

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Harvard College Library

FROM THE

BRIGHT LEGACY.

Descendants of Henry Bright, jr., who died at Watertown, Mass., in 1686, are entitled to hold scholarships in Harvard College, established in 1880 under the will of

JONATHAN BROWN BRIGHT

of Waltham, Mass., with one half the income of this Legacy. Such descendants failing, other persons are eligible to the scholarships. The will requires that this announcement shall be made in every book added to the Library under its provisions.

In the Office of the Librarian of Congress, at Washington.

Lincoln Medals. Andrew C. Zabriskie, of New York, an earnest student of numismatics, printed, for private circulation, a descriptive catalogue of one hundred and eighty-nine med-

ple; a fifth proposing to commit the business of "reconstruction" to the people, and a sixth enjoining the duty of confiscating the property of rebels and giving it to the Union soldiers and

MEDAL FROM THE FRENCH DEMOCRATS. (See p. 794.)

als struck in honor of Abraham Lincoln. No other public man in the United States excepting Washington has been so honored in this way.

Lincoln, PRESIDENT, IN RICHMOND. The President had been at City Point and vicinity several days before the fall of Richmond, and on that day (April 4, 1865) he went up to that city with Admiral Porter on the *Malvern*. Captain Ralph Chandler, with the *Sangamon*, several tugs, and thirty small boats, had fished up the torpedoes with which the river was strewn. At Richmond the President was cheered by a vast concourse of emancipated slaves, who were told that the tall man was their liberator. He returned the same day, and on the 6th he again visited Richmond, when he authorized General Weitzel to allow the assembling of the Virginia Legislature, which he had been assured by leading members would work faithfully in the interests of peace and the restoration of the Union. Their promise was not kept, and the President revoked his order to Weitzel.

Lincoln, PRESIDENT, RE-ELECTION OF. In the Administration party were men who deprecated the cautious policy of Mr. Lincoln and were opposed to his re-election. They held a nominating convention at Cleveland, Ohio, May 31, 1864. It was composed of about three hundred and fifty persons, very few of whom were regularly chosen delegates. They were called "the radical men of the nation." They adopted a "platform of principles," consisting of thirteen resolutions, among which was one proposing an amendment to the Constitution to prevent the re-establishment of slavery; another declaring the wisdom of the "Monroe Doctrine" (which see); a third asserting the policy of restricting the incumbency of the presidential office to one term; a fourth recommending the election of President directly by the peo-

ple; a fifth proposing to commit the business of "reconstruction" to the people, and a sixth enjoining the duty of confiscating the property of rebels and giving it to the Union soldiers and actual settlers. They nominated General John C. Frémont for President, and General John Cochrane for Vice-President. They afterwards withdrew. The Union National Convention assembled at Baltimore June 7, 1864, in which all the states and territories were represented by chosen delegates, excepting those in which insurrection existed. Their "platform of principles" was equally strong in support of national honor, national freedom, the emancipation of the slaves and the perpetuation of their freedom, the "Monroe Doctrine," etc. It was the regular Republican Convention. It endorsed the acts of the administration, and nominated Abraham Lincoln for President and Andrew Johnson for Vice-President. The Democratic National Convention met at Chicago Aug. 29, 1864. Horatio Seymour, of New York, was its chairman, and, in his opening address on taking the chair, he expressed sentiments of extreme hostility to the policy of the administration, and condemnatory of the war for the preservation of the Union. They adopted a "platform of principles," composed of six resolutions. It declared the fidelity of the Democratic party to the Union; that the war was a failure, and that "humanity, liberty, and the public welfare" demanded its immediate cessation; that the government, through its military power, had interfered with elections in four of the late slave-labor states, and was, consequently, guilty of revolutionary action, which should be resisted; that the government had been guilty of unwarrantable usurpations (which were specified), and also been guilty of a shameful disregard of duty respecting the exchange of prisoners and the relief of its suffering captives. The resolutions closed with an assurance that the Democratic party extended its sympathy to the Union soldiers, and that, in the event of their obtaining power, the soldiers should receive "all the care and protection and kindness" which they de-

served. General George B. McClellan, who had been relieved from military duty about twenty months before, was nominated for President, and George H. Pendleton, of Ohio, for Vice-President. The opposing parties carried on the canvass with great vigor during the autumn. The real practical issue was expressed in two words—Union and Disunion. Mr. Lincoln was re-elected by an unprecedented majority in the Electoral College. His opponent—General McClellan—received the votes only of the two late slave-labor states of Delaware and Kentucky and the State of New Jersey. The soldiers in the army gave 121,000 votes for Lincoln and 35,050 for McClellan, or three to one in favor of the former. They did not regard the war in which they were struggling as "a failure." The freedmen rejoiced at the result, for they regarded it as the seal of their sure deliverance, for there was a wonderful power slumbering behind that vote.

Lincoln's Cabinet (1861). On the day after his inauguration (March 5, 1861) President Lincoln nominated the following gentlemen as his constitutional advisers: William H. Seward, of New York, Secretary of State; Salmon P. Chase, of Ohio, Secretary of the Treasury; Simon Cameron, of Pennsylvania, Secretary of War; Gideon Welles, of Connecticut, Secretary of the Navy; Caleb Smith, of Indiana, Secretary of the Interior; Montgomery Blair, of Maryland, Postmaster-general, and Edward Bates, of Missouri, Attorney-general. These were immediately confirmed by the Senate.

Lincoln's Cabinet (1865). Mr. Lincoln retained his cabinet—namely, W. H. Seward, Secretary of State; Hugh McCulloch, Secretary of the Treasury; Edwin M. Stanton, Secretary of War; Gideon Welles, Secretary of the Navy; William Dennison, Postmaster-general; J. P. Usher, Secretary of the Interior; James Speed, Attorney-general. There had been previously some changes in his cabinet. At the request of the President, Montgomery Blair had resigned the office of Postmaster-general, and was succeeded by Mr. Dennison, of Ohio. On the death of Chief-justice Taney, Salmon P. Chase had been made his successor, and the place of the latter in the cabinet had been filled by Hugh McCulloch.

Lincoln's Election, EFFECT OF. It was not denied that the election had been fairly and legally conducted, or that the platform of the Republican party pledged the nominee and his supporters to absolute non-interference with the rights and domestic policy of the several states. During the canvass the friends of the slave system labored with great zeal in the creation of a "solid South," in opposition to the Republican party and its nominee. They asserted, with all the solemnity of seeming truth, that the people of the free-labor states, "grown rich and powerful through robbery of the people" of the slave-labor states, had elected a sectional President, for the purpose of carrying out a long-cherished scheme of ambition—namely, the political and social subjugation of the people of the slave-labor states; the subversion of their

system of labor; the elevation of the negro to social equality with the white man, and the destruction of slavery, upon which, they alleged, had rested in the past, and must forever rest in the future, all substantial prosperity in the cotton-growing states. They held the Republican party responsible for John Brown's Raid (which see), and cited as proof of the intentions of the Republicans their declarations that "there is an irrepressible conflict between freedom and slavery;" "freedom is the normal condition of all territory;" "the Republic cannot exist half slave and half free." The press and the pulpit became powerful auxiliaries in disseminating these views concerning the Republican party. The "common people" were blinded, confused, alarmed. When the fact of Mr. Lincoln's election had been flashed by the telegraph over the land, the voice of disunion was heard in vehement utterances all over the slave-labor states. South Carolinians were anxious to put the pre-concerted scheme of revolution into immediate operation. An extraordinary session of the Legislature had been called at Columbia, Nov. 5, in anticipation of the result, and the governor of that state received congratulatory telegraphic despatches from other commonwealths where the political leaders were in sympathy with disunionists. A grand plan of the disunionists was for the sympathizing states to first withdraw from the Union. "North Carolina will secede," said a despatch from Raleigh. "A large number of Bell men (see *National Constitutional Union Party*) have declared for secession." "The state will undoubtedly secede," said a despatch from the capital of Alabama. Another, from Milledgeville, Ga., said: "The hour for action has come. This state is ready to assert her rights and independence. The leading men are eager for the business." "There is a great deal of excitement here," said a despatch from Washington; "several extreme Southern men, in office, have donned the Palmetto cockade (which see) and declared themselves ready to march South." A despatch from Richmond said: "If your state secedes we will send you troops and volunteers to aid you." "Placards are posted about the city," said a message from New Orleans, "calling a convention of those favorable to the organization of a corps of minute-men." A second message from Washington said: "Be firm; a large quantity of arms will be shipped South from the arsenal here to-morrow. The President [Buchanan] is perplexed. His feelings are with the South, but he is afraid to assist them openly." "The bark *James Grey*, owned by Cushing's Boston Line, lying at our wharves," said a message from Charleston, "has hoisted the Palmetto flag and fired a salute of fifteen guns [the number of the slave-labor states], under the direction of her owner. The minute-men throng the streets, with Palmetto cockades in their hats. There is great rejoicing here." So, within thirty hours after the election of Mr. Lincoln, the fact was clearly revealed, by the unanimity of expressed sentiments among the Southern politicians in favor of disunion, that a scheme for the dissolution of the Union had been

preconcerted. The effect of Mr. Lincoln's election was to bring into active co-operation all the disloyal elements in the Union, North and South.

Lincoln's Inaugural Address. This message to the people at the opening of President Lincoln's administration gave no uncertain sound. He said he had no purpose, directly or indirectly, to interfere with slavery in states where it existed. He believed he had no lawful right to do so, and he had no inclination to do so. He gave assurance that the prosperity, peace, and security of no section were to be endangered by the incoming administration, and that every section of the Union should have equal protection. He then discussed the political character and structure of the Republic, showing that the Union is older than the Constitution; that it is necessarily perpetual; that there is no inherent power in the whole or in part to terminate it, and that the secession of a state is impossible. Assuming that the Republic was unbroken, he declared that, to the extent of his ability, he should take care, as the Constitution required him to do, that the laws should be executed in all the states, performing that duty as far as practicable, unless his "rightful masters, the American people," should withhold the requisite means. "I trust this will not be regarded as a menace," he said, "but only of the declared purpose of the Union that it will constitutionally defend and maintain itself." "In doing this," he added, "there need be no bloodshed or violence, and there shall be none, unless it shall be forced upon the national authority." He declared that the power confided to him should be used to "hold, occupy, and possess the property and places belonging to the government, and to collect the duties and imposts." This frank, generous, and kindly avowal of his intention to do his duty faithfully gave force to his statement at Trenton, when on his way to Washington: "The man does not live who is more devoted to peace than I am — no one who would do more to preserve it; but it may be necessary to put the foot down firmly." The President also declared that he should endeavor, by justice, "to reconcile all discontents;" and he asked the enemies of the government to point to a single instance where "any right, plainly written in the Constitution," had ever been denied. He showed the dangers of the precedent established by secession. "Plainly," he said, "the central idea of secession is anarchy." He referred to the physical impossibility of the dissolution of the Union; asked, in view of a separation, "whether treaties could be more faithfully enforced among aliens than laws among friends?" He reminded them that their respective territories must remain "face to face;" that they "could not fight always," and that the causes of feuds would always exist. He begged his countrymen to take time for consideration. "In your hands," he said, "my dissatisfied fellow-countrymen, and not in mine, is the momentous issue of civil war. The government will not assail you. You can have no conflict without

being yourselves the aggressors. You have no oath registered in heaven to destroy the government, while I shall have the most solemn one to preserve, protect, and defend it." The enemies of the government would listen to no words of kindness, of justice, or of warning; they had resolved to destroy the Union at all hazards.

Lincoln's Inauguration. On Monday, the 4th of March, 1861, Abraham Lincoln, of Illinois, was inaugurated the sixteenth President of the United States under circumstances of peculiar interest. In expectation of open violence on the part of the conspirators against the life of the Republic, General Scott had made ample provision for the preservation of order by the strong arm of military power, if it should be necessary. This fact was known, and no disorder occurred. So almost imperceptibly had about six hundred troops been gathered at different points in the city of Washington [and yet it was known that they were gathering], that there was a general impression that a vast number of them were there. The Secessionists were not undeceived until it was too late to organize the "minute-men" of Maryland and Virginia to prevent the inauguration of Mr. Lincoln. In response to inquiries from Congress, from time to time, President Buchanan, on the 1st of March, replied that only six hundred and fifty private soldiers were in the city, besides the usual marines at the navy-yard, and that they were there to act as a *posse comitatus*, strictly under the civil authority, to maintain the public peace. More than twenty-five thousand strangers were present at the

LINCOLN'S INAUGURATION.

ceremony, a large portion of them the political friends of the President-elect. Mr. Lincoln, accompanied by Mr. Buchanan, rode to the Capitol

in an open barouche, escorted by military and followed by an immense procession of civilians. As they sat waiting before the desk of the Senate, "Mr. Buchanan sighed audibly and frequently, and Mr. Lincoln was as grave and impassive as an Indian martyr." Mr. Buchanan was pale and nervous. Mr. Lincoln's face was slightly flushed with excitement. Going to the platform on the eastern front of the Capitol (the new dome was then in course of construction), Mr. Lincoln was introduced to the people by Senator Baker, of Oregon. Then, with a clear, strong voice, and rising, like Saul, in his height, above the people, he read his inaugural address, during which Senator Douglas, his opponent in the race for the Presidency, held his hat. At the close of the reading, Chief-justice Taney administered the usual oath to the new President. Leaving the Capitol, Mr. Lincoln proceeded to the "White House," and the next day ex-President Buchanan departed for his beautiful seat, Wheatland, near Lancaster, Penn.

Lincoln's Journey to the Capital. Abraham Lincoln, President-elect of the Republic, left his home in Springfield, Ill., Feb. 11, 1861, for Washington city, accompanied by a few personal and political friends. To the crowd at the railway station, evidently impressed with the solemn responsibility laid on him, he said: "A duty devolves on me which is, perhaps, greater than that which has devolved upon any man since the days of Washington. He never could have succeeded except for the aid of Divine Providence, upon which he at all times relied. I feel that I cannot succeed without the same divine aid which sustained him, and on the same Almighty Being I place my reliance for support; and I hope you, my friends, will all pray that I may receive that divine assistance without which I cannot succeed, but with which success is certain." The journey then undertaken was performed at about the same time that Jefferson Davis, the elected President of the Southern Confederacy, was on his way from his home to the capital of the Confederacy. (See *Inauguration of Jefferson Davis*.) Lincoln made a long journey of hundreds of miles through Illinois, Indiana, Ohio, New York, New Jersey, Pennsylvania, Delaware, and Maryland, everywhere greeted with demonstrations of profound respect, and speaking to the crowds who came out to see him words full of cheerfulness, kindness, forbearance, and tenderness. Common prudence counselled him to say little or nothing on the grave affairs of state, but occasionally words would drop from his lips that clearly indicated his views and intentions. He often alluded to the condition of the country. "It is my intention," he said at Pittsburgh, "to give this subject all the consideration I possibly can before specially deciding in regard to it, so that when I do speak I may be as nearly right as possible. I hope I may say nothing in opposition to the spirit of the Constitution, contrary to the integrity of the Union, or which will prove inimical to the liberties of the people or the peace of the whole country." At the Astor House, in New York, he said to a multitude who greeted

him: "When the time does come for me to speak, I shall then take the ground that I think is right—right for the North, for the South, for the East, for the West, and for the whole country." Mr. Lincoln was received by the municipal authorities of New York city at the City Hall, where the mayor (Wood), who had recently set forth the advantages that the commercial mart would derive from its secession from all government (see *Wood's, Fernando, Proposition to Secede*), admonished the President-elect that it was his duty "to so conduct public affairs as to preserve the Union." Mr. Lincoln arrived in Philadelphia Feb. 21, where he was informed of a plan in Baltimore to assassinate him, on his way through that city to Washington. On the following morning (Washington's birthday) he hoisted the national flag, with his own hands, over the old State House, in the presence of a vast multitude of citizens. In his speech on that occasion he referred to the Declaration of Independence, adopted and signed in that building, and said that it was the sentiment of perfect freedom to all, contained in that document, which had kept the Union together so long, and promised the same blessing, in due time, to all men. "If this country," he said, "cannot be saved by this principle, I was about to say I would rather be assassinated on this spot than surrender it. I have said nothing but what I am willing to live by, and, if it be the pleasure of Almighty God, die by." His friends believed his life would be in danger if he carried out the prescribed plan of his journey to visit Harrisburg and thence directly through Baltimore to Washington. But he persisted in keeping his engagement, and went on to Harrisburg. Meanwhile, revelations had been made that convinced his friends that he would be assassinated if the whole plan should be carried out, and he was persuaded to go back to Philadelphia that night, and so on to Washington, instead of waiting until the next day. He passed through Baltimore unobserved, and arrived in Washington early on the morning of Feb. 26. (See *Lincoln's Passage through Baltimore*.)

Lincoln's Passage through Baltimore (1861). When Mr. Lincoln arrived in Philadelphia on the evening of Feb. 21, 1861, he was informed of an alleged plot to assassinate him in Baltimore while passing through that city to Washington, and he was persuaded to take precautions against such a catastrophe. His movements at that time gave currency to many absurd and untruthful stories. Mr. Lincoln gave, orally, to the writer of this work, early in December, the following narrative of the affair, substantially: "I arrived at Philadelphia on the 21st. I agreed to stop over-night, and on the following morning hoist the flag over Independence Hall. In the evening there was a great crowd where I received my friends, at the Continental Hotel. Mr. Judd, a warm personal friend from Chicago, sent for me to come to his room. I went, and found there Mr. Pinkerton, a skilful police detective, also from Chicago, who had been employed for some days in Baltimore watching or searching for suspicious persons there. Pinkerton informed

me that a plan had been laid for my assassination, the exact time when I expected to go through Baltimore being publicly known. He was well informed as to the plan, but did not know that the conspirators would have pluck enough to execute it. He urged me to go right through with him to Washington that night. I didn't like that. I had made engagements to visit Harrisburg and go from there to Baltimore, and I resolved to do so. I could not believe that there was a plot to murder me. I made arrangements, however, with Mr. Judd for my return to Philadelphia the next night, if I should be convinced that there was danger in going through Baltimore. I told him that if I should meet at Harrisburg, as I had at other places, a delegation to go with me to the next place (then Baltimore), I should feel safe and go on. When I was making my way back to my room, through crowds of people, I met Frederick Seward. We went together to my room, when he told me that he had been sent, at the instance of his father and General Scott, to inform me that their detectives in Baltimore had discovered a plot there to assassinate me. They knew nothing of Pinkerton's movements. I now believed such a plot to be in existence. The next morning I raised the flag over Independence Hall, and then went on to Harrisburg with Mr. Sumner, Major (now General) Hunter, Mr. Judd, Mr. Lamon, and others. There I met the Legislature and people, dined, and waited until the time appointed for me to leave (six o'clock in the evening). In the meantime Mr. Judd had so secured the telegraph that no communication could pass to Baltimore and give the conspirators knowledge of a change in my plans. In New York, some friend had given me a new beaver hat, in a box, and in it had placed a soft wool hat. I had never worn one of the latter in my life. I had this box in my room. Having informed a very few friends of the secret of my new movements, and the cause, I put on an old overcoat that I had with me, and, putting the soft hat in my pocket, I walked out of the house at a back door, bareheaded, without exciting any special curiosity. Then I put on the soft hat and joined my friends without being recognized by strangers, for I was not the same man. Sumner and Hunter wished to accompany me. I said, 'No; you are known, and your presence might betray me. I will only take Lamon (now Marshal of the District of Columbia, whom nobody knew) and Mr. Judd.' Sumner and Hunter felt hurt. We went back to Philadelphia, and found a message there from Pinkerton (who had returned to Baltimore) that the conspirators had held their final meeting that evening, and it was doubtful whether they had nerve enough to attempt the execution of their purpose. I went on, however, as the arrangement had been made, in a special train. We were a long time in the station at Baltimore. I heard people talking around, but no one particularly observed me. At an early hour on Saturday morning [Feb. 23], at about the time I was expected to leave Harrisburg, I arrived in Washington." Mr. Lincoln was received at the rail-

way station by Mr. Washburne, member of Congress from Illinois, who was expecting him. He was taken in a carriage to Willard's Hotel, where Senator Seward was waiting to receive him. Mrs. Lincoln, who had joined him at Philadelphia (Feb. 22), left Harrisburg, with Mr. Sumner and others, at the time appointed, and went on to the capital without molestation.

Lincoln's Second Inauguration. When Mr. Lincoln was inaugurated the second time, with Andrew Johnson as Vice-President, there were sure signs of a speedy termination of the Civil War. Sherman's march through Georgia and the Carolinas showed the real weakness of the Confederacy. In his inaugural address (March 4, 1865), Mr. Lincoln spoke with hope; and when the Chief-justice (Chase) had administered the oath, loud shouts went up from the multitude. The President retained his cabinet (see *Lincoln's Cabinet*), and started on a new term of office with hope and satisfaction. A little more than a month later he fell by the hand of an assassin. (See *Assassination of President Lincoln*.)

Lipans. This tribe, hovering on the borders of Texas, is a branch of the Athabascas. For a long time they roamed from the banks of the Rio Grande and the Chihuahuas to the land of the Comanches. They made war on the Spanish frontiers and desolated mission-stations. Having learned many Spanish words and advanced somewhat in civilization, they became allies of Mexican partisans in the revolutions in that country; and when Texas became an independent state the Lipans roamed over it from Austin to Corpus Christi, but plundered only the Mexicans, generally. At the close of the war between Mexico and the United States (1848) they began war in Texas, and for a while they desolated the frontier settlements. The remnant has since retired to Mexico. Their number does not exceed five hundred.

Little Rock (Ark.), CAPTURE OF (1863). General Frederick Steele organized an expedition at Helena for the seizure of the capital of Arkansas. His forces there, early in August, reached about 12,000 men, with forty pieces of cannon. These moved Aug. 10. They pushed back General Marmaduke, who confronted them; and early in September they moved on the state capital, in two columns, led by Generals Steele and Davidson, having been reinforced. General Sterling Price was in chief command of the Confederates. At Bayou Fournche, on the south side of the river, Davidson was confronted by Marmaduke, and, after a sharp struggle for two hours, the Confederates fell back towards the city. At the same time Steele was moving in a parallel line on the north side of the river. When the Nationals reached Little Rock the Confederates had abandoned it, and on the evening of Sept. 10, 1863, the city and its military appurtenances were surrendered to Davidson by the civil authorities. The troops had fled to Arkadelphia, on the Washita River. When the National troops entered the city eight steamboats, fired by the retreating Confederates, were in flames. In his campaign of

forty days, Steele lost about 100 men, killed, wounded, and prisoners, and captured about 1000 prisoners. The National loss by sickness was very heavy—not less than 2000 men.

Little Turtle (Me-che-cun-na-na), a distinguished chief of the Miami Indians, who died at Fort Wayne, Ind., July 14, 1812, and was buried in an orchard. He received instructions in a Jesuit school in Canada, it is believed; and he was remarkable for his mental vigor and great common-sense. Little Turtle was a brave and skilful military leader. He commanded at the defeat of Generals Harmar and St. Clair (which see), the former in October, 1790, and the latter in November, 1791. He was present in the fight with Wayne at Fallen Timbers (which see). The brave chief, who spoke of Wayne as "the chief who never sleeps," urged his people to make peace with such a formidable warrior. He was one of the signers at the Treaty of Greenville (which see). Early in 1797 he visited President Washington at Philadelphia. There Kosciuszko, then on a visit to the United States, gave Little Turtle a pair of elegant pistols.

Live-stock. It was not until the close of the old war for independence that much attention was paid to the improvement of the breeds of domestic animals in the United States. In 1783 some horned cattle were imported into Maryland, and passed into the hands of Matthew Patton, of Virginia, who took great pains in raising pure stock from them. He went with a considerable herd of them to Kentucky in 1794. That Patton stock made a sensible impression upon the public mind. Some "short-horns" were imported from England into Westchester County, N. Y., from 1792 to 1796; and these were purchased with the design of improving the breed of American cattle—the first effort of the kind. In 1815 Henry Clay introduced the Herefords from England into Kentucky. Afterwards other fine breeds came, until now we have as fine average horned cattle as any country in the world. Associations have been formed in the West for importing choice stock, and, by importations and crossings, the production and value of our cattle have greatly increased. The same may be said of our horses, sheep, and swine. In 1840 the aggregate number of bulls, cows, and oxen in the United States was 15,000,000 head. In 1870—in the space of thirty years—they had increased to about 24,000,000. In 1876 the number was about 30,000,000, the total value of which was more than \$1,500,000,000. No country raises finer horses than the United States; nor is any country so beautifully supplied with them. We have about 11,000,000, of which about 8,000,000 are on farms. This gives one horse to every four persons of our population. We have also about 1,200,000 mules and asses. Sheep husbandry is a large and profitable industry. There are now about 30,000,000 sheep in the United States, and they are increasing in quality and numbers. They produce more than 100,000,000 pounds of wool annually; and our woollen-mills (of which there

were 2891 in 1870) use more than seventy per cent. of domestic wool, which is considered the best in the world. The fleece that commanded the highest premium at the World's Fair in London in 1851 was grown among the hills of Tennessee. Early in the present century some efforts were made to improve the breed of swine in the United States. Soon after his return from Europe, Chancellor Livingston imported some and bred from them. There was much opposition at first among the farmers to this innovation; but the palpable superiority of the imported to the native swine was so apparent that the prejudice was soon overcome, and there began to be an improvement in the appearance of swine in many parts of the country. In 1870 the whole number of swine in the Union was about 25,000,000. In several of the Western States the slaughter of hogs and the packing of pork form an extensive and important industry.

Livingston, BROCKHOLST, LL.D., a son of Governor William Livingston, of New Jersey, was born Nov. 25, 1757; died in Washington, March 19, 1823. He was attached to the staff of General Schuyler in 1776, and afterwards to that of General Arnold, and was a participant in the capture of Burgoyne. He was promoted to colonel. In 1779 he accompanied John Jay to the Spanish court as his private secretary, and on his return he studied law, and became eminent in his profession. In January, 1802, he was made Judge of the Supreme Court of New York.

Livingston, EDWARD, was born at Clermont, Columbia Co., N. Y., May 27, 1764; died at Rhinebeck, N. Y., May 23, 1836. He graduated at Princeton in 1781, and began the practice of law in New York city in 1785. He soon acquired a high reputation as an advocate. A republican in politics, he became a member of Congress in 1795, and served until 1801. Jefferson appointed him United States District-attorney for New York in 1801, and in the same year he was chosen mayor of the city for two years. Through the misconduct of a clerk, Mr. Livingston became a public defaulter. He went to New Orleans, had great professional success, and paid every debt he owed the government. Livingston prepared a code of judicial procedure for Louisiana, which gained for him great fame at home and abroad. In the battle of New Orleans (which see) he acted as aid to General Jackson. He represented Louisiana in Congress from 1823 to 1829; was United States Senator from 1829 to 1831; was Secretary of State from 1831 to 1833; and then minister to France until the close of 1835. He had been chosen a member of the French Academy, and at his death an elegant eulogy upon his life and works was pronounced before that body by Mignet. At the time of his death, Mr. Livingston owned and occupied the beautiful mansion and estate of "Montgomery Place," at Rhinebeck, built by his sister, Mrs. General Montgomery. He was the youngest brother of the chancellor.

Livingston, HENRY BEEKMAN, was born at Livingston Manor in 1750; died at Rhinebeck, N. Y., Nov. 7, 1831. He was a brother of Chan-

cellor and Edward Livingston. In 1775 he raised a company, with which he accompanied his brother-in-law, General Montgomery, to Canada, where he performed excellent service, and was voted a sword by Congress for his skill and bravery at Chambly. He was with Montgomery at the siege of Quebec (which see). In 1776 he was aid to General Schuyler, and late in that year he was promoted to colonel. He was with Sullivan in Rhode Island, and was in the battle of Quaker Hill (which see). He resigned in 1779. After the war he became attorney-general, judge, and chief-justice of the State of New York. Colonel Livingston was a general in the War of 1812, and was President of the New York Society of the Cincinnati.

Livingston, JAMES, was born in Canada in 1747; died in Saratoga County, N. Y., Nov. 20, 1832. He possessed some influence with the Canadians, and became colonel of a regiment of Canadian refugees, and, with them, joined General Montgomery. With these Livingston captured Fort Chambly, at the rapids of the Sorel (see *Chambly, Fort, Capture of*), and he participated in the attack on Quebec. (See *Quebec, Siege of*.) He was also in the battle of Bemis's Heights (which see), and he served throughout the war.

Livingston, JOHN HENRY, D.D., was born at Poughkeepsie, N. Y., May 30, 1746; died at New Brunswick, N. J., Jan. 20, 1825. He graduated at Yale College in 1762. He studied theology at Utrecht, Holland, where he was ordained by the Classis of Amsterdam. While in Holland he successfully worked for the independence of the American Dutch Reformed Church from the Dutch Classis. He settled as a pastor in New York; but when that city was taken possession of by the British he went on foot to Albany, and thence to Kingston, and finally to Poughkeepsie, whence, at the close of the war, he returned to New York. He was held in high esteem by his denomination; and in 1807 he was chosen President of Queen's (now Rutgers) College, at New Brunswick, N. J., which position he held until his death.

Livingston Manor. Robert Livingston, a native of Ancrum, Teviotdale, Roxburghshire, Scotland, where he was born in 1634, emigrated to America in 1674. He possessed a bold, adventurous spirit, and was soon in public employment at Albany, where, in 1683, he married Alida, widow of Rev. Nicholas van Rensselaer, and daughter of Philip Pietersen van Schuyler. She brought him considerable wealth, with which he purchased a large landed estate on the east bank of the Hudson. Its boundary commenced about five miles south of the site of the city of Hudson, and extended twelve miles along the river, and eastward to the line between the states of New York and Massachusetts. The area widened as it extended eastward, so that, on its eastern boundary, the tract was nearly twenty miles in width. In 1686 Thomas Dongan, Governor of New York, granted Livingston a patent for this domain, which comprised over one hundred and twenty thou-

sand acres. It was the largest landed estate in the province, excepting that of Van Rensselaer. Five or six thousand acres of it were purchased for the use of the Palatines who came over with Governor Hunter in 1700, which tract still bears the name of Germantown, given to it at that time. In 1715 the grant of the Livingston Manor, given by Dongan, was confirmed by royal authority, and full manorial privileges were given to the proprietor. The lord of the manor exercised moderate judicial functions within his domain, and had the privilege of electing a representative to the General Assembly of the colony and two constables. This manor occupied a portion of Columbia and Dutchess counties.

Livingston, PHILIP, a signer of the Declaration of Independence, was born in Albany, N. Y., Jan. 15, 1716; died in York, Penn., Jan. 12, 1778. He graduated at Yale College in 1737; became a prominent merchant in the city of New York; was an alderman there from 1754 to 1758; and a member of the Provincial Assembly in 1759, in which he was one of the committee of correspondence with the colonial agent in England, Edmund Burke. Livingston opposed the taxation schemes of Parliament, and was unseated by a Tory majority in 1769, when the controversy between Great Britain and her colonies ran high. He was a member of the First Congress (1774), and held a seat in that body until his death in 1778, when their session was held at York, the British having possession of Philadelphia. Mr. Livingston was associated with Lee and Jay in the preparation of two of the state papers put forth by the First Congress. He was very active on the most important committees in Congress. Mr. Livingston founded the Professorship of Divinity at Yale College in 1746, and was one of the founders of the New York Society Library. He also aided materially in the establishment of King's (now Columbia) College. He patriotically sold a part of his property to sustain the public credit with its proceeds just before his death.

Livingston, ROBERT R., LL.D., first chancellor of the State of New York, was born in the city of New York, Nov. 27, 1747; died Feb. 26, 1813. He graduated at King's (now Columbia) College in 1765. He practised law successfully in New York, and was made recorder of the city in 1773. Of this office he was deprived early in 1775, because of his espousal of the patriot cause. He was elected to the Continental Congress in 1775, and was one of the committee appointed to draft a declaration of independence, but his necessary absence from Congress prevented his signing it. On the organization of the State of New York under a constitution, he was appointed chancellor, and held that position until 1801. In 1780 he was again a member of Congress, and was Secretary for Foreign Affairs from 1781 to 1783. Mr. Livingston was a member of the convention of New York which adopted the national Constitution, and voted for it. Minister-plenipotentiary to France (from 1801 to 1804), he secured the cession of Louisiana to the United

States from Bonaparte. (See *Louisiana*.) He was the coadjutor of Fulton in perfecting the system of steam navigation. (See *Steam Navigation*.)

ROBERT R. LIVINGSTON.

Livingston, WILLIAM, LL.D., was born in the province of New York in November, 1723; died at Elizabethtown, N. J., July 25, 1790. He was an eminent member of the bar of both New York and New Jersey. With William Smith, he published the first *Digest of the Colonial Laws*, in 1752. For a while, in that decade of the century, he published the *Independent Reflector*. Thoroughly educated at Yale College, he possessed many solid as well as brilliant attainments in law and literature, and was an elegant and facile writer. Behind the mask of anonymity, Mr. Livingston

WILLIAM LIVINGSTON.

dealt heavy blows in favor of Presbyterianism, and against Episcopacy, in his weekly periodical, first published late in 1752. (See *Independent Reflector*.) In 1757 he published, in defence of Governor Shirley, a *Review of the Military Opera-*

tions in North America from 1753 to April 14, 1756, in a Letter to a Nobleman. The following year he was elected a member of the New York Assembly. Having purchased land in Elizabethtown, N. J., he built a fine mansion there, which he called "Liberty Hall," and removed there in 1773. Mr. Livingston early espoused the cause of the oppressed colonies, and was a representative of New Jersey in the first Continental Congress (1774). He was again a delegate to that body in 1775, but was soon called (June 5) to command the militia of New Jersey, with the commission of brigadier-general. After William Franklin (which see) was deposed in 1776, William Livingston succeeded him as governor of New Jersey, which post he retained until his death, conducting public affairs with wisdom and energy. The British called him "The Don Quixote of New Jersey" (for he was tall and thin in person), and tried hard to catch him, but he always managed to escape. Mr. Livingston was a delegate from New Jersey in the convention which framed the national Constitution. He was offered the position of minister to Holland, but declined. Mr. Livingston had some poetic genius, and in 1747, when he was twenty-four years of age, he wrote a poem called *Philosophical Solitude*.

Loan-offices Authorized. The Congress, on Oct. 3, 1776, authorized a loan of \$5,000,000 for the use of the United States, whose faith was to be pledged to the lenders for the payment of the same with interest. The Congress also authorized the establishment of a loan-office in each state, and the appointment by the respective states of a commissioner to superintend each office.

Loans and the Peace Faction (1813-14). From the beginning of the second war for independence, the government had to depend upon loans for funds to carry on the war, and in this matter the Peace faction found an excellent chance for embarrassing the administration. They took measures to injure the public credit, and so much did they do so that upon each loan after 1812 a ruinous bonus was paid. On a loan of \$16,000,000, at the beginning of 1813, the lender received a bonus of about \$2,000,000. In March, 1814, the darkest period of the war, a loan of \$25,000,000 was authorized, when the Peace faction, at public meetings, through the newspapers, and even from the pulpit, cast every possible embarrassment in the way of the government. Their opposition assumed the character of virtual treason. They violently denounced the government and those who dared to lend it money; and by inflammatory publications and personal threats they intimidated many capitalists who were disposed to lend. The result was, not half the amount of the proposed loan was obtained, and that only by the payment of \$2,852,000 on \$11,400,000. Then this unpatriotic faction pointed to this event as evidence of the unwillingness of the people to continue the war. So disastrous were these attempts to borrow money, that only one more of a like nature was made through the remainder

of the war, the deficiency being made up by treasury notes. Foiled in their efforts to utterly prevent the government from making loans, the Peace faction struck another blow at the public credit, and the complicity of Boston banks gave it intensity. The banks out of New England were the principal lenders to the government, and measures were taken to drain them of their specie, and so produce an utter inability on their part to pay their subscriptions. Boston banks demanded specie for the notes of New York banks and those farther south which they held, and at the same time drafts were drawn on the New York banks for the balances due the Boston corporations, to the total amount of about \$3,000,000. A panic was created, and great commercial distress ensued, for the banks so drained were compelled to contract their discounts. This conspiracy against the public credit was potent and ruinous in its effects. To make the blow more intensely fatal, the conspirators made arrangements with agents of the government authorities of Lower Canada, whereby a very large amount of British government bills, drawn on Quebec, were transmitted to New York, Philadelphia, and Baltimore, and offered on such advantageous terms that capitalists were induced to purchase them. By this means an immense amount of gold was transmitted to Canada, and so placed beyond the reach of the government of the United States, and put into the hands of the enemy.

Locke, JOHN, born at Wrington, Somersetshire, Aug. 29, 1632; died in Essex County, England, Oct. 28, 1704. His father was a parliamentary captain. He graduated at Oxford, was fond of philosophical studies, associated with men of wit, and chose the profession of a physician. His first public employment was as secretary in a diplomatic mission to the court of Brandenburg in 1664. While pursuing philosophical studies in 1667, he became acquainted with Lord Ashley (afterwards Earl of Shaftesbury), and by his medical skill advised a surgical operation that saved his lordship's life. By him Locke was introduced to the most distinguished statesmen of the time. He superintended the education of Ashley's son, and assisted him in preparing a scheme of government for the Carolinas. (See *Fundamental Constitutions*.) When Ashley (then Earl of Shaftesbury) was accused of treason (1683), he fled to Holland, and Locke followed him. Locke had held various public offices, but now he remained quietly in Holland until after the revolution (1688), when he returned to England in the same vessel that bore the Princess Mary thither. Locke's principal work was an *Essay on the Human Understanding*, published twenty years after it was begun. Locke ranks among the most eminent mental philosophers.

Loco-focos. A name originally applied to a faction of the Democratic party. At a meeting in Tammany Hall, New York, in 1834, there was great diversity of sentiment upon certain questions. The conservative chairman and his friends, perceiving the radical movement to be

strong, determined to defeat it by a sort of *comp-d'état*. To dissolve the meeting, the chairman left his seat and the lights were all extinguished, but the radicals rekindled the lights with "loco-foco," or friction, matches, reorganized the meeting, and carried their measures; and it finally became a popular designation of the whole Democratic party in the Union.

Logan (Ta-ga-jute), a noted Indian chief, who was born about 1725, and died in 1780. He received his name from James Logan, secretary of the province of Pennsylvania, and was the son of a Cayuga chief who dwelt at Shamokin, on the Susquehanna River. He went beyond the Alleghenies before 1767. In 1772, Heckewelder, the Moravian missionary, met him on the Beaver River, and observed his great mental capacity. His family were massacred by a party of white people in the spring of 1774, which was the occasion of his celebrated speech (see *Logan's Speech*) after the defeat of the barbarians at Point Pleasant (which see). Logan fought the white people desperately afterwards, when occasion offered, in the West. At a council held at Detroit, while maddened by strong drink, he felled his wife by a heavy blow. Supposing he had killed her, he fled. Overtaken by a troop of Indians on the southern shore of Lake Erie, he supposed them to be avengers, and frantically declared that he would slay the whole party. As he leaped from his horse he was shot dead.

Logan, BENJAMIN, a Kentucky pioneer, was born in Pennsylvania about 1742; died in Shelby County, Va., Dec. 11, 1802. At twenty-one he removed to the banks of the Holston from Augusta County, Va., to which his father had emigrated. There he bought a farm and married. He became a sergeant in Bouquet's Expedition (which see), and in 1774 was in Dunmore's expedition. Removing to Kentucky in 1775, in 1776 he took his family to Logan's Fort, near Harrodsburg. There he was attacked by a large force of Indians, but they were repulsed. He was second in command of an expedition against the Indians at Chillicothe under Colonel Bowman in July, 1779. In 1788 he conducted an expedition against the Northwestern tribes, burning their villages and destroying their crops. In 1792 he was a member of the convention that framed the first constitution for Kentucky.

Logan, JAMES, was born at Lurgan, Ireland, Oct. 20, 1674; died near Philadelphia, Oct. 31, 1751. He was an accomplished scholar and linguist. In 1699 he accepted the invitation of William Penn to become the secretary of his province of Pennsylvania; and when the proprietor returned to England in 1701, he left Logan intrusted with important executive offices, which he filled with zeal, ability, and good judgment. He was chief-justice of the province. On the death of Gordon (1736), so long the faithful guardian of the proprietor's rights, Logan, as president of the council, administered the government for two years. Logan was always the friend of the Indians. At his death he left his valuable library of two thousand volumes to the city of Philadelphia.

Logan, JOHN ALEXANDER, was born in Jackson County, Ill., Feb. 9, 1826. He served in the war against Mexico, rising from the rank of private to that of lieutenant and quartermaster. He was admitted to the practice of law in 1852;

JOHN ALEXANDER LOGAN.

was in the Illinois Legislature, and in Congress from 1859 to 1862. He was a private in a Michigan regiment at the battle of Bull's Run (July, 1861); returned to Illinois and raised a regiment, of which he was colonel; was wounded at Fort Donelson, and the following month (March, 1862) was made a brigadier-general. In April of the same year he was promoted to major-general, and commanded a division in the Vicksburg and Atlanta campaigns (1863-64). He was one of the most successful of the generals of volunteers in the war. In 1867 he was again sent to Congress, where he was distinguished as a fluent and vigorous speaker. He was one of the "managers" of the impeachment of President Johnson (which see).

Logan's Speech. James Logan, William Penn's provincial secretary, was a friend of the Indians, and Shikellimus, a converted Cayuga chief, gave to his son Ta-ga-jute the name of Logan. The latter became a chief among the Mingoes. A greater portion of his family were murdered by the white people on the banks of the Ohio in 1774. Revenge was fearfully aroused in his bosom, and on the war-path he gathered many scalps of white people as trophies of his valor and vengeance. He was invited to a conference with Lord Dunmore on the Scioto. He refused to have any friendly intercourse with a white man, but sent by the messenger (Colonel John Gibson, who married his sister) the following remarkable speech to the council: "I appeal to any white man to say if he ever entered Logan's cabin hungry and he gave him no meat; if he ever came cold and naked and he clothed him not. During the course of the last long and bloody war, Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they passed and said, 'Logan is the friend of the white man.' I had even thought to have lived with you

but for the injuries of one man. Colonel Cresap, the last spring, in cold blood and unprovoked, murdered all the relations of Logan, not even sparing my women and children. This called on me for revenge. I have sought it. I have killed many. I have fully glutted my vengeance. For my country, I rejoice at the beams of peace. But do not harbor the thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan? Not one!" Logan was mistaken; it was not Cresap who led the band of assassins. He was not then in that region. The speech was translated into English, and was pronounced inimitable for eloquence and pathos.

London's Address TO THE KING (1775). The continued news of the kindling of civil war in America excited the sympathies of the people and authorities of the city of London in favor of the long-suffering and long-forbearing colonists, and the citizens voted an address to the king, desiring him to consider the English people, "who had nothing to expect from America but gazettes of blood and unnatural lists of their slaughtered fellow-subjects," and prayed for a dissolution of the Parliament, and a dismissal of the present ministers. The king refused to receive the address, but it was entered on the records of the city and published by authority.

London Company. Twenty years after Raleigh's first attempt to establish a colony in America, Richard Hakluyt, prebendary of Westminster (see *Hakluyt, Richard*), incited several gentlemen, some of them personal friends of Raleigh, to petition King James I. to grant them a patent for planting colonies in North America. Raleigh's grant was made void by his attainder. (See *Raleigh*.) There was not an Englishman to be found in America then, and there was only one permanent settlement north of Mexico, that of St. Augustine. The petition was gladly received by the king, for reasons elsewhere stated (see *Virginia, Colony of*), and on the 10th of April, 1606, James issued letters-patent to Sir Thomas Gates, Sir George Somers, Richard Hakluyt, Edward Maria Wingfield, and others, granting to them a territory extending from latitude 34° to 45° north, together with all the islands in the ocean within one hundred miles of the coast. The object of the patent was "to make habitations and plantations," and to form colonies by sending English people into that portion of America "commonly called Virginia with the hope of Christianizing and civilizing the pagans there." The territory was divided into two districts, called, respectively, North and South Virginia. A supreme government of the domain was vested in a council, resident in England, to be named by the king; to be governed by laws which he should prescribe; and subordinate jurisdiction was committed to a council resident in Virginia. All the rights of citizenship were to be guaranteed to the colonists; besides this they would possess no political rights. Homage and rent were the prime conditions of the charter—rent in the form of one fifth of the net profits arising

from mines of precious metals. The charter had not the feature of a free government; for, to the emigrants, not a single elective franchise, or a right to self-government, was conceded. They were to be governed by a commercial corporation, of which they were not allowed to be members, and even in matters of divine worship they had no choice. The doctrine and ritual of the Church of England were to be the established theology and mode of worship in the American colonies, and no dissent was allowed. The colonists were permitted to coin money for their own use, to import necessities from England free of duty for seven years, and to take measures for repelling enemies. The proprietors of each section were invested with the right of property in the lands extending along the coast fifty miles each way from the point first settled respectively, and back one hundred miles from the coast. To an association of "noblemen, gentlemen, and merchants," chiefly residing in London, was granted a charter for the settlement of South Virginia. This was known as the "London Company." A similar charter was granted to "knights, gentlemen, and merchants," of Plymouth, Bristol, and other places in the west of England, and this was known as the "Plymouth Company." The king prepared a code of laws for the colonists, in which kindness to the Indians, regular preaching of the Gospel, and teaching religion to the pagans were enjoined; also providing for the well-ordering of a civil community. Under this charter, and laws and instructions from the king, presented in November, 1606, the London Company sent three ships with emigrants, from the Thames, on the 20th of December, under the command of Captain Newport, and they landed on the banks of the James River in May, 1607. (See *Virginia, Colony of*.) The company desired more the immediate profits from precious metals discovered than to found a commonwealth. Indeed, the class of men they sent over were totally unfit for such a noble service. The disappointed company demanded impossibilities. In 1608 they sent word to the colonists that, if they did not send them commodities sufficient to pay the charges of the voyage in which their demand was sent (\$10,000); a "lump of gold, the product of Virginia; assurance of having found a passage to the Pacific Ocean, and also one of the lost colony sent to Roanoke," they should be "left in Virginia as banished men." To this absurd demand and threat Captain Smith made a spirited answer, in which he implored them to send better emigrants if they expected the fruits of industry. The company now sought strength by influential alliances, and they succeeded in associating with them wealthy and powerful men in the kingdom. In the spring of 1609 the company was composed of twenty-one peers, several bishops, ninety-eight knights, and a multitude of professional men, "gentlemen," and merchants. They thus obtained great influence in Parliament, and in May (1609) they procured a new charter, under the title of "The Treasurer and Company of Adventurers and Planters of the City of London for the First Col-

ony in Virginia," by which the border of the domain was extended, by a grant of new territory, northward to Chesapeake Bay; the offices of president and council in Virginia were abolished, and all laws for the government of the colony were to be passed by the Supreme Council in England, and administered by persons appointed by that body. The colonists were really vassals, without any recognized power to remove the yoke from their necks. The rule of the appointed governor was absolute, and they were compelled to share a certain portion of their net earnings with the proprietors. In 1612 a third charter was obtained by the London Company, by which the control of the king in their affairs was annulled, the Supreme Council was abolished, and the whole company, sitting as a democratic assembly, elected the officers and ordained laws for the colonists, who remained without political rights. In spite of their disabilities, the Virginians flourished under the new order of things. The seeds of representative government were then sown, and in 1621 the company gave the colonists a written constitution that conferred the privilege of the elective franchise in a limited degree. The company had now borne a heavy burden a long time, and was approaching final dissolution. The king became jealous of the personal strength of the corporation and the republican spirit manifested in the colonies, and in May, 1623, he took high-handed measures against the company. He appointed a commission to examine the transactions of the corporation from the beginning and to report to the Privy Council. All their charters, books, and papers were seized; two of the principal officers were arrested, and all letters from the colony were intercepted and taken to the Privy Council. Captain Smith's testimony was damaging to the company. The report was kept a secret until the company received a notice from the king and Privy Council (October, 1623) that it was judged that the misfortunes to Virginia had been occasioned by their mismanagement, and that the sovereign had determined to revoke the old charter and issue a new one which would concentrate the power of government in a few hands. The astonished company indignantly refused to sanction the stigma affixed to their conduct by this order, or to consent to a change in the popular form of their government. They declared themselves prepared to defend their rights against any measures the king might decide on. Incensed by their audacity, James directed a writ of *quo warranto* to be issued against the company, to try the validity of the charter in the Court of King's Bench. The company, hopeless of obtaining justice in that court, appealed to the House of Commons for redress. They sympathized with the company, but their session was too near its close to allow them to enter into inquiries. The exasperated king launched a proclamation (July 4, 1624), suppressing the courts of the company and committing the temporary management of colonial affairs to members of the Privy Council. The contest resulted in the vacation of the charter, by order of the

Court of King's Bench, the dissolution of the London Company, and Virginia becoming a royal province. (See *Virginia, Colony of*.) It had been an unprofitable speculation for the members of the company. They had spent \$500,000 of their own fortune in establishing the first permanent English colony in America. They had sent nine thousand persons there; when the company dissolved not more than two thousand remained. The annual value of exports to England, from Virginia, did not exceed \$100,000. Ten different persons had served as governors of Virginia during the eighteen years of the existence of the London Company.

London Company, SECOND CHARTER OF THE, was obtained from King James (May 23, 1609) with more ample privileges. With augmented numbers, wealth, and reputation, the company pressed forward. It was made "one body, or commonalty, perpetual," and was incorporated by the title of "The Treasurer and Company of Adventurers and Planters of the City of London for the First Colony in Virginia." The former charter seemed to give them only a deed of trust; this gave them absolute property. The domain included the region from Old Point Comfort, at the mouth of the James River, southward along the coast two hundred miles, and northward from the same point two hundred miles, and westward to the Pacific Ocean. Thomas West (Lord Delaware) was appointed Governor of Virginia for life; Sir Thomas Gates, his lieutenant; Sir George Somers, Admiral; and Christopher Newport, Vice-admiral.

London Company, THE, applied to the Long Parliament (1642) for the restoration of their charter. The opposition of the Virginians defeated the project, for they were loyal to the king, who was then in arms against the Parliament.

London Company, THIRD CHARTER OF THE. On March 12, 1612, King James gave the company a new charter, which confirmed all their former privileges and granted them more extensive property and more ample jurisdiction. By it all the islands lying within three hundred leagues of the coast were annexed to the province of Virginia. The Bermudas, lying within these limits, were sold by the company to one hundred and twenty of its own members, who, in honor of Sir George Somers (which see), named them Somers's Isles, or the Somer Islands. To these islands they now sent the first colony of sixty persons, with Richard Moore as their governor.

Long, ELI, was born in Woodford County, Ky., June 27, 1836; was educated at a military school in Frankfort, Ky.; and in 1856 was made lieutenant of United States cavalry. He served in campaigns against the Indians, and in May, 1861, was made captain. He did good service throughout the Civil War, rising rapidly until he commanded a division; and in March, 1865, he was breveted major-general United States Army. Retiring in August, 1867, on account of disability from wounds, he was made a major-general United States Army.

Long Island, BATTLE OF. On the 1st of August, 1776, the army of Washington at New York did not exceed 20,000 men, of whom one fifth were sick and as many more absent on detached duty. Soon afterwards 7000 militia reinforced him, and later on a few more came. But they were poorly equipped, very little disciplined, distracted by sectional jealousies, and, in the New England troops especially, there was so much democratic freedom that there was little subordination. On the whole, it presented a very unpromising force with which to oppose the British veterans, greater in numbers, then preparing to invade Long Island and attempt the capture of New York and Washington's army. General Howe had been reinforced by Hessians (see *German Mercenaries*), the troops under Clinton from Charleston, and others, making a total force of about 24,000, encamped on Staten Island. Admiral Howe sent some armed ships up the Hudson to reconnoitre and take soundings. They passed the batteries at Fort Washington and elsewhere, and, having narrowly escaped some fire-ships and accomplished their errand, they returned to the fleet. Divining the purpose of the British, Washington sent a considerable force, under General Greene, to Long Island, who cast up strong intrenchments back of Brooklyn; but he was soon compelled to retire, on account of sickness, and leave the command to General Sullivan. There was a range of thickly wooded hills, extending from the Narrows to Jamaica, through which several roads passed; while another extended near the shores of the bay, from the Narrows to Brooklyn. These passes through the hills were imperfectly guarded by Sullivan, when, on the morning of Aug. 22, about 15,000 British and German troops landed on the western end of Long Island and prepared to move forward. Washington sent reinforcements to Sullivan, and General Putnam was placed in chief command on the island, with instructions to thoroughly guard the passes in the hills. The whole American force on the island did not exceed 8000 men, and 2500 of these were sent to guard the passes. On the 26th the British moved forward, under the chief command of Sir Henry Clinton and Lord Cornwallis, followed by the Germans, under General de Heister. The combined forces formed a thoroughly disciplined army. It was obvious that they intended to gain the rear of the Americans by the Bedford and Jamaica passes. At three o'clock on the morning of the 27th word reached Putnam that his pickets at the lower pass (below the present Greenwood Cemetery) had been driven in. He immediately sent General Lord Stirling with some Delaware and Maryland troops to repulse the invaders. He was followed by General Parsons with some Connecticut troops. Beyond Gowanus Creek, Stirling found himself confronted by overwhelming numbers under General Grant, with some of Howe's ships on his right flank. At the same time the Germans, under De Heister and Knyphausen, were moving to force their way at the pass farther eastward (now in Prospect Park); while Howe, with the main body

of the British, under Clinton and Cornwallis, was pressing towards the Bedford and Jamaica passes to gain the rear of the Americans. Putnam had neglected to guard the latter pass. When, at eight o'clock, the invaders had reached those passes, not more than 4000 men were out of the lines at Brooklyn; and, instead of ordering Stirling to fall back from almost certain destruction, he allowed Sullivan to go out with a few troops and take command at the pass below (now in Prospect Park), not nearly so important. The consequence was that, while Sullivan was fighting the Germans, Clinton had gained his rear and fell upon him. It was a surprise. Sullivan was driven back upon the Germans. After a severe hand-to-hand fight, and seeing no chance for success or an orderly retreat, Sullivan ordered his men to shift for themselves. Some fought through the attacking lines; some fled to the woods; and many were made prisoners; while Sullivan, hidden in a field of corn, was captured. Stirling and his party were now the only unbroken body of Americans in the field, and they fought with spirit four hours. Then, hopeless of receiving reinforcements, and seeing a strong body of the British approaching his flank and rear, he ordered a retreat. The bridge across Gowanus Creek (on the border of which he was fighting, near where the old mill stood in 1850) was in

BROWER'S MILL IN 1850.

flames, and his troops were compelled to wade the water and the oozy morass. Even that passage was about to be cut off by the enemy, led by Cornwallis. Quickly ordering the Delaware and Maryland troops to ford the creek and morass with some German prisoners, he, with the remainder, fought Cornwallis desperately until all the others had crossed excepting seven, who were drowned. No longer able to resist the pressure, Stirling and his men were made prisoners. The loss of the Americans did not exceed 1000, of whom one half were prisoners. Howe did not follow up his advantage, but allowed the American army on Long Island to retreat in safety to New York. (See *Retreat from Long Island*.)

Long Parliament, THE. Charles I. of England, who attempted to rule that realm without a parliament, was compelled, in 1640, to call one, which became a long-existing body, and one of the most remarkable in the history of England. It first met Nov. 3, 1640, and was dissolved by Cromwell April 20, 1653. A large number of its members were Puritans, and almost all of them

were opposed to the tyrannous measures of the king. They entered at once on the redress of grievances, and in the course of eighteen months assumed the entire political control and authority of the kingdom. Among their earlier acts was a resolution that the English-American colonists should enjoy all their liberties according to their patents. Exercising equal liberality towards English subjects at home caused almost a total cessation of emigration to America. About twenty-five thousand British emigrants had then been received in America, and east of the Hudson River were then twelve independent communities, comprising not less than fifty towns or distinct settlements.

Long, PIERCE, was born at Portsmouth, N. H., in 1739; died there, April 3, 1789. He was a member of the Provincial Congress of New Hampshire in 1775, and became colonel of a regiment, which he commanded in the retreat from Ticonderoga in July, 1777. He defeated a pursuing British force at Fort Anne, and was serving as a volunteer at the time of the surrender of Burgoyne. Colonel Long was in Congress from 1784 to 1786; a state councillor from 1786 to 1789; and Collector of the Port of Portsmouth at the time of his death.

Longfellow, HENRY WADSWORTH, LL.D., was born at Portland, Me., Feb. 27, 1807, and graduated at Bowdoin College in 1825. He is a descendant of William Longfellow, of Newbury, Mass., and on his mother's side from John Alden, a passenger in the *Mayflower*. He studied law a short time, when he received the appointment of Professor of Modern Languages in his *alma mater*. To better fit himself for the duties,

HENRY WADSWORTH LONGFELLOW.

he spent three years and a half in Europe, and assumed the functions of his office in 1829. In 1835 he was chosen Professor of Belles-Lettres in Harvard University, and again he made a

pilgrimage to Enrope to make himself familiar with Continental literature. In the spring of 1836 his wife, who accompanied him, died in Rotterdam. He was again married in 1843. For nearly twenty years he was a professor in Harvard College, retiring from that post in 1854, and pursued the delightful task of literary composition in his fine old mansion at Cambridge, which Washington had used for his headquarters in 1775-76. He first wrote timidly for literary periodicals, and the first seven articles in a collection published in 1857 were written before he was nineteen years of age. Among these is his exquisite *Hymn of the Moravian Nuns*. He also wrote prose essays for the *North American Review* and other periodicals. In his later years, Mr. Longfellow has been a fruitful poet, in quality and quantity, and from the day of his majority his fame was assured by the approval of the best literary critics. The most popular of his poems, and deservedly so, are his *Excelsior*, *Psalm of Life*, *Evangeline*, and the *Song of Hiawatha*. An analytical list of Mr. Longfellow's works down to 1870 may be found in Allibone's *Critical Dictionary of English Literature*, etc. Some of Mr. Longfellow's later poems are translations from the modern languages of Europe, and these are models. "As a translator," says a critic, "he has succeeded admirably in preserving the spirit of the originals, and as a poet he appeals to the universal affections of humanity by the thoughts and images derived from original perceptions of nature and life." As an indication of the popularity of Mr. Longfellow, the sales of his poetical compositions had amounted in 1857 (when he was fifty years of age) to 293,000 copies, and his prose productions to 32,550 copies. Since that time the number has probably been increased to half a million. The sales in England, where he is as popular as in America, have been very large. His translation of Dante, in three volumes (1867-70), is regarded by good judges as the best in the English language.

Longfellow, STEPHEN, LL.D., was born at Gorham, Me., June 23, 1775; died Aug. 2, 1849. He graduated at Harvard, and was admitted to the bar in 1801. In 1814 he was a delegate to the Hartford Convention (which see), and was a member of Congress from 1823 to 1825. In 1834 he was President of the Maine Historical Society.

Longstreet, JAMES, was born in Alabama in 1820, and graduated at West Point in 1842. He served in the war against Mexico (1846-48), in which he was severely wounded, and was distinguished for bravery. He held the rank of major when the Civil War broke out, and, joining the insurgents, was made a brigadier in the Confederate army in October, 1861. All through the Civil War he was regarded as one of the ablest of the Confederate military leaders, and as Lee's "right hand." After the failure of the cause he had supported he became loyal to the government, and received appointment to office under it.

Longwoods, BATTLE OF. Captain Holmes, of

the Twenty-fourth United States Infantry, proceeded (Feb. 27, 1814) with a party of about one hundred and sixty rangers and mounted men against some of the British posts in Upper Canada. At Longwoods, on the Thames, he had a very sharp battle, on March 4, with the British, who, after an hour of hard fighting, ordered a retreat. Their loss was sixty-five killed and wounded, besides Indians. The loss of the Americans was seven men.

Longworth, NICHOLAS, was born at Newark, N. J., Jan. 16, 1782; died in Cincinnati, Feb. 10, 1863. In early life he was clerk in a store of an elder brother in South Carolina, but emigrated to Cincinnati at the age of twenty-one years, when that place was not much more than a hamlet. He studied law, which he practised there for twenty-five years, and invested money in lands, long since covered by the rapidly growing city. He finally turned his attention to the cultivation of grapes, first raising foreign vines and then the native Catawba and Isabella. He produced very fine wine from the latter. At one time he had two hundred acres of vineyard and a wine-house. At his death, Mr. Longworth's property was estimated at \$15,000,000.

Lookout Mountain, BATTLE ON. General W. T. Sherman had arrived near Chattanooga late in November, 1863. It was important to get his army over the river without being discovered. To attract the chief attention of the Confederates to another quarter, Hooker was ordered to attack them on the northern face of Lookout Mountain. His entire force consisted of nearly ten thousand men. The main Confederate force was encamped in a hollow half-way up the mountain, and the summit was held by several brigades. Their pickets held a continuous line along Lookout Creek, with reserves in the valley. Hooker moved to the attack on the morning of Nov. 24. Geary, supported by Cruft, marched to Wauhatchie and

JAMES LONGSTREET.

crossed Lookout Creek there, while the rest of the troops crossed in front of the Confederates on temporary bridges. A heavy mist enveloped mountain and plain. Geary crossed at eight

o'clock, seized a picket-guard of forty men, and extended his line to the foot of the mountain. Gross's brigade seized the bridge below the railway-crossing, and T. J. Wood's brigade crossed half a mile above. Two batteries had been planted on a hill near, and by eleven o'clock Hooker was endeavoring to drive the Confederates from the mountain. His adversary in immediate command before him was General Walhall. Hooker's guns all opened at once on the breastworks and rifle-pits along the steep wooded acclivity. The brigades just mentioned formed a junction, and, sweeping everything before them, captured the rifle-pits, allowing but few men to escape up the mountain. At the same time the troops scaled the rugged heights, cutting their way through felled trees, and driving the Confederates from the hollow

established his line on the easterly face of the mountain; so that, by an enflading fire, he completely commanded the Confederate defences, stretching across the Chattanooga valley to Missionaries' Ridge. A National battery on Moccasin Point, fifteen hundred feet below the crest of Lookout Mountain, had dismounted a gun in a battery on that crest.

Lopez, NARCISO, was born in Venezuela in 1799; executed at Havana, Sept. 20, 1851. He was a merchant in early life. He first sided with the revolutionists in 1814, but afterwards enlisted in the Spanish army, and was a colonel in 1822. He went to Cuba, and became conspicuous as a liberal in politics. Going to Spain, he became a senator for Seville, which office he resigned because delegates from Cuba were not admitted. On his return to Cuba he was in the employ of the government for a while; but in 1849 he came to the United States and organized a force for revolutionizing Cuba and effecting its independence. He failed in an attempted invasion, and, landing again in Cuba with an invading force, he was soon captured and garroted.

Lord Charles Hay and Lord Loudoun.

When the Earl of Loudoun, on July 9, 1757, had assembled his whole armament, consisting of ten thousand soldiers, sixteen ships of the line, several frigates, and many transports, for an attack on Louisbourg, it was believed an immediate assault would be made. The troops were landed, and set at work levelling the earth and cultivating a vegetable garden; and in these labors and in the exercise of sham-fights almost a month was spent. The army became dispirited, and its officers exasperated. One day, when Major-general Lord Charles Hay was sitting under a tree near the sea-shore, discussing army matters with his fellow-officers, his indignation at the delay became uncontrollable, and, springing to his feet, he exclaimed, as he pointed towards a noble ship lying near and to the idle camp not far off, "See how the power of England is held in chains by imbecility! Her substance is wasted by indecision! With such ships and such men as we have here, led by an energetic and competent commander,

Cape Breton and its fortress, and all this eastern region, might have been a part of the British empire a month ago." For these brave words Lord Hay was arrested by Loudoun, sent to England, tried by court-martial, and acquitted of all blame. The president of the Board, while putting a question to Lord Hay, fell from his seat in an apoplectic fit and died.

Lord Hillsborough and Colonial Agents.

On Dec. 6, 1768, the Secretary for the Colonies met the several colonial agents in a body, to communicate to them the result of a cabinet council. He said: "The administration will enforce the authority of the Legislature of Great Britain over the colonies in the most effectual manner, but with moderation and lenity. All the petitions we have received are very offensive,

SLOPE OF LOOKOUT MOUNTAIN.

to a plateau well up towards the crest and forcing them around towards the Chattanooga valley. At the same time Freeland's brigade was rolling them up on the flank. The struggle on the mountain-sides, in a dense fog (or, rather, a *cumulus* cloud) that hid the combatants from view, was fierce. It was, literally, a "battle in the clouds." At considerably past noon the plateau was cleared, and the Confederates were flying in confusion down the precipitous ravines and rugged slopes towards the Chattanooga valley. All the morning, while the battle was raging, so thick was the cloud on the mountain that only at intervals could the straining eyes of spectators at Chattanooga and on Orchard Knob, listening to the thunders of the artillery, catch a glimpse of the lines and banners. Hooker es-

for they contain a denial of the authority of Parliament." (See *American Petitions Rejected*.) He disapproved of some of the late acts of a commercial nature, and said the Duty Act would have been repealed, had the Americans opposed it on the ground of its inexpediency. "But," he said, "the principle you proceed upon extends to all laws; and we cannot, therefore, think of repealing it, at least this session of Parliament, or until the colonies shall have dropped the point of right. Nor can the conduct of the people of Boston pass without censure." Against this actively patriotic town ministerial wrath was chiefly directed. Hillsborough, in the House of Lords, expressed a hope that no one would move or think of a repeal of the late acts while the present attitude of the Americans lasted. "The notion of the Americans," he said, "is a polytheism in politics—absurd, fatal to the constitution, and never to be admitted." He truly said, it was not the amount of revenue to be obtained by taxation from the colonies (about \$50,000 a year) that they opposed, but the principle upon which the tax was levied. He closed his speech by offering a series of resolutions for coercing the colonies into submission. Choiseul (which see), watching the course of British legislation, said: "Under the semblance of rigor, it covers pusillanimity and fear. If those who are threatened with a trial for high-treason are not alarmed, the lesson and discouragement will affect nobody but the British ministers." (See *Henry VIII., Statute of*.)

Lord North's Proposition. In February, 1775, the information received from Franklin disheartened Lord North, and he dreaded a war with the colonists which his encouragement of the king's obstinacy was provoking, and, armed with the king's consent in writing, he proposed, in the House of Commons, a plan of conciliation. It was on the general plan, if the colonies would tax themselves to the satisfaction of the ministry, Parliament would impose on them no duties except for the regulation of commerce. "Whether any colony will come in on these terms I know not," said North, "but it is just and humane to give them the option. If one consents, a link of the great chain is broken. If not, it will convince men of the justice and humanity at home, and that in America they mean to throw off all dependence." This yielding of Parliament to the colonies could not be tolerated by the ultra ministerial party, and a wild storm of opposition ensued; but Lord North, with the assistance of the king, finally subdued it, and the Commons consented. When Vergennes, the French Minister for Foreign Affairs, heard of these proceedings, he said, "Now, more than ever, is the time for us to keep our eyes wide open"—for the French court had resolved to promote the quarrel until the colonists should become independent, and so weaken the British empire by dismemberment.

Lord North's Remorse. It is said that, in his old age, Lord North often became low-spirited on account of his having yielded his con-

science to the will of the king, and remaining in the administration after he became satisfied that the war was unjust, and that peace ought to be made with the Americans. This thought disturbed him more than did his blindness.

Loring, JOSHUA, was born in Massachusetts; died at Highgate, Eng., in 1781. He was made captain in the Royal Navy in 1757, and in the French and Indian War (which see) he was naval commander in the operations on lakes Champlain and Ontario, accompanying Amherst to Montreal in 1760. His son was high-sheriff of Massachusetts.

Loring, WILLIAM W., was born in North Carolina in 1815; commanded a detachment of volunteers in Florida (1835-42), and afterwards mounted riflemen in the war against Mexico, where he lost an arm, and was breveted colonel. He was afterwards colonel of a regiment fighting the Indians in New Mexico. He left the army, joined the Confederates, was made a brigadier-general, and afterwards major-general. He was conspicuous in the Vicksburg campaign.

Loss of Life during the Civil War. It is estimated that full 300,000 Union soldiers perished during the war. Of these, 60,000 were killed in the field, and about 35,000 mortally wounded. Disease in camps and hospitals slew 184,000. Full 300,000 Confederate soldiers also lost their lives in the conflict. The number of men, in both armies, who were crippled or permanently disabled by disease, was estimated at 400,000. The actual loss to the country of able-bodied men, in consequence of the slaveholders' rebellion, was fully a million.

Lost Cause, THE. Those who engaged in the war for the destruction of the Union (1861-65), and failed to accomplish their purpose—failed in efforts to build from the ruins of the Republic a commonwealth or an empire whose corner-stone should be slavery—spoke of it as "The Lost Cause."

Lost Colony, THE. John White, whom Sir Walter Raleigh had sent to Virginia with some colonists, to be their governor, had with him his daughter, Mrs. Dare. (See *Dare, Virginia*.) White went back to England for supplies, and was detained a long time. When he returned to Roanoke Island, the colony he had left there had disappeared. With nineteen men, in two boats, he went in search of them. The colonists had agreed with White, when he left for England, to write or carve on the trees or posts of the doors the name of the place to which they had emigrated, if they should leave, for they were then preparing to go to a place fifty miles into the mainland. It was also agreed, in case they should be in distress, that they should carve a cross over the letters. As White and his friends ascended the bank at the site of the settlement, they found carved upon the trunk of a tree, in fair Roman letters, CROATAN, but, to their great comfort, they saw no sign of distress. The houses had been taken down, and the place strongly palisaded. They determined to sail for Croatan the next morning. A tempest arose,

the ship parted her cables, their provisions and fresh water were scanty, and they concluded to sail to the West Indies, remain there through the winter, and go to Croatan in the spring. But they were compelled to return to England. The colony was never heard of afterwards. It is asserted that some of the Hatteras Indians, of a subsequent generation, had light complexions, and their faces resembled the English type, and it is supposed the colony became amalgamated with the Hatteras tribe on the eastern coast of North Carolina.

Lost Prince, THE. (See *Williams, Eleazar.*)

Loudoun (Lord) and the Mayor of New York. According to his instructions, the Earl of Loudoun (which see) demanded of the authorities of New York city free quarters for himself, his officers, and one thousand men. "Your demand is contrary to the laws of England and the liberties of America," said the mayor of the city. "Free quarters are everywhere usual. I assert it on my honor, which is the highest evidence you can require," answered the haughty earl. The mayor was firm, and Loudoun determined to make New York an example for the rest of the continent. When the citizens, by the lips of the mayor, pleaded their rights as Englishmen, his lordship, with a vulgar oath, said to the magistrate, "If you don't billet my officers upon free quarters this day, I'll order here all the troops under my command, and billet them myself upon the city." A subscription for the purpose was raised, the officers were billeted on the city, and there Loudoun won his first victory. A similar contest, with a similar result, occurred in Philadelphia, and there Loudoun won his second and last victory in America.

Loudoun (John Campbell), FOURTH EARL OF, was born in Scotland in 1705; died April 27, 1782. In 1756 he was appointed governor of Virginia and commander-in-chief of the British forces in America. Leaving his lieutenant, Dinwiddie, to govern the province, he paid attention to military affairs, in which his indolence, indecision, and general inefficiency were most conspicuous, and worked disasters. Franklin said of him, "He is like little St. George on the signboards, always on horseback, but never goes forward." He was recalled in 1757, and returned to England. In 1758 he was made lieutenant-general, and in 1770 general.

Loudoun's Plantation. (See *Massachusetts, First Royal Charter for.*)

Louis XVI. of France, was born in Versailles, Aug. 23, 1754; was beheaded in Paris, Jan. 21, 1793. He was a grandson of Louis XV. and of a daughter of Frederick Augustus, King of Poland and Elector of Saxony. His father dying in 1765, he became heir presumptive to the throne of France, which he ascended on the 10th of May, 1774, with the beautiful Marie Antoinette, Archduchess of Austria, whom he married in May, 1770, as his queen. Louis was amiable, fond of simple enjoyments, and was beloved by his people. Through bad advisers and the wickedness of demagogues, he was placed

in seeming opposition to the people when his heart was really with them, and the madmen of France, who ruled the realm during the Reign of Terror, brought both Louis and his beautiful

LOUIS XVI.

queen to the scaffold. They went through the farce of a trial after arraigning the king on a charge of treason, found him guilty, of course, and beheaded him by the guillotine, with accompaniments of vulgar cruelty. His death was seriously mourned. He was weak, but not wicked. His friends dared not make any public demonstrations of grief, or even of attachment, at the time. A small commemorative medal of brass was struck, and secretly circu-

MEMORIAL MEDAL.

lated. These were cherished by the loyalists with great affection. Upon this medal—over a funeral urn from which a crown and sceptre had fallen—were the significant words, "SOL REGNI ABIT"—"The sun of the kingdom has departed." King Louis was closely identified with the Americans in their struggle for independence, consenting, through the influence of his chief minister, Vergennes, to give material aid, and make a treaty of friendship and alliance with them. Personally, he despised republicans, and could never hear with patience Dr. Franklin spoken of in words of praise, while his queen was a great admirer of the philosopher and statesman.

Louisburg. The fortress of Louisburg, on the Island of Cape Breton, was built by the French soon after the Treaty of Utrecht, in 1713. Its cost was great, its strength enormous, and so long as the French held it it would be a source of annoyance to New England and of support to Canada. When, in 1746, France declared war

against Great Britain (see *King George's War*), Governor Shirley, of Massachusetts, perceived the great importance of driving the French from it. He proposed to the Massachusetts Legislature the bold project of attempting its capture, and after some hesitation a colonial expedition for the purpose was authorized (Jan. 25, 1745) by a vote of a majority of one. A circular letter, soliciting aid, was sent to all the colonies as far south as Pennsylvania. The latter voted £4000 currency, to purchase provisions. New Jersey furnished £2000 towards the expedition, but declined to furnish any men. The New York Assembly contributed £3000 currency, but Governor Clinton sent, besides, a quantity of provisions purchased by private subscription and ten 18-pounders from the public magazine. Connecticut voted 500 men, led by Roger Wolcott (afterwards governor), who was appointed second in command of the expedition. Rhode Island and New Hampshire each raised a regiment of 300 men. As was to be expected, the chief burden of the expedition was borne by Massachusetts. Much interest was manifested everywhere. In seven weeks an army of 3250 men was enlisted, transports were procured, and an ample quantity of bills of credit issued to pay the expense. Massachusetts provided ten armed vessels. The chief command of the expedition was given to William Pepperell, of Maine. Whitefield, who was then making his third preaching tour throughout the colonies, successfully advocated the expedition, and suggested the motto of the New Hampshire regimental flag—"NIL DESPERANDUM CHRISTO DUCE"—"Nothing is to be despaired of with Christ for a leader." It assumed the character of an anti-papist crusade. One of the chaplains, a disciple of Whitefield, carried a hatchet, provided to hew down all images in the French churches. "Louisburg must be subdued," was the thought of the New-Englanders. Commodore Warren, in the West Indies, refused to co-operate with his fleet until he received express orders to do so. The expedition sailed from Boston April 4, 1745, and at Canseau they were unexpectedly joined by Warren on the 9th of May. The combined forces (4000 troops) landed (April 30) at Gabarus Bay, not far from Louisburg, and their sudden appearance there was the first intimation the French had of the near approach of danger. Consternation prevailed in the fortress and town. The canuons on shore, commanded by Richard Gridley, were dragged, with provisions, on sledges, over a morass; trenches were dug, batteries were erected, and a regular siege was commenced on the 1st of May (N. S.). Commodore Warren captured a French man-of-war of 64 guns, with over 500 men and a large quantity of stores for the garrison. Other English vessels of war arrived, and the fleet and army prepared to make a final and combined assault. The French, despairing of receiving any aid from France, surrendered the fortress and town of Louisburg and the Island of Cape Breton to the English on the 17th of June, after a siege of forty-eight days. The Island of St. John was also surrendered. The

capitulation included 650 soldiers of the garrison and 1300 inhabitants of the town of Louisburg, all of whom were to be shipped to France. (See *King George's War*.) The British government reimbursed the expenses of the expedition incurred by Massachusetts.

Louisburg, CAPTURE OF (1758). The zeal of the New-Englanders in raising a force to capture Louisburg was intense. Massachusetts voted 7000 men, besides 600 maintained for frontier defence. The advances made by the province during that year were not less than \$1,000,000. The tax on real estate amounted to two thirds of its value. Connecticut voted 5000 men, and New Hampshire and Rhode Island furnished 1000 more between them. The people were alive with enthusiasm, and the New England provinces raised 15,000 men. Boscawen arrived at Halifax early in May with about forty armed vessels, bearing a land force of over 12,000 men, under General Amherst as chief, and General Wolfe as his lieutenant. The armament left Halifax May 28, and the troops landed on the shores of Gabarus Bay (June 8) without much opposition, within a short distance of the fort. Alarmed by this unexpected and powerful display, the French almost immediately deserted their outposts, and retired within the fortress and the town. They made a vigorous resistance to the besiegers for almost fifty days. When all the shipping in the harbor was lost to the French, they surrendered the town, the fort, the islands of Cape Breton and St. John (now Prince Edward), and their dependencies (July 26, 1758). The garrison became prisoners of war. The spoils of victory were more than 5000 prisoners and a large amount of munitions of war. The garrison lost about 1500 men, and the town was made a ruin. So ended the attempts of the French to settle in and near the Gulf of St. Lawrence. That region passed into the permanent possession of the English. With the fall of Louisburg the power of France in America began to wane, and its decline was rapid.

Louisburg, EXPEDITION AGAINST (1757). The capture of Louisburg was Lord Loudoun's first care in the campaign of 1757. (See *French and Indian War*.) He found himself at the head of 6000 provincials on the 1st of June. He sailed from New York on the 20th, and arrived at Halifax on the 30th, where he was joined by Admiral Holborne, with a powerful naval armament and 5000 troops from England. The combined forces were about to sail for Louisburg when information reached Loudoun that 6000 troops were in the fortress there, and that a French fleet, larger than that of the English, was lying in that harbor. The latter had gained this position while the indolent Loudoun was moving with his accustomed slowness. The enterprise was abandoned, and Loudoun returned to New York (Aug. 31) with intelligence that had met him on the way of defeat and disgrace to the English arms in the north.

Louisiana was first visited by La Salle (which see), who discovered the mouth of the Mississippi (1691), and took possession of the country

in the name of Louis, King of France. Settlements were soon afterwards formed. (See *Iberville, Orleans*.) In 1712 Louis XIV. named the region Louisiana, in honor of himself, and granted it to M. Crozat. (See *Crozat and Louisiana*.) The territory was granted to "The Western Company" (which see) in 1717. (See also *Mississippi Scheme and Law's Bubble*.) The French remained in possession until 1762, when they ceded it to Spain. In 1800 it was retroceded to France, and in 1803 it was bought from the latter by the United States for \$15,000,000 (see *Louisiana, Purchase of*), and the American flag was first raised in New Orleans on the 20th of December, 1803. In 1804 the territory was divided into two governments—namely, "Territory of Orleans" and "District of Louisiana." The former entered the Union as the State of Louisiana April 8, 1812, and the name of the latter was changed (June 4, 1812) to Missouri. At the close of 1814 Louisiana was invaded by British troops, but they were speedily driven away. (See *Battle of New Orleans*.) So soon as the election of Mr. Lincoln was known the Governor of Louisiana took measures looking to the secession of the state from the Union. A convention assembled Jan. 8, 1861, and on the 26th passed an ordinance of secession. (See *Louisiana Ordinance of Secession*.) The public property of the national government was seized by the state authorities. In the spring of 1862 an expedition under General Butler and Admiral Farragut captured all the defences on the Mississippi below New Orleans and took possession of the city. (See *Capture of New Orleans*.) The state became the theatre of stormy events during the Civil War. (See *Bank's Red River Campaign, Port Hudson*.) On Dec. 4, 1862, two congressional districts, under the control of National troops, were permitted to elect delegates to Congress, and Benjamin F. Flanders and Michael Hahn were chosen and took their seats. Local courts were organized under military rule, and in November, 1862, a provisional court for the state was organized by the President. In April, 1863, he appointed judges of the Supreme Court. Late in 1863 an election of state officers was held in a portion of Louisiana, which in 1860 contained 233,000 inhabitants. Michael Hahn was elected governor, and inaugurated March 4, 1864, and on the 15th was made military governor likewise. In April a convention adopted a constitution abolishing slavery and providing for the education of both races, which was ratified in September, when five Congressmen (Unionists) were chosen. The Legislature ratified the thirteenth amendment to the national Constitution, but the Senators and Representatives of Louisiana were not admitted to seats in Congress, and the state was placed under military rule in 1867, Louisiana and Texas constituting one military district. Early in 1868 a convention in New Orleans formed a state constitution, which was ratified on the 17th and 18th of April, and Henry C. Warmouth (Republican) was elected governor. By act of Congress (June 25, 1868) Louisiana delegates were admitted to seats in that body. Soon afterwards

the State Legislature ratified the Fourteenth Amendment to the national Constitution and chose United States Senators. The Fifteenth Amendment was ratified by the same body March 1, 1869. Since the reorganization the state has been almost continually agitated by political excitement arising from the friction produced by the equality of the white and black races before the law.

Louisiana and Bonaparte. When Bonaparte became actual ruler of France as First Consul he felt an ardent desire to re-establish the colonial empire of his country, and with that view he obtained from Spain (1800) the retrocession of Louisiana, which had passed from the French in 1762. Bonaparte had formed a plan for taking immediate possession of New Orleans by an armed expedition. Livingston, the American minister in France, advised his government of this expedition, and declared that it would not only oppress American commerce on the Mississippi, but that attempts would be made to seize Natchez, and to carry out the plan of Genet and his successors in corrupting the Western people and dismembering the Union. Before the letter of Livingston had been received, the Spanish intendant at New Orleans, as if anticipating the wishes of Bonaparte, had issued a proclamation interdicting the privilege secured to the Americans by the treaty of 1795 of depositing merchandise at New Orleans. This interruption of their commerce on the great river produced a great commotion in the West. It was in this excited state of the public mind that the Seventh Congress assembled (Dec. 7, 1802) for its second session, and the state of affairs in the Southwest occupied their earnest attention. President Jefferson, alive to the interests, independence, and power of his country, wrote an able letter to Livingston, suggesting that France might be willing to cede a portion of Louisiana, especially the island of New Orleans, to the United States, and thus remove all cause for irritation between the two governments. This suggestion led to the purchase of the domain by the United States (1803) for \$15,000,000. (See *Louisiana, Purchase of*.)

Louisiana and the French. In 1730 the Company of the Indies reconveyed Louisiana to the King of France, and it was taken possession of by the commissary-general in the name of that monarch. The same year the French, in pursuance of their design to confine the English to the seaboard region, advanced up Lake Champlain, within the Province of New York, and began a settlement on the east side of the lake.

Louisiana Ceded by Spain to France. On Oct. 1, 1800, a treaty was concluded at St. Ildefonso between France and Spain, by which, under certain conditions, the sovereignty and property of Louisiana were ceded to France by Spain, when the Republic of France re-entered into possession of that American province.

Louisiana Delivered to Spain. On Oct. 21, 1764, the King of France gave orders to his director-general and commandant for Louisiana to deliver up to the King of Spain all the French

possessions in North America not already ceded to Great Britain. These orders were given in consequence of an act passed at Fontainebleau on Nov. 3, 1762, by which the French king ceded to the King of Spain, and to his successors, "the whole country known as Louisiana, together with New Orleans, and the island on which the said city is situated," and of another act passed at the Escorial on Nov. 13, in the same year, by which his Catholic majesty accepted that cession.

Louisiana, INVASION OF (1814). When Jackson returned to Mobile (Nov. 11), after driving the British from Pensacola (which see), he received messages from New Orleans urging him to hasten to the defence of that city. The government officials did not give credit to Lafitte's revelations (see *Lafitte and the Baratarians*), but the people did; and they held a large meeting in New Orleans (Sept. 16), where they were eloquently addressed by Edward Livingston, who urged the inhabitants to make speedy preparations for repelling invasion. They appointed a Committee of Safety, composed of distinguished citizens of New Orleans, of which Livingston was chairman. Governor Claiborne, who also believed Lafitte's story, sent copies of the British papers to Jackson, then at Mobile. Then the latter issued a vigorous counter-proclamation, and proceeded to break up the nest of motley enemies at Pensacola. Finally, there were such omens of a speedy invasion of Louisiana that appeals to Jackson were repeated, and he left Mobile for New Orleans on Nov. 21. He found the city utterly defenceless, and the councils of the people distracted by petty factions. The patriotic governor had called the Legislature together as early as Oct. 5. The members were divided into several factions, and there was neither union, harmony, nor confidence. The people, alarmed, complained of the Legislature; that body complained of the governor; and Claiborne complained of both the Legislature and the people. Money and credit were equally wanting, and ammunition was very scarce. There was no effective naval force in the adjacent waters; and only two small militia regiments and a weak battalion of uniformed volunteers, commanded by Major Planché, a gallant Creole, composed the military force for repelling invasion or defending the city. In every aspect the situation was most gloomy when Jackson arrived. His advent was hailed with joy. "Jackson's come! Jackson's come!" went from lip to lip. He did not rest for a moment. He at once organized the feeble military force in the city; took measures for obstructing the large bayous, whose waters formed convenient communication between the city and the Gulf of Mexico; and proceeded to inspect and strengthen the fortifications in the vicinity, and to erect new ones. Fort St. Philip, below the city, was his main reliance for preventing a passage of the British ships. The expected invaders soon appeared. In fifty vessels of all sizes 7000 land troops were borne over the Gulf of Mexico from the West India island of Jamaica in the direc-

tion of New Orleans, and sighted the northern coast of the Gulf, a little east of Lake Borgne, on Dec. 9. Music, dancing, theatrical performances, and hilarity of every kind had been indulged in during the voyage, every man feeling that the conquest of Louisiana would be an easy task. The wives of many officers were with them, anticipating great pleasure in the Western World. Believing the Americans to be profoundly ignorant of the expedition, they anchored at the entrance to Lake Borgne, and prepared small vessels for the transportation of troops over the shallow waters, to take New Orleans by surprise. They did not dream of the fatal revelations of Lafitte. Two gunboats, sent out towards Mobile Bay to catch intelligence of the coming armament, discovered the great fleet Dec. 10, and hastened to report the fact to Lieutenant Thomas Ap Catesby Jones, in command of a small flotilla at the entrance of Lake Borgne, to prevent the British from landing troops. Jones's flotilla was encountered by the British (much to their astonishment) on the 13th. The British fleet was under the command of Admiral Cochrane, and many of the troops were those which had been engaged in the invasion of Maryland (which see). It would not do to attempt to land troops while the waters of the lake were patrolled by American gunboats, and so Cochrane sent sixty barges, nearly all carrying a caronade in the bow, and with six oars on each side, and all well filled with armed volunteers from the fleet, to capture or destroy Jones's flotilla. The latter was composed of an armed sloop (the flag-ship), a tender, and five gunboats, with an aggregate of 23 guns and 182 men. The British barges contained 1200 men. On the morning of Dec. 14 an encounter took place, which the little flotilla sustained against overwhelming numbers for about an hour, when it was compelled to surrender. The British had now complete control of Lake Borgne. The transports, filled with troops, entered, and the latter were conveyed in barges to Pea Island, where General Keane organized his forces for future operations. Learning from some Spanish residents of New Orleans that there was a bayou navigable for large barges to within a short distance of the Mississippi River just below New Orleans, Cochrane sent a party to explore it. They followed this bayou (the Bienvenu) and a canal across Villeré's plantation, and when they reported favorably about one third of the troops were taken through these water-courses. At the head of the bayou the active Lieutenant-colonel Thornton, with a detachment, surrounded the house of General Villeré, the commandant of a division of Louisiana militia, and made him prisoner; but he soon escaped, and, hastening to New Orleans, gave warning of the invasion to General Jackson. General Keane, a gallant Irish officer, the commander-in-chief of the British land-forces, was with this advance party, with several of his officers, and felt confident that the invasion was unknown at New Orleans. The British formed a camp at Villeré's (Dec. 23), within sight of the Mississippi, and prepared to move forward. The invaders were now within

nine miles of New Orleans. A proclamation, printed in the Spanish and French languages, and signed by General Keane and Admiral Cochrane, was sent forward by a negro to be distributed among the inhabitants. It read as follows: "*Louisianians!* remain quietly in your houses; your slaves shall be preserved to you, and your property shall be respected. We make war only against Americans." While all this work of invasion was going on Jackson had been busy at New Orleans preparing to roll it back. He had heard of the capture of the gunboats on the 15th, and he called upon Generals Coffee, Carroll, and Thomas to hasten to New Orleans with the Tennesseans and Kentuckians. They came as speedily as possible. Coffee came first, and Carroll arrived on the 22d of December. A troop of horse under Major Hinds, raised in Louisiana, came at the same time. General Villere, soon after his capture, escaped, as we have observed, crossed the Mississippi, rode up its right bank on a fleet horse to a point opposite New Orleans, crossed over, and gave Jackson such full information of the position of the invaders that he marched with quite a large body of troops on the afternoon of the 23d to meet the intruders. The armed schooner *Carolina*, Captain Henley, moved down the Mississippi in the evening to within musket-shot distance of the centre of the British camp at Villere's. At half-past seven o'clock she opened a tremendous fire upon them, killing and wounding at least 100 men. The British extinguished their camp-fires, and hurled rockets and bullets upon the *Carolina* with little effect. The schooner soon drove the British from their camp in great confusion. Meanwhile Jackson had pressed forward with his troops in the darkness in two columns, and, falling upon the bewildered invaders, soon achieved a victory which he dared not follow up in the gloom, and fell back. The astonished Britons were soon cheered by the arrival of reinforcements, and the advent of General Edward Pakenham, one of Wellington's veterans, who took the chief command. After careful preparation, and getting his soldiers well in hand, he led them towards New Orleans. He was met by Jackson with a force behind intrenchments about half-way between the city and Villere's, and a severe battle ensued, in which the Americans were victorious. (See *New Orleans, Battle of.*) Immediately afterwards the British withdrew to their ships and departed.

Louisiana Ordinance of Secession. In the Legislature of Louisiana, assembled at Baton Rouge in special session, Dec. 10, 1860, the Union sentiment was powerful, yet not sufficiently so to arrest mischief to the commonwealth. An effort was made to submit the question of "Convention or No Convention" to the people, but it failed, and an election of delegates to a convention was ordered to be held on the 8th of January, the anniversary of Jackson's victory at New Orleans (1815). On that occasion the popular vote was small, but it was of such a complexion that the Secessionists were hopeful. The convention met at Baton Rouge, Jan. 23. The Leg-

islature had convened there on the 21st. The number of delegates in the convention was 130. Ex-governor Alexander Monton was chosen president, and J. Thomas Wheat, secretary. Commissioners from South Carolina and Alabama were there, and were invited to seats in the convention; and they made vehement speeches in favor of secession. A committee of fifteen was appointed to draft an ordinance of secession. It reported on the 24th by their chairman, John Perkins, Jr., and the ordinance then submitted was adopted on the 26th by a vote of 113 against 17. Its phraseology bore the same general features as the ordinances passed by other states. Though a state purchased from France by the national government, the convention declared that Louisiana "resumed the rights and powers heretofore delegated to the government of the United States of America," its creator. At the conclusion of the balloting the president said: "In virtue of the vote just announced, I now declare the connection between the State of Louisiana and the Federal Union dissolved, and she is a free, sovereign, and independent power." No state was more dependent on the Union for its permanent growth in population and wealth than Louisiana. Her seal has the device of a pelican brooding over and feeding her young, which is emblematic of the fostering care of the national government. The convention, alarmed at the planting of cannons at Vicksburg by the Mississippians (see *Mississippi Ordinance of Secession*), resolved unanimously that they recognized the right of a "free navigation of the Mississippi River and its tributaries by all friendly states bordering thereon;" also "the right of egress and ingress of the mouths of the Mississippi by all friendly states and powers." A motion to submit the ordinance to the people for consideration was lost.

Louisiana, PURCHASE OF. After the retrocession by Spain of Louisiana to France, and the closing of the agreement for the Americans to have New Orleans as a place of deposit for merchandise, nothing remained for the United States government to do but to negotiate for the purchase of territory there. Such negotiations were speedily made by Mr. Livingston, American minister at Paris, assisted by Mr. Monroe. Their instructions asked for the cession of the island of New Orleans and the Floridas, and that the Mississippi should be divided by a line that should put the city of New Orleans within the territory of the United States, thus securing the free navigation of that river. To the surprise of the American minister, it was announced by Marbois, Bonaparte's representative, that he would treat for the sale of the *whole* of Louisiana. Bonaparte had already experienced serious difficulties in the way of securing French colonial dominion, especially in the West Indies. (See *Santo Domingo and Guadeloupe.*) He also needed troops at home and money to carry on the war with England, rather than far-off territory held by a doubtful tenure. "Irresolution and deliberation," said the First Consul to Marbois, "are no longer in season. I renounce Louisiana. It is not only New Orleans that I will cede; it is

the whole colony, without any reservation. I know the price of what I abandon, and I have sufficiently proved the importance that I attach to this province, since my first diplomatic act with Spain had for its object the recovery of it. I renounce it with the greatest regret. To attempt to retain it would be folly. I direct you to negotiate this affair with the envoys of the United States." In less than a fortnight after the beginning of negotiations in France, a treaty was signed (April 30, 1803) by Robert R. Livingston and James Monroe on the part of the United States, and Barbé Marbois on the part of France, by which the United States came into possession of a vast, and to some extent undefined, domain, containing a mixed free population of 85,000 white people and 40,000 negro slaves, for the sum of \$15,000,000. Livingston and Marbois had been personal acquaintances (see *Marbois*) for about a quarter of a century. "We have lived long," said Livingston to Marbois, as he arose after signing the treaty, "but this is the noblest work of our whole lives. The treaty which we have just signed has not been obtained by art or force; equally advantageous to the two contracting parties, it will change vast solitudes into flourishing districts. From this day the United States take their place among the powers of the first rank; the English lose all exclusive influence in the affairs of America." With equally prophetic vision Bonaparte said to Marbois, a few days after the negotiation was signed, "I would that France should enjoy this unexpected capital [60,000,000 francs] that it may be employed in works beneficial to her marine." The invasion of England, and the prostration of her maritime superiority, was then Bonaparte's pet project. "This accession of territory," he continued, exultingly, "strengthens forever the power of the United States, and I have just given to England a maritime rival that will sooner or later humble her pride."

LOUISIANA, STATE OF. Congress, in February, 1811, passed a bill authorizing the inhabitants of the Territory of Orleans to meet in convention and frame a state constitution. It was done, and on April 8, 1812, the territory was admitted into the Union as a state, under the title of Louisiana. By another act (April 14, 1812), the remainder of the region east of the Mississippi (now under the jurisdiction of Louisiana) taken possession of by the United States the year before (see *Florida, Revolutionary Movements in*) was added to the new state. By another act (June 4, 1812), the territory heretofore known as Louisiana had its title altered to Territory of Missouri. Louisiana bore its full share of the burden of the War of 1812, and upon its soil was fought the last great battle of that war. (See *New Orleans, Battle of*.) New con-

STATE SEAL OF LOUISIANA.

stitutions were framed in 1845 and 1852. Soon after the election of Mr. Lincoln became known in 1860, the governor convened the Legislature for December 10. On assembling, they passed an act calling for a convention to consider the propriety of seceding from the Union. (See *Louisiana Ordinance of Secession*.) When the ordinance of secession had passed, the state authorities proceeded to seize the National property within its borders. The National troops took partial possession of the state in 1862. The first election for Union civil officers was held in the state in December, 1862. An election for Union state officers was held in 1864, and Michael Hahn was elected ruler and invested with the powers of a military governor. On the ratification of the Thirteenth Amendment to the national Constitution, Louisiana was regarded as a reorganized state, and it resumed its place in the Union.

Lowell, CHARLES RUSSELL, born in Boston, June 2, 1835; died of wounds at Cedar Creek (which see), near Middletown, Va., Oct. 20, 1864. He graduated at Harvard in 1854, and when the Civil War broke out he was one of the first to offer his services. He was made captain of cavalry in May, 1861, and served on the staff of General McClellan until the fall of 1862, when he organized the Second Massachusetts Cavalry, and was made colonel in the spring of 1863. As a leader of cavalry he performed much good service in Virginia, and was made brigadier-general of volunteers on Sheridan's recommendation the day before his death. His younger brother, James Jackson, died of wounds near Richmond, Va., July 4, 1862.

Lowell, JAMES RUSSELL, poet, was born in Cambridge, Mass., Feb. 22, 1819, and graduated at Harvard in 1838. He studied law, and was admitted to the bar in 1840, but soon abandoned the profession and devoted himself to literary pursuits. His first collection of poems—*A Year's Life*—was published in 1841, and in 1843 he engaged with Robert Carter in the publication of *The Pioneer*, a literary and critical magazine. He has since produced many volumes and a large number of contributions to periodical literature. He visited Europe in 1851, and in the winter of 1854-55, he delivered a course of twelve lectures on the British poets. On the resignation of the professorship of Modern Languages and Belles-lettres in Harvard by Mr. Longfellow, Mr. Lowell was chosen his successor. To fill the place successfully, he again went to Europe and studied for a year, returning in August, 1856. He edited the *Atlantic Monthly* from 1857 to 1862, and in 1863 he became one of the editors of the *North American Review*, to which he had long been a contributor. He retained this editorial post until 1872, when he again visited Europe, and returned in 1874, in which year the English university at Cambridge bestowed upon him the honorary degree of LL.D. President Hayes sent Dr. Lowell to Madrid as American minister-plenipotentiary.

Lowell, JOHN, JR., was founder of the Lowell Institute at Boston, where he was born, May 11,

1799; died in Bombay, March 4, 1836. He was educated in Edinburgh and at Harvard University until 1815, when he was compelled to travel for the improvement of impaired health. A fine scholar, the inheritor of a large fortune, he indulged his passion for travel and books, after being engaged a few years in commercial life. Mr. Lowell bequeathed \$250,000 for the maintenance forever in Boston of an annual course of free lectures on a variety of subjects. The Lowell Institute began its work in the winter of 1839-40.

Lowell, JOHN, LL.D., was born at Newburyport, Mass., Oct. 6, 1769; died in Berlin, March 12, 1840. He graduated at Harvard University in 1786. He became a prolific writer, and published about twenty-five pamphlets. He was a strong political partisan, but would never take office, and he wrote severely against the supporters of the War of 1812-15. With his extraordinary colloquial powers and elegant and logical pen, he wielded great influence in Massachusetts. Mr. Lowell was a founder of the Massachusetts General Hospital, the Boston Athenæum, the Savings Bank, and the Hospital Life Insurance Company. For many years he was President of the Massachusetts Agricultural Society.

Lowndes, RAWLINS, was born in the British West Indies in 1722; died in Charleston, S. C., Aug. 24, 1800. He was a successful lawyer, and in 1766 the crown appointed him associate-judge. An earnest patriot, he was one of the Committee of Safety at Charleston in 1775, and in 1776 he was one of a committee to draft a constitution for the province. Mr. Lowndes opposed the national Constitution, and he said in a speech, "I wish no other epitaph than this: 'Here lies one who opposed the Federal Constitution, holding it to be fatal to the liberties of his country.'"

Loyalists, ENLISTMENT OF. When the peace negotiations failed between the Howes and the Continental Congress, active preparations were made on both sides for prosecuting the war. Oliver De Lancey, brother of James De Lancey, who had been a royal governor and chief-justice of New York, and Cortlandt Skinner, late attorney-general of New Jersey, and speaker of its Assembly, were commissioned brigadiers in the British army, with authority to raise twenty battalions of volunteers each, which William Tryon, who still claimed to be governor of New York, was to command as major-general. They organized active corps of loyalists that produced much distress among the patriots.

Luce, STEPHEN BLEECKER, Captain United States Navy, was born in Albany, N. Y., March 25, 1827, and entered the navy as a midshipman from New York in 1841. He was first attached to the Mediterranean Squadron, and then to the Brazilian. With Commodore James Biddle he circumnavigated the globe in the 74-gun line-of-battle-ship *Columbus*. He was afterwards on the Pacific Station in the *Fandalia*, and then was attached to the Home Squadron in the *Vixen*. In September, 1855, he was commissioned lieutenant, and when the Civil War broke out in 1861

he was ordered to the *Wabash*, in which he participated in the attack on the forts at Hatteras Inlet (which see). In the *Wabash* (then the flagship of Commodore Dupont) Lieutenant Luce engaged in the conflict at Port Royal. Subsequently he was employed in the blockade service in the *Pontiac*. In 1863, in command of the Naval Academy practice-ship *Macedonian*, he visited the ports of Plymouth and Portsmouth, England, and became deeply interested in the training system for boys for the Royal Navy as practised there. On his return he made a special report and recommendations upon the subject, which was followed by the adoption of a similar system for the United States Navy by the Navy Department. This method of improving the morale of our navy has engaged the earnest efforts of Captain Luce ever since. In 1875 he was appointed to the command of the United States training-ship *Minnesota*, which position he still (1890) holds. He was at the Naval Academy in September, 1865, and in October was commissioned commander of midshipmen. In July, 1866, he was promoted to captain in the navy.

Lumber State. A popular name for the State of Maine, which abounds in immense forests of timber suitable for buildings. The inhabitants are largely engaged in cutting, rafting, and sawing the trees for lumber. It is sometimes called the "Pine-tree State" because of its forests of pine-trees.

Luna, DON TRISTAN DE, IN FLORIDA. In 1559 a powerful expedition was fitted out at Vera Cruz, Mexico, for the conquest of Florida, under the command of De Luna, a scion of a noble family in Aragon, whose father was for several years governor of Yucatan. He sailed August 14 with a land force of fifteen hundred soldiers, many friars, and a number of women and children (the families of soldiers), to conquer and colonize Florida. He had a prosperous voyage to the Bay of Pensacola, where he anchored his ships, but a week later a storm arose which drove the vessels ashore and wrecked them. He at once sent out an exploring party in search of the fertile lands and cities plethoric with precious metals, of which he had dreamed. For forty days they marched through a barren country before they found any food. This they found at a deserted town. Word was sent back to De Luna of the abundance of food there. He had lost most of his stores with the ships. With a thousand men, women, and children, De Luna marched to the town. The food was soon consumed, and great suffering followed. De Luna marched back to Pensacola, whence, in two vessels that had been saved or built there, he sent to the viceroy of Mexico for succor. Relief came, but the discontent of the remnant of his colony caused his return to Vera Cruz in 1561.

Lundy's Lane, BATTLE AT. A sanguinary contest near the great cataract of the Niagara is known in history by the names of "Bridge-water," "Niagara Falls," and "Lundy's Lane." The latter is better known. On his retreat from the battle-ground at Chippewa (July 5, 1814), the British general, Riall, fled down the borders

of the Niagara River to Queenston, put some of his troops in Fort George, and made his headquarters near the lake, twenty miles westward. Drummond was mortified by this discomfiture of his veteran troops by what he deemed to be raw Americans, and he resolved to wipe out the stain. He drew most of the troops from Burlington Bay, York, Kingston, and Prescott, with a determination to drive the invaders out of Canada. With a force about one third greater than that of Brown, Drummond pushed forward to meet the latter. In the meantime, Brown, after burying the dead and caring for the wounded, had moved forward to Queenston and menaced Fort George. He expected to see Chauncey with his squadron on the Niagara River to co-operate with him, but that commander was sick at Sackett's Harbor, and his vessels were blockaded there. Brown waited many days for the squadron. Losing all hope of aid from Chauncey, he fell back to the Chippewa battleground. On the 24th intelligence reached him that Drummond, with a thousand troops, many of them Wellington's veterans, had landed at Lewiston, opposite Queenston, with a view, no doubt, of seizing the American stores at Schlosser, above the falls. Brown ordered Scott to march rapidly with a part of the army and threaten the forts at the mouth of the river. Towards evening (July 24, 1814) Scott went forward with his brigade, Towson's artillery, and a few mounted men, and near the verge of the great cataract he saw some British officers leave a house, mount their horses, and ride rapidly away. Believing an advance guard of the British were near, Scott dashed into the woods to disperse them, when he was confronted by Riall with a larger force than he had at Chippewa. The Americans were in great peril. To stand still would be fatal; to retreat would be hazardous, for it might create a panic in the main army. So Scott resolved to fight the overwhelming force. At sunset a desperate battle was begun, which ended at near midnight. Riall's force was eighteen hundred strong, posted in slightly crescent form on an eminence over which passed Lundy's Lane, a highway stretching westward from the Niagara River. Upon that eminence the British had planted a battery. Scott perceived a blank between the British left and the river, and ordered Major Jesup with his command to crawl cautiously, in the evening twilight, through the underbrush that covered the space and turn that flank. Jesup obeyed, and successfully gained the British rear and kept back reinforcements sent by Drum-

mond. At the same time Scott was hotly engaged with Riall. Brown, apprised of the situation, had pressed forward with his whole army and engaged in the fight. Perceiving the key of the British position to be the battery on the hill, he turned to Colonel James Miller, of the Twenty-seventh Regulars, and asked, "Can you storm that work and take it?" "I'll try," was the prompt reply. With three hundred men he moved steadily up the hill in the darkness, along a fence lined with thick bushes that hid his troops from the view of the gunners and their protectors who lay near. When within short musket-range of the battery, they could see the

SITE OF THE BRITISH BATTERY—1860.

gunners with their glowing lintstocks, ready to act at the word *fire*. Selecting good marksmen, Miller directed each to rest his rifle on the fence, select a gunner, and fire at a given signal. Very soon every gunner fell, when Miller and his men rushed forward and captured the battery. This gallant exploit secured a victory; not, however, until a terrible hand-to-hand fight in the darkness with the protectors of the guns had ensued. The British fell back. They attempted to retake the battery (consisting of five brass cannons) but failed, even after being reinforced by fifteen hundred men sent forward by Drummond from Queenston. Meanwhile, General Scott had been fighting desperately but successfully, and had been severely wounded by a musket-ball in his shoulder. General Brown was also severely wounded, and the command devolved upon General Ripley. The British were repulsed, and the Americans fell back to Chippewa, with orders from General Brown to return after a brief rest, before the dawn, and occupy the battle-field. The always tardy and disobedient Ripley failed to obey the order, and the British returned and took possession of the battery (excepting one piece) and the field. The battle had been fought by about forty-five hundred British troops and twenty-six hundred Americans. The latter lost

in killed, wounded, and missing, nearly one third of their whole number; the British lost eight hundred and seventy-eight, or twenty-six more than the Americans. Both armies claimed a victory. Ripley, whose disobedience caused the Americans to lose the advantages of a victory won at midnight, led the army to Fort Erie, where he was soon afterwards superseded by General E. P. Gaines. The exploit of Miller in capturing the battery was considered one of the most brilliant of the war. The moment that General Brown met Miller afterwards, he said,

of the national government in 1789, President Washington caused the Secretary of State to write a letter to Luzerne, making an official acknowledgment of his services. In 1788 Luzerne was sent ambassador to London, where he died. Marbois, who was secretary of legation, wrote an account of Arnold's treason, entitled *Complot d'Arnold*.

Lyford and Oldham, CONSPIRACY OF. The Pilgrims, regarding Robinson, in Holland, as their pastor, and expecting him over, had no other spiritual guide than Elder Brewster. Be-

MILLER'S MEDAL

"You have immortalized yourself." Congress voted him the thanks of the nation and a gold medal.

Luzerne, ANNE CÉSAR DE LA, LL.D., was born in Paris in 1741; died in England, Sept. 14, 1791. Having risen to the rank of colonel in the French army, he studied the art of diplomacy, and, in 1776, was sent as envoy to Barranca. He succeeded Gerard as minister to the United States, in September, 1779, and remained here

DE LA LUZERNE

four years, gaining the esteem of the Americans by his friendship, wisdom, and prudence. In 1783 he returned to France, bearing the cordial thanks of Congress; and after the organization

cause of this state of things at Plymouth, the London partners were taunted with fostering religious schism. To relieve themselves of this stigma, they sent a minister named Lyford to be pastor. He was kindly received, and, with John Oldham, who went to Plymouth at about the same time, was invited to the consultations of the governor with his council. It was soon discovered that Lyford and Oldham were plotting treason against the Church and State. Several letters written by Lyford to the London partners, breathing sedition, were discovered by Bradford as they were about to be sent abroad. The governor kept quiet for a while, but when Lyford set up a separate congregation, with a few of the colonists whom he had seduced, and held meetings on the Sabbath, Bradford summoned a General Court (1674), before whom the offending clergyman and his companions were arraigned on a charge of seditious correspondence. They denied the accusation, when they were confronted by Lyford's letters, in which he defamed the settlers, advised the London partners to prevent Robinson and the rest of his congregation coming to America, as they would interfere with his church schemes, and avowed his intention of removing the stigma of schism by a regularly organized church. A third conspirator had written that Lyford and Oldham "intended a reformation in Church and Commonwealth." Before these disclosures Oldham had behaved with much insolence, abusing the governor and Captain Standish, calling them "rebels and traitors," and, when

proved guilty, he attempted to excite a mutiny on the spot. Lyford burst into tears and confessed that he "feared he was a reprobate." Both were ordered to leave the colony, but Lyford, humbly begging to stay, asking forgiveness and promising good behavior, was reinstated. Oldham went to Nantasket, with some of his adherents, and engaged in traffic with the Indians. Lyford was soon detected again in seditious work and expelled from the colony. He joined Oldham. They afterwards lived at Hull and Cape Anne, and Oldham represented Wattertown in the popular branch of the Massachusetts government in 1634. He made an exploring journey to the site of Windsor, on the Connecticut River the next year, which was followed by the emigration to that region in 1635. (See *Connecticut, Colony of*.) While in a vessel at Block Island, Oldham was murdered by some Indians, who fled to the Pequods, on the mainland, and were protected by them. This led to the war with the Pequods. (See *Pequod War*.)

Lyman, PHINEAS, born at Durlham, Conn., about 1716; died in West Florida, 1775. Educated at Yale College, he was a tutor there from 1738 to 1741. He engaged in mercantile pursuits, but finally became a lawyer in Suffield. There he was a magistrate for some years, and took a conspicuous part in the disputes between Massachusetts and Connecticut concerning the town of Suffield. (See *Secession in New England*.) At the breaking-out of the French and Indian War, he was commander-in-chief of the Connecticut forces; he built Fort Lyman (afterwards Fort Edward), on the upper Hudson, and fought and won the battle at the head of Lake George in 1755. (See *Crown Point*.) In 1758 he served under General Abercrombie, and was with Lord Howe when he was killed. He was also at the capture of Crown Point and Montreal, and, in 1762, led provincial troops against Havana. In 1763 General Lyman went to England to get prize-money for himself and fellow-officers and to solicit a grant of land on the Mississippi for a company called "Military Adventurers." He returned to America in 1774, at which time a tract near Natchez was granted to the petitioners; and thither he went with his eldest son, and died soon after reaching West Florida, as the region was then called. The emigrants suffered great hardships, and on the conquest of the country by the Spaniards (1781-82) they took refuge in Savannah.

Lynch Law is the name given to the summary operations of a mob or a few private individuals, independently of the legal authorities. It is said to derive its name from John Lynch, a farmer, who exercised it upon the fugitive slaves and criminals dwelling in the Dismal Swamp, N. C., when they committed outrages upon persons and property which the colonial law could not promptly redress. This mode of administering justice is still practised occasionally in the United States.

Lynch, THOMAS, JR., signer of the Declaration of Independence, was born in St. George's Parish, S. C., Aug. 5, 1749; died at sea, in 1779.

He was of Austrian descent. His father, a wealthy patriot, was a member of the Continental Congress from 1774 till his death, in 1796. The son was educated in England, and returned home in 1772, when he settled upon a plantation on the Santee River and married. He was elected to fill the seat of his sick father in Congress near the close of 1775, when he voted for and signed the Declaration of Independence. His own ill-health compelled him to leave Congress in the fall of 1776. Near the close of 1779 he embarked for St. Eustatius, with the intention of proceeding to Europe, but the vessel and all on board were never heard of afterwards.

Lynch, WILLIAM F., was born in Virginia in 1801; died in Baltimore, Oct. 17, 1865. He entered the United States Navy as midshipman in 1819. In 1847 he was sent on an expedition, proposed by himself, to explore the course of the River Jordan and the coasts of the Dead Sea. He entered upon these duties in the spring of 1848, and completed them with great success. He ascertained the Dead Sea to be 1312 feet lower than the Mediterranean Sea. He joined the insurgents in 1861, and was made a commander in the Confederate navy, in which he served throughout the Civil War.

Lyon, MATTHEW, was born in Wicklow County, Ireland, in 1746; died in Arkansas, Aug. 1, 1822. He emigrated to America at the age of thirteen, and was assigned to a Connecticut farmer for a sum of money to pay for his passage. (See *Redemptioners*.) Lyon settled in Vermont and became lieutenant in a company of "Green Mountain Boys" (which see), in 1775, but was cashiered for deserting his post. He served in the Northern Army awhile afterwards, and held the rank of colonel while serving as commissary-general of militia. In 1778 he was deputy secretary to the Governor of Vermont; and after the war he built saw-mills and grist-mills, a forge, and a mill for manufacturing paper, where he had founded the town of Fairhaven, in Rutland County. Lyon served in the State Legislature, and was a judge of Rutland County in 1786. He established the *Freeman's Library* (newspaper), which he conducted with ability. From 1797 to 1801 he was a member of Congress, and gave the vote which made Jefferson President of the United States. He and Roger Griswold, of Connecticut, had a personal encounter on the floor of Congress, the first in our country. (See *Decorum, First Breach of, in Congress*.) For a libel on President Adams, in 1798, he was confined four months in jail and fined \$1000. In 1801 he went to Kentucky, and represented that state in Congress from 1803 to 1811. Ruined pecuniarily by the building of gunboats for the War of 1812-15, he went to Arkansas, and was appointed territorial delegate to Congress, but did not live to take his seat.

Lyon, NATHANIEL, was born in Windham County, Conn., July 14, 1819; killed in battle, Aug. 10, 1861. He graduated at West Point in 1841. He served in the war in Florida and

against Mexico, where he gained honors for gallant conduct. He became captain in 1851, and when the Civil War broke out he was placed in

NATHANIEL LYON.

command of the arsenal at St. Louis, where he outwitted and outgeneralled the Secessionists. (See *Arsenal at St. Louis.*) Commissioned brig-

adier-general of volunteers, in May, 1861, the command of the Department devolved on him (June 1). He acted with great vigor against insurgents under the Governor (Jackson) of Missouri, defeating the Confederates in battle here and there. He attacked a large force at Wilson's Creek, near Springfield, and was killed in the battle. (See *Wilson's Creek.*) Lyon was unmarried, and he bequeathed nearly all his property (about \$30,000) to the government to assist in preserving the Union.

Lytle, WILLIAM HAINES, was born in Cincinnati, Nov. 2, 1826; killed near the Chickamauga River, Sept. 20, 1863. He graduated at Cincinnati College in 1843; served in the war against Mexico, and was Democratic candidate for lieutenant-governor of Ohio in 1857, but was defeated. In command of an Ohio regiment, he served in western Virginia in 1861, and was wounded. He was in command of a brigade under General Mitchell; was wounded in the battle of Perryville (which see), and made brigadier-general. He served under Rosecrans, and was killed in the battle of Chickamauga.

M.

McAlester, MILES D., was born in New York in 1834; died at Buffalo, N. Y., April 23, 1869. He graduated at West Point in 1856, and entered the Engineer Corps in May, 1861. He was one of the most useful of the engineer officers of the United States Army during the Civil War, being successively chief-engineer in a corps of the Army of the Potomac, of the Department of the Ohio, at the siege of Vicksburg, and of the Military Division of the West. In 1863-64 he was assistant-professor of engineering at West Point. He was in many battles of the war, and assisted in reducing several strongholds in the vicinity of Mobile.

McAllister, FORT, CAPTURE OF. As Sherman's army, marching from Atlanta to the sea, approached Savannah, they found Fort McAllister, at the mouth of the Ogeechee River, a bar to free communication with the ocean, and on Dec. 13, 1864, General Hazen was ordered to carry it by assault. With a division of the Fifteenth Corps Hazen crossed the Ogeechee at King's Bridge, and at one o'clock P.M. that day his force was in front of the fort—a strong enclosed redoubt, garrisoned by 200 men under Major Anderson. Sherman and Howard repaired to a signal-station where, with glasses, they could see the movements against the fort. Hazen's bugles sounded and the division moved to the assault. A little before, a National steamer appeared in the waters below the fort, to communicate with the National army, but her commander was not sure whether Fort McAllister was still in the hands of the Confederates. All doubt was soon removed. Hazen's charging troops, after a brief but desperate struggle, fighting hand to hand over the parapet, won a complete victory. The fort, garrison, and armament were soon in possession of the Nationals, who, in the struggle,

had lost ninety men, killed and wounded. The Confederates lost nearly fifty men. Sherman had seen the entire conflict, and when the American flag waved over the fort, he and Howard hastened thither in a small boat, unmindful of the danger of explosion of torpedoes with which the river bottom was strewn.

McArthur, DUNCAN, was born in Dutchess County, N. Y., Jan. 14, 1772; died near Chillicothe, O., April 28, 1839. His father removed to the Ohio frontier of Pennsylvania when Duncan was only

DUNCAN MCARTHUR.

eight years of age. At eighteen he volunteered in defence of the frontier against the Indians, and served in Harmar's campaign (which see). McArthur became a surveyor, and, purchasing

large tracts, became possessed of much landed wealth. He was a member of the Ohio Legislature in 1805, and in 1808 became major-general of the state militia. When war was kindling he was chosen colonel of the Ohio Volunteers, and was second in command at the surrender of Detroit (which see). In the spring of 1813 he was promoted to brigadier-general, and in 1814 succeeded General Harrison in command of the Army of the West. He made a famous raid, late in 1814, into Upper Canada, with a view to its conquest, but not being seconded by General Izard, on the Niagara frontier, it was a failure. In the fall of 1815 he was elected to the Ohio Legislature, and in 1816 he was appointed a commissioner to conclude treaties with the Indian tribes. He was again an Ohio legislator and speaker of the House, and in 1819 was sent to Congress. He was governor of Ohio from 1830 to 1832, and while in that office he met with a serious accident, from which he never recovered.

McArthur's Raid. Late in the summer of 1814, the critical situation of General Brown's army on the Niagara frontier induced General Duane McArthur to make a terrifying raid in the western part of Canada, to divert the attention of the British. McArthur arrived at Detroit (Oct. 9, 1814) with about 700 mounted men which he had raised in Kentucky and Ohio. Late in that month he left Detroit with 750 men on fleet horses, and with five pieces of cannon passed up the lake and river St. Clair towards Lake Huron, to deceive the Canadians. On the morning of the 25th he suddenly crossed the river, pushed on in hot haste to the Moravian towns (which see), and on Nov. 4 entered the village of Oxford. He appeared unheralded, and the inhabitants were greatly terrified. There he disarmed and paroled the militia, and threatened instant destruction to the property of any one who should give notice to any British post of his coming. Two men did so, and their houses were laid in ashes. On the following day he pushed on to Burford, where the militia were casting up intrenchments. They fled at his approach, and the whole region was excited with alarm. The story went before him that he had 2000 men in his train. He aimed at Burlington Heights, but at the Mohawk settlement on the Grand River, near Brantford, he was confronted by a large body of Indians, militia, and dragoons. Another British force, with artillery, was not far distant, so McArthur turned southward, down the Long Point road, and drove some militia at a post on the Grand River. There he killed and wounded seven men and took 131 prisoners. His own loss was one killed and six wounded. He pushed on, destroying flouring-mills at work for the British army in Canada, and, finding a net of peril gathering around him, he turned his face westward and hastened to Detroit, pursued, from the Thames, by 1100 British regulars. He arrived at Sandwich Nov. 17th, and there discharged his band. That raid was one of the boldest operations of the war. He skimmed over hundreds of miles of British territory with the loss of only one man.

McCall, EDWARD R., was born in Charleston, S. C., Aug. 5, 1790; died at Bordentown, N. J., July 31, 1853. He entered the United States Navy as midshipman in 1808, and in the summer of 1813 was lieutenant of the brig *Enterprise*. In the action with the *Boxer*, Sept. 4, 1813, his commander (Lieutenant Burrows) was mortally wounded, when the command devolved upon McCall, who succeeded in capturing the British vessel. (See *Enterprise and Boxer*.) For this service Congress voted him a gold medal. He was made master-commander in 1825, and captain in 1835.

McCall, GEORGE ARCHIBALD, was born in Philadelphia, March 16, 1802; died at Westchester, Penn., Feb. 25, 1868. He graduated at West Point in 1822; was distinguished in the war in Florida, and served in the war against Mexico, in which he was assistant-adjutant-general with the rank of major, at the beginning. Late in 1847 he was promoted to major of infantry; was made inspector-general in 1850; and in April, 1853, resigned. When the Civil War broke out, he organized the Pennsylvania Reserve Corps (which see) of 15,000 men, and was made brigadier-general in May, 1861. This force was converted into three divisions of the Army of the Potomac, under his command; and they did gallant service in McClellan's campaign against Richmond in 1862. Made captive on the day before the battle of Malvern Hills, he suffered such rigorous confinement in Richmond that he returned home in broken health, and resigned in March, 1863.

McClellan, GENERAL-IN-CHIEF. On the 1st of November, 1861, Lieutenant-general Scott, then in the seventy-sixth year of his age, was relieved from the chief command of the armies of the Republic, and was succeeded by General McClellan, then thirty-five years of age. This change was hailed by the loyal people as a promise of a speedy termination of the war, for McClellan had promised that it should be "short, sharp, and decisive." It was believed that Richmond, which had become the Confederate capital, would be in possession of the National troops in a few weeks. In this the loyal people were disappointed. The civil and military leaders, remembering the disaster at Bull's Run, were circumspect and cautious. It was several months before McClellan could be induced to move towards Richmond; and the National and Confederate armies lay all that time within thirty miles of each other, camp-life being enlivened by an occasional skirmish or midnight alarm. In September two nephews of the French prince De Joinville, who had accompanied their uncle to the United States, offered their services to the government without pay. Each was commissioned a captain and assigned to duty on the staff of General McClellan. They remained in the service until the close of the Peninsular campaign in July, 1862.

McClellan, GEORGE BRINTON, was born in Philadelphia, Dec. 3, 1826. He graduated at the University of Pennsylvania in 1842, and at West Point in 1846. He was lieutenant of sappers,

miners, and pontoniers in the war against Mexico, and was commended for gallantry at various points from Vera Cruz to the city of Mexico. After the war he was instructor of bayonet exercise at West Point, and his *Manual*, translated

GEORGE B. McCLELLAN.

from the French, became the text-book of the service. In 1852 he was engaged with Captain R. B. Marcy (now his father-in-law) and General C. F. Smith in explorations and surveys of Red River, the harbors of Texas, and the western part of a proposed route for a Pacific railway; also mountain-ranges and the most direct route to Puget's Sound. He was next sent on a secret mission to Santo Domingo; and in 1855 he was sent with Majors Delafield and Mordecai to Europe to study the organization of European armies and observe the war in the Crimea. Captain McClellan left the army in 1857 and engaged in civil engineering and as superintendent of railroads. He was residing in Ohio when the Civil War broke out, and was commissioned major-general of the Ohio volunteers by the governor. He took command of all the troops in the Department of the Ohio; and after a brief and successful campaign in western Virginia, he was appointed to the command of the National troops on the Potomac (afterwards the Army of the Potomac) and commissioned a major-general of the regular army. On the retirement of General Scott in November, 1861, he was made general-in-chief. His campaign against Richmond in 1862 with the Army of the Potomac was not successful. He afterwards drove General Lee out of Maryland, but his delay in pursuing the Confederates caused him to be superseded in command by General Burnside. General McClellan was the unsuccessful Democratic candidate for President of the United States against Mr. Lincoln in 1864. He resigned his commission in the army on the day of the election (Nov. 8, 1864), and took up his residence in New York. After a visit to Europe, he became (1868) a citizen of New Jersey, and engaged in the business of an engineer. The will of Edward A. Stevens, of Hoboken, made him Superintendent of the Stevens Floating Battery (which see); and he was appointed

Superintendent of Docks and Piers in the city of New York, which office he resigned in 1872. In 1877 he was elected Governor of New Jersey.

McClelland, JOHN ALEXANDER, was born in Breckenridge County, Ky., May 30, 1812. His family removed to Illinois while he was a small child. He became a lawyer in 1832; volunteered to serve in the Black Hawk War; engaged in trade and journalism; was in the Illinois Legislature at different times between 1836 and 1842. He was in Congress from 1843 to 1851, and again in 1860, when, the war breaking out, he resigned and, with others, raised a brigade of volunteers. He distinguished himself at Belmont (which see), and was made brigadier-general. After the battle at Fort Donelson (which see) he was made a major-general; commanded a division at the battle of Shiloh; succeeded General Sherman in command of the National army in Mississippi in January, 1863; and distinguished himself in the battles that followed. When he resigned, in November, 1864, he was in command of the Thirteenth Army Corps.

McClure, SIR ROBERT JOHN LE MESURIER, was born at Wexford, Ireland, Jan. 28, 1807. In the years 1850 to 1854 he explored the polar seas north of America in the ship *Investigator*, and was the first to discover the long-sought northwest ocean passage from the Atlantic to the Pacific waters. For this discovery he was knighted and presented with \$20,000.

McCook Brothers, THE. Alexander McDowell, Daniel, and Robert Latimer, children of one mother, were distinguished soldiers in the Civil War. I. ALEXANDER was born in Columbiana County, O., April 22, 1831, and graduated at West

A. McDOWELL MCCOOK.

Point in 1852. He served against the Indians in New Mexico in 1857; from 1858 to 1861 was assistant-instructor of tactics at West Point; and was colonel of an Ohio regiment at the battle of Bull's Run. In September, 1861, he was made brigadier-general of volunteers, and major-general in July, 1862, having distinguished himself at Shiloh and Corinth. He fought in the

battle of Perryville (which see) in command of the First Corps of the Army of the Ohio, and commanded the right wing in the battle at Stone's River (which see). He was afterwards in command of the Twentieth Army Corps, and fought in the battle of Chickamauga (which see) in 1863. — II. DANIEL was born at Carrollton, O., July 22, 1834; killed at Kenesaw Mountain, July 17, 1864. He graduated at Florence College, Ala., in 1857; was colonel of an Ohio volunteer regiment; and served at Perryville, Chickamauga, and in the Atlanta campaign. — III. ROBERT LATIMER was born in Columbiana County, O., Dec. 28, 1827; was murdered by guerillas while lying sick in an ambulance near Salem, Ala., Aug. 6, 1862. He was a lawyer, and when the war broke out he became colonel of an Ohio regiment of volunteers. He served in western Virginia, and became a brigadier-general of volunteers under Rosecrans. He was in the battle of Mill Spring, Ky. (which see), and commanded a division in Thomas's corps. He was made a brigadier in March, 1862. — The father of this band of warriors, Major Daniel McCook (born in 1796), was mortally wounded in a fight with Morgan's men near Buffington's Island. (See *Morgan's Raid*.) This family contributed sixteen of its members to the Union army.

McCook, EDWARD M., was born at Steubenville, O., in June, 1834. He was an active politician in Kansas, and was a member of its Legislature in 1860. He was an efficient cavalry officer during the Civil War, rising to the rank of brigadier-general in April, 1864. He was in the principal battles in Kentucky, Tennessee, and northern Georgia, and in the Atlanta campaign commanded a division and was distinguished for skill and bravery in quick movements. In 1865 he was breveted major-general of volunteers; was American minister to the Hawaiian Islands from 1866 to 1869; and in 1870 was appointed Governor of Colorado Territory, which was made a state of the Union July 4, 1876.

McCook's Raid. General E. M. McCook, with his own and fresh cavalry brought by Rousseau (see *Atlanta, Siege of*), was ordered to move out to Fayetteville and, sweeping round, join Stoneman—leading another cavalry raid—at Lovejoy's Station on the night of July 28, 1864. He and Stoneman moved simultaneously. McCook went down the west side of the Chattahoochee; crossed it on a pontoon bridge at Rivertown; tore up the track between Atlanta and West Point, near Palmetto Station; and pushed on to Fayetteville, where he captured five hundred of Hood's wagons and two hundred and fifty men, and killed or carried away about one thousand mules. Pressing on, he struck and destroyed the Macon railway at Lovejoy's at the appointed time; but Stoneman did not join him. Being hard pressed by Wheeler's cavalry, McCook turned to the southward and struck the West Point road again at Newman's Station. There he was met by a force of Mississippi infantry moving on Atlanta, and, at the same time, his

rear was closely pressed by Confederate cavalry. He fought at great odds, but escaped with a loss of his prisoners and five hundred of his own men.

McCormick, CYRUS HALL, inventor of the reaping-machine, was born in Rockbridge County, Va., Feb. 15, 1809. So early as his fifteenth year he had constructed a "cradle," used in harvesting grain in the field. His father, early in 1816, had invented an improved reaper, and in 1831 Cyrus invented his, for which he first obtained a patent in 1834. In 1845, 1847, and 1858 he patented valuable improvements. He moved to Cincinnati in 1845, and to Chicago in 1847. The gold medal of the American Institute was awarded to him for his invention in 1845, and he received the Commercial Medal at the World's Fair in London in 1851. In 1855 he was awarded the grand gold medal of the Paris Exposition; also the highest prizes of subsequent international and other exhibitions. In the Paris Exposition of 1867 he received the grand gold medal of honor, and the order of the Legion of Honor from the emperor of the French. In 1859 Mr. McCormick founded and endowed the "Theological Seminary of the Northwest," at Chicago, and has since endowed a professorship in Washington College, Lexington, Va.

McCrea, JANE. A tragedy that caused deep and wide-spread indignation in the colonies occurred at Fort Edward while Burgoyne was making his way to the Hudson River. Jane McCrea, a handsome young girl, was visiting friends at Fort Edward when the invaders approached. She was betrothed to a young Tory living near there, who was then in Burgoyne's army. When that army was near Fort Edward some prowling Indians seized Miss McCrea in the house of her friend, and, seating her on a horse, attempted to carry her a prisoner to Burgoyne's camp at Sandy Hill. A detachment of Americans was sent to rescue her. One of a volley of bullets fired at her captors pierced the maiden and she fell to the ground dead. The Indians, seeing her dead, scalped her and carried her glossy locks into camp as a trophy. Her lover (David Jones), shocked by the event, left the army, went to Canada at the close of the war, and there lived, a moody bachelor, until he was an old man. He had purchased the scalp of his beloved from the Indians, and cher-

GRAVE OF JANE MCCREA AT FORT EDWARD.

ished it as a precious treasure. Miss McCrea's body was buried at Fort Edward. A few years ago her remains were transferred to a cemetery

between Fort Edward and Sandy Hill. The incident was woven into a wild tale of horror, which, believed, caused hundreds, perhaps thousands, of young men, burning with indignation against the British for employing savages to fight their brethren, to join the army of Gates.

McCulloch, BENJAMIN, was born in Rutherford County, Tenn., in 1814; killed in battle at Pea Ridge (which see), March 7, 1862. Emigrating to Texas before the war for its independence, he fought as a private at San Jacinto. He was a captain of Rangers in the war against Mexico, serving well under both Taylor and Scott. He was a commissioner to adjust the difficulties with the Mormons in May, 1857. Joining the Confederate army, he was made a brigadier-general, and led a corps at the battle of Pea Ridge, where he was killed.

Macdonald, FLORA. Among the settlers at Cross Creek (now Fayetteville), N. C., was Allan Macdonald, who, with his wife Flora, had emigrated to America because of the pressure of poverty in their native Scotland. She was the same person who, when a young maiden, rescued Prince Charles Edward, the "Young Pretender," from his pursuers in 1745. She was born at South Uist, Scotland, in 1720, and died March 4, 1790. She was a daughter of Macdonald of Milton. In 1750 she was married; came to America in 1773, and settled among other Scotch families at Cross Creek (now Fayetteville), N. C. When the old war for independence broke out, she and her husband, like most of the Scotch people, espoused the cause of the crown. Her husband was a captain of the "Loyal Highlanders" in North Carolina, and was among the defeated at Moore's Creek Bridge. (See *Moore's Creek Bridge, Battle of*.) After experiencing various trials because of their political position, Flora and her family returned to Scotland before the close of the war, in which two of their sons were loyalist officers. One of them (John) became a distinguished man, and a Fellow of the Royal Society. On her voyage to Scotland from America the ship was attacked by an enemy, and Flora, though nearly sixty years of age, bravely engaged in the fight and had her arm broken. The stirring events of her early life, in connection with the "Pretender," were woven into a charming romance by Sir Walter Scott.

Macdonough, THOMAS, was born at New-castle, Del., Dec. 23, 1783; died at sea, Nov. 16, 1825. He was of Scotch-Irish descent, and his father, who came from the North of Ireland, was an officer of distinction in the Continental army. Macdonough was appointed a midshipman in the navy in 1800, a lieutenant in 1807, and commander in July, 1813. He had served with distinction in the Mediterranean squadron with Bainbridge and Decatur. In 1814 he commanded a squadron on Lake Champlain, and on Sept. 11 he gained a signal victory over the British off Plattsburg. For this service he was promoted to captain and received thanks and a gold medal from Congress. Civil honors were bestowed upon him by various cities and

towns; and the Legislature of Vermont gave him an estate on Cumberland Head, which overlooked the scene of his great exploit. From the

THOMAS MACDONOUGH.

close of the war Macdonough's health declined, and he lived but ten years afterwards. His wife was Miss Shaler, of Middletown, Conn.

McDougall, A MARTYR. When a scheme for cheating the people of New York into a compliance with the provisions of the Mutiny Act (which see) was before the Assembly, the leaders of the Sons of Liberty (which see) raised a cry of alarm. Early on Sunday morning, Dec. 16, 1769, a handbill was found widely distributed over the city, addressed, in large letters, "To the Betrayed Inhabitants of the City and Colony of New York," and signed "A Son of Liberty." It denounced the money scheme as a deception, covering wickedness, and that it was intended to divide and distract the colonies. It exhorted the New York Assembly to imitate the patriotic course of those of other colonies; and it closed with a summons of the inhabitants to "The Fields" the next day, to express their views and to instruct their assemblymen to oppose the measure; and in case they should refuse to do so, to send notice thereof to all the other assemblies, and to publish their names to the world. In response to the call, full fourteen hundred people gathered around the Liberty Pole in "The Fields," where they were harangued by John Lamb, and the people, by unanimous vote, condemned the action of the Assembly in passing obnoxious bills. The sentiments of the meeting were embodied in a communication to the Assembly, which was borne by a committee of seven leading Sons of Liberty—Isaac Sears, Caspar Wistar, Alexander McDougall, Jacob Van Zandt, Samuel Broome, Erasmus Williams, and James Varick. Toryism was then rife in the New York Assembly. Twenty of that pliant body, on motion of James De Lancey, voted that the handbill was "an infamous and scandalous libel."

Only one member—Philip Schuyler—voted No. The Assembly then set about ferreting out the author of it, and a reward of \$500 was offered. The frightened printer of the handbill, when arraigned before the House, gave the name of McDougall as the author. He was taken before the House, where he refused to make any acknowledgment or give bail. He was indicted and cast into prison, where he remained a month, and then pleaded not guilty and gave bail. When brought before the House again, several months afterwards, he was defended by George Clinton. His answer to the question whether he was the author of the handbill was declared to be a contempt, and he was again imprisoned. In February, 1771, he was released and was never troubled with the matter again. McDougall was the first to suffer imprisonment for "liberty since the commencement of the glorious struggle," and he was regarded as a martyr. At public meetings his health was drunk, and men and women of distinction in the city thronged the prison and furnished him even with luxuries, for he was regarded as the true type of imprisoned commerce. Popular songs were composed and sung under his prison windows, and emblematic swords were worn. (See *McDougall, Alexander*.)

McDougall, ALEXANDER, was born in Scotland in 1731; died in New York city, June 8, 1786. He came to America about 1755, and settled near New York. He learned the trade of a printer, and took an early and active part with the Sons of Liberty of New York. (See *The Fields*, and *McDougall, a Martyr*.) He was active in the appointment of delegates to the First Congress in 1774, and was colonel of the First New York Regiment. On Aug. 9, 1776, he was made a brigadier-general, and in the retreat from Long Island (which see) he superintended the embarkation of the troops. In the battle of White Plains (which see) he was conspicuous. In the spring of 1777 he was in command at Peekskill, and in October of that year he was made a major-general in the Continental army. McDougall was in the battle of Germantown (which see), and in March, 1778, he took command in the Hudson Highlands, when, with Kosciuszko, he finished the fortifications there. In 1781 he was a member of Congress, and was made Minister of Marine (Secretary of the Navy), but did not fill the office long. He was again in Congress in 1784-85, and in the winter of 1783 he was at the head of the committee of army officers who bore the complaint of grievances to Congress from Newburgh. (See *Newburgh Addresses*.) He was elected State Senator in 1783, which office he held at his death.

McDougall, SIR DUNCAN, K.C.T., son of Patrick McDougall, Esq., of Argyleshire, Scotland, was born in 1789. He entered the army in 1804, and served in several regiments, and on the staff in Portugal, Spain, France, America, Cape of Good Hope, and West Indies. He had the distinction of having received into his arms two eminent British generals when they fell in battle—namely, General Ross, killed near Baltimore,

and General Pakenham, slain near New Orleans. He commanded the Seventy-ninth Highlanders for several years. His son and heir, Colonel

SIR DUNCAN MCDUGALL.

Patrick Leonard McDougall, was commandant of the Royal Stall College in 1870. The family is descended, in a direct line, from Somerled, the Prince of the western coast of Argyleshire, and famous "Lord of the Isles." The above portrait of the gallant soldier is from a *carte de visite* likeness, sent to me at my request by Sir Duncan in the summer of 1861.

McDowell, BATTLE AT. General Banks with 5000 men was at Harrisonburg, in the upper Shenandoah valley, at the close of April, and "Stonewall" Jackson, joined by troops under Generals Ewell and Edward S. Johnson, had a force of about 15,000 men not far off. Jackson was closely watching Banks, when he was startled by news that General Milroy was approaching from Frémont's Department, to join Banks or fall upon Staunton. Leaving Ewell to watch the latter, he turned rapidly towards Staunton, and sent Johnson with five brigades to strike Milroy. The latter, outnumbered, fell back to McDowell, thirty-six miles west of Staunton, whither General Schenck hastened with a part of his brigade, to assist him. Jackson also hurried to the assistance of Johnson, and on May 8th a severe engagement occurred, lasting about five hours, when darkness put an end to it. Schenck (who ranked Milroy), finding the position untenable, withdrew during the night to Franklin, and the next day Jackson wrote to Ewell: "Yesterday God gave us the victory at McDowell." (See fac-simile on next page.) The Nationals lost 256 men, of whom only nine were killed. Jackson reported a loss of 461, of whom 70 were killed. Among the latter was General Johnson.

6 miles west
of McDowell
May 1st 1862
My Dear General:
Yesterday
God gave us the victory at
McDowell which is 36 miles
west of Stanton. I hope to be
with you in a few days.
Very truly yours
T. J. Jackson
Maj. Genl. R. S. Ewell

FAC-SIMILE OF JACKSON'S NOTE TO EWELL. (See p. 826.)

McDowell, IRVIN, was born at Franklinton, O., Oct. 15, 1818. Educated partly at a military school in France, he graduated at West Point in 1838 and was assistant-instructor of tactics there in 1841. He was adjutant of the post until 1845. In 1846 he accompanied General Wool to Mexico as aide-de-camp, winning the brevet of captain at Buena Vista. In 1856 he became assistant-adjutant-general, and brigadier-general United States Army in May, 1861. General McDowell had command of the first

Department of the Rappahannock. He co-operated with the forces of Banks in the Shenandoah valley, and was of great assistance to General Pope in the operations of the Army of Virginia (which see). He was relieved, at his own request, Sept. 5, 1862, and subsequently commanded the Department of the Pacific. He received the brevet of major-general United States Army in March, 1865. In September, 1866, he was mustered out of the volunteer service, and afterwards commanded the Department of the East and South.

IRVIN MCDOWELL.

army gathered at Washington, and commanded at the battle of Bull's Run. After McClellan took command of the Army of the Potomac, McDowell led a division under him. In March, 1862, he took command of a corps, and was appointed major-general of volunteers. In April his corps was detached from the Army of the Potomac, and he was placed in command of the

McFingal. The title of a political and historical satire, in four cantos, written by John Trumbull during the American Revolution. *McFingal* is a representative of the Tory or loyalist party in that struggle; a burly New England squire, constantly engaged with Honorius, a champion of the Whigs, or rebels, as the British called the patriots. In it all the leading Tories of the day are severely lampooned. It is written in Hudibrastic style, and is the ablest American production of the kind. The first canto was published in 1775; the whole work in 1782. The latest edition, fully annotated by Benson J. Lossing, was published in 1860.

Macgillivray, ALEXANDER, a noted Creek chief, was the son of a Scottish trader of that name, who married a Creek maiden, daughter of the principal chief. When he was ten years of age his father sent him to Charleston, under the care of his kinsman, Farquhar Gillivray, by whom he was placed under the tuition of an eminent English schoolmaster. He was also taught the Latin language in the Free School of Charleston. At the age of seventeen he was sent to Savannah and placed in the counting-house of General Elbert, where he devoted much

of his time to reading history instead of attending to his employer's business. His father sent for him to come home; and, finally, the Creeks chose him for their principal sachem or king. The King of Spain gave him the commission of a brigadier-general in his service. He married a Creek girl, and they had several children. The mother was a very intelligent and excellent woman. Macgillivray desired that his children should learn and speak the English language, and always talked with them in English, while their mother, jealous of her native tongue, never would talk to them in English, but always in Indian.

McIntosh, GENERAL LACHLAN, was born near Inverness, Scotland, March 17, 1725; died at Savannah, Feb. 20, 1806. His father, at the head of one hundred of the clan McIntosh, came to Georgia with Oglethorpe in 1736 and settled

LACHLAN MCINTOSH.

at New Inverness, in what is now McIntosh County, Georgia. Some of his sons and grandsons bore commissions in the army of the Revolution. Lachlan received assistance in the study of mathematics from Oglethorpe. At maturity he entered the counting-room of Henry Laurens, in Charleston, as clerk. Making himself familiar with military tactics, he was ready to enter the field when the war for independence began, and he served faithfully in that struggle, rising to the rank of brigadier-general. Button Gwinnett, one of the signers of the Declaration of Independence, persecuted McIntosh beyond endurance, and he called the persecutor a scoundrel. A duel ensued, and in it Gwinnett was killed. McIntosh was at the siege of Savannah in 1779, and was made a prisoner at Charleston in 1780. In 1784 he was in Congress, and the next year was a commissioner to treat with the Southern Indians.

McKean, THOMAS, LL.D., signer of the Declaration of Independence, was born in Chester County, Penn., March 19, 1734; died in Philadelphia, June 24, 1817. He was admitted to the bar in 1757, and chosen clerk of the Assembly.

He was a member of that body for the county of New Castle (see *Delaware*) from 1762 to 1779, and member of the Stamp Act Congress (which see) in 1765. He and Lynch and Otis framed the address to the British Parliament. He held seven local offices, and in 1774 was a member of the Continental Congress, to which he was annually elected until 1783. McKean was the only man who was a member of that body continually during the whole period of the war. He was active in procuring a unanimous vote for the Declaration of Independence, and was one of the committee that drew up the Articles of Confederation (which see). From 1777 till 1779 he held the office of president of the State of Delaware; also executed the duties of chief-justice of Pennsylvania. He was "hunted like a fox," he said, by the British, removing his family five times in the course of a few months. They finally rested in a little log-house on the Susquehanna, but were finally compelled to move on account of hostile Indians. McKean was governor of Pennsylvania from 1799 to 1808. In politics he followed the lead of Jefferson, though he had promoted the adoption of the Constitution.

McKean, WILLIAM W., United States Navy, was born in Pennsylvania in 1801; died near Binghamton, N. Y., April 22, 1865. He was a son of Judge McKean and nephew of Governor McKean, of Pennsylvania. He entered the navy as midshipman in 1814; became a lieutenant in 1825, a commander in 1841, captain in 1855, and commodore in July, 1862, when he was retired. In command of a schooner, under Commodore Porter, he assisted that officer (1823-24) in suppressing piracy in the West Indies. In 1860 he was engaged in the special service of conveying the Japanese embassy home. He was governor of the Naval Asylum, Philadelphia (1858-61), and was for a short time after his return from Japan in command of the Western Gulf Blockading Squadron.

Mackenzie, SIR ALEXANDER, explorer, was born in Inverness, Scotland, 1760; died at Dalhousie, March 12, 1820. At one time he was engaged in the fur-trade in Canada. He set out to explore the vast wilderness northward in June, 1789, having spent a year previously in England studying astronomy and navigation. At the western part of the Great Slave Lake he entered a river in an unexplored wilderness, and gave his name to it. Its course was followed until the 12th of July, when his voyage was terminated by ice, and he returned to his place of departure, Fort Chippewayan. He had reached 69° 1' north latitude. In October, 1792, he crossed the continent to the Pacific Ocean, which he reached in July, 1793, in latitude 51° 21' north latitude. He returned, went to England, and published (1801) his *Voyages from Montreal, on the River St. Lawrence, through the Continent of North America, to the Frozen and Pacific Oceans, in the Years 1789 and 1793*, with excellent maps. He was knighted in 1802.

Mackenzie, WILLIAM LYON, was born in Forfarshire, Scotland, March 12, 1795; died at To-

ronto, Canada, Aug. 28, 1861. He kept a circulating library near Dundee when he was seventeen years of age, and was afterwards clerk to Lord Lonsdale, in England. He came to Canada in 1820, where he was engaged successfully in the book and drug trade in Toronto. He entered upon political life in 1823; edited the *Colonial Advocate* (1824-33) and was a natural agitator. He criticised the government party, and efforts to suppress his paper failed. Rioters destroyed his office in 1826, and the people, whose cause he advocated, elected him to the Canadian Parliament. Five times he was expelled from that body for alleged libels in his newspaper, and was as often re-elected, until finally the Assembly got rid of him by refusing to issue a writ for a new election. He went to England in 1832, with a petition of grievances to the Home Government. In 1836 Toronto was incorporated a city, and Mackenzie was chosen its first mayor. He engaged, as a leader, in the Canadian Rebellion (which see), when he was outlawed by his government, his property was confiscated, and he fled to the United States. Arrested at Rochester by the United States authorities on a charge of a violation of the neutrality laws, he was sentenced to eighteen months' imprisonment in the county jail of Monroe. At the end of that time he went to New York, where he was the actuary of the Mechanics' Institute, and with his family resided in the basement of their school building. He was editorially connected with the *New York Tribune* for some time, and published *Mackenzie's Gazette*. In 1850 his government pardoned him, restored his confiscated property, and he returned to Canada, where he was elected to Parliament, and remained a member of the Assembly until 1858. He established a newspaper in Toronto, and conducted it until his death. Mackenzie was a thoroughly sincere and honest man, and had the courage of his convictions. His admirers purchased for him a residence near Toronto and a small annuity.

Mackerel and Free Schools. The first free school established by the Pilgrim fathers was supported by the proceeds of the mackerel-fishery authorized by the Legislature of the colony, by a grant which was confirmed in 1674, in the following words: "This court having received, by the deputies of the several towns, the significance of the minds of the major part of the freemen of the colony, that all the profits of the fishery at Cape Cod, granted by the court for the erecting and maintaining of a school, do hereby confirm the grant of the aforesaid profits of the fishery at the cape to the maintenance of the school."

Mackinaw (or Michilimackinac). In the

bosom of the clear, cold, and deep waters of the strait between lakes Huron and Michigan—a strait forty miles in length—stands a limestone rock about seven miles in circumference, rising in its centre to an altitude of nearly three hundred feet, and covered with a rough and generous soil, out of which springs heavy timber. The Indians, impressed by its form, called it Mich-il-i-mack-i-nac—"The Great Turtle." On the opposite shore of the peninsula of Michigan, French Jesuits erected a stronghold and called it Fort Michilimackinac, which name has

MACKINAW, FROM ROUND ISLAND.

been abbreviated to Mackinaw. This fort fell into the hands of the British, in their conquest of Canada (1760), but the Indians there remained hostile to their new masters. "You have conquered the French," they said, "but you have not conquered us." The most important village of the Chippewas—one of the most powerful tribes of Pontiac's Confederacy (which see)—was upon the back of Michilimackinac. Early in the summer of 1763 (June 4) the front of the island was filled with Indians, who, professing warm friendship for the English, invited the garrison at Fort Mackinaw to witness a great game of ball—an exciting amusement. They did so. At length a ball, making a lofty curve in the air, fell near the pickets. It was a preconcerted signal. The warriors rushed towards the fort as if in quest of the ball, when their hands suddenly pulled gleaming hatchets from beneath their blankets and began a massacre of the garrison; but, hearing that a strong British force was approaching, the barbarians abandoned the fort and fled. This fort came into the possession of the United States in 1796, when the Northwestern posts were given up by the British in compliance with the treaty of peace in 1783 (which see). The fortification called Fort Holmes, on the high southwest bluff of the island, was garrisoned in 1812 by a small force of Americans, and was captured (July 17, 1812) by a British force. (See *Fall of Mackinaw*.)

Mackinaw, ITS RECAPTURE ATTEMPTED. The island and fort of Mackinaw (see *Fall of Mackinaw*) was the key to the vast fur-trade in the Northwest, and the Americans planned a land and naval expedition in the spring of 1814 for its recapture. A small squadron was placed at the disposal of Commander St. Clair, and a land

force was placed under the command of Lieutenant-colonel Croghan, of Fort Stephenson (which see) fame. They left Detroit at the beginning of July. A part of the force went against the post of the Northwest Fur Company, at the Falls of St. Mary, the agents of which were among the most active of the British emissaries in inciting the Indians to make war on the Americans. The keepers of the post fled when the armament appeared, and the Americans destroyed everything of value that could not be carried away. Then the whole expedition started for Mackinaw. The force of the Americans was too small to effect a capture, and the enterprise was abandoned. Some vessels cruised in those waters for a time. The expedition returned to Detroit in August, and no further military movements were undertaken in the Northwest, excepting a raid by McArthur. (See *McArthur's Raid*.)

McKnight, CHARLES, M.D., was born at Cranberry, N. J., Oct. 10, 1750; died in New York in 1791. He graduated at Princeton in 1771, studied medicine with Dr. Shippen, and entered the Continental army as a surgeon. He soon became surgeon of the Middle Department. After the war he settled in New York, where he became a very eminent practitioner, and was for some time professor of anatomy and surgery in Columbia College.

McLane, ALLAN, was born Aug. 8, 1746; died at Wilmington, Del., May 22, 1829. Removing to Delaware in 1774, he left an estate in Philadelphia worth \$15,000, the whole of which he sacrificed in the service of his country. Mr. McLane entered warmly into the contest for freedom, becoming first a lieutenant in Caesar Rodney's regiment. He joined the army under Washington in 1776, and distinguished himself at the battles of Long Island, White Plains, Trenton, and Princeton. He was made captain in 1777. He commanded the outposts of the Continental army around Philadelphia while that city was occupied by the British (1777-78), and was made major of the infantry of "Lee's Legion." (See *Lee, Henry*.) While engaged in active service under that commander, he discovered and reported the weakness of the garrison at Stony Point, and promoted its capture on July 16, 1779. He also revealed the weakness of the garrison at Paulus's Hook, and participated in the brilliant affair there, Aug. 19, 1779. His personal courage and strength were remarkable. In an encounter, near Frankford, Penn., with three British dragoons, he killed one, wounded another, and caused the third to flee for his life. After the war he held prominent civil positions—namely, member of the Assembly of Delaware, and its speaker; six years a privy-councillor; a judge of the Court of Common Pleas; marshal of the district from 1790 to 1798, and collector of the port of Wilmington from 1808 until his death.

McLane, LOUIS, was born at Smyrna, Kent Co., Del., May 28, 1786; died in Baltimore, Md., Oct. 7, 1857. He was a son of Major Allan McLane, a distinguished officer of the Revolu-

tion. He entered the navy at thirteen years of age, and served as a midshipman under Decatur in the *Philadelphia* (which see), but afterwards studied law, and was admitted to the bar in 1808. When Baltimore was threatened, in 1814, he was a member of a volunteer corps that marched to its defence. For ten successive years (1817-27) he represented Delaware in Congress, and was United States Senator from 1827 to 1829. In May, 1829, President Jackson appointed him American minister to Great Britain, which post he held two years, when he was called to Jackson's cabinet as Secretary of the Treasury. In his instructions to McLane, the President said, "Ask nothing but what is right, and submit to nothing that is wrong." In 1833, in consequence of his declining to remove the government deposits from the United States Bank (which see), he was transferred to the position of Secretary of State, which office he held until 1834, when he resigned, and retired from public life. For ten successive years (1837-47) he was president of the Baltimore and Ohio Railroad. Pending the settlement of the Oregon boundary question he was ambassador in London, to which he was appointed by President Polk in June, 1845. His last public acts were as a member of the Convention at Annapolis to reform the constitution of Maryland.

McLaws, LAFAYETTE, was born in Georgia, and graduated at West Point in 1842. He remained in the army until 1861, when he joined the insurgents, and became one of the most active of the Confederate military leaders. He had served in the war against Mexico. Made a major-general in the Confederate army, he commanded a division under Lee, and was distinguished at Fredericksburg, Gettysburg, and at Averasborough (which see), N. C. He surrendered with Johnston's army in April, 1865.

McLean, ALLAN, was born in Scotland, in 1725; died in 1784. He was a lieutenant in a Scotch brigade in the service of the Dutch in 1747. He left that service in 1757, came to America, and was at the capture of Fort Duquesne in 1758. He served under Amherst in 1759, and was major-commander of the One-hundred-and-fourteenth Highlanders, which regiment he raised. He was made lieutenant-colonel in 1771, and in 1775 he came to America again, to fight the patriotic colonists. With a corps of Royal Highland emigrants, which he raised in Canada, he occupied Quebec late in 1775, and rendered great service during the siege by Montgomery. He commanded the fort at Penobscot (which see) in 1779, and in 1780 was made a colonel.

McLean, JOHN, LL.D., was born in Morris County, N. J., March 11, 1785; died in Cincinnati, O., April 4, 1861. His father removed first to Virginia, then to Kentucky, and in 1799 settled in Warren County, O. John labored on a farm until he was sixteen years old, receiving a scanty education; studied law, was admitted to the bar in 1807, and was a member of Con-

gress from 1813 to 1816. He was a supporter of Madison's administration, and from 1816 to 1822 he was a judge of the Supreme Court of Ohio. In 1822 he was made commissioner of the general land-office, and in 1823 postmaster-general. In 1830 he became a justice of the United States Supreme Court, and was always known as an advocate for the freedom of the slaves. In the Dred Scott case (which see) Judge McLean dissented from the opinion of Chief-justice Taney.

McMinnsville, BATTLE NEAR. Generals Bragg and Buell had marched in nearly parallel lines eastward towards Chattanooga—the latter north of the Tennessee River, and the former south of it. Bragg won the race, and with full forty thousand men turned his face towards the Ohio. Bragg divided his force into three corps, commanded respectively by Generals Hardee, Polk, and E. Kirby Smith. The latter was sent to Knoxville, Tenn., while the two former held Chattanooga and its vicinity. Buell disposed his line from Huntsville, Ala., to McMinnsville, Warren Co., Tenn. So lay the opposing armies when Kirby Smith left Knoxville to invade Kentucky. Bragg crossed the Tennessee, just above Chattanooga, on Aug. 21, with thirty-six regiments of infantry, five of cavalry, and forty guns. Louisville was his destination. He advanced among the rugged mountains towards Buell's left at McMinnsville as a feint, but fairly flanked the Nationals. This was a cavalry movement, which resulted in a battle there. The horsemen were led by General Forrest, who, for several days, had been hovering around Lebanon, Murfreesborough, and Nashville. Attempting to cut off Buell's communications, he was confronted (Aug. 30) by National cavalry under E. P. Fyffe, of General T. J. Wood's division, who had made a rapid march. After a short struggle the Confederates were routed. Supposing Bragg was aiming at Nashville, Buell took means to defend that city.

McNab, SIR ALLAN NAPIER, was born at Niagara, Feb. 19, 1798; died at Toronto, Can., Aug. 8, 1862. His father was the principal aid on the staff of General Simcoe during the war for independence. Allan became a midshipman in 1813, in the British fleet on Lake Ontario, but soon left the navy and joined the army. He commanded the British advanced guard at the Battle of Plattsburg (which see). He practised law at Hamilton, C. W., after the war, and was in the Canadian Parliament in 1820, being chosen speaker of the Assembly. In 1837-38 he commanded the militia on the Niagara frontier, and was a conspicuous actor in crushing the "rebellion." He sent a party to destroy the *Caroline* (which see), and for his services at that period he was knighted. (See *Canadian Rebellion*.) After the union of the two provinces (Upper and Lower Canada), in 1841, he became speaker of the Legislature. He was prime minister under the governorship of Lord Elgin and Sir Edmund Head, and in 1860 was a member of the Legislative Council.

McNeill, JOHN, was born at Hillsborough, N. H.,

in 1784; died at Washington, D. C., Feb. 23, 1850. He entered the army as captain in March, 1812, and was breveted lieutenant-colonel for his good conduct at the Battle of Chippewa (which see). The next year he was wounded at the Battle of Niagara, or Lundy's Lane (which see), and was breveted colonel. In 1830 he resigned his commission, and was appointed, by President Jackson, Surveyor of the Port of Boston, which office he held until his death. His wife was a half-sister of President Pierce.

McNeill, JOHN, was born on British-American soil, of American parents, in 1820, and was a hatter in St. Louis about twenty years. He entered the military service with General Lyon in May, 1861, and was in command of St. Louis, under Frémont, having performed good military service. He was made colonel of volunteers, and early in 1862 took command of a cavalry regiment and of a military district in Missouri, in which he distinguished himself, and was made a brigadier-general. He assisted in driving the forces under Price out of Missouri in the fall of 1864. (See *Last Invasion of Missouri*.)

Macomb, ALEXANDER, was a son of a fur-merchant, and was born at Detroit, Mich., April 3, 1782; died at Washington, D. C., June 25, 1841. He entered the army as cornet of cavalry in 1799, and at the commencement of the war

ALEXANDER MACOMB.

with Great Britain, in 1812, held the rank of lieutenant-colonel of engineers and adjutant-general of the army. He had five brothers in that contest. He was transferred to the artillery, and distinguished himself on the Niagara frontier. In January, 1814, he was promoted to brigadier-general, and when General Izard left the military post on Lake Champlain, in the summer of that year, Macomb was left in chief command in that region. In that capacity he

won a victory over the British at Plattsburg (Sept. 11, 1814). For his conduct on that occasion he was commissioned a major-general in the United States Army, and received thanks and a gold medal from Congress. (See *Battle of Platts-*

burg.) Mr. Macon was a warm personal friend of Jefferson and Madison, and his fellow-citizens have embalmed his name in the title of one of the counties of North Carolina. John Randolph, the cynic, said of him, in his will, "He is the best, purest, and wisest man that I ever knew." Mr. Jefferson called him "The last of the Romans." He selected for his place of burial an untillable ridge, ordered the spot to be marked only by a pile of loose stones, and directed his coffin to be made of plain boards, and to be paid for before his interment.

McPherson Blues, a volunteer uniformed company, composed of young men of the best families in Philadelphia. The uniform was a close-fitting blue-cloth jacket and pantaloons with white facings, with cocked hat covered with bearskin and adorned with a cockade and a buck's tail. Their legs were encased in close-fitting gaiters, which buttoned over the shoes. They ranked as infantry. When, on Dec. 26, 1799, there was a funeral procession from the Hall of Congress to the German Lutheran Church in Philadelphia, to hear an oration in memory of Washington from General Henry Lee, the McPherson Blues were invited by a committee of Congress to attend as a guard of honor. After the ceremonies at the church, the Blues re-formed, and in the street, in the presence of thousands of citizens, a squad of them fired a salute, in the manner such honor is paid

at the grave of a deceased officer. Six of that company were living as late as 1862. They have since passed to the world of spirits.

MACOMB'S MONUMENT.

On the death of General Brown, in 1835, General Macomb was appointed general-in-chief of the armies of the United States, which position he held at the time of his death. His remains were interred, with military honors, in the Congressional burying-ground, Washington, and over them stands a beautiful white marble monument, properly inscribed. General Macomb wrote a treatise on *Martial Law and Court-martial*.—His son, WILLIAM H., entered the United States navy, as midshipman, in 1834. He was engaged against forts in China in 1856, and in the expedition to Paraguay in 1859, in which he commanded the *Metacombet*. In the Civil War he was active on the waters of the Mississippi and on the coast of North Carolina, attaining the rank of commodore in 1862. In 1869 he commanded the steamship *Plymouth*, in the European squadron, and was light-house inspector in 1871.

Macon, NATHANIEL, was born in Warren County, N. C., in 1757; died there, June 29, 1837. At college at Princeton when the Revolution broke out, he returned home, and volunteered as a private soldier in the company of his brother. He was at the fall of Charleston, the disaster to Gates near Camden (see *Sanders's Creek*), and with Green in his remarkable retreat across the Carolinas. From 1780 to 1785 he was a member of the North Carolina Assembly, and he opposed the ratification of the national Constitution. From 1791 to 1815 he was a member of Congress, and from 1816 to 1828 United States Senator.

A MCPHERSON BLUE.

McPherson, JAMES BIRDSEYE, was born at Clyde, Sandusky Co., O., Nov. 14, 1828; killed near Atlanta, Ga., July 22, 1864. He graduated at West Point in 1853, the first in his class, and entered the engineer corps. He was made captain in August, 1861, and brigadier-general of volunteers in May, 1862. He was aid to Gen-

eral Halleck late in 1861, and chief-engineer of the Army of the Tennessee, doing good service at Fort Donelson, Shiloh, Corinth, and Inka Springs. In December, 1862, he commanded

JAMES BIRDSEYE MCPHERSON.

the Seventeenth Corps with great ability, having been made major-general in October. He did admirable service, under Grant, in the Vicksburg campaign (1863), and was made brigadier in the United States Army in August. He was also active and efficient in the Atlanta campaign, in 1864, distinguishing himself everywhere, as commander of the Army of the Tennessee. He was shot while reconnoitring, by a Confederate named McPherson.

McPherson, WILLIAM, was born in Philadelphia in 1756; died near there in November, 1813. At the age of thirteen he was appointed a cadet in the British army, and became adjutant of a regiment. He joined the Continental army on the Hudson at the close of 1779, and was made a brevet-major by Washington. Serving as aid to Lafayette for a while, he was appointed to the command of a partisan corps of cavalry, which served in Virginia in 1781. President Washington appointed him Surveyor of the Port of Philadelphia in 1789; Inspector of Revenue in 1792; and Naval Officer late in 1793, which position he held until his death. He was made brigadier-general in the Provisional army in 1798. His brother, John, was aid to General Montgomery, and perished with him at the siege of Quebec (which see).

McRee, WILLIAM, was born at Wilmington, N. C., Dec. 13, 1787; died at St. Louis, Mo., Sept. 10, 1832. He graduated at West Point in 1805, and entered the corps of engineers. He was major in July, 1812; was chief-engineer on the northern frontier, and was breveted colonel for services in defence of Fort Erie in August, 1814. Made lieutenant-colonel in 1818, he resigned in 1819, and was United States Surveyor of Public Lands in the Mississippi region from 1825 to 1832. He had been sent to France by Major Thayer in 1816 to collect scientific and military information for the benefit of the military acad-

emy at West Point, of which Thayer was then superintendent.

Madison, JAMES, fourth President of the United States, was born at Port Conway, King George's Co., Va., March 16, 1751; died at Montpelier, Va., June 28, 1836. He was a graduate of the College of New Jersey (1771), studied law, and in 1776 was elected to a seat in the Virginia Assembly. He became a member of the Executive Council in 1778, and was sent to Congress in 1779. In that body he continually opposed the issue of paper-money by the states. He was active until the peace in 1783, when he retired to private life, but was drawn out again as a delegate to the convention that framed the national Constitution. In that body he took a prominent part in the debates, and wrote some of the papers in *The Federalist*, which advocated the adoption of that instrument. He was also in the Virginia Convention in 1788 that ratified the Constitution. A member of Congress from 1789 to 1797, Madison did much in the establishment of the nation on a firm foundation. Unit- ing with the Republican party, he was a moderate opponent of the administration of Washington. He declined the post of Secretary of State, vacated by Jefferson in 1793, which Washington offered him. He presented a series of resolutions to the Virginia Legislature in 1798, drawn by him, on the basis of a series drawn by Jefferson for the Kentucky Legislature, which contained the essence of the doctrine of state supremacy. They were adopted. (See *Resolutions of 1798*.) In 1801 Madison was appointed

JAMES MADISON.

by Jefferson Secretary of State, which office he held until he took the chair of President of the United States. He very soon became involved in disputes about impressment with the government of Great Britain, and, in 1812, was compelled to declare war against that nation. He was enabled to proclaim a treaty of peace in February, 1815. Retiring from office in 1817, he

passed the remainder of his days on his estate at Montpelier. His accomplished wife, Dorothy (commonly called "Dolly"), shared his joys and sorrows from the time of their marriage in Philadelphia in 1794 until his death, and survived him until July 2, 1849, when she also died, at the age of eighty-two years. She was a long time among the leaders in Washington society.

Madison, JAMES, RE-ELECTION OF. In the fall of 1812 James Madison was re-elected President of the United States, with Elbridge Gerry as Vice-President, George Clinton having died in April previously. There were some changes made in the cabinet, John Armstrong having taken the place of William Eustis as Secretary of War, in January, 1813, and William Jones that of Paul Hamilton as Secretary of the Navy, at the same time. Monroe, who had acted as Secretary of War a short time, remained Secretary of State. Albert Gallatin remained Secretary of the Treasury; so, also, did Gideon Granger continue Postmaster-general. William Pinkney remained in the cabinet as Attorney-general.

Madison, Mrs., and Washington's Portrait. President Madison, seeing that the capital was in danger when victory remained with the British at Bladensburg (which see), sent messengers to his wife, advising her to fly to a place of safety. She had already been apprised of the

MRS. MADISON.

disaster on the field. On receiving the message from her husband (Aug. 24, 1814), between two and three o'clock P.M., she ordered her carriage and sent away in a wagon silver plate and other valuables, to be deposited in the Bank of Maryland. In one of the rooms hung a full-length portrait of Washington, painted by Stuart. While anxiously waiting for the arrival of her husband, she took measures for preserving the picture, when, finding the process of unscrewing the frame from the wall too tedious, she had it broken in pieces, and the canvas was removed from the stretcher with her own

hands. Just as she had accomplished so much, two gentlemen from New York (Jacob Barker and R. G. L. De Peyster) entered the room. The precious picture was lying on the floor. The sound of approaching troops was heard. They might be the invaders, coming to secure so notable a captive as the beautiful wife of the President. "Save that picture," said Mrs. Madison to the two gentlemen. "Save it if possible; if not possible, destroy it; under no circumstances allow it to fall into the hands of the British." Then, snatching up the precious parchment which bore the engrossed copy of the Declaration of Independence and the autographs of the signers, which she had also resolved to save, she hastened to the carriage, with her sister and her husband, and was borne away to a place of safety beyond the Potomac. Barker and De Peyster rolled up the picture, and, with it, accompanied a portion of the retreating army, and so saved it. That picture was left at a farm-house where they lodged that night, and a few weeks afterwards Mr. Barker restored it to Mrs. Madison. It now hangs in the Blue Room at the presidential mansion in Washington. The revered parchment is still preserved by the government. Mrs. Dolly (Payne) Madison was a superior woman, and possessed remarkable beauty of person. She possessed those charms which "at sixty bloom as fair as at sixteen." Her parents were Quakers, and lived in Philadelphia, where, at an early age, she married Mr. Todd, a young lawyer, but soon became a widow. James Madison, a member of Congress there, wooed and won the young widow in 1794, and all through his life she was a helpmate indeed. She was the acknowledged leader in Washington society for many years. She lived to the age of eighty-two.

Madison's Cabinet Officers. Madison nominated to the Senate Robert Smith, of Maryland, as Secretary of State; Albert Gallatin (continued in office), as Secretary of the Treasury; William Eustis, of Massachusetts, Secretary of War; Paul Hamilton, of South Carolina, Secretary of the Navy; Gideon Granger, of New York (continued in office), Postmaster-general; and Cæsar A. Rodney, of Delaware (continued in office), Attorney-general.

Madoc. Welsh records and traditions declare that Madoc, a son of Owen Gwynneth, Prince of North Wales, disgusted with the domestic contentions about the rightful successor of his father, went on a voyage of discovery, with well-manned ships and many followers, about the year 1170; that he sailed westward from Ireland and discovered a fruitful country; that, returning, he fitted out a squadron of ten vessels and filled them with a colony of men, women, and children of his country, and with these sailed for the fair land he had found. The expedition was never heard of afterwards. Travellers in the Mississippi valley and westward of it assert that the Maudans and other Indians who are nearly white have many Welsh words in their language. Allusions to this fact have been made by early and late writers, and it is suggested that the word Maidan is a corruption

of Madawgwys, the name applied to the followers of Madawc or Madoc. The traditions of the Southern Indians, even as far south as Peru, that the elements of civilization were introduced among them by a white person, who came from the North, favor the theory that the light-colored Indians of our continent have a mixture of Welsh blood, as they have of Welsh language. Until the translation of the Icelandic chronicles, the Welsh historians claimed for their countrymen the honor of being the discoverers and first European settlers of America. (See *Northmen*.)

Magellan, FERDINANDO, a Portuguese navigator, was born about 1470. After serving long in the Portuguese navy, he went to Spain and persuaded the authorities there that the Molucca or Spice Islands, which they coveted, might be reached by sailing westward, and so come within the Pope's gift of lands westward of the Azores. (See *Pope, Donation of the*.) Magellan was sent in that direction with five ships and two hundred and thirty-six men. After touching at Brazil, he went down the coast and discovered and passed through the strait which bears his name, calling it the Strait of the Eleven Thousand Virgins. He passed into the South Sea, discovered by Nuñez (see *Nuñez, Alvar Cabeça de Vacu*), and, on account of its general calmness, he named it the Pacific Ocean. Crossing it, he discovered the Philippine Islands, eastward of the China Sea, where he was killed by the natives. The expedition was reduced to one ship. In that the survivors sailed across the Indian Ocean and around the Cape of Good Hope, and reached Spain Sept. 6, 1522. That ship (the *Victoria*) was the first that ever circumnavigated the globe.

Magruder, JOHN BANK-HEAD, was born in Virginia in 1810; died at Houston, Texas, Feb. 19, 1871. He graduated at West Point in 1830; served in the war against Mexico; joined the insurgents in 1861, and commanded in the defence of Richmond in the summer of 1862 as brigadier and major-general. In the fall of that year he commanded the Confederate forces in Texas, New Mexico, and Arizona, and was in command of the expedition against the Nationals at Galveston (which see).

Maguaga, BATTLE AT. After the evacuation of Canada (which see) General Hull sent six hundred men, under Lieutenant-colonel Miller, to repair the misfortunes of Van Horne and afford a competent escort for Captain Brush and the army supplies under his charge at the River Raisin. When the troops were placed in marching order, Lieutenant-colonel

Miller said to the Ohio militia: "Soldiers, we are now going to meet the enemy and beat them. The reverses of the 5th (see *Van Horne's Defeat*) must be repaired. The blood of our brethren, spilt by the savages, must be avenged. I shall lead you. You shall not disgrace yourselves nor me. Every man who shall leave the ranks or fall back, without orders, shall be instantly put to death. I charge the officers to execute this order." Turning to the veterans of the Fourth Regiment of Regulars, he said: "My brave soldiers, you will add another victory to that of Tippecanoe—another laurel to that gained on the Wabash last fall. If there is now any man in the ranks of the detachment who fears to meet the enemy, let him fall out and stay behind!" They all cried out, "I'll not stay! I'll not stay!" and, led by Miller, they pressed southward, in an order ready for battle at any moment, until, about four o'clock on a Sabbath afternoon (Aug. 9, 1812), they reached the vicinity of Maguaga, fourteen miles below Detroit. Spies had led the way, under Major Maxwell, followed by a vanguard of forty men, under Captain Snelling, of the Fourth Regiment. The infantry moved in two columns, about two hundred yards apart. The cavalry kept the road in the centre, in double file; the artillery followed, and flank guards of riflemen marched at prop-

MAGUAGA BATTLE-GROUND.

er distances. In the Oak Woods, at Maguaga, near the banks of the Detroit, they received from an ambush of British and Indians, under Major Muir and Tecumtha, a terrible volley. This was a detachment sent over from Fort Malden by General Proctor to repeat the tragedy at Browns-

town (which see), cut off the communication between the Raisin and Detroit, and capture Brush and his stores. Snelling, in the advance, returned the fire and maintained his position until Miller came up with the main body. These were instantly formed in battle order, and, with a shout, the gallant young commander and his men fell upon the foe. At the same time, a 6-pounder poured in a storm of grape-shot that made sad havoc. The battle soon became general, when, closely pressed in front and rear, the British and Canadians fled, leaving Tecumtha and his warriors to bear the brunt of battle. The white men gained their boats as quickly as possible and sped across the river to Fort Malden. The barbarians soon broke and fled also, pursued by the impetuous Snelling more than two miles, on a powerful horse, with a few of the cavalry. The rout and victory was complete. The Americans lost eighteen killed and fifty-seven wounded. Miller, though injured by a fall from his horse, wished to push on to the Raisin, but Hull sent a peremptory order for the whole detachment to return to Detroit. The British were gathering in force at Sandwich, and threatening the fort and village of Detroit.

MAHEW, JONATHAN, an American clergyman, was born at Martha's Vineyard, Mass., Oct. 8, 1720; died in Boston, July 9, 1766. He graduated at Harvard in 1744, and was ordained minister of the West Church, Boston, in 1747, which position he held until his death. He was a zealous republican in politics, and his preaching and writing were remarkable for their controversial character. He was warmly opposed to the operations of the "British Society for the Propagation of the Gospel in Foreign Parts," for he regarded it as an instrument for the spread of Episcopacy, to which he was opposed. He became involved in a controversy with Dr. Secker, Archbishop of Canterbury, because the latter proposed the introduction of bishops into the colonies. He co-operated with Otis and others in their resistance to measures of the British Parliament concerning the Americans, and he was among the boldest of the Whigs. His death deprived the cause of a staunch champion.

MAHEW ON UNION. On Sunday morning, June 8, 1766, Rev. Jonathan Mahew wrote to James Otis: "You have heard of the communion of churches. While I was thinking of this in my bed, the great use and importance of a communion of colonies appeared to me in a strong light. Would it not be decorous for our Assembly [of Massachusetts] to send circulars to all the rest, expressing a desire to cement a union among ourselves?" The suggestion was remembered and acted upon by the patriots of Massachusetts.

MAIDEN BRIDE, THE FIRST, IN NEW ENGLAND. The dreadful famine and fever which destroyed one half of the Pilgrims at New Plymouth during the winter and spring of 1621, made a victim of Rose Standish, wife of Captain Miles Standish. Her husband was then thirty-seven years of age. Not long after this sad event, the

brave little captain was smitten by the charms of Priscilla Mullins, daughter of William Mullins, who was a passenger on the *Mayflower*. Priscilla had then just bloomed into young womanhood, and Standish sent young John Alden, a cooper from Southampton, who lived in his family, to ask the hand of the maiden in marriage. The ambassador went to her father and discreetly and modestly performed the duties of his mission. The father readily gave his consent, and added, "But Priscilla must be consulted." She was summoned to the room, where sat young, graceful, almost courtly, ruddy-faced John Alden, whom she knew well. The ambassador of love repeated his message, and when Priscilla asked, "Why does he not come himself?" and was answered, "He is too busy," the indignant maiden declared that she would never marry a man who was "too busy" to court her. She said (in the words of Longfellow):

"Had he waited awhile, had only showed that he loved me,
Even this captain of yours—who knows?—at last might
have won me,
Old and rough as he is; but now it never can happen."

John Alden pressed the suit of Standish, when

"Archly the maiden smiled, and, with eyes overrunning with
laughter,
Said, in a tremulous voice, 'Why don't you speak for yourself, John?'"

Young Alden blushed, bowed, and retired, for he was faithful to his trust. His visit was soon repeated, and it was not long before the nuptials of John Alden and Priscilla Mullins were celebrated by the whole community, excepting Captain Standish, who could not readily forgive the weakness (for he knew it was not perfidy) of his young friend in surrendering at the first assault from the eyes and lips of the maiden. The great-great-granddaughter of John and Priscilla, Mrs. Phebe C. Bailey, died at Dover, N. H., in 1874, aged ninety-one years.

MAIDEN INDIAN QUEEN, THE. After fighting his way through hostile tribes, De Soto penetrated the country north to Silver Bluffs, on the Savannah River. On the opposite side of that stream (in Barnwell District, S. C.) lived a young and beautiful Indian maiden, who, as queen, ruled over a large domain. She heard of the arrival of the strangers, and, in a richly wrought canoe, filled with feathers, shawls, skins, and other presents, this dusky cacica glided across the river, and, with kind words, welcomed the Spanish leader and offered him her services. They exchanged presents. The young queen had a magnificent string of pearls around her neck. This she drew over her head and put it around the neck of De Soto, as a token of her regard. Then she invited him and his followers to cross over to her valley. They passed the stream in canoes and log-rafts, and, in the shade of mulberry-trees, they encamped and were feasted on wild-turkey and venison. There they remained many days, enjoying the hospitality of the cacica, when the Spaniard requited this hospitality by carrying her away a prisoner, as a hostage for the good behavior of her people towards his followers. She finally

escaped and returned home, a bitter enemy of the perfidious invaders. (See *De Soto, Fernando*.)

Maine, COLONIAL. This most easterly state in the Union was admitted in 1820. Its shores were first visited by Europeans under Bartholomew Gosnold (1602) and Martin Pring (1603), though it is possible they were seen by Cabot (1498) and Verazzani (1524). The French, under De Monts, wintered near the site of Calais, on the St. Croix (1604-5), and took possession of the River Sagadahock, or Kennebec. Captain Weymouth was there in 1605, and kidnapped some of the natives; and in 1607 the Plymouth Company sent emigrants to settle there, but they did not remain long. A French mission established at Mount Desert was broken up by Argall in 1613 (see *Argall, Samuel*), and the next year Captain Smith, landing first at Monhegan Island, explored the coast of Maine. (See *New*

tenant to administer the laws in 1640. He established himself at Agamenticus (now York), when, in 1642, the city called *Gorgeana* was incorporated. There the first representative government in Maine was established (1640). On the death of Sir Ferdinando (1647) the Province of Maine descended to his heirs, and was placed under four jurisdictions. Massachusetts, fearing this sort of dismemberment of the colony might cause the fragments to fall into the hands of the French, made claim to the territory under its charter. Many of the people of Maine preferred to be under the jurisdiction of Massachusetts, and in 1652 a large number of the freeholders in five towns took the oath of allegiance to the Bay State. The latter province then assumed supreme rule in Maine, and continued it until the restoration of the Stuarts (1660), when Charles II., on the petition of the heirs of Gor-

MONHEGAN ISLAND.

England, and Smith, Captain John.) The whole region of Maine, and far southward, westward, and eastward, was included in the charter of the Plymouth Company, and in 1621 the company, having granted the country east of the St. Croix to Sir William Alexander, established that river as the eastern boundary of Maine. (See *Alexander, Sir William*.) Monhegan Island was first settled (1622) and next Saco (1623); and in 1629 the Plymouth Company, perceiving its own dissolution to be inevitable, parcelled out the territory in small grants. In the course of three years the whole coast had been thus disposed of as far east as the Penobscot River. East of that river was claimed by the French, and was a subject of dispute a long time. When the Plymouth Company dissolved (1635) and divided the American territory, Sir Ferdinando Gorges took the whole region between the Piscataqua and the Kennebec, and received a formal charter for it from Charles I. in 1639, when the region was called the *Province of Maine*, in compliment to the queen, who owned the Province of Maine in France. In 1636 Gorges sent over his nephew, William Gorges, as governor of his domain, and he established his government at Saco, where, indeed, there had been an organized government since 1623, when Robert Gorges was governor under the Plymouth Company. In 1639 Sir Ferdinando was appointed governor-general of New England, and his son Thomas was sent as lieu-

ges, sent over a commission to re-establish the authority of the grantees. Massachusetts, after long resistance, purchased the interests (1677) of the claimants for £12,000 sterling. In 1674 the Dutch conquered the territory eastward from the Penobscot, including that of Acadia and Nova Scotia; and in 1676 Cornelius Steenwyck was appointed governor of the conquered territory by the Dutch West India Company (which see). Settlers from Boston soon afterwards expelled the Dutch. Meanwhile the horrors of King Philip's War had extended to that region, and in the space of three months one hundred persons were murdered. (See *King Philip's War*.) Then came disputes arising out of the claims of the Duke of York (to whom Charles II. had given New Netherland) to the country between the Kennebec and St. Croix rivers, which in 1683 had been constituted Cornwall County, of the Province of New York, over which Andros was made governor. (See *Andros, Sir Edmund*.) Massachusetts, however, continued to hold possession of the whole Province of Maine, excepting at Sagadahock and Pemaquid. But when the duke became king (see *James II.*) the charter of Massachusetts was forfeited, and Andros ruled Maine with cruelty. (See *Massachusetts*.) The Revolution of 1688 restored the former political status of Massachusetts, and thenceforth the history of the Province of Maine is identified with that of Massachusetts. It re-

maintained a part of that province until March 15, 1820, when it was admitted into the Union as the twenty-third independent state.

Maine, PURCHASE OF. Massachusetts claimed jurisdiction over New Hampshire and Maine, in opposition to the claims of Mason and Gorges. (See *Maine, Colonial*.) Massachusetts was called to defend her rights in the premises, but the Indian war (King Philip's) absorbed her attention. In the midst of that war (June, 1676) Edward Randolph, a kinsman of Mason, appeared in Boston with a notice from the Privy Council that unless within six months agents were sent to defend the right of Massachusetts to these provinces, judgment by default would be given for the claimants. The General Court sent (September) two commissioners (Bulkley and Stoughton), with circumscribed power, on that errand. The Privy Council decided that the patent of Massachusetts did not extend northward more than three miles beyond the Merrimac, and consequently its claim to jurisdiction was void. Massachusetts at once, through the agency of Usher, a wealthy bookseller in Boston, purchased the territory of Maine from Gorges, with all his proprietary rights, for \$60,000. (See *Maine, Colonial*.) The king intended to purchase the territory for the Duke of Monmouth, his illegitimate son, but Massachusetts was before him and resumed jurisdiction.

Maine, STATE OF. During the Revolution Maine was very little disturbed, but during the War of 1812 that district suffered much. The British held possession of a part of the country, but their rule was comparatively mild after

were involved in a controversy concerning the eastern boundary of Maine, which the treaty of 1783 did not accurately define. The dispute was finally settled by treaty in 1842, each party

STATE SEAL OF MAINE.

making concessions. Maine was twice invaded by Confederates during the Civil War. On the night of June 29, 1863, the officers and crew of a Confederate privateer entered the harbor of Portland, captured the revenue cutter *Caleb Cushing*, and fled to sea with her, sharply pursued by two steamers manned by armed volunteers. Finding they could not escape with the cutter, they blew her up, and taking to their boats, were soon made prisoners. At mid-day on July 18, 1864, some Confederates, led by a Mississippi Confederate captain, came from St. John, N. B., and entered Calais to rob the bank there. Having been forewarned by the American consul at St. John, the authorities were pre-

VIEW OF MALDEN IN 1861, WHERE THE BRITISH SHIPS WERE BUILT. (See p. 839.)

they gained a foothold. Maine continued to be a district of Massachusetts until 1820, when, on March 15, it was admitted into the Union as a state. For more than half a century the governments of the United States and Great Britain

pared, arrested three of the party, and frightened the remainder away. During the Civil War Maine contributed its full share of men and supplies in support of the government. In 1872 a Swedish colony was planted on the Aroos-

took, at a place called New Sweden, where, in 1873, about six hundred Swedes, aided by the state, had settled upon twenty thousand acres of land. They have their own municipal organization and schools, in which the chief study is the English language, that the children may be fitted to become American citizens.

Malden, on the Detroit River, eighteen miles below the city of Detroit and eight miles from Lake Erie, was a place of great importance, in a military point of view, during the War of 1812-15. It is on the Canadian shore, and is now called Amherstburg. There the British fleet on Lake Erie—captured by Perry in 1813—was built, and it was a rallying-place for British troops and their Indian allies. The long dock seen in the engraving on page 838 was the place where the British fleet was launched. From Malden they sailed on the morning of the battle of Lake Erie. In the winter of 1813 the British and Indians issued from Malden on the expedition that resulted in the massacre at the River Raisin. In March, while British ships were frozen in at Malden, Harrison sent an expedition to capture them at that port. They set off in sleighs, instructed to leave the latter at Middle Bass Island, whence, with feet muffled by moccasins, they were to make their way silently over the frozen river. But when they arrived the ice had broken up, and the expedition returned.

Mallory, STEPHEN R., was born at Trinidad, W. I., in 1810; died at Pensacola, Nov 9, 1873. He was the son of a sea-captain of Bridgeport, Conn., who died at Key West in 1821. He studied law, and was admitted to the bar at Key

STEPHEN R. MALLORY.

West in 1833. He was appointed inspector of customs there, and a judge; and in 1845 was made collector of customs in the same place. From 1851 to 1861 he was United States Senator from Florida; and on the organization of the Confederate government in February, 1861, he was appointed Secretary of the Navy. At the close of the war he was made a state prisoner, and remained such for some time.

Malvern Hills, BATTLE AT. Malvern Hills form a high and dry plateau sloping towards Richmond from bold banks on the James River,

and bounded by deep ravines that make it an excellent defensive position. Upon that plateau the Army of the Potomac was posted, July 1, 1862, under the direction of General Barraud. General Fitz-John Porter had reached that point the day before, and placed his troops so as to command all approaches to it from Richmond or the White Oak Swamp. They were within reach of National gunboats on the James River that might prove very efficient in any battle there. The last of the Confederate trains and artillery arrived there at four o'clock in the afternoon, and in that almost impregnable position preparations were made for battle. Yet General McClellan did not consider his army safe there, for it was too far separated from his supplies; so, on the morning of July 1, he went on the *Galena* to seek for an eligible place for a base of supplies, and for an encampment for the army. During his absence on this errand the Confederates brought on a battle, which proved to be a most sanguinary one. Lee had concentrated his troops at Glendale (which see) on the morning of the 1st, but did not get ready for a full attack until late in the afternoon. He formed his line with the divisions of Generals Jackson, Ewell, Whiting, and D. H. Hill on the left (a large portion of Ewell's in reserve); Generals Magruder and Huger on the right, while the troops of A. P. Hill and Longstreet were held in reserve on the left. The latter took no part in the engagement that followed. The National line of battle was formed with Porter's corps on the left (with Sykes's division on the left and Morell's on the right), where the artillery of the reserve, under Colonel Hunt, was so disposed on high ground that a concentrated fire of sixty heavy guns could be brought to bear on any point on his front or left; and on the highest point on the hill Colonel Tyler had ten siege-guns in position. Couch's division was on Porter's right; next on the right were Hooker and Kearney; next Sedgwick and Richardson; next Smith and Slocum; and then the remainder of Keyes's corps, extending in a curve nearly to the river. The Pennsylvania Reserves (which see) were in the rear of Porter and Couch as a reserve. Lee resolved to carry Malvern Hills by storm, and concentrated his artillery so as to silence that of the Nationals; when, with a shout, two divisions were to charge and carry a battery before them. This shout was to be a signal for a general advance with bayonets to "drive the invaders into the James." This programme was not carried out. When, late in the afternoon, a heavy artillery fire was opened on Couch and Kearney, A. P. Hill, believing that he heard the shout, advanced to the attack, but found himself unsupported. A single battery was "playing on the Yankees," instead of 200 great guns as had been promised. That battery was soon demolished, and the Confederates driven back in confusion to the woods, when the Nationals advanced several hundred yards to a better position. Meanwhile Magruder and Huger had made a strong attack on Porter at the left. Two brigades (Kershaw's and Semmes's) of McLaws's division charged through a dense

wood up to Porter's guns; and a similar dash was made by Wright, Mahone, and Anderson farther to the right, and by Barksdale nearer the centre; but all were repulsed, and for a while there was a lull in the storm of battle. Then Lee ordered another assault on the batteries. His columns rushed from the woods over the open fields to capture the batteries and "carry the hill." They were met by a deadly fire of musketry and great guns; and as one brigade recoiled another was pushed forward, with a seeming recklessness of life, under the circumstances. At about seven o'clock in the evening, while fresh troops under Jackson were pressing the Nationals sorely, Sickles's brigade, of Hooker's division, and Meagher's Irish brigade, of Richardson's division, were ordered up to their support. At the same time the gunboats on the James River, full 150 feet below, were hurling heavy shot and shell among the Confederates with terrible effect, their range being directed by officers of the signal corps on the hill. The conflict was furious and destructive, and did not cease until almost nine o'clock at night, when the Confederates were driven to the shelter of the woods, ravines, and swamps, their ranks shattered and broken. The victory for the Nationals was decisive. The victorious generals were anxious to follow up the advantage and push right on to Richmond, eighteen miles distant; but General McClellan, who came upon the battle-ground on the right when the final contest was raging furiously on the left, issued an order, immediately after the repulse of the Confederates, for the victorious army to "fall back still farther," to Harrison's Landing, on the James, a few miles below, and then returned to the *Galena*, on which he had spent a greater part of the day. The order produced consternation and dissatisfaction, but was obeyed. The battle at Malvern Hills was the last of the series of severe conflicts before Richmond in the course of seven days. In these conflicts the aggregate losses of the Nationals were reported by McClellan to be 15,249. Of that number 1582 were killed, 7709 wounded, and 5958 missing.

Manassas, BATTLE OF, or SECOND BATTLE OF BULL'S RUN, was fought near the battle-ground of the first engagement at Bull's Run, Aug. 30, 1862. Pope, after the Battle at Groveton (which see), found his army greatly reduced in numbers—only about 40,000. It had failed to keep Lee and Jackson apart, and it was now decidedly the weaker party. Prudence counselled a retreat to Bull's Run, or even to the defences of Washington; but Pope resolved to try the issue of another battle. He expected rations and forage from McClellan, at Alexandria, but was disappointed. When it became clear that he would receive no aid from McClellan, he had no other alternative than to fight or surrender; so he put his line into V shape on the morning of the 30th of August. Lee made a movement which gave Pope the impression that the Confederates were retreating, and the latter telegraphed to Washington to that effect. He ordered a pursuit. When, at ten o'clock, an attempt was made to execute this order, a fearful state of things was

developed. The eminence near Groveton was found to be swarming with Confederates, who, instead of retreating, had been massing under cover of the forest, in preparation for an offensive movement. They opened a furious fire on the front of the Nationals, and at the same time made a heavy flank movement. Porter's corps, which had been made to recoil by the first unexpected blow, rallied, and performed specially good service. Ricketts meanwhile had hastened to the left. By the disposition of Reynolds's corps to meet the flank movement, Porter's key-point had been uncovered, but the place of Reynolds had been quickly supplied by a thousand men under Warren. The battle became very severe, and for a while victory seemed to incline towards the Nationals, for Jackson's advanced line was steadily pushed back until five o'clock in the afternoon. Then Longstreet turned the tide. With four batteries, he poured a most destructive fire from Jackson's right, and line after line of Nationals was swept away. Very soon the whole of Pope's left was put to flight, when Jackson advanced, and Longstreet pushed his heavy column against Pope's centre. At the same time Lee's artillery was doing fearful execution upon Pope's disordered infantry. Darkness alone put an end to the fearful struggle. Although pushed back some distance, the National left was still unbroken, and held the Warrenton turnpike, by which alone the Nationals might safely retreat. Pope had no other safe alternative than to fall back towards the defences of Washington. At eight o'clock in the evening he issued orders to that effect, and during the night the whole army withdrew across Bull's Run to the heights of Centreville, the troops under Meade and Seymour covering the movement. The night was very dark, and Lee, fortunately, did not pursue.

Manassas Junction. When, at the close of April, 1861, the Confederates were satisfied that the National government and the loyal people of the country were resolved to maintain the authority and integrity of the Republic, they put forward extraordinary efforts to strike a deadly blow by seizing the capital before it should be too late. There was great enthusiasm among the young men of the South. They read on the telegraph bulletin-boards the call of the President for 75,000 men, and received the announcement with derisive laughter and cheers for "Old Abe the Rail-splitter." Few believed there would be war. One of their chroniclers avers that companies were quickly formed from among the wealthiest of the youths, and that 200,000 volunteers could have been organized within a month, if they had been called for. The enthusiasm of the young men was shared by the other sex. Banners of costly materials were made by clubs of young women and delivered to the companies with appropriate speeches—the young men on such occasions swearing that they would perish rather than desert the flag thus consecrated. Regarding the whole matter as a lively pastime, many of these companies dressed in the most costly attire, and bore the most expensive rifles, but grave men tried to

undeceive them. Jefferson Davis wrote to a Mississippi friend, telling him that hardships and privations awaited these young men, and advising them to use the commonest materials for clothing. He recommended all volunteers to dress in gray-flannel coats and light-blue cotton pantaloons, for summer was approaching. The Confederates chose as their grand rallying-place, preparatory to a march on Washington, Manassas Junction, a point on the Orange and Alexandria Railway, where another joins it from Manassas Gap, in the Blue Ridge. It is about twenty-five miles west from Alexandria, and thirty miles in a direct line from Washington city. It was an admirable strategic point, as it commanded the grand southern railway route connecting Washington and Richmond, and another leading to the fertile Shenandoah valley, beyond the Blue Ridge. General Scott had been advised to take possession of that point, but he declined; and while the veteran soldier was preparing for a defensive campaign the opportunity was lost. At Manassas Junction, large numbers of Confederate troops were soon gathered, under the command of General Beauregard.

Mandamus Councillors. An act for remodelling the government of Massachusetts was put in force on the 1st of August, 1774, and under it Governor Gage appointed a council by writ of mandamus. Most of those appointed accepted the office and were sworn in. They became at once objects of bitter public odium. The new government was denounced vehemently, and in some parts of the province with violence. The "Mandamus Councillors" were treated as enemies of their country by the patriots. In Boston, juries refused to serve, lest by consenting to act they should recognize the authority of the new government. It was not long before most of the "Mandamus Councillors" were compelled to take shelter under a resignation to escape popular resentment.

Manhattan Island, the site of the city of New York, was so named by the Dutch after a tribe of Indians which they first found there, who were called Manna-hatans. The popular story that the name signifies "place of drunkenness," and that it was given because there the Indians were made drunk by Verazzani (1524) or Hudson (1609), is apocryphal. When Peter Minnits came to New Netherlands as governor (1626), he purchased the island of the natives for the Dutch West India Company for the value of sixty guilders (about \$24), and paid for it in cheap trinkets, hatchets, knives, etc. About 1612, Captain Hendrick Christiansen carried some rabbits and goats from Holland to Manhattan, but they were poisoned by the herbage growing there, and it was a long time before any domestic animals were seen on the island excepting cats and dogs. In the winter of 1613-14, Captain Block built a ship there—the beginning of the merchant marine of New York—and there the first permanent settlers within the domain of New York State first landed. The purchase of Manhattan Island by the Dutch from the Indians was an event in history as important and

as creditable to the honesty of the purchasers as was the treaty of William Penn, which painters and poets have delighted to celebrate.

Manifesto of British Commissioners (1778). The commissioners appointed under North's Conciliatory Act (which see), after fair and unfair efforts to accomplish their ends, were completely discomfited, and before leaving for England issued an angry and threatening manifesto (Oct. 3, 1778) addressed not to Congress only, but to the state legislatures and the people, charging upon Congress the responsibility of continuing the war; offering to the assemblies separately the terms already proposed to Congress; reminding the soldiers that Great Britain had already conceded all points originally in dispute; suggesting to the clergy that the French were papists; appealing to all lovers of peace not to suffer a few ambitious men to subject the country to the miseries of unnecessary warfare; allowing forty days for submission; and threatening, if this offer should be rejected, the desolation of the country as a future leading object of the war. This manifesto Congress caused to be printed, with a counter-manifesto by that body, and other comments calculated to neutralize the proclamation of the commissioners. Because the commissioners spoke disparagingly of France, Lafayette, in spite of the remonstrances of Washington and D'Estaing, sent Lord Carlisle, one of the commissioners, a challenge to mortal combat. The earl politely declined, saying he was responsible for his acts only to his sovereign.

Manifesto of the Continental Congress. The colonists had been compelled to take up arms in self-defence. To justify this act, Congress agreed to a manifesto (July 6, 1775), in which they set forth the causes and necessity of their taking up arms. After a temperate but spirited preamble, presenting an historical view of the origin, progress, and conduct of the colonies, and of the measures of the British government towards them since 1763, they specified the various acts of Parliament which were oppressive to the colonies. Having reverted to their fruitless petition to the throne and remonstrances to Parliament; to the unprovoked attack of British troops on the inhabitants of Massachusetts at Lexington and Concord; to the proclamation declaring the people of the colonies to be in a state of rebellion; to the events at Breed's Hill and the burning of Charlestown, the manifesto proceeded: "Our cause is just. Our union is perfect. Our internal resources are great, and, if necessary, foreign assistance is undoubtedly attainable." After acknowledging the evidence of divine favor towards the colonists by not permitting them to be called into this controversy until they had grown strong and disciplined by experience to defend themselves, the manifesto most solemnly declared that the colonists, having been compelled by their enemies to take up arms, they would, in defiance of every hazard, "with unabating powers and perseverance, employ for the preservation of their liberties all the means at their

command, being with one mind resolved to die freemen rather than live slaves." Disclaiming all intention of separating from Great Britain and establishing independent states, they declared that having been forced to take up arms, they should lay them down when hostilities should cease on the part of the aggressors, and all danger of their being made slaves should disappear. In that manifesto the united colonies cast at the feet of their blinded sovereign the gauntlet of defiance.

Manifesto of the Prince Regent. In consequence of the insanity of George III., George, Prince of Wales (afterwards George IV.) was created by Parliament regent of the kingdom. The act for that purpose passed Feb. 5, 1811,

THE PRINCE REGENT—GEORGE IV.

and from that time until the death of his father, George Augustus Frederick was acting monarch as prince regent. On the 9th of January, 1813, he issued from the royal palace at Westminster a manifesto concerning the causes of the war and the subjects of blockades and impressments. He declared the war was not the consequence of any fault of Great Britain, but that it had been brought on by the partial conduct of the American government in overlooking the aggressions of the French, and in their negotiations with them. He alleged that a quarrel with Great Britain had been sought because she had adopted measures solely retaliatory as to France, and that as these measures had been abandoned by a repeal of the Orders in Council, the war was now continued on the questions of impressment and search. On this point he took such a decisive position that the door for negotiation which the recommendation of the committee of the American Congress on Foreign Relations proposed to open seemed irrevocably shut. "His royal highness," said the manifesto, "can never admit that the exercise of the undoubted and hitherto undisputed right of searching neutral merchant vessels in time of war, and the impressment of British seamen when found

therein, can be deemed any violation of a neutral flag; neither can he admit that the taking of such seamen from on board such vessels can be considered by any neutral state as a hostile measure or a justifiable cause of war." After reaffirming the old English doctrine of the impossibility of self-expatriation of a British subject, the manifesto continued: "But if to the practice of the United States to harbor British seamen be added their asserted right to transfer the allegiance of British subjects, and thus to cancel the jurisdiction of their legitimate sovereign by acts of naturalization and certificates of citizenship, which they pretend to be as valid out of their own territory as within it, it is obvious that to abandon this ancient right of Great Britain, and to admit these naval pretensions of the United States, would be to expose the very foundations of our maritime strength." The manifesto charged the United States government with systematic efforts to inflame the people against Great Britain; of ungenerous conduct towards Spain, Great Britain's ally, and of deserting the cause of neutrality. He spoke of the subservieny of the United States to the ruler of France, and against this course of conduct the prince regent solemnly protested. He thought that while Great Britain was contending for the liberties of mankind, she had a right to expect from the United States far different treatment—not an "abettor of French tyranny."

Manley, JOHN, was born at Torbay, England, in 1733; died in Boston, Feb. 12, 1793. He became a seaman in early life; settled in Marblehead; commanded a vessel in the merchant service before the revolution, and was commissioned captain in the naval service by Washington in the fall of 1775. He soon captured in Boston harbor, with the schooner *Lee*, three valuable prizes laden with heavy guns, mortars, and intrenching tools, much wanted by the patriots besieging Boston. In August, 1776, Congress commissioned him captain, and placed him in command of the frigate *Hancock*, 32 guns, in which he captured the British man-of-war *Fox*. The *Hancock* was captured in July, 1777, and Manley was a prisoner during nearly the whole of the war. In September, 1782, he commanded the frigate *Hague*, and cruised in the West Indies.

Mann, HORACE, LL.D., was born at Franklin, Mass., May 4, 1796; died at Yellow Springs, Ohio, Aug. 2, 1859. He graduated at Brown University in 1819; studied law at Litchfield, Conn., and began its practice at Dedham in 1823; was a member of the Massachusetts House of Representatives from 1823 to 1833, and of the Senate from 1833 to 1837. He was always distinguished for his efforts to promote popular education and temperance. He made Boston his residence in 1833, and from 1837 to 1848 was Secretary of the Massachusetts Board of Education. He effected salutary changes in the system of education in Massachusetts and in the laws pertaining to it, and in 1843 he visited Europe to examine the educational systems there. From 1848 to 1853 he was the successor of John Quincy Adams in

Congress, and, like him, advocated measures for the extinction of slavery in the Republic. From 1852 until his death he was President of Antioch College, Ohio. Dr. Mann's annual reports on education deservedly rank high, and some of them were highly extolled in Europe.

Mansfield, JOSEPH KING FENNO, was born at New Haven, Conn., Dec. 22, 1803; died of wounds received at Antietam, Sept. 18, 1862. He graduated at West Point in 1822, and entered the Engineers. He served as chief-engineer under General Taylor in the war against Mexico, and was breveted colonel for his good services there. In 1853 he was inspector-general, with the rank of colonel; and in May, 1861, he was made brigadier-general and placed in command of the Department of Washington, and, for a while, that of Virginia. General Mansfield thoroughly fortified the National capital, and, after various efficient services, took command of the corps formerly under General Banks. With that he went into the battle of Antietam, and was mortally wounded early in the day.

Marauders in Delaware Bay. (See *Amphibious Warfare*.) Commodore Beresford was sent by Admiral Cockburn with the *Poictiers*, *Belvidera*, and some smaller vessels to teach the inhabitants along the shores of Delaware Bay the duty of submission. He found his intended pupils refractory. When he pointed the guns of the *Poictiers* towards the village of Lewes (March 16, 1813), near Cape Henlopen, and said, in a note which he sent to the magistrates, "You must send me twenty live bullocks, with a proportionate quantity of vegetables and hay, for the use of his Britannic Majesty's squadron," offering to pay for them, but threatening to destroy the place in case of refusal, he was astonished to have the magistrates and people answer, "We solemnly refuse to commit legal or moral treason at your command. Do your worst!" The people, forewarned, had fully prepared to receive the invaders at any point. This was the spirit manifested everywhere along the shores of the bay. At Smyrna, Dover, New Castle, and Wilmington the people turned out with spades or muskets, to cast up fortifications or fight. At Wilmington the venerable soldier of the Revolution, Allan McLane, took the direction of military affairs. Beresford was astonished at the spirit of the people. He continued to threaten and hesitate. On the 23d of March he appeared before Lewes and repeated his demand and threat, and received the positive refusal of the people to comply with his requisition. At length, on April 6, Captain Byron was sent with the *Belvidera* and some smaller vessels to attack the town. The militia were out in force, under the command of Colonel S. B. Davis. Byron sent word to the latter that he regretted that the refusal would cause the infliction of so

much misery on the women and children of the village. "Colonel Davis will take care of the ladies," was the prompt reply. The town was then cannonaded and bombarded for twenty-four hours. Notwithstanding eighteen hundred 18- and 24-pound shot and many bomb-shells and Congreve rockets were hurled at the village, not much damage was done, and not a life was lost. The shells did not reach the village, while the rockets passed over it. A few houses were injured by the round shot. Meanwhile Davis's militia, well supplied with powder sent down from Wilmington by Dupont, had kept up a lively response to the cannonading with a battery on an eminence. The most dangerous of the British gunboats was disabled and its guns silenced. On the 7th a party of British attempted to land and seize some live-stock, when the militia drove them back to their ships. Beresford lingered in the Delaware for a month, but failing to obtain any supplies, he sailed with his squadron for Bermuda, where Admiral Warren was fitting out reinforcements for his fleet in American waters.

Marauding on the Southern Shores of Lake Ontario. A British squadron on Lake Ontario hovered along its southern shores in the summer of 1813 and seriously interfered with supplies on their way to the American camp on the Niagara. They captured (June 12, 1813) two vessels laden with hospital stores at Eighteen-mile Creek, eastward of the Niagara River. They made a descent upon the village of Charlotte, at the head of navigation of the Genesee River, on the 15th, and carried off a large quantity of stores. On the 18th they appeared offodus Bay, and the next evening an armed party, one hundred strong, landed at Sodus Point for the purpose of destroying American stores known to have been deposited there. These had been removed to a place of concealment a little back of the village. The invaders threatened to destroy the village if the hid-

DESTRUCTION AT SODUS BAY.

ing-place of the stores was not revealed. The women and children fled from their homes in alarm. A negro, compelled by threats, gave the

desired information; and they were marching in the direction of the stores, when they were confronted at a bridge over a ravine by forty men under Captain Turner. A sharp skirmish ensued. The British were foiled, and as they returned to their vessels they burned the public storehouses, five dwellings, and a hotel. The property destroyed at Sodus was valued at \$25,000. The marauders then sailed eastward, and looked into Oswego harbor, but Sir James Yeo, their cautious commander, did not venture to go in.

Marbois, FRANÇOIS, Marquis of Barbé-Marbois, was born at Metz, Jan. 31, 1745; died Jan. 14, 1837. He was tutor to the children of Castries, the French Minister of Marine, through whose influence he obtained (1779) the appointment to the post of Secretary of Legation to the United States during the Revolution. By his learning and talents he became the principal agent in the most important operations of the embassy while Luzerne was minister. After the return of the latter Marbois remained as chargé d'affaires, and resided in America until 1785, arranging all the French consulates. He was afterwards appointed Intendant of Santo Domingo, and returned to France in 1790, when he was sent as ambassador to the German Diet. Having offended the ruling party in the course of the fierce French Revolution, he was condemned to exile at Cayenne. On his return, Bonaparte, then First Consul, nominated him as the first councillor of state, and in 1801 he was made Secretary of the Treasury. He successfully negotiated the sale of Louisiana to the United States in 1803. He served in conspicuous positions in civil life, and was among the first of the senators who voted for the deposition of Napoleon in 1814. Louis XVIII. created him a peer and made him keeper of the seals in 1815. Soon after that he was created a marquis. On Napoleon's return from Elba, Marbois was ordered to quit Paris. After the revolution of July, 1830, he took the oath of allegiance to Louis Philippe.

March of Public Sentiment. On March 6, 1857, Roger B. Taney, Chief-justice of the United States, and a majority of his associates on the bench of the Supreme Court of the Republic, uttered an extra-judicial opinion, that any person who had been a slave, or was a descendant of a slave, could not enjoy the rights of citizenship in the United States. Five years afterwards (1862) the Secretary of State (Mr. Seward) issued a passport to a man who had been a slave to travel abroad as "a citizen of the United States." Six years later still (July 20, 1868) the national Constitution was so amended that all persons, of whatever race or color, born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. By the same amendment every civil right was given to every such person. And by a subsequent amendment (1869) it was decreed that "the rights of any of the citizens of the United States, or any state, on account of race, color,

or previous condition of servitude should not be abridged." A great change in ten years.

Marcy, WILLIAM LEARNED, was born at Southbridge, Mass., Dec. 12, 1786; died at Ballston Spa, N. Y., July 4, 1857. He graduated at Brown University in 1806, and taught school at Newport, R. I., for a while. He began the practice of law in Troy, N. Y., and, as an officer of militia, volunteered his services in the War of 1812. He had the honor of taking the first prisoners captured on land, by seizing (Oct. 22, 1812) a corps of Canadian militia at St. Regis, N. Y. Their flag was the first trophy of the kind captured during the war. In 1816 Captain Marcy was Recorder of Troy, and he edited the *Troy Budget*, a leading Democratic newspaper. In 1821 he was adjutant-general of the state, and state comptroller in 1823. He was made Associate-justice of the New York Supreme Court in 1829; was United States Senator from 1831 to 1833; and governor of the state from 1833 to 1839. From 1839 to 1842 he was a commissioner to decide upon the claims of the Mexican government, and from 1845 to 1849 he was Secretary of War. Governor Marcy opposed all interference with slavery. He was Secretary of State from 1853 to 1857, while the subject of slavery was in fearful agitation. He was a plain man, possessed of a clear mind, good judgment, and great integrity. Governor Marcy was the author of the political maxim, "To the victor belong the spoils."

Marion and the British Officer. A young British officer was sent from Georgetown to Marion's camp, on Snow's Island, to treat concerning prisoners. From the picket-guard he was led, blindfolded, to the camp of Marion. There he first saw the diminutive form of the great partisan leader, his rough followers lounging in ease around him. When their business was concluded Marion invited the officer to dine with him. He remained. To his utter astonishment, he saw some roasted potatoes brought forward on a piece of bark, of which the general partook freely and invited his guest to do the same. "Surely, general," said the officer, "this cannot be your ordinary fare!" "Indeed it is," replied Marion, "and we are fortunate on this occasion, entertaining company, to have more than our usual allowance." It is said that the young officer, on his return to Georgetown, gave up his commission, declaring that such a people could not be, and ought not to be, subdued.

Marion, FRANCIS, was born near Georgetown, S. C., in 1732; died Feb. 29, 1793. At the age of sixteen, while on a voyage to the West Indies, the vessel in which he sailed foundered at sea, and he was rescued only when several of the crew, who, with himself, had taken to the boat, had died of starvation. Working on a farm until 1759, that year he joined an expedition against the Cherokees. In 1761 he was made a captain, under Colonel Grant. He led the forlorn-hope in the battle of Etchowee, and was among the few who escaped death. On the breaking-out of the Revolution, Marion was

elected to the South Carolina Provincial Congress; became a captain of Provincial troops; served as major in defence of Fort Sullivan; and was lieutenant-colonel of his regiment at

FRANCIS MARION.

Savannah (1779) and at the siege of Charleston. Appointed a brigadier-general in 1780, he began his famous partisan career with only sixteen men. After the war he married a wealthy lady of Huguenot descent (Mary Videau), and in time became a State Senator. In 1790 he was a member of the State Constitutional Convention. Small in stature, reserved, and very modest, he was exceedingly captivating in manner. His residence was at Pond Bluff, on the Santee, near Nelson's Ferry. It was built by himself

MARION'S RESIDENCE.

soon after his marriage, and there he and his young wife dispensed most generous hospitality. She survived him many years.

Marion's Brigade. Francis Marion, who had been a soldier in the French and Indian War, became a famous partisan leader in the war for independence. He raised a company; served as major in the defence of Fort Sullivan (June, 1776); and after many daring exploits with a partisan band—a few ragged followers as grotesque in appearance as any led by Falstaff—he was made a brigadier-general (July, 1780) by Governor Rutledge, of South Carolina. He appeared in the camp of Gates with only sixteen men; and while there the people of Williamsburg district, having risen in arms, sent for him to be their leader. Before he left, Rutledge gave

him the commission of brigadier; and soon afterwards he organized his *brigade*, which became so famous in the partisan warfare in the South. It was the only military force in the field, after the defeat of Gates, that defied British power in South Carolina.

Marion's Camp on Snow's Island (1780). Marion and his brigade (which see) achieved victory after victory over bands of Tories and British among the swamps of the Santee, and late in October they pushed forward to assail the British garrison at Georgetown, on Winyaw Bay, for the purpose of obtaining necessary supplies. This was an unusual and serious undertaking for them. The garrison was on the alert, and in a severe skirmish with a large party near the town Marion was repulsed. He then retired to Snow's Island, at the confluence of Lynch's Creek and the Pedee River, where, in a most secluded spot, he fixed his camp and strengthened its natural defences. It was chiefly high river swamp, covered with forest trees and abounding with game. From that swamp fastness the partisan sent out or led expeditions which, for many weeks, accomplished marvellous results by celerity of movements, stealthiness of approaches to the enemy, and the suddenness and fierceness of the blows. It was in allusion to these movements that Bryant wrote in his *Song of Marion's Men*:

"A moment in the British camp—
A moment—and away,
"Back to the pathless forest,
Before the break of day"

The British became thoroughly alarmed, and the destruction of Marion's camp became, with them, an object of vital importance. That work was accomplished in the spring of 1781. During his absence some Tories penetrated to the camp, dispersed the little garrison, destroyed the provisions and stores found there, and fled. (See *Marion and the British Officer*.)

Marion's Exploit near Nelson's Ferry. Marion had gathered many partisans to his standard while Cornwallis was carrying out his reign of terror in South Carolina. "Colonel Marion," wrote Cornwallis, "so wrought on the minds of the people that there was scarcely an inhabitant between the Santee and Pedee that was not in arms against us." Some parties even crossed the Santee and carried terror to the gates of Charleston. One of the earliest of Marion's great exploits was near Nelson's Ferry, on the Santee, on Aug. 20, 1780, two days after Williams's exploit at Musgrove's Mill. At dawn on that day a British party, with one hundred and fifty prisoners of the Maryland line, captured from Gates near Camden (see *Gates, Horatio*), were crossing at the great savannah, near the ferry, on the route from Camden to Charleston, when Marion and his men sprang upon the guard, liberated the prisoners, and captured twenty-six of the escort.

Marquette, JACQUES, was a French missionary and explorer. He was born at Laon, France, in 1637, and died May 18, 1675. In his youth he entered the order of Jesuits, and at the age

of twenty-nine years sailed for Canada as a missionary. After residing eighteen months at Three Rivers, on the St. Lawrence, learning the dialects of the Montagnais and other Indian tribes—also the Huron and Iroquois—he went to Lake Superior in 1668, and founded a mission at Saut de St. Marie, or Falls of St. Mary, at the outlet of the lake. The next year he was sent to take the place of Allouez (which see) among the Ottawas and Hurons, but these tribes were soon afterwards dispersed by the Sioux, and he returned with the Hurons to Mackinaw, near the strait that connects lakes Michigan and Huron, where he built a chapel and established the mission of St. Ignatius. Hearing of the Mississippi River, he resolved to find it, and in 1669 he prepared for the exploration of that stream, when he received orders to join Joliet in a thorough exploration of the whole course of the great river. With that explorer and five others they left Mackinaw in two canoes in May, 1673, and, reaching the Wisconsin River by way of Green Bay, Fox River, and a portage, they floated down that stream to the Mississippi, where they arrived June 17. Near the mouth of the Ohio River savages told them it was not more than ten days' journey to the sea. Voyaging down the great river until they were satisfied, when at the mouth of the Arkansas River, that the Mississippi emptied into the Gulf of Mexico, and not into the Atlantic or Pacific Ocean, they concluded to return, to avoid captivity among the Spaniards farther south. They had accomplished their errand, and travelled in open canoes over two thousand five hundred miles. Passing up the Illinois River instead of the Wisconsin, they reached Green Bay in September. There, at a mission, Marquette was detained a whole year by sickness. In 1674 he sent an account of his explorations of the Mississippi to Dablon, the superior of the Jesuit mission in Canada, and set out on a journey to Kaskaskia, but was compelled, by his infirmities and severely cold weather in December, to stop at the portage on the Chicago, and there he spent the winter. At the close of March, 1675, he resumed his journey, reached Kaskaskia in April, erected a chapel, and celebrated the Easter festival in it. Warned by his infirmities that his life was near its end, he soon attempted to return to Mackinaw. He crossed Lake Michigan to its eastern shore, and entering the mouth of a small stream that bore his name long afterwards, he prepared to die there. His attendants (two Frenchmen) bore him tenderly to a bed of leaves in the shadows of the forest. Then asking for some holy water which he had prepared, and taking a crucifix from his neck, and placing it in the hand of one of his companions, he desired him to keep it constantly before his eyes while he lived. With clasped hands, he pronounced aloud the profession of his faith, and soon afterwards died. His companions buried him near, and erected a cross at his grave. His remains were afterwards taken to Mackinaw, where they still repose.

Marriage Ceremonies among the Indians of the Gulf Region. When a young chief was

inclined to marry, he would send his wisest men to select from the daughters of the best families one of the youngest and most beautiful of the marriageable ones. The chosen bride was then gorgeously painted and decorated preparatory to the nuptials. Brilliant colors and costly pearls and shells adorned her person. From her waist to her knees she was covered with a tunic of beautiful feathers. Then she was placed in a Sedan chair, covered with a canopy of boughs, festooned and garlanded with flowers. In that state she was conveyed to the presence of her future husband on the shoulders of six noblemen, who were preceded by musicians and men bearing magnificent fans, and followed by dancing-girls and the immediate relatives of the bride. She was received by the lords in waiting, and conducted to the side of the groom, on an elevated dais, while great pomp was displayed by all in attendance. The bride and groom were continually fanned by beautiful maidens if the weather was warm, and they were regaled with the unfermented juice of the grape in its season, or with a kind of sherbet made of orange-juice at other times. Near sun-setting the chief and his bride walked into an open field, followed by all the people, and at the last parting ray of the luminary they prostrated themselves towards the west, and invoked the blessings of the sun upon themselves and upon their children. (See *Sun-worshippers*.) From that moment until the stars appeared the people indulged in music and dancing—the music of the reed and a sort of tambourine, and the dancing of young men and maidens—when the chief and his bride retired to their dwelling, there, with friends, to partake of a marriage feast by the light of lamps.

Marsellaise Hymn Parodied. This stirring hymn of the French Revolution was parodied, and sung all over the "Confederate States" at social gatherings, at places of amusement, and in the camps of the "Confederacy" during the early stages of the Civil War. The following is the closing stanza of the parody:

"With needy, starving mobs surrounded,
The zealous, blind fanatics dare
To offer, in their zeal unbounded,
Our happy slaves their tender care.
The South, though deepest wrongs bewailing,
Long yielded all to Union's name;
But Independence now we claim,
And all their threats are unavailing.
"To arms! to arms! ye brave!
Th' avenging sword unsheath!
March on! march on!
All hearts resolved
On victory or death!"

The allusion to "starving mobs" was in accordance with the erroneous belief, engendered by misrepresentations of Southern politicians and newspapers, about the "starving and riotous condition of the working-classes in the North." At that time this class, in only three of the New England states (Massachusetts, Rhode Island, and Connecticut), had \$137,000,000 on deposit in savings-banks.

Marshall, HUMPHREY, was born at Frankfort, Ky., Jan. 13, 1812; died at Louisville, Ky., March 29, 1872. He graduated at West Point

in 1832, and resigned the next year. He served as colonel of cavalry, under General Taylor, in the war against Mexico, leading a charge at Buena Vista. He was in Congress from 1849 to 1852, and from 1855 to 1859, and was sent as commissioner to China. Espousing the cause of the Secessionists, he became a Confederate general, and was defeated by General Garfield at Prestonburg, Ky., in January, 1862. He was afterwards under General Kirby Smith.—Another Humphrey Marshall was a Kentucky pioneer in 1780, and died in Lexington, Ky., July 1, 1841. He served many years in the State Legislature, and from 1795 to 1801 was United States Senator. He was the author of the first history of Kentucky.

Marshall, JOHN, LL.D., was born at Germantown, Fauquier Co., Va., Sept. 24, 1755; died in Philadelphia, July 6, 1835. His father (Thomas) led a regiment that bore the brunt of battle with Cornwallis near the banks of the Brandywine

JOHN MARSHALL

(Sept. 11, 1777). In early youth John obtained some classical education—not at college—and at the breaking-out of the war for independence he entered the military service as lieutenant of a company. He had formerly led some Virginia militia against Duumore's troops in the battle of Great Bridge (which see). He, too, was in the battle at the Brandywine; also at Germantown and Monmouth. He left the military service in 1781, and began the practice of law, for which profession he had studied. He soon attained eminence. He was in the Virginia Convention that ratified the national Constitution, in which he distinguished himself by his eloquence and logic. He became a distinguished member of the Virginia Assembly. President Washington offered Marshall the position of Attorney-general, but he declined. On the return of Monroe from France, Washington offered the mission to Marshall, but it was declined. He afterwards accepted the position of special envoy to France from President Adams, and was associated in that mission with Messrs. Pinckney and Gerry. That mission proved fruitless. In 1799 Mr. Marshall was in the national Congress, and in 1800 was made Secretary of War, which office he held only a short time. He succeeded Timothy Pick-

ering as Secretary of State (May 3, 1800), and on the resignation of Chief-justice Ellsworth he was appointed his successor (June 1, 1801), and held the office until his death, thirty-four years afterwards. Chief-justice Marshall was President of the American Colonization Society and Vice-President of the American Bible Society. He was also the author of a *Life of Washington* published in five volumes in 1805. He also wrote a *History of the Colonies Planted by the British in North America*.

Martin, FRANÇOIS XAVIER, LL.D., was born at Marseilles, France, March 17, 1762; died at New Orleans, Dec. 10, 1846. He came to North Carolina in 1782, where he taught French, learned printing, and established a newspaper. He also published almanacs and school-books, studied law, and began its practice in 1789. Jefferson appointed him a judge of the Mississippi Territory, and he was made Attorney-general of the State of Louisiana in 1813. In 1815 he was made Judge of the Supreme Court of Louisiana, and remained a justice thirty-two years. He was chief-justice from 1837 to 1845.

Martin, GOVERNOR JOSIAH, FLIGHT OF. This royal governor became extremely obnoxious to the people of North Carolina by his attempts to thwart the patriotic movements. He denounced the Provincial Congress, and announced his determination to use all the means in his power to counteract their influence. Finding the Assembly firm in their stand against him, he dissolved them (April 8, 1775). Soon after this a letter from the governor to General Gage, asking for a supply of men and ammunition, was intercepted. The people were greatly exasperated. The Committee of Safety at New Berne seized and carried off six cannons which he had placed in front of the "palace" there. News of hostile preparations reached the governor's ears from every quarter. Becoming alarmed for his personal safety, he fled to Fort Johnson (June 14), on the Cape Fear River, near Wilmington, whence he sent forth (June 16) a menacing proclamation. A plot for a servile insurrection was discovered in July. It was supposed the governor had planned it, and the indignant people determined to demolish Fort Johnson, and not allow Martin to make it a stronghold. Five hundred of them, led by John Ashe, marched on the fort. The governor fled to the sloop-of-war *Cruiser*, lying in the river, and the people demolished the fort. The patriots disarmed the Tories, and confined as prisoners, on their plantations, those who were most obnoxious, and the Continental Congress voted to sustain the Whigs in North Carolina with a force of one thousand men. They prepared to hold a new convention, when Martin, from on shipboard, issued a proclamation forbidding the meeting, and making accusations against the patriots. The Whigs denounced it as "a malicious and scandalous libel, tending to disseminate the good people of the province," and it was burned by the common hangman. They authorized the raising of three regiments. Martin never returned. So ended royal rule in North Carolina.

Martin, LUTHER, LL.D., was born at New Brunswick, N. J., in 1744; died in New York, July 10, 1826. He graduated at Princeton in 1766; taught school at Queenstown, Md.; was admitted to the bar in 1771, and soon obtained a lucrative practice in Maryland. He was a decided patriot, but was not found in public office until 1778, when he was attorney-general. He had been a member of a committee to oppose the claims of Great Britain in 1774, and wrote essays and made addresses on the topics of the day. In 1784-85 he was in Congress, and was a member of the convention which framed the national Constitution, the adoption of which he opposed, because it did not sufficiently recognize the equality of the states. Mr. Martin was a defender of Judge Chase when he was impeached, and in 1807 he was one of the successful defenders of Aaron Burr, in his trial for treason, at Richmond. Burr was his personal friend. In 1813 Mr. Martin was made Chief-justice of the Court of Oyer and Terminer in Baltimore, and in 1818 he again became Attorney-general of Maryland. He was struck with paralysis in 1820, and in 1822 he took refuge with Aaron Burr in New York, broken in health and fortune. Mr. Martin was a violent political partisan, and savagely attacked Jefferson and the Democratic party.

Martindale, JOHN HENRY, was born at Sandy Hill, N. Y., March 20, 1815. He graduated at West Point in 1835; left the army the next year, and became a civil engineer, and finally practised law in western New York. He was made brigadier-general of volunteers in August, 1861, and served in the Army of the Potomac, in the campaign of 1862, under General Fitz-John Porter. He was in the Army of the James, and also in the Army of the Potomac in the campaign against Richmond, commanding (in July and September, 1864) the Eighteenth Army Corps. He resigned Sept. 13, 1864, and was made Attorney-general of New York in 1866.

Martin's Proclamation. Governor Josiah Martin, of North Carolina, was driven on board the *Cruiser*, a British man-of-war in the Cape Fear River, by the exasperated people. They burned Fort Johnson before his face. He issued a proclamation, in which he stigmatized the Whigs as traitors to the king; denounced all their public movements—such as the Mecklenburg Convention, the Provincial Congress at Hillsborough—and in an incoherent manner made various false accusations, and threatened the insurgents with the wrath of the king, while offering pardon for all past outrages to those who should return to their allegiance. The Convention at Hillsborough defied him, and formally proclaimed the governor's proclamation to be "a false, scurrilous, malicious, and seditious libel."

Martyrs' Monument. In Merrimac Square, Lowell, Mass., a beautiful monument of Concord granite was erected in commemoration of two of the four young Massachusetts soldiers slain in the streets of Baltimore, April 19, 1861. These were Luther C. Ladd, a youth a little more than

seventeen years of age, and Addison O. Whitney, a young man twenty-one years of age, and both mechanics of Lowell. The monument was erected by the citizens of Lowell. The bodies of these young men had been conveyed to their homes, in ice, at the expense of the State of Massachusetts. They were received at Lowell by a great concourse of citizens, and interred with peculiar honors in a vault in the Lowell cemetery. A little more than four years afterwards they were laid beneath the granite monument here mentioned. At that time Maryland had disappointed the hopes of the Confederates, and was a loyal member of the Union. At the dedication of the monument, June 17, 1865, Lieutenant-colonel Morris, of the staff of Governor Bradford, of Maryland, presented to Governor Andrew as the representative of Massachusetts, a beautiful national banner, made of silk, and wrought by the hands of loyal women of Baltimore for the purpose. On the polished black-walnut staff was a silver-plate bearing an engraving of the arms of Maryland and Massachusetts and the words, "MARYLAND TO MASSACHUSETTS, APRIL 19, 1865. MAY THE UNION AND FRIENDSHIP OF THE FUTURE OBLITERATE THE ANGUISH OF THE PAST." Long before the Legislature of Maryland had taken steps to "wipe out," as they expressed it, "the foul blot of the Baltimore riot," on March 5, 1862, the General Assembly of Maryland appropriated \$7000, to be disbursed under the direction of the governor of Massachusetts, for the relief of the families of those who were then injured. The other two slain at Baltimore were Charles A. Taylor, a decorative painter of Boston, and Sumner H. Needham, of Lawrence, a plasterer by trade.

Maryland, COLONY OF, was one of the original thirteen states of the Union, and was first settled by Captain William Clayborne, with a party of men from Virginia, in 1631. Earlier than this, George Calvert, an Irish peer, had obtained a patent from King James (1622) to plant a Roman Catholic colony in America. Failing in some of his projects, he applied for a charter for the domain between South and North Virginia, but before the matter was completed his lordship died, and a patent was issued to his son Cecil Calvert, June 20, 1632 (see *Baltimore, Lords*), who inherited the title of his father. The province embraced in the grant had been partially explored by the first Lord Baltimore, and it is believed that the charter granted to Cecil was drawn by the hand of George Calvert. In honor of Henrietta Maria, Queen of Charles I., it was called *Terra Maria*—Mary's Land—hence Maryland. It was the most liberal grant yet made by a British sovereign, both in respect to the proprietor and the settlers. The government of the province was made independent of the crown, and equality in religious and civil freedom was secured to every Christian sect excepting Unitarians. This toleration promoted the growth of the colony, and persecuted people found a refuge there. Armed with this charter, young Lord Baltimore set about the business of colonizing his domain. He appointed his half-brother, Leonard Calvert, governor, and Nov. 22,

1633, that kinsman and another brother, "with very near twenty other gentlemen of very good fashion and three hundred laboring-men" (so Lord Baltimore wrote to Wentworth), sailed from Cowes, Isle of Wight, in two vessels, the *Ark* and *Dore*, accompanied by two Jesuit priests, Andrew White and John Altham. The Calverts and the other "gentlemen," and some of the "laboring-men," were Roman Catholics, but a greater portion of the latter were Protestants. After a terribly tempestuous voyage, in which the vessels were separated, they met at Barbadoes and finally entered the broad mouth of the Potomac River, in February, 1634. They sailed up the Potomac, and upon Blackstone Island (which they named St. Clement's) they landed, performed religious ceremonies, and were visited by the wondering natives. The governor made further explorations, and, finally, on the 27th of March (O. S.), Calvert, having entered into a treaty for the purchase of a domain on a pleasant little river, determined there to plant a settlement. With imposing religious ceremonies it was dedicated to the Virgin Mary, and the place was called St. Mary. It was near the entrance of the Potomac into Chesapeake Bay. A year afterwards, they established their capital at St. Mary; a Legislative Assembly composed of the whole people—a purely democratic Legislature—met there. As their ranks increased by emigration this method was found inconvenient, and in 1639 a representative government was established, the people being allowed to send as many delegates as they pleased. So was founded the Commonwealth of Maryland. Clayborne, the first settler, refused to acknowledge the new government, and was finally expelled from Kent Island. Under the charter, Lord Baltimore had the power of enacting all necessary laws for the colony "with the advice, consent, and approbation of the freemen of the province" or their representatives convened in general assembly; but in the first Assembly (1635) a dispute arose respecting the right of initiating legislation. The contention continued until 1638, when Lord Baltimore yielded the right to the Assembly. The first statutes of Maryland were enacted in 1639. In 1642 a company of Puritans, who had been driven out of Virginia, settled in Maryland, and soon showed a spirit of resistance to the authorities. Clayborne, who had been deprived of his property and civil rights by the Legislature of Maryland, now reappeared at Kent Island and stirred up the Indians with jealousy of the colonists, and they made war upon the settlers. It was not long nor very distressing, and it was just ended (1645) when Clayborne, by false representations, fanned the embers of discontent into a flame of civil war. The insurgents, with disaffected Indians, drove the governor and his council into Virginia, and for about a year and a half the rebels held the reins of power. The rebellion was crushed in the summer of 1647, when the governor returned (in August) and resumed his chair. Many of the records had been destroyed in the turmoil, and a greater portion were carried into Virginia and lost. In 1649 an important law called the Toleration Act was

passed, which simply reaffirmed the provisions of the charter concerning religious freedom. (See *Toleration Act*.) The Puritans in Maryland called their chief settlement Providence, which was afterwards named Annapolis. Leonard Calvert died in 1647, and was succeeded by Thomas Greene; but on the death of the king (1649), Lord Baltimore professed to be a Protestant, and appointed William Stone, of Virginia, a warm friend of Parliament and a Protestant, governor. The Parliament not having confidence in Lord Baltimore's professions, removed Stone from office and appointed commissioners to administer the government. Clayborne was one of them, so also was Governor Bennet, of Virginia. These commissioners entered upon their duties with a high hand. They removed Governor Stone, took possession of the records, and abolished the authority of Lord Baltimore. So the "outlaw" trampled on his old enemy. A few months later they reinstated Stone, and put Kent and Palmer's islands into the possession of Clayborne again. On the dissolution of the Long Parliament (1653), Cromwell restored Lord Baltimore's power as proprietor, and Stone proclaimed the actions of the commissioners rebellions. The incensed commissioners returned to Maryland and compelled Stone to surrender his office: then they vested the government in a board of ten commissioners. Civil and religious disputes now ran high. The Puritans, being in the majority in the Assembly, passed an act disfranchising the Roman Catholics and members of the Church of England. These narrow-minded bigots flogged and imprisoned Quakers, and tried to hold sway as their coreligionists did in Massachusetts. Baltimore appealed to Cromwell, and the latter sent word to the commissioners in Maryland not "to busy themselves about religion, but to settle the civil government." So encouraged, Baltimore directed Stone to raise an army for the restoration of the authority of the proprietor. He obeyed. Stone's forces were mostly Roman Catholics. He seized the colonial records, resumed the office of governor, and inaugurated civil war. A sharp and decisive battle was fought near Providence (Annapolis) early in April, 1655, when many of Stone's party were killed or taken prisoners, and he was defeated and became a captive. His life was spared, but four others were executed, having been convicted of treason. Anarchy reigned in Maryland for several months, when Lord Baltimore appointed Josiah Fendall, a former insurgent, governor. But for two years longer there was bitter strife between the people and the agent of the proprietor. The latter finally made important concessions to the popular demands. Fendall acted discreetly, and there was comparative quiet in the colony until the death of Cromwell. In the spring of 1660, the people, boldly asserting popular supremacy, assumed the legislative powers of the state, and gave Fendall a commission as governor. The restoration of monarchy in England soon afterwards led to the reinstatement of Lord Baltimore in his rights, and Fendall was found guilty of treason because he had accepted office from a "rebellious assembly." But Baltimore merely proclaimed a gen-

eral pardon of all political offenders, and for thirty years afterwards Maryland enjoyed repose. Lord Baltimore died in 1675, and was succeeded by his son Charles; and he and his successors continued to administer the government of the province, with a few interruptions, until the period of the war for independence. The revolution in England (1678) shook the colony. The deputy governor hesitated to proclaim William and Mary, and a restless spirit named Coode made this a pretext for exciting the people by giving currency to a story that the local magistrates and the Roman Catholics were about to join the Indians and exterminate the Protestants. The old religious feud instantly flamed out with intensity. The armed Protestants, led by Coode, took forcible possession of the capital of the province (September, 1689) and assumed the administration of the government. They called a convention, invested it with legislative functions, and by that body public affairs were managed until June, 1691, when the sovereign of England, ignoring the rights of Lord Baltimore, made Maryland a royal province, with Lionel Copley governor. In 1694 the capital of the province was transferred from St. Mary to the town soon afterwards named Annapolis, where it yet remains. The proprietary rights of Baltimore (Benedict Leonard Calvert) were restored to his infant son and heir (Charles) in 1716, and the original form of government was re-established. So it remained until the war for independence. A state constitution was adopted Aug. 14, 1776, and Thomas Johnson was elected the first governor of the independent state. During the French and Indian War and the Revolution, the people of Maryland were conspicuous.

Maryland, CONSTITUTION OF, SETTLED. In 1650 a law was enacted for settling the Provincial Assembly of Maryland. It provided that those members who should be called by special writ should form the Upper House, and those chosen by the Hundreds should compose the Lower House, and that all bills which should pass both houses and receive the signature of the governor should be deemed the law of the province, and have the same effect as if the freemen were personally present. The colony was now divided into three counties, which contained eight hundred. (See *Hundred, A.*)

Maryland, DECLARATION OF INDEPENDENCE OF. Before receiving information from Philadelphia of the Declaration of Independence, the Convention of Maryland "yielded to the dire necessity" of renouncing a king who had violated his compact, and conjured every virtuous citizen to "join cordially in maintaining the freedom of Maryland and her sister colonies." That action was taken on July 6, 1776.

Maryland for the Union. For a while after the attack on Massachusetts troops in Baltimore (which see), the Unionists of Maryland were almost silenced. Even Governor Hicks yielded to the pressure of the disunionists, and for a while did their bidding. The Legislature was filled with disloyal men. Abettors of the mob in Baltimore, who were members of the Legislature,

proposed laws to shield the rioters from harm. S. T. Wallis proposed for that purpose, "That the measures adopted and conduct pursued by the authorities of the city of Baltimore on Friday, April 19, and since that time, be, and the same are hereby made valid by the General Assembly." This would cover the disloyal acts of the mayor, the chief of police, the murderous rioters, and the bridge-burners. To further shield the offenders, T. Parkins Scott offered in the same body a bill to suspend the operations of the criminal laws, and that the Grand Jury should be estopped from finding indictments against any of the offenders. These things alarmed the best friends of the commonwealth, and added strength to the sympathy for the Union cause in that state. When Butler, by a single bold stroke, revealed the real weakness of the secession element in Maryland, the Unionists breathed freer, and very soon manifested their strength. The 14th of May, 1861, was a memorable one in the annals of Maryland. On that day the disloyal Legislature adjourned, and Governor Hicks, relieved of the presence of the active enemies of the republic, and assured by the Secretary of War that National troops would remain in Maryland so long as seeming necessity demanded their presence, issued a proclamation calling for Maryland's quota of troops (four regiments) in response to the President's call. On that day the veteran Major W. W. Morris, commander of Fort McHenry, at Baltimore, first gave practical force to the suspension of the privilege of the writ of *habeas corpus* which the exigency of the times gave constitutional sanction for. A man claiming to be a Maryland soldier was imprisoned in Fort McHenry. A Baltimore judge issued a writ of *habeas corpus* for his release. Morris refused to obey, saying, in a letter: "At the date of issuing your writ, and for two weeks previous, the city in which you live and where your court has been held, was entirely under the control of revolutionary authorities. Within that period, United States soldiers, while committing no offence, had been perfidiously attacked and inhumanly murdered in your streets; no punishment had been awarded, and, I believe, no arrests had been made for these atrocious crimes; supplies of provisions intended for this garrison had been stopped; the intention to capture this fort had been boldly proclaimed; your most public thoroughfares had been daily patrolled by large numbers of troops armed and clothed, at least in part, with articles stolen from the United States, and the Federal flag, while waving on the Federal offices, was cut down [by order of the chief of police, Kane] by some person wearing the uniform of a Maryland soldier. To add to the foregoing, an assemblage elected in defiance of law, but claiming to be the legislative body of your state, and so recognized by the executive of Maryland, was debating the Federal compact. If all this be not rebellion, I know not what to call it. I certainly regard it as sufficient legal cause for suspending the privilege of the writ of *habeas corpus*." (See *Habeas Corpus*.) The action of the governor, this indictment of the Secessionists by the

commander of Fort McHenry, and the presence of Butler with his troops made the Unionists of Maryland firm, and it was discovered that they composed an immense majority of the people.

Maryland Guard. This was a corps formed by some enthusiastic young Marylanders who had made their way to Richmond, where they formed themselves into a military corps with the above title, and offered themselves to the Confederacy. The Secession women of Baltimore wrought for them a beautiful banner, which was taken to the corps by a sister Secessionist, and was publicly presented to the corps in Capitol Square, Richmond, in front of the monument there erected in honor of Washington and other founders of the Republic. On that occasion, ex-Senator James M. Mason made a speech, in which he complimented the Chief Justice of the United States (Taney), a Marylander, for his sympathy with the enemies of the government. Hinting at a contemplated invasion of Maryland by troops in Virginia, in which it was expected the corps would join, he told them they were to take the flag back to Baltimore. "It came here," he said, "in the hands of the fair lady who stands by my side, who brought it through the camps of the enemy with a woman's fortitude and courage and devotion to our cause; and you are to take it back to Baltimore, unfurl it in your streets, and challenge the applause of your citizens."

Maryland, INVASION OF, BY LEE. At the request of the governors of many states, the President, on July 1, 1862, called for 300,000 volunteers to serve during the war; and in August he called for 300,000 more for three months, with the understanding that an equal number would be drafted from the citizens who were between eighteen and forty-five years of age, if they did not appear among the volunteers. These calls were cheerfully responded to; and the Confederate government, alarmed, ordered General Lee to make a desperate effort to capture the national capital before the new army should be brought into the field. Lee perceived that it would be madness to make a direct attack upon its formidable defences, so he resolved to cross the Potomac with a large force into Maryland, assail Baltimore, and, if successful, to fall upon Washington in the rear. He believed the people of "sovereign" Maryland were chafing under the dominion of the national government, and were eager to aid the Confederate cause. He believed that the presence of his army on the soil of Maryland would cause an immediate and almost universal uprising in favor of the Confederacy in that state. Lee was joined (Sept. 2, 1862) by the fresh division of General D. H. Hill. This was sent as a vanguard to Leesburg, Va. The whole Confederate army followed, and between the 4th and 7th crossed the Potomac at the Point of Rocks, and encamped not far from the city of Frederick, on the Monocacy River. There General Lee raised the standard of revolt, and on the 8th issued a stirring appeal in the form of a proclamation to the people of Maryland. He was sorely disappointed. Instead

of a general uprising in his favor, he lost more men by desertions than he gained by accessions. When General McClellan heard of this invasion, he left General Banks with some troops at Washington, and with about 90,000 men crossed the Potomac above Washington and advanced cautiously towards Frederick. At McClellan's approach Lee withdrew. There the plan for seizing Washington was discovered. It was to take possession of Harper's Ferry and open communication with Richmond, by way of the Shenandoah valley, and then, marching towards Pennsylvania, entice McClellan's forces in that direction. At a proper time Lee was to turn suddenly, smite and defeat his antagonist, and then march upon Washington. (See *South Mountain* and *Antietam*.)

Maryland, POLITICAL COURSE OF (1775). There was a steadiness and consistency in the political movements in Maryland which was highly conservative, but not less patriotic than in other colonies. Caution was a characteristic feature of the methods of her people in dealing with important measures; and so, from the first, everything was done with so much moderation that all parties acquiesced in the Democratic principle of deriving all power from the people, and the province presented an almost unbroken line in opposition to ministerial actions. It adopted the *American Association* almost immediately after the adjournment of the First Continental Congress. Religious prejudices were held in abeyance, and the people resolved that henceforth former religious differences should cease. Charles Carroll, of Carrollton, a Roman Catholic, who, under the British government, had not been allowed to vote, now took a prominent part in the political movement, and was placed on the Committee of Correspondence. It was a harbinger of a better day, when a new republic should be formed, and perfect religious and political freedom should prevail in it.

Maryland, POSITION OF (1861). It was very important in carrying out the plan of the Secessionists, early in 1861, to seize the national capital, to have the authorities of the State of Maryland in accord with the movement. It might be a barrier to the march of troops from the North sent to defend the capital. Emissaries and commissioners from the cotton-growing states were early within its borders plying their seductive arts; and they found in Baltimore so many sympathizers among leading citizens that, for a while, they felt sure of the co-operation of Maryland. But they found in the Governor (T. H. Hicks) of Maryland a sturdy opponent of their revolutionary schemes. It is said that on the 1st of January, 1861, there were no less than 12,000 men organized in that state, bound by the most solemn oaths to follow their leaders in seizing Washington city. Against such an array, against the natural sympathy of blood-relationship with the Southern people, and against the seeming self-interest of the holders of 700,000 slaves, valued at \$50,000,000, which property might be imperilled, they thought, by alliance with the North, Governor Hicks manfully con-

tended. He was supported by an eminently loyal people among the so-called "masses." Hicks was urged by the Secessionists to call a meeting of the Legislature to consider the state of affairs; but he too well knew the danger that would attend the gathering of a body largely made up of slaveholders, and he steadily refused to make the call. In fact, he had been informed that the members of the Legislature had already formed a plan for "carrying Maryland out of the Union," and resolutions to that effect had already been drawn. These facts he set forth in an address to the people of his state (Jan. 6, 1861), which delighted the Unionists. Already the late Henry Winter Davis, a representative of the Baltimore district in Congress, had published (Jan. 2, 1861) a powerful appeal against the calling of a meeting of the Legislature, or the assembling of a Border State Convention, as had been proposed. The Secessionists denounced Hicks as a traitor, and tried every means to counteract his influence, but in vain, for the best men of the state upheld him. A strong Union party was organized. Maryland became the great battle-field of opposing opinion. The Union men triumphed; and within the space of four years slavery was abolished in Maryland, not only by the Proclamation of Emancipation by the President of the United States (which see), but by the constitutional act of its own authorities.

Maryland Sanctions Independence. On June 28, 1776, a convention in Maryland, which had assembled on the 21st, passed resolutions concurring with Virginia on the subject of independence, a confederation, treaties with foreign powers, and the reservation of the internal government of each colony to its own people. Five days afterwards (July 3) the convention directed the election of delegates to a new convention to create a government by the authority of the people.

Maryland, STATE OF. A convention assembled at Annapolis in August, 1776, and in September presented a bill of rights and a state constitution, which were adopted in November. The first State Legislature met at Annapolis, Feb. 5, 1777, and on the 13th Thomas Johnson was chosen the first governor. The constitution was amended in 1802, and remodelled in 1836. The "Maryland line" of Continental troops held a high position in the Revolution. At Annapolis, in Maryland, when Congress was in session, late in 1783, Washington resigned his commission; and Maryland gave a handsome majority vote for the national Constitution in April, 1788. During the War of 1812 the coasts of Maryland suffered from the depredations of Admiral Cockburn (see *Frenchtown* and *Harre-de-Grace*); and the Battle of Bladensburg (which see) and the defence of Baltimore in August and September, 1814, are conspicuous events in our history. Two of the greatest works of internal improvement in our country were the Baltimore and Ohio Railroad (begun in 1828, and completed to Point of Rocks, on the Potomac, in 1832, but not carried through to the Ohio at Wheeling until

1853) and the Chesapeake and Ohio Canal, made by a company formed in 1828, but not completed until 1850. In 1845-46 the constitution of Maryland was again amended, and in 1851 a new one was adopted. On the subject of secession the people of Maryland were divided at the beginning of the Civil War, but the state held fast to the Union. There were many battles on her soil (see *South Mountain* and *Antietam*),

STATE SEAL OF MARYLAND.

and many exciting scenes of minor importance. The state authorities were active in support of the war, furnishing to the Union army 49,730 men. In October, 1864, a new constitution was ratified by the people. It abolished slavery and disfranchised all who had aided or encouraged rebellion against the government. The present state constitution was adopted in September, 1867.

Maryland, THE FOURTH INVASION OF. At the beginning of July, 1864, Maryland was invaded by the Confederates for the fourth time. The Confederate General Early had been gathering troops for the purpose in the Shenandoah valley, and with fifteen to twenty thousand of these, of all arms, he swept rapidly down the valley towards Williamsport. General Sigel, too weak to resist, fled into Maryland, with a heavy loss of stores, and General Weber, in command at Harper's Ferry, retired to Maryland Heights. Early crossed the Potomac at Williamsport, and, pushing on to Hagerstown (July 6, 1864), levied a contribution on the inhabitants there of \$20,000. Then he pushed on to Frederick, on the Monocacy River, and threatened both Baltimore and Washington. The raid had a twofold purpose—to draw troops from before Petersburg for the defence of Washington, and to plunder. When informed of it, General Grant sent the Sixth Corps to protect Washington. Meanwhile General Lew Wallace (then in command of the Middle Department, with his headquarters at Baltimore) had proceeded from that city, with a few troops hastily collected, to confront the invaders. General E. B. Tyler was then at the railway bridge over the Monocacy with about 1000 men. Wallace went to Tyler's camp, saw the necessity for prompt and energetic action, and chose a commanding position on the east side of the Monocacy for the concentration of his forces. On the 9th he fought the hosts of Early desperately not far from Frederick. He had been joined by a portion of Rickett's brigade, from the advance of the Sixth Corps. This handful of warriors, after fighting overwhelming numbers eight hours, were defeated, with heavy loss, when Early pushed on towards Washington. The vanquished Nationals had really won a victory, for they had detained the Confederates long enough that evening to al-

low the Sixth and Nineteenth Corps to reach and secure the national capital. When Early perceived this he pushed across the Potomac at Edwards's Ferry with a large amount of plunder, closely pursued by General Wright to the Shenandoah valley. He was struck by the Nationals at Snicker's Ferry and at Snicker's Gap, and sharp skirmishes ensued. At Ashby's Gap there was also a brisk skirmish, and in two encounters the Nationals lost about 500 men. Early moved up the valley as if continuing his retreat, when General Wright, handing his command over to General Crook, returned to Washington. Meanwhile General Averill, with a considerable force, moved towards Winchester, and near that place he fought the Confederates (July 20) three hours. They lost 400 men (about 200 of them made prisoners), with four guns. Averill's loss was about 200. It was supposed Early was moving up the valley, but Crook, marching from Harper's Ferry to Winchester, soon afterwards encountered him in heavy force, and he was driven back (July 23) to Martinsburg, with a loss of 1200 men. Early sent 3000 cavalry, under General McCausland, to make a plundering and devastating raid in the direction of the Susquehanna. They swept over the country in eccentric lines, bewildering its defenders, and on July 30 entered the defenceless and partly deserted village of Chambersburg, Penn., and demanded of the inhabitants \$200,000 in gold or \$500,000 in "greenbacks" (paper currency) as a tribute to insure the town against destruction. The tribute was not offered, and two thirds of the town was laid in ashes. No time was given for the removal of the sick, infirm, women, or children. Harry Gilmor, a young Marylander, was McCausland's torch-bearer, and ten minutes after he received orders he applied the flame. General Averill, with 2600 cavalry, was after the raiders. He drove them across the Potomac with such blows that they did not stop to plunder and destroy. Moseby, another guerilla chief, dashed across the Potomac and carried off a few horsemen. Averill pursued the Confederates up the south branch of the Potomac, attacked and defeated them (Aug. 4, 1864) at Moorfield, captured their guns, trains, and 500 men, with a loss to himself of fifty men. Grant now, to protect Washington from seizure, and Maryland and Pennsylvania from invasion, consolidated several departments, calling the organization the Middle Division. General Sheridan was assigned to its command, Aug. 7, 1864. Sheridan at once entered upon his duties, and found himself at the head of over 30,000 troops.

Mason and Dixon's Line. The disputed boundary-line between the State of Pennsylvania and the states of Maryland and Virginia—the border-line between the free- and slave-labor states—was finally fixed by Charles Mason and Jeremiah Dixon, English mathematicians and surveyors employed for the purpose, between 1763 and the close of 1767. In the debates on slavery before the admission of Missouri, John Randolph used the words "Mason and Dixon's line" as figurative of the division between the two systems of labor. The press and the poli-

ticians echoed it; and in that connection it was used until the destruction of slavery by the late Civil War.

Mason and Slidell, CAPTURE OF. Early in the career of the Confederate government they sent diplomatic agents to European courts who proved to be incompetent. That government undertook to correct the mistake by sending two of their ablest men to represent their cause at the courts of Great Britain and France respectively. These were James M. Mason, of Virginia, author of the Fugitive Slave Law, and John Slidell, of Louisiana, who was deeply interested in the scheme for reopening the African slave-trade. These ambassadors, each accompanied by a secretary of legation, left Charleston harbor on a stormy night (Oct. 12, 1861), eluded the blockading squadron, and landed at Havana, Cuba, where they were cordially greeted by the British consul and other sympathizers. There they embarked for St. Thomas on the British mail-steamer *Trent*, intending to go to England in the regular packet from the latter port. While the vessel was on her way to St. Thomas, and when off the northern coast of Cuba, she fell in with the American war-ship *San Jacinto*, Captain Wilkes, then on his way home from the coast of Africa. He had touched at Havana, where he heard of the movement of the Confederate ambassadors. Satisfied that the English rule concerning neutrals and belligerents would justify him in seizing these men on the *Trent* and transferring them to his own vessel, he went out in search of her. He found her (Nov. 8), and brought her to by firing a shell across her bow. Then he sent Lieutenant Fairfax, a kinsman of Mason, on board the *Trent* to demand of the captain the delivery of the ambassadors and their secretaries to Captain Wilkes. The officers of the *Trent* protested, and the ambassadors refused to leave the ship unless forced by physical power to do so. Lieutenant Greer and a few marines were sent to help Fairfax, who then took Mason by the shoulders and placed him in a boat belonging to the *San Jacinto*. Then the lieutenant returned to Slidell. The passengers were greatly excited. They gathered around him, some making contemptuous allusions to the lieutenant, and even crying out "Shoot him!" The daughter of Slidell slapped Fairfax in the face three times as she clung to the neck of her father. The marines were called, and Slidell and the two secretaries were compelled to go. The captive ambassadors were conveyed to Boston and lodged in Fort Warren as prisoners of state. The British government pronounced the act of Wilkes as a "great outrage," though in exact accordance with their code of international law as expounded by their judges and publicists; and with the same unseemly haste which characterized the Queen's proclamation (which see), the British government prepared for war on the United States. It did not wait for diplomatic correspondence, but made extensive preparations for hostilities before sending a peremptory demand for the release of the prisoners. The Tory papers abused the American govern-

ment without stint. While these preparations were going on, and Congress and other legislative bodies were thanking Captain Wilkes, the United States government, acting upon the wise counsel of President Lincoln, and true to its long-cherished principles concerning the sacredness of neutrality, proceeded to disavow the act of Wilkes and to release the prisoners. They were placed on board a British vessel, and went to England, where they were treated with marked coldness. The *London Times*, which had teemed with abuse of the Americans because of the arrest, now declared that the ambassadors were "worthless booty," and added, "England would have done as much for two negroes."

Mason, GEORGE, was born in Fairfax County, Va., in 1726; died there (at Gunston Hall), Oct. 7, 1792. After his marriage he built Gunston Hall, on the bank of the Potomac, below Mount Vernon. He was a firm patriot and able statesman. In 1769 he drew up the non-importation resolutions which Washington presented to the Virginia Assembly, and which were unanimously adopted. He also wrote a powerful tract against the claim of the British Parliament to tax the colonies without their consent. At a meeting of the inhabitants of Fairfax (July 18, 1774) he offered twenty-four resolutions reviewing the whole ground of the pending controversy; recommended a general congress; and urged the non-intercourse policy. In 1775 he was a member of the Virginia Committee of Safety; and in 1776 he drafted the Declaration of Rights and State Constitution of Virginia, which were adopted unanimously. In 1777 he was elected to the Continental Congress, and in 1787 he was a leading member of the convention which framed the national Constitution. In that body he opposed every measure which tended to the perpetuation of slavery. Dissatisfied with the constitution, he declined to sign it, and, in connection with Patrick Henry, led the opposition to it in the convention of Virginia. He also declined the office of United States Senator, to which he was elected. Jefferson wrote of Mason: "He was a man of the first order of wisdom, of expansive mind, profound judgment, cogent in argument, learned in the lore of our form of constitution, and earnest for the republican change on democratic principles." Mr. Mason's statue occupies a pedestal on Crawford's monument of Washington at Richmond, Va.

Mason, JAMES MURRAY, grandson of George Mason, of Gunston Hall, was born in Fairfax County, Va., Nov. 3, 1798; died near Alexandria, Va., Feb. 14, 1874. He graduated at the University of Pennsylvania in 1818; began the practice of law in 1820; served in the Virginia Legislature; was a member of Congress from 1837 to 1839; and United States Senator from 1847 until expelled in July, 1861, for assisting the enemies of the government. Senator Mason was the author of the Fugitive Slave Law (which see) and an active leader of the insurrection in 1860-61. He promoted the secession movement in Virginia, and was a member of the

Confederate Congress. He was arrested while on his way to England as diplomatic agent of the Confederate government (see *Mason and Sidel*), but was soon released. He afterwards resided some time in Paris.

JAMES MURRAY MASON.

Mason, JEREMIAH, LL.D., was born at Lebanon, Conn., April 27, 1768; died in Boston, Oct. 14, 1848. He graduated at Yale College in 1788, was admitted to the Vermont bar in 1791, and soon became the acknowledged head of his profession in the state. He was attorney-general in 1802, and from 1813 to 1817 was United States Senator. For many years he was in the New Hampshire Legislature, and was the author of an able report on the Virginia resolutions touching the Missouri Compromise (which see). In 1837 he removed to Boston, where, until he was seventy years of age, he was extensively engaged in his profession; but he was little known, personally, out of New England. His mind was clear, logical, and extremely vigorous, the characteristics of which, Webster said, were "real greatness, strength, and sagacity."

Mason, JOHN, founder of New Hampshire, was born in Norfolk County, England; died in London in 1635, and was buried in Westminster Abbey. In 1610 he commanded an expedition to subdue a rebellion in the Hebrides, and in 1616 he went to Newfoundland as governor. He surveyed the island and made a map of it, published in 1626. He also wrote a description of Newfoundland. In 1617 he explored the New England coasts, and obtained from the Council of Plymouth (which see) a tract of land there in 1622. With Ferdinando Gorges, he procured a patent for another tract (see *Maine*), and sent a colony there in 1623. In 1629 he obtained a patent for the domain which he called New Hampshire. In the same year he acquired, with Gorges, another tract, which embraced the country around Lake Champlain (see *Laconia*); and in 1631 Mason, Gorges, and others formed a company for trading with the natives of New England and to make settlements there. In 1633 Mason became a member of the Council for New England (see *Plymouth Council*) and

vice-president of the same. He was also judge of the courts of Hampshire, England, in 1665, and in October was appointed Vice-admiral of New England. When he was about to sail for America he died. Mason's heirs sold his rights in the Province of New Hampshire in 1691 to Samuel Allan.

Mason, JOHN, an Indian fighter, was born in England in 1600; died at Norwich, Conn., in 1672. He served as a soldier under Fairfax in the Netherlands, and that leader invited Mason to join his standard in the Civil War. He came to America in 1630, and was one of the first settlers of Dorchester. Captain Mason led the white and Indian troops against the Pequods near the Mystic in 1637 (see *Pequod War*), and was soon afterwards made major-general of the Connecticut forces, which position he held until his death. He was a magistrate from 1642 until 1668, and deputy-governor from 1660 to 1670. He went to Saybrook after the Pequod War at the request of the settlers, and in 1659 removed to Norwich.

Mason, LOWELL, Musical Doctor, was born at Medfield, Mass., Jan. 8, 1792; died at Orange, N. J., Aug. 11, 1872. At an early age he became a teacher and composer of music, and at the age of twenty years went to Savannah, Ga., where he gave instruction and led choirs and musical associations. In 1821 he published in Boston his *Handel and Haydn Collection of Church Music*, and it was so successful that he returned north and settled in Boston, where, in 1827, he began the instruction of classes in vocal music. He taught juvenile classes gratuitously on the Pestalozzian system, and published many juvenile collections of music, glee-books, etc. Dr. Mason's latest work, *The Song Garden*, appeared in 1866. In connection with Professors Park and Phelps, he compiled a *Collection of Psalms and Hymns for Public Worship*, published in 1858.

Mason, STEVENS THOMSON, was born at Stafford, Va., in 1760; died in Philadelphia, May 10, 1803. He was educated at the College of William and Mary, and at the early age of twenty years (1780) held the rank of colonel in the Virginia troops. At the close of the Revolution he was a brigadier-general. In the Virginia House of Representatives he was conspicuous; also in the convention in Virginia in 1788 to consider the national Constitution. He took a conspicuous place in the Democratic party (see *Jay's Treaty*), and was United States Senator from 1794 until his death. Mr. Mason was distinguished for oratory, and was very popular.

Massachusetts (colony of), one of the original thirteen states of the Union, was founded by English Puritans who fled from persecution. (See *Puritans*.) Its shores were probably visited by Northmen at the beginning of the eleventh century (see *Northmen*), and possibly Sebastian Cabot saw them (1498), and also Verazzani (1524). The shores were explored by Bartholomew Gosnold (1602), Samuel Champlain (1604), and John Smith (1614); but the first permanent European settlement was made on the shores of Cape Cod Bay by some English

Non-conformists, who, calling themselves "Pilgrims," had fled from England to Holland, so-journed there a few years, formed a church at Leyden, and in 1620 came to America, where they might worship God with perfect freedom. Having made arrangements with the Plymouth Company for planting a settlement, and for funds with some London merchants, they went from Delftshaven to England, and sailed for America from Plymouth in the *Mayflower*, of 180 tons' burden, on the 17th of September (N. S.), and, after a stormy passage, arrived at Cape Cod in November. Seeking a good landing-place, the company, one hundred and one in number—men, women, and children—did not leave the vessel until the 22d of December (N. S.), when they landed on a rock on the shores of Cape Cod Bay, built some log-huts in the snow, and called the rude village New Plymouth. In the cabin of the *Mayflower* the men had drawn up and signed a form of government—a solemn compact—by which they were to be ruled (see *Pilgrims*), and chose John Carver governor for one year. Cold, exposure, and poor food caused a sickness that swept away nearly one half their number in four months. Carver was among the victims, and William Bradford was his successor. Their spiritual leader was Elder William Brewster. They made a treaty of friendship with Massasoit, sachem of the surrounding Indians, and it was long maintained inviolate. In petty hostilities with other chiefs, Captain Miles Standish, a valiant little soldier, was very useful. (See *Standish, Miles*.) Other Puritans joined the Pilgrims, and other settlements were soon attempted (see *Weston's Colony*); but the little colony at New Plymouth suffered much at times until 1623, when they were blessed with a bountiful harvest. The community system of labor was abandoned, and in 1627 the colonists dissolved their partnership with the London merchants, and became sole proprietors of the soil. As the Pilgrims could not obtain a patent, they quietly lived under their own simple form of government and prospered. An English company obtained a grant of territory on Massachusetts Bay and sent over John Endicott (1628) with one hundred settlers, who seated themselves at Naumkeag, now Salem. Others soon joined them, and a royal patent was obtained for the "Massachusetts Bay Company." (See *Massachusetts, First Royal Charter for*.) In 1629-30 large reinforcements came to the colony, new settlements were planted, and a supply of farming-tools and live-stock was furnished. The charter and the corporate powers of the company were transferred from England to Massachusetts, and so the foundations of that commonwealth were firmly laid. In 1630 John Winthrop was elected governor, and that year the colony numbered one thousand souls. Religious intolerance marked the rulers in Church and State, and five or six years after the arrival of Winthrop, Roger Williams, an eccentric Puritan minister at Salem, was banished from the colony and soon founded the commonwealth of Rhode Island. In 1637 the colony was disturbed by a war with the Pe-

quods. (See *Pequod War*.) Very soon King Charles I. began to interfere with the political independence of the colony. He demanded the surrender of the charter to the crown; the order was evaded, and, by erecting fortifications and drilling troops, the colonists prepared to resist it. During the Civil War the colony was quiet, but on the restoration of the Stuarts in 1660 (see *Charles II.*) the government of England claimed supreme jurisdiction in Massachusetts. A commissioner was sent to England in 1662, and obtained a confirmation of the charter and a conditional promise of amnesty for offenders during the late troubles between royalty and the people. Charles II. demanded the repeal of all laws contrary to his authority, the taking of an oath of allegiance, the administration of justice in the king's name, the complete toleration of

76. (See *King Philip's War*.) The Indians destroyed a dozen towns, six thousand houses, and six hundred of the inhabitants, in their homes or in the little army. Of the men, one in twenty had fallen, and of the families, one in twenty was homeless; and the cost of the war was over \$500,000 — enormous at that time. The royal pretensions to rule the colony were renewed after the war, though England had not furnished a man or a farthing to carry it on, but these were spurned. In 1680 a committee of the Privy Council, at the suit of the heirs of Gorges, denied the right of Massachusetts to New Hampshire and Maine. Massachusetts purchased the title to the latter (see *Maine*), and the former became an independent province. (See *New Hampshire*.) In 1684 the High Court of Chancery in England gave judgment in favor of the crown

against the governor and company of Massachusetts, and the charter was declared forfeited. Joseph Dudley was appointed royal governor, the General Assembly, or Court, was dissolved, and a new commission superseded the charter government. Edmund Andros succeeded Dudley (Dec. 20, 1686), when that tyrannical ruler and his pliant council proceeded to make laws and levy taxes without the consent of the people. The people submitted with impatience. They were relieved by the expulsion (1688) of the last Stuart king from the throne of England (see *James II.*), and early in 1689 the men of Boston imprisoned Andros, reinstated the old government, and sent the ex-royal-governor to England. (See *Andros, Sir*

ANCIENT MAP OF MASSACHUSETTS BAY.

the Church of England in Massachusetts, and a concession of the elective franchise to every man having a competent estate. There was a diversity of sentiment in the colony respecting these demands, some acquiescing, some opposing; and in 1664 commissioners arrived at Boston (the capital of the colony, founded by Winthrop) to investigate the affairs of the colony. The colonial authorities published an order prohibiting any complaints to be made to the commissioners, and addressed a remonstrance to the king. The commissioners, unable to do anything, finally withdrew. The king reproved Massachusetts, and ordered the governor and others to appear before him. They refused to go, and much trouble was expected. A more serious trouble awaited them. The colony was severely scourged by King Philip's War in 1675-

Edmund.) In the intercolonial war between France and England in 1690 Massachusetts participated, and to pay the expenses the colony first issued paper-money. (See *Paper Currency*.) In 1692 a new charter was given to Massachusetts, by which New Plymouth was united with it. Then the commonwealth included forty thousand inhabitants, and was divided into several counties. It was a royal province, and the governor and secretary were appointed by the king; and no act of the popular Legislature was valid without the sanction of the chief magistrate, who possessed a veto power. About this time a strange delusion, known as Salem Witchcraft, fearfully disturbed the colony for six months. (See *Salem Witchcraft*.) The province was finally smitten by French and Indian invaders in 1703-4, and war was waged with the

Indians in 1722 and 1725. The colony was involved in war with its French neighbors in 1744, in consequence of a war between France and England. In that war Massachusetts contributed largely in men and means to the capture of Louisburg (1745), and in attempts to conquer Canada. (See *Louisburg*.) She also bore her part in the French and Indian War; and in the opposition to the Stamp Act and other schemes of the British Parliament for taxing the English-American colonists, Massachusetts took a leading part. And when that opposition to British oppression was educating the people for armed resistance, Massachusetts was a chief leader and instructor. All through the war for independence she was among the foremost of the colonies, in the council and in the field. Upon her soil the first Continental army was organized, and the first clash of arms in the war for independence was heard within her borders. On March 2, 1780, a state constitution was adopted, and a state government organized under it some time afterwards, with John Hancock as governor.

Massachusetts Charter Forfeited. On June 18, 1684, the High Court of Chancery in England gave judgment for the king against the governor and Council of Massachusetts, and their charter was declared forfeited. The liberties of the people were thus seized by the king. So fell the old charter under which the people had lived for fifty-five years. Colonel Kirke was appointed governor of the colonies of Massachusetts, New Hampshire, and Plymouth; but before he received his commission and instructions the monarch died and his appointment was annulled.

Massachusetts Committee of Safety. On Feb. 9, 1775, the members of the Massachusetts Provincial Congress (second), consisting of two hundred and fourteen members, appointed eleven men as their Committee of Safety, charged to resist any attempt at executing the acts of Parliament. They were empowered to take possession of the munitions of war of the province, to make returns of the militia and the minutemen (which see), and to muster so many of the militia as they should judge necessary.

Massachusetts Declaration of Independence. On the first day of May, 1776, the General (Provincial) Court of Massachusetts passed "An Act for establishing the Style of Commissions which shall hereafter be Issued and for Altering the Style of writs, Processes, and all Law proceedings within this colony, and for directing *pene* Recognizances to the Use of this Government shall for the future be taken and prosecuted." The act went on to say that, "Whereas, the Petitions of the United Colonies to the King had been rejected and treated with scorn and contempt, and the evident design of the government was to reduce the colonies to a state of servile subjection," it was therefore decreed that, "on and after the first day of June next ensuing, all Civil Commissions, Writs, and Precepts for convening the General Court or Assembly" should thereafter be made out "in the name and Style of the Government and People of the Massachusetts Bay in New England."

Also, all the officers of the colony, civil and military, should receive their authority from the same source. This placed the supreme authority of Massachusetts, *de facto* and *de jure*, in the chosen representatives of the people. It was an absolute declaration of independence.

Massachusetts Declaration of Rights. In 1692, after the receipt of the new charter, the General Court of Massachusetts passed an act which was a declaration of the rights of the colony. Among the general privileges which it asserted, it declared that "No aid, tax, tollage, assessment, custom, loan, benevolence, or imposition whatsoever, shall be laid, assessed, imposed, or levied on any of their majesties' subjects, or their estates, on any pretence whatsoever, but by the act and consent of the governor, council, and representatives of the people assembled in General Court." To this declaration the people of Massachusetts firmly adhered; and the principle was formulated as a political maxim in the words used before and at the time of the Revolution in 1775—"Taxation without representation is tyranny."

Massachusetts, FIRST ROYAL CHARTER FOR.

In March, 1629, King Charles I. gave a charter to a number of wealthy and influential Englishmen, confirming a former grant to others, to a domain in America (see *Massachusetts*), with whom they became associated, and superadded the power of government. It was similar to the Virginia charter (see *Virginia*), and erected the patentees and their associates into a corporation by the name of the "Governor and Company of Massachusetts Bay, in New England." The affairs of the company and the colony were to be managed by a governor, deputy-governor, and eighteen assistants, or magistrates, the latter to hold monthly courts. The more important laws of the colony were to be enacted by a General Court of Assembly of all the freemen and stockholders, to be held quarterly. The rights of Englishmen were secured to the colonists, but the management of the local government was entirely in the hands of the corporation in England. No royal negative was reserved in the enactments of the company. Nothing was said about religion. The company was organized under the charter by the appointment of Matthew Cradock governor, and Timothy Goffe deputy-governor—two wealthy London merchants. The executive administration of the colony was intrusted to Endicott (see *Endicott, John*), assisted by twelve councillors—seven to be named by the company, two to be selected by the old planters, and these nine to select three more. The settlement was called "London's Plantation." Every stockholder who should emigrate to America at his own cost was to receive fifty acres of land for each member of his family, and the same for each indentured servant he carried with him. The charter and the government were soon transferred from England to Massachusetts, and a large emigration ensued in 1629-30. (See *Massachusetts*.)

Massachusetts, INDEPENDENCE PROCLAIMED IN. The Declaration of Independence was read

from the pulpits on the ensuing Lord's day after it was received, and was entered at length on the records of the towns. It created the greatest enthusiasm throughout the commonwealth, and Tories became a small minority.

Massachusetts Legislature, Two Houses FIRST ESTABLISHED. In 1644 an interesting change took place in the General Assembly of Massachusetts. An arrangement was agreed to for the magistrates to sit by themselves, and the deputies by themselves, forming two houses, and that what one should agree upon should be sent to the other; and if both should agree, then the act was to pass. From that time bills and resolutions were sent in a parliamentary way from one House to the other.

Massachusetts, NEW GOVERNMENT IN. In accordance with the directions of the Continental Congress, the people of Massachusetts, at town meetings, chose representatives for a new Assembly. The citizens of Boston, who were scattered, gathered at Concord and chose their representatives. These and others met at Cambridge, where, on July 19, 1775, the Provincial Congress was dissolved forever, and the new House of Representatives began the restoration of regular civil government in that colony. They chose James Warren, of Plymouth, as their speaker. The next night the Americans destroyed the light-house in Boston harbor by fire, and the British, alarmed, became more circumspect, for they had learned not to regard the American soldiers as an "undisciplined rabble."

Massachusetts, NEW ROYAL CHARTER OF. When the colony resumed its charter in 1689, the people earnestly solicited its re-establishment with the addition of some necessary powers. The king would not consent, and a new royal charter was issued in 1692. By the terms of the new charter the Colony of Plymouth, the provinces of Maine and Nova Scotia, as far north as the River St. Lawrence, and all the country between them, were added to the old Province of Massachusetts; also the Elizabeth Islands and the islands of Nantucket and Martha's Vineyard. Under the new charter the governor, lieutenant-governor, and colonial secretary were appointed by the crown. It gave the governor the power to convene and dissolve the General Court, and a veto of all its acts. The councillors first appointed by the crown were afterwards to be annually elected by the House of Representatives and the existing Council; but of the twenty-eight thus chosen the governor might reject thirteen. The advice and consent of the Council were necessary to all appointments and official acts. Under this charter the theocracy which had ruled Massachusetts with rigor lost nearly all its power. (See *Theocracy*.) Toleration was expressly secured to all religious sects, excepting Roman Catholics. The right of suffrage, limited by the old government to church members and a few persons admitted freemen on a minister's certificate, was now bestowed on all inhabitants possessing a freehold of the annual value of \$6.66, or personal property to the amount of \$133.33. Massa-

chusetts had gained religious freedom and the extension of political rights. (See *Phipps*.)

Massachusetts, PETITION OF, TO THE KING. Recent acts of Parliament for taxing the Americans caused the Massachusetts Assembly, in January, 1768, to send to the king a petition which combined, temperately, the spirit of liberty and of loyalty. In it was set forth a brief history of the colony of Massachusetts; the franchise guaranteed by their charter; expressed the happiness of the colonists while in the enjoyment of these chartered privileges; spoke of the obedience to acts of Parliament not inconsistent with these chartered rights, and said: "It is with the deepest concern that your humble suppliants would represent to your majesty that your Parliament, the rectitude of whose intentions is never to be questioned, has thought proper to pass divers acts imposing taxes on your subjects in America, with the sole and express purpose of raising a revenue." "If your majesty's subjects here shall be deprived of the honor and privilege of voluntarily contributing their aid to your majesty," they continued, "in supporting your government and authority in the province, and defending and securing your rights and territories in America, which they have always hitherto done with the greatest cheerfulness, their liberties would be in danger." They declared that if Parliament intended to lay taxes upon them without their consent, the people "must regret their unhappy fate in having only the name left of free subjects." "With all humility," they continued, "we conceive that a representation of this province in Parliament, considering these local circumstances, is utterly impracticable. Your majesty has heretofore been graciously pleased to order your requisitions to be laid before the representatives of the people in the General Assembly, who never failed to afford the necessary aid to the extent of their ability, and sometimes beyond it; and it would be ever grievous to your majesty's faithful subjects to be called upon in a way that should appear to them to imply a distrust of their most ready and willing compliance." They closed by humbly asking the king to consider their situation and to afford them relief from the oppression of the Parliament. With this petition went to England letters to leading statesmen, urging the rights of the province.

Massachusetts, REMONSTRANCE OF (1813). The doctrine of state supremacy had yet a strong hold upon the political opinions of New England, and particularly of Massachusetts, and it was restless under the assumption of supreme power by the national government in the War of 1812-15. In his message to the Legislature (May 20, 1813), Governor Strong defended the right of free discussion of the great question of the day—peace or war with Great Britain. The Peace Party (which see) powerfully influenced public opinion in Massachusetts, and, following the message of the governor, the Legislature of that state agreed to a remonstrance, in which they denounced the perseverance in war, and

declared that, for ought that appeared, the questions at issue might be adjusted by peaceful negotiations. This remonstrance was regarded as highly unpatriotic by the great bulk of the nation, put forth as it was in the midst of the struggle, when the American government required the sympathy of all its citizens.

Massachusetts, RESUMPTION OF CHARTER GOVERNMENT IN (1775). The Provincial Congress of Massachusetts wrote to the Continental Congress (May 16), setting forth the difficulties they experienced for the want of a regular government, since the act of Parliament that was intended to subvert their charter, and asking for explicit advice in the matter. The Congress resolved (June 9) that no obedience was due from the inhabitants of Massachusetts to the obnoxious act of Parliament, nor to any of the crown officers acting under it; that, as there was no council (see *Madamus Councillors*), and as Governor Gage was actually carrying on war against the people, they recommended an election of representatives to an assembly that should appoint councillors, and that this body or the councillors should exercise the powers of government until a governor should be appointed who would consent to govern the colony according to the charter. This was done. James Warren, President of the Provincial Congress, was authorized to issue writs for an election. The summons was readily obeyed. A full house convened at Watertown on the 20th of July, and Warren was chosen speaker. A council was chosen, and the two branches proceeded to legislation, under the charter.

Massachusetts Song of Liberty, THE, was sung throughout all the colonies for several years before the war for independence broke out. It was very popular, for it touched the hearts of the people at that time. It was published in Bickerstaff's *Boston Almanac* for 1770, with the music as given below. The *Almanac* for that year contained on its title-page a rude type-metal engraving of a likeness of James Otis. The portrait of the patriot is supported by Liberty on one side and Hercules on the other.

"Our grandsires, bless'd heroes, we'll give them a tear,
Nor sully their honors by stooping to fear;
Through deaths and through dangers their *Trophies* they won,
We dare be their *Rivals*, nor will be outdone.
"In Freedom we're born, etc.

"Let tyrants and minions presume to despise,
Encroach on our *Rights*, and make *Freedom* their prize;
The fruits of their rapine they never shall keep,
Though vengeance may nod, yet how short is her sleep.
"In Freedom we're born, etc.

"The tree which proud *Haman* for *Mordecai* rear'd
Stands recorded, that virtue endanger'd is spared;
That *rogues*, whom no bounds and no laws can restrain,
Must be stripp'd of their honors and humbled again.
"In Freedom we're born, etc.

"Our wives and our babes, still protected, shall know
Those who dare to be free shall forever be so;
On these arms and these hearts they may safely rely
For in freedom we'll live, or like *Heroes* we'll die.
"In Freedom we're born, etc.

"Ye insolent *Tyrants*! who wish to enthrall;
Ye *Minions*, ye *Placemen*, *Pimps*, *Pensioners*, all;
How short is your triumph, how feeble your trust,
Your honor must wither and nod to the dust.
"In Freedom we're born, etc.

"When oppress'd and approach'd, our King we implore,
Still firmly persuaded our *Rights* he'll restore;
When our hearts beat to arms to defend a just right,
Our monarch rules there, and forbids us to fight.
"In Freedom we're born, etc.

"Not the glitter of arms nor the dread of a fray
Could make us submit to their chains for a day;
Withheld by affection, on *Britons* we call,
Prevent the fierce conflict which threatens your fall
"In Freedom we're born, etc.

"All ages shall speak with amazement and applause
Of the prudence we show in support of our cause;
Assured of our safety, a *Brunswick* still reigns,
Whose free, loyal subjects are strangers to chains.
"In Freedom we're born, etc.

"Then join hand in hand, brave *AMERICANS* all,
To be free is to live, to be slaves is to fall;
Has the land such a dastard as scorns not a Lord,
Who dreads not a fetter much more than a sword?
"In Freedom we're born," etc.

Massachusetts, STATE OF. In 1780 a state constitution for Massachusetts was framed, and was adopted by the people, and it is now the fundamental law of the commonwealth, though it has been amended several times. It was soon decided that by a clause in its Bill of Rights slavery was abolished. Under the constitution, John Hancock was elected its first governor. The poverty and distress of the people caused some of them, in the interior of the state, to resist taxation. (See *Shays's Rebellion*.)

FAC-SIMILE OF THE MUSIC.

"Come swallow your bumpers, ye *Tories*, and roar,
That the Sons of fair Freedom are hamper'd once more;
But know that no *Cutthroats* our spirits can tame,
Nor a host of *Oppressors* shall smother the flame.
"In Freedom we're born, and, like Sons of the brave,
Will never surrender,
But swear to defend her,
And scorn to survive if unable to save.

A state convention ratified the national Constitution Jan. 9, 1788. The people were generally opposed to the War of 1812, yet that state furnished a large number of seamen for the navy. The politicians of that state were chiefly instrumental in getting up the "Hartford Conven-

tion" (which see), and George Cabot, of that state, was its president. In 1820 the District of

STATE SEAL OF MASSACHUSETTS.

Maine was separated from Massachusetts, and admitted into the Union as a state. During the Civil War Massachusetts furnished to the National army and navy 159,165 men, and the losses were 3749 killed in battle, 9086 who died from wounds or disease, 15,645 discharged for disability contracted in the service, and 5866 not accounted for. The state expended on account of the war \$30,162,200. The state now maintains a militia force of about 6000 men, at an annual expenditure of \$175,000.

Massachusetts Troops in Baltimore. Early in January, 1861, Governor Andrew, of Massachusetts, tendered troops to the government for its protection. Fort Sumter was attacked, and on the day when the President's call for troops was issued, Senator Wilson telegraphed to Governor Andrew to despatch twenty companies to Washington immediately. The formal requisition of the Secretary of War arrived an hour later, calling for two regiments from Massachusetts, and before sunset the same day an order went out for four regiments to muster forthwith on Boston Common. Benjamin F. Butler was commissioned brigadier-general, and these regiments formed his brigade. On the 16th Senator Wilson telegraphed for four regiments. They were ready, and the Sixth Regiment, Colonel Jones, was sent forward immediately, to go by way of New York, Philadelphia, and Baltimore. The regiment consisted of eleven companies, and to these were added two more. News had reached Baltimore of the approach of these troops, and there was much excitement there on the morning of April 19th, for they had heard of the destruction of the armory and arsenal at Harper's Ferry (which see) the night before. At near noon the Massachusetts troops arrived, and the excitement was intensified. When the train reached the President Street Station, between which and Camden Street Station the cars were drawn by horses, a mob of about five hundred men were waiting to receive them. The number rapidly increased, until, when the cars started, at least two thousand men followed them, with yells, to the Camden Street Station, where another mob, which had been gathering all the morning, met them. A mob in Pratt Street became more and more unruly, shouting lustily for "Jeff Davis and the Southern Confederacy," and at near the corner of Gay Street, where lay a heap of stones, they broke loose from all restraint, and hurled these missiles upon the cars loaded with soldiers as they were passing. Every window was demolished, and several soldiers were hurt. Then the cry was raised, "Tear up the track!" That could not easily be done, and

the mob barricaded the street by dragging anchors upon it from a store near by. The troops back of the barricade alighted for the purpose of marching to the station. They consisted of four companies. As they began a march in close order, the mob fell upon them. The rioters were led by a man with a Secession flag on a pole, who told the troops they should never go through the city—that "every nigger of 'em" would be killed before they could reach the other station. The word *March!* was given to the troops, when the mob began hurling bricks and stones. The missiles filled the air like hail, while the troops advanced at a "double-quick." Very soon the attack became more furious, and several of the soldiers were knocked down by stones and their muskets taken from them. Presently some shots were fired by the infuriated populace. Up to this time the troops had made no resistance. Now, finding the mob intent upon murder, the troops were ordered to cap their muskets (already loaded) and defend themselves. They had now reached Gay Street, and the mob was full ten thousand strong, hurling stones and bricks. Heavy pieces of iron were thrown upon them from windows. One of them crushed a man to the earth. Now the troops turned and fired at random upon the mob. Shouts, stones, musketry, shrieks of women, and the carrying of wounded men into stores made an appalling tragedy. The severest of the fight was in Pratt Street, between Gay and Bowley's Wharf, near Calvert Street. The Mayor of Baltimore tried to quell the storm of passion, but in vain, and the New-Englanders were left to fight their way through to the Camden Street Station. They were furiously assailed at Howard Street, where about twenty shots were fired. At a little past noon the troops entered the cars for Washington. Three of their number had been killed outright, one mortally wounded, and eight were seriously hurt and several slightly. Nine citizens of Baltimore were killed and many—how many is not known—were wounded. The mob followed the cars as they went off for Washington, more than a mile, impeding the progress of the train with stones, logs, and telegraph-poles, which the accompanying police removed. The train was fired into from the hills on the way. The troops reached the capital that evening, and were quartered in the Senate Chamber.

Massacre of Huguenots in Florida. (See Huguenots.)

Massasoit, sachem, or king, of the Wampanoags, was born about 1580; died in 1661. His domain extended from Cape Cod to Narraganset Bay. At one time his tribe numbered thirty thousand souls, but just before the arrival of the *Mayflower* they had almost been swept from the face of the earth by a malignant disease, which left only three hundred persons alive. On the 15th of March, 1621, Massasoit appeared at New Plymouth with sixty of his followers, armed and painted, prepared for peace or war. Edward Winslow had been sent with Squanto (see *New Plymouth*) to meet him with presents from the governor, while Captain Standish, with

several musketeers, remained a little behind. Leaving Winslow behind as a hostage, Massasoit approached with twenty armed warriors, and met Standish at a dividing brook. The dusky people were taken to a building where a rug and cushions were prepared for the king and his courtiers, and there, sitting in state, he received Governor Carver, who came with a braying trumpet and beaten drum. Squanto acted as interpreter. A treaty of peace and amity was concluded, which was never broken by either party while Massasoit lived. The old sachem sent messengers to other tribes, inviting them to come and make peace with the white people. When ready to depart, Massasoit rose from his seat, and stretching forth his hand and pointing to the surrounding country, said, in substance: "Englishmen, take possession of the land, for there is no one left to occupy it. The Great Spirit came in his anger, and swept the people from the face of the earth." Soon after this treaty Edward Winslow and a companion visited Massasoit at his residence at Pokanoket, within the limits of Warren, R. I. Squanto went with them as guide. They carried presents to the king, and were graciously received, but Massasoit was so unprovided with food, his corn being spent, that the Englishmen nearly starved. They were honored by sleeping in the same bed—which was made of plank, covered with thin matting, and infested with vermin—with the king and queen (the latter at one end and the former at the other). In 1623, when Massasoit was very sick, Winslow again visited him, and, in gratitude for the attention of the Englishman, the sachem revealed a plot of the Indians to destroy the white people. Thirteen years later, when Roger Williams, banished from Massachusetts, was making his way towards Narraganset Bay, he was kindly entertained by Massasoit for several weeks. A contemporary writer says the Wampanoag king was "a portly man in his best years; grave of countenance and spare of speech." He left two sons. (See *King Philip's War*.)

Matches. Loco-foco, or friction, matches were invented by John Walker, an English chemist, in 1829. They began to find their way into the United States in 1831 or 1832, when they were sold in boxes of twenty-five sticks in number for twenty-five cents, or one cent apiece. The first patent issued in the United States for their manufacture was to Alonzo D. Phillips, of Springfield, Mass., in the fall of 1836. In 1870 there were seventy-five establishments devoted to their manufacture, and the total value of the annual product was more than \$3,540,000.

Mather, COTTON, D.D., was born in Boston, Feb. 12, 1663; died there, Feb. 13, 1728. He is one of the most notable of the early New England divines. He graduated at Harvard in 1678, was employed several years in teaching, and was ordained a minister in May, 1684, as colleague of his father, Dr. Increase Mather. The doctrine of special providence he carried to excess. He was credulous and superstitious, and believed he was doing God service by witch-

hunting. (See *Salem Witchcraft*.) His *Wonders of the Invisible World* (1692) gives an account of the trials for witchcraft. In 1700 he published *More Wonders*, and seems never to have relinquished his belief in witches and witchcraft.

COTTON MATHER.

Aside from this peculiarity, he was a most sincere, earnest, indefatigable Christian worker, engaging in every good work; and he was the first to employ the press extensively in this country in the dissemination of tracts treating of temperance, religion, and social morals. He preached and wrote for sailors, Indians, and negroes. The number of his published works issued between 1686 and 1727 is three hundred and eighty-two.

Mather, INCREASE, D.D., was born at Dorchester, Mass., June 21, 1639; died Aug. 23, 1723. He was educated at Harvard and Dublin Universities, and returned to Boston in 1661, having spent some time in England, preaching occasionally. He was President of Harvard University from 1685 to 1701. He was the first in this country upon whom was conferred the degree of D.D. He was an energetic and patriotic public man, and took an active part in the political affairs of the colony. He was sent to England to obtain redress of grievances, and returned in 1692 with a new charter, and invested with the power to nominate a governor, lieutenant-governor, and council for Massachusetts. Dr. Mather opposed the violent measures promoted by his son against persons accused of witchcraft. He wrote a *History of the War with the Indians*, and many other books and pamphlets, to the number of ninety-two.

Matlack, TIMOTHY, was born at Haddonfield, N. J., in 1730; died near Holmesburg, Penn., April 15, 1829, at the age of ninety-nine years. He was a member of the society of "Free Quakers," or "Fighting Quakers," as the members of the Society of Friends were called who took an active part in the war for independence—like General Mifflin. Matlack was most active in every patriotic movement from the time of the Stamp Act until the end of the war, serving in the councils of the inchoate nation and as

colonel of a Pennsylvania battalion of troops. He was in the civil service of Pennsylvania after the war, and in all places was distinguished for thorough uprightness.

Matthews, EDWARD, was born in 1729; died Dec. 26, 1805, at Clauville Lodge, Hants, Eng. In 1746 he was an ensign in the Coldstream Guards, and before he came to America, in 1776, he was a colonel, and aide-de-camp to the king. He commanded a brigade of the Guards, with the rank of brigadier-general, in the attack on Fort Washington (which see). He commanded a raiding-party near Norfolk, Va., in May, 1779, and assisted in the capture of Verplanck's and Stony Point soon afterwards. Appointed major-general, he was stationed at or near New York, and returned to England in 1780. General Matthews was commander-in-chief of the forces in the West Indies in 1782, and the next year was governor of Grenada and the Caribbean Islands. In 1797 he became a general.

Matthews, GEORGE, was born in Augusta County, Va., in 1739; died at Augusta, Ga., Aug. 30, 1812. He led a company in the battle of Point Pleasant (which see), and was colonel of a Virginia regiment in the war of the Revolution. Made a prisoner at the battle of Germantown (which see), he was a captive in a prison-ship until exchanged, late in 1781, when he joined Greene's army with his regiment. After the war he settled in Georgia, and was governor of the state from 1793 to 1796. From 1789 to 1791 he was a member of Congress. He was afterwards brigadier-general of the Georgia militia, with which he was active in taking possession of Florida, by order of the President (see *Florida, Revolutionary Movements in*), and the capture of Amelia Island.

Matthews's Plundering Raid in Virginia. In May, 1779, General Clinton sent two thousand men from New York, under General Matthews, to plunder the coast of Virginia. He entered the Elizabeth River on transports, escorted by a squadron of armed vessels under Sir George Collier, on May 9. They plundered and spread desolation on both sides of the river to Norfolk. They seized that city, then rising from its ashes and enjoying a considerable trade, and also Portsmouth, opposite. These were the chief places of deposit of Virginia agricultural productions, especially tobacco. They captured and burned not less than one hundred and thirty merchant vessels in the James and Elizabeth rivers, an unfinished Continental frigate on the stocks at Portsmouth, and eight ships of war on the stocks at Gosport, a short distance above Portsmouth, where the Virginians had established a navy-yard. So sudden and powerful was the attack, that very little resistance was made by Fort Nelson, below Portsmouth, or by the Virginia militia. Matthews carried away or destroyed a vast amount of tobacco and other property, estimated, in the aggregate, at \$2,000,000.

Maubila, BATTLE OF. At Choctaw Bluff, in Clarke County, Ala., about twenty-five miles above the confluence of the Alabama and Tombigbee rivers, was a strong Indian town, the cap-

ital of Tuscaloosa, the head of the Mobilian tribes. Tuscaloosa was gigantic in stature, and was called the Black Warrior. De Soto had led his marauders through the beautiful Coosa country, and had, as usual, required kind treatment by treachery and cruelty. He made captive the Coosa ruler, and carried off men, women, and children in chains as slaves. Arriving on the borders of Tuscaloosa's domain, at the great town of Tallase, he there released the Coosa chief, and found the Black Warrior at his temporary residence. He was seated on a commanding eminence, with beautiful mats under his feet, and surrounded by numerous attendants. Forty years of age, with a handsome face and grave aspect, a head taller than any of his warriors, and lord of many tribes, he was revered by his people and feared by all his neighbors, and his influence was felt from the Alabama to the Mississippi River. He received De Soto with haughty courtesy. When a pack-horse was brought, and Tuscaloosa was requested to mount and ride by the side of De Soto, it was evident to him that he was really a prisoner of the Spaniard, after the manner of other caciques who had been held as hostages. They crossed the Alabama River a little below the site of Selma, and moved on in the direction of the sea. De Soto discovered signs which made him uneasy. Tuscaloosa was in close and continual consultation with his principal followers, and was constantly sending runners ahead to his capital with messages, telling De Soto that he was preparing for their honorable reception there. De Soto did not believe him, and took measures against treachery. The Black Warrior and the Spanish leader rode side by side into the Mobilian capital, a large, high-palisaded, and walled town, called Maubila. They were received in a great square, with songs, the music of flutes, and the dancing of Indian girls. There Tuscaloosa requested not to be held as a hostage any longer. De Soto hesitated, when the cacique, with proud and haughty step, entered a house. When invited to return, he refused, saying, "If your chief knows what is best for him, he will immediately take his troops out of my country." This was followed by a revelation that ten thousand Indian warriors were in the houses, with a vast amount of weapons; that the old women and children had been sent to the forests, and that the Indians were talking about the proper hour to fall upon the Spaniards. A greater part of De Soto's army was lagging behind at that perilous moment in fancied security. To postpone attack until his army should come up, De Soto approached Tuscaloosa with smiles and kind words. The cacique turned haughtily away, when a chief came out of a house, and denounced the Spaniards as robbers and murderers. Gallegos, one of De Soto's most powerful warriors, angered by his words, cleft the speaker with his heavy sword from his head to his loins. The fury of the people was aroused. They swarmed from the houses, and by force of numbers pushed the invaders out of the walled town into the plain, releasing the Indian captives, and making them fight their late masters. Five Spaniards were

killed and many wounded in that first encounter. De Soto himself was wounded, but he fought on desperately. At the head of his cavalry, he charged upon the Indians, and drove them back into their town. They rushed to their wall-towers, and hurled showers of stones and clouds of arrows upon their assailants, which drove them back. The barbarians rushed out with heavy clubs, and there was a fierce hand-to-hand fight. Hearing the sounds of battle, De Soto's laggards hurried forward, and with these fresh troops the Indians were driven back into their town, followed by the invaders. A dreadful carnage ensued. The Indians fought with all the desperation of patriots. Young women, in large numbers, fought side by side with the warriors, and their blood flowed as freely. At length De Soto, at the head of his cavalry, made a furious charge into the town, with a shout of, "Our Lady and Santiago!" and made fearful lanes in the ranks of fighting men and women. The houses were now fired, and the combatants were shrouded in blinding smoke. As the sun went down, the sights and sounds of the slaughter were dreadful. When night fell the contest was over. It had raged nine hours. Manbila was a smoking ruin, and its inhabitants had perished. It was estimated that eleven thousand native Alabamians had fallen, and De Soto lost eighty-two of his men, some of them the flower of Spanish chivalry. It is believed that Tuscaloosa remained in his house and perished in the flames.

Mauduit Duplessis (Chevalier de), THOMAS ANTOINE, was born at Hennebon, France, Sept. 12, 1753; died in Santo Domingo, March 4, 1791. When a boy twelve years of age he ran away from home, visited the battle-fields of Marathon and Thermopylæ, and made plans of these battles with his own hand. He became an artilleryman, and served in the Continental army of America, first as volunteer aid to General Knox. He became a lieutenant-colonel, and behaved with skill and bravery at the battles of Brandywine, Germantown, Fort Mercer, and Monmouth. In 1781 he distinguished himself at the siege of Yorktown. After the war he was stationed at Santo Domingo, where he perished by the hands of the revolutionists. (See *Santo Domingo*.)

Mauduit, ISRAEL, was born at Exeter, Eng., in 1708; died June 16, 1787. He was a prosperous London merchant. He was acting agent of the Province of Massachusetts in England (1763-64), and wrote much in praise of the American cause during the war of the Revolution.

Maurepas (Count de), JEAN FRÉDÉRIC PHÉLYPEAUX, was born in Versailles in 1701; died in November, 1781. He was minister of state in 1738, and was one of the ablest statesmen France ever produced; but because of an epigram on the mistress of Louis XV.—Madame d'Etoiles—whom the monarch had just created Marquise de Pompadour, he was removed from office in 1745. He was recalled in 1774, on the accession of Louis XVI., when he restored the exiled Parliament, and began a system of reform. He was

instrumental in bringing about the treaty of alliance (which see) between France and the United States in 1778.

Maury, MATTHEW FONTAINE, LL.D., was born in Spotsylvania County, Va., June 14, 1806; died at Lexington, Va., Feb. 1, 1873. He entered the United States Navy as midshipman in 1825, and while circumnavigating the globe began his treatise on "Navigation." An accident in 1839 made him a permanent cripple, and he was placed in charge of the Hydrographic Office at Washington. On its union with the Naval Observatory, in 1844, he became its superintendent. He made extensive researches concerning the physical geography of the sea, and published an interesting work on the subject. He also made extensive investigations concerning the Gulf Stream. In 1861 he resigned his appointments from the government and joined the insurgents. In 1871 he was made President of the University of Alabama. His scientific works gained for him distinguished honors from foreign governments and many learned societies.

Maverick, SAMUEL, was born in England in 1602; died in New York, at the age of about seventy years. He settled on Noddle's Island (now East Boston), Mass., in 1629, and suffered much persecution from the Puritans because he was a zealous member of the Church of England. In 1664 he was appointed one of the six commissioners to settle political difficulties in New England, and to wrest New Netherland from the Dutch. After the surrender of New Amsterdam (now New York) to the Dutch, he settled in that city. (See *New Netherland, Conquest of*.)

Maximilian, Emperor of Mexico, was made so by the power of French arms. Louis Napoleon, emperor of the French, had long cherished a scheme for extending imperial rule, and the consolidation of the power of the Roman Catholic Church and the Latin race in America; and when the Civil War in the United States was at its height, he sent troops to Mexico to establish a throne there and fill it with one of the royal family of Austria, believing the government of the United States to be then too feeble to attempt to enforce the "Monroe Doctrine" (which see). Ferdinand Maximilian Joseph Maximilian, an archduke of Austria, was chosen by Napoleon to be the instrument of his designs. He was born in Vienna, July 6, 1832, and, having entered the naval service, was made rear-admiral and chief of the Austrian navy in 1854. In 1857 he was made governor of the Lombardo-Venetian kingdom, and in the same year married Charlotte, daughter of Leopold I. of Belgium and sister of the present king. He departed for Mexico in April, 1864, and landed, with his wife, at Vera Cruz in May. The French army had already taken possession of the country. The archduke assumed the crown of Mexico, with the title of Maximilian I., and, being childless, adopted a son of Iturbide (which see) as his presumptive successor on the throne. Juarez, the president, who had been driven from the capital, and, with his followers, declared by the new emperor to be an outlaw and usurper, made such strong re-

assistance, that Maximilian had to struggle for his throne from the very beginning. When the Civil War was ended, Napoleon was given to understand, by the United States government, that the empire in Mexico and the presence of French troops there could not be regarded with favor by the citizens of the Republic. The emperor of the French acted upon this hint. He suggested the propriety of the abdication of Maximilian, but the latter would not consent, for he relied upon French arms to sustain him. His wife went to Europe to have an interview with the emperor and also with the pope, but the boon was refused, and her mind gave way under the pressure of her anxiety. Napoleon perfidiously abandoned Maximilian by withdrawing his troops, and left the latter to his fate, who, after struggling for a while to maintain his power, was captured by the Republicans at Queretaro on May 14, 1867. He was shot, with two of his generals, on June 19. A vessel was sent from Austria, under the command of a vice-admiral, to convey his remains to his native country, and they were interred in the imperial vault in January, 1868. His poor wife yet (1880) lives, hopelessly insane.

Maxwell, WILLIAM, was born in New Jersey, and died in that state Nov. 12, 1798. He was made colonel of a New Jersey battalion in 1775, and served in the campaign in Canada in 1776. He had been in the provincial army continually for fifteen years before the revolution broke out. In October, 1776, he was appointed brigadier-general, and, in command of a New Jersey brigade, was distinguished at the battles of Brandywine, Germantown, and Monmouth. He was in Sullivan's campaign (which see) in 1779, and soon after the action at Springfield, N. J. (which see), in 1780, he resigned.

May, CORNELIUS JACOBSEN, commanded the Dutch trading vessel *Fortune* on a trading excursion to Manhattan in 1613. The next year he coasted along New England to Martha's (Martin's) Vineyard. In 1620 he was on the coasts and rivers southward of Manhattan, in the ship *Glad Tidings*, visited Chesapeake Bay, and sailed up the James River to Jamestown. The bay at the mouth of the Delaware River the Dutch called New Port May, in compliment to their commander, and the southern extremity of New Jersey is still known as Cape May. In the spring of 1623, Captain May conveyed to Manhattan thirty families, chiefly Walloons, in the ship *New Netherland*, with Adriaen Joris as lieutenant. May remained at Manhattan as first director or governor of the colony. He was succeeded by William Verhulst, second director of New Netherlands, and returned to Holland.

Mayer, BRANTZ, was born in Baltimore, Sept. 27, 1809; died there in 1878. He was educated at St. Mary's College, Baltimore, and made a trip to the East Indies, visiting Sumatra, China, and Japan, returning in 1828. He became a lawyer. In 1841 he was appointed secretary of legation to Mexico, and afterwards published two important works on that country. He was an accurate and industrious writer, and issued

several valuable publications, besides numerous occasional addresses. During the Civil War and afterwards, he held the office of paymaster in the army, and resided in California a few years. He was appointed one of the judges at the Centennial Exhibition in 1876.

Mayor Wood and Georgia Disunionists. Early in January, 1861, it became known to the superintendent of the Metropolitan Police of New York (who were not under the control of the mayor) that large quantities of arms, purchased of Northern manufacturers and merchants, were going southward. It was resolved to put a stop to this traffic; and, on Jan. 22, nearly forty boxes of fire-arms, consigned to parties in Georgia and Alabama, and placed on board a steam-vessel bound for Savannah, were seized by the New York police. The governor of Georgia was informed of the act by telegraph, sent to him at Milledgeville. Toombs was there, and took the matter into his own hands. He telegraphed to the mayor of New York (Fernando Wood): "Is it true that arms, intended for and consigned to the State of Georgia, have been seized by public authorities in New York? Your answer is important to us and New York. Answer at once." To this demand of a private citizen the mayor meekly expressed his regret, but disclaimed any "responsibility for the outrage," as he called it. "As mayor," he said, "I have no authority over the police. If I had the power, I should summarily punish the authors of this illegal and unjustifiable seizure of private property." Toombs determined to retaliate. The governor had no authority under the law to do so. Toombs advised him to act without authority, and he did. By his orders, ships of Northern owners were seized at Savannah and held as hostages. Meanwhile a large portion of the arms seized in New York had been given up, and the little tempest of passion raised by the event was allayed. An investigation proved that during several months the insurgents had been largely armed by purchases from Northern merchants.

Mazzei, JEFFERSON'S LETTER TO. During the debates on Jay's treaty, Jefferson watched the course of events from his home at Monticello with great interest. He was opposed to the treaty, and, in his letters to his partisan friends, he commented freely upon the conduct and character of Washington, regarding him as honest but weak, the tool and dupe of rogues. In one of these letters, addressed to Philip Mazzei (which see), he declared that "in place of that noble love of liberty and republican government" which carried the Americans triumphantly through the late struggle, "an Anglican, monarchical, aristocratic party" had sprung up, resolved to model our form of government on that of Great Britain. He declared that the great mass of citizens, the whole landed interest, and the talent of the country, were republicans; but opposed to them were the executive (Washington), the judiciary, two out of three of the national Legislature, "all the officers of the government, all who want to be officers, all timid men who prefer the calm of despotism to

the boisterous sea of liberty, British merchants and Americans trading on British capital, speculators and holders in the banks and public funds—a contrivance invented for the purpose of corruption, and for assimilating us in all things to the rotten as well as the sound parts of the British model." "It would give you a fever," he continued, "were I to name to you the apostates who have gone over to these heresies—men who were Samsons in the field and Solomons in the council, but who have had their heads shorn by the harlot of England." This letter was dated April 24, 1796. Mazzei published an Italian translation of it in Florence, Jan. 1, 1797. Thence it was retranslated into French, and published in the *Moniteur*, Jan. 25. Translated a third time, into English, it made its way to the American newspapers, through the London press, in the beginning of May, and produced a most profound sensation in the United States. Jefferson first saw it on the 9th of May, at Bladensburg, while on his way to Philadelphia to take his seat as president of the Senate, having been chosen Vice-President of the United States. The administration newspapers and pamphleteers attacked Jefferson with energy, but he wisely kept silent on the subject. This letter caused Washington to lose faith in Jefferson, and it was never restored. It was used as political capital by the Federalists until the election of Jefferson to the presidency of the United States in 1800.

Mazzei, PHILIP, was born in Tuscany in 1730; died at Pisa, March 19, 1816. He was a practising physician at Smyrna for a while, and was in London in 1755, where he resided most of the time until 1783, engaged in mercantile business, excepting a period when he was in America. He came hither in December, 1773, with a few of his countrymen, for the purpose of introducing into Virginia the cultivation of the grape, the olive, and other fruits of Italy. He formed a company for the purpose. Jefferson was a member of it, and Mazzei bought an estate adjoining that of Monticello to try the experiment. He persevered three years, but the war and other causes made him relinquish his undertaking. Being an intelligent and educated man, he was employed by the State of Virginia to go to Europe to solicit a loan from the Tuscan government. He left his wife in Virginia, when he finally returned to Europe, in 1783, where she soon afterwards died. He revisited the United States in 1785, and in 1788 wrote a work on the *History of Politics in the United States*, in four volumes, which has never been translated. In 1792 Mazzei was made privy-councillor of the King of Poland; and in 1802 he received a pension from the Emperor Alexander, of Russia, notwithstanding he was an ardent republican. (See *Mazzei, Jefferson's Letter to*.)

Meade, GEORGE GORDON, LL.D., was born in Cadiz, Spain, in 1816; died in Philadelphia, Nov. 6, 1872. He graduated at West Point in 1835, served in the war with the Seminoles (see *Seminole War*), and resigned in 1836. He continued in the practice of engineering until May,

1842, when he was reappointed second-lieutenant of topographical engineers, serving through the war against Mexico, attached to the staff, first of General Taylor, and then of General Scott. The citizens of Philadelphia presented him with an elegant sword on his return from Mexico. In the summer of 1861 he was made a brigadier-

GEORGE GORDON MEADE.

general of volunteers, having been in charge of the surveys on the Northern lakes until that year as captain of engineers. He was in the Army of the Potomac, active and efficient, from 1861 until the close of the war. In June, 1862, he was made major-general of volunteers, and was in command of the Army of the Potomac from the summer of 1863 until the surrender of Lee at Appomattox Court-house. In 1864 he was made major-general in the United States Army; and from July, 1865, to August, 1866, he was in command of the military division of the Atlantic, and subsequently of the Department of the East and the military district comprising the states of Florida, Georgia, and Alabama. In 1865 he received the degree of LL.D. from Harvard University. The citizens of Philadelphia had presented to his wife the house in which he died, and \$100,000 was afterwards raised for his family.

Meade, WILLIAM, an American bishop, son of Richard K. Meade, a revolutionary soldier, and one of Washington's confidential aids, holding the rank of colonel, was born in (present) Clarke County, Va., Nov. 11, 1789; died near Millwood, Va., March 14, 1862. He graduated at Princeton in 1808, and became a minister of the Protestant Episcopal Church. He was an earnest and active worker for his Church and the best interests of religion. In 1829 he was made assistant bishop of the diocese of Virginia, and became bishop on the death of Bishop Moore in 1841. For several years he was the acknowledged head of the "evangelical" branch of the Church in the United States. In 1856 he published, in two volumes, *Old Churches, Ministers, and Families in Virginia*.

Meagher, THOMAS FRANCIS, was born at Waterford, Ireland, Aug. 3, 1823; was drowned at

Fort Benton, Montana, July 1, 1867. He was well educated in Ireland and in England. In 1846 he became one of the leaders of the "Young Ireland" party. He was already distinguished

THOMAS FRANCIS MEAGHER.

for his oratory, and was sent to France to congratulate the French Republic in 1848. On his return he was arrested on a charge of sedition and held to bail. Afterwards charged with treason, he was again arrested, tried, found guilty, and sentenced to death. That sentence was commuted to banishment for life to Van Diemen's Land, from which he escaped, and landed in New York in 1852. Lecturing with success for a while, he studied law, entered upon its practice, and in 1856 edited the *Irish News*. When our Civil War broke out he raised a company in the Sixty-ninth New York Volunteers, and, as major of the regiment, fought bravely at Bull's Run. Early in 1862 he was made brigadier-general of volunteers, and served in the Army of the Potomac in the campaign against Richmond that year. He was in Richardson's division in the battle of Antietam. Engaged in the desperate battle of Fredericksburg, he was badly wounded. Immediately after the battle of Chancellorsville (which see) he resigned. He was recommissioned brigadier-general of volunteers. Early in 1864 he was assigned to the command of the district of Etowah. In 1865 he was appointed Secretary of the Territory of Montana, and for some time previous to his death was acting-governor.

Mechanicsville (or Ellison's Mill), BATTLE OF (1862). General Robert E. Lee, who had been recalled from Georgia, was placed in command of the Confederate army led by Johnston, after the latter was wounded. (See *Seven Pines* and *Fair Oaks*.) He prepared to strike McClellan a fatal blow or to raise the siege of Richmond. He had quietly withdrawn Jackson and his troops from the Shenandoah valley, to have him suddenly strike the right flank of McClellan's army at Mechanicsville and uncover the passage of that stream, when a heavy force would join him, sweep down the left side of the Chicka-

hominy towards the York River, and seize the communications of the Army of the Potomac with the White House. McClellan did not discover Jackson's movement until he had reached Hanover Court-house. He had already made provision for a defeat by arrangements for a change of base from the Pamunkey to the James River; and when, on the morning of June 25, he heard of the advance of Jackson on his right, he abandoned all thought of moving on Richmond, took a defensive position, and prepared for a retreat to the James River. On the right side of the Chickahominy General Porter was posted with 27,000 men and ten heavy guns in battery. At three o'clock in the afternoon of the 26th General A. P. Hill crossed the river and drove a regiment and a battery at Mechanicsville back to the main line near Ellison's Mill, where the Nationals were strongly posted. There, on a hill, McCall's Pennsylvania Reserves (which see) were posted, 8500 strong, with five batteries. These, with a part of Meade's brigade, were supported by regulars under Morell and Sykes. General Reynolds held the right, and General Seymour the left, and the brigades of Martindale and Griffin were deployed on the right of McCall. In the face of these formidable obstacles, and a heavy fire of infantry and artillery, the leading brigades of Hill advanced, followed by Longstreet's, and moved to the attack. They massed on the National right to turn it, expecting Jackson to fall upon the same wing at the same time; but this movement was foiled by Seymour. A terrific battle ensued. The Confederates were hurled back with fearful carnage. Night fell, and at nine o'clock the battle of Mechanicsville, or Ellison's Mill, ceased. The loss of the Nationals was about 400; that of the Confederates, between 3000 and 4000. By this victory Richmond was placed at the mercy of the National army; but McClellan, considering his army and stores in peril, immediately prepared to transfer both to the James River.

Mecklenburg Declaration of Independence. Towards the close of May, 1775, Colonel Thomas Polk, of Mecklenburg County, N. C., issued a notice to the elected committee-men of that county to assemble in the court-house at Charlotte. They met on the 31st of May, appointed Abraham Alexander chairman, and Dr. Ephraim Brevard clerk. The court-house was surrounded by a large concourse of excited people eager to know the resolves of their representatives. Dr. Brevard, Rev. H. J. Balch, and William Kennon were appointed a committee to draft resolutions. They reported twenty in number, with the following preamble: "Whereas, by an address presented to his majesty by both Houses of Parliament in February last, the American colonies are declared to be in a state of actual rebellion, we conceive that all laws and commissions confirmed by or derived from the authority of the king and Parliament are annulled and vacated, and the former civil constitution of these colonies for the present wholly suspended." To provide for the present exigencies of their county in such a crisis, they

passed the twenty resolutions, the first of which virtually declared the independence of the colonies, and the remainder provided for the government of affairs in Mecklenburg County.

around which were thirty-three stars, the number of the states then in the Union. Such medals were awarded to three hundred and twenty persons.

AUTOGRAPHS OF THE MEMBERS OF THE MECKLENBURG COMMITTEE.

Medals of Honor. Congress authorized the Secretary of the Navy, late in 1861, to cause bronze "Medals of Honor" to be struck, to be bestowed by him upon such petty officers and others of inferior rank as should most distinguish themselves by their gallantry in action in the navy during the war. It was in the form of a star with five points, with a device emblematic of Union crushing the monster Rebellion,

Mediation of Connecticut. Anxious for reconciliation after the affair at Lexington and Concord, Governor Trumbull and the Assembly of Connecticut sent a deputation to Gage (May 1, 1775) to act as mediators. This step alarmed the ardent patriots of Massachusetts. The Provincial Congress remonstrated against any separate negotiations; and they declared, by vote, that Gage was a public enemy and an iustru-

ment in the hands of tyrants whom there was no further obligation to obey. There was some unimportant correspondence between Trumbull and Gage, and the affair was dropped.

Mediterranean Fund, THE. When news of the capture of the *Philadelphia* in the harbor of Tripoli reached the United States, Congress passed an act by which all goods subject to *ad valorem* duties were to pay an additional two and a half per cent. during the continuance of hostilities in the Mediterranean, to constitute a fund to be exclusively applied to expenses occasioned by hostilities with the Barbary Powers. (See *Tripoli, War with.*)

Meigs, MONTGOMERY CUNNINGHAM, was born in Georgia in 1816. He graduated at West Point in 1836, entering the Artillery, and was transferred to the Engineers. His services as Quartermaster-general of the United States armies in the Civil War were vastly important; and for these services he was made major-general United States Army. He still (1880) holds the office of quartermaster-general.

Meigs, RETURN JONATHAN, was born at Middletown, Conn., in December, 1740; died at the Cherokee Agency, Jan. 28, 1823. He hastened with a company to Cambridge after the affair at Lexington. He accompanied Arnold to Quebec, with the rank of major (see *Arnold's Expedition*), where he was made prisoner. Having raised a regiment in 1777, he was made a colonel, and performed a brilliant exploit at Sag Harbor (which see). He commanded a regiment at Stony Point (which see), and served faithfully to the end of the war. Colonel Meigs was one of the first settlers of Marietta, O. He was Wayne's commissary of clothing in 1794.

Meigs, RETURN JONATHAN, son of the preceding, was born at Middletown, Conn., in November, 1765; died at Marietta, O., March 29, 1825. He graduated at Yale College in 1785. He became a lawyer, and went with his father among the first settlers of Marietta, O., in 1788. There he took a conspicuous part in public affairs, and was often engaged in Indian fights. From 1803 to 1804 he was Chief-justice of Ohio; and for two years he was commander of the St. Charles District of Louisiana, with the brevet of colonel United States Army. He was a United States district judge in Michigan; United States Senator from 1808 to 1810; and Governor of Ohio from 1810 to 1814. His services during the War of 1812 were of incalculable value. From 1814 to 1823 Meigs was Postmaster-general.

Melyn, CORNELIUS, a patroon. Cornelius Melyn, of Antwerp, came to Manhattan in 1639, and was so pleased that he returned and brought over his family and began a colony on Staten Island, under the authority of the Amsterdam directors. His domain was near the Narrows, and he was vested with the privilege of a patroon. Melyn was active, and was chosen one of the Eight Men, under Kieft. He quarrelled with Kieft, and, as President of the Eight Men, he wrote a vigorous letter to the States-General, urging them to interfere in behalf of the

province. (See *Addresses of the People of New Netherland*.) On the accession of Stuyvesant, he was falsely accused of rebellious practices as one of Kieft's Council of Eight Men, and a prejudiced verdict was given against him. He was sentenced to seven years' banishment from the colony, to pay a heavy fine, and to "forfeit all benefits to be derived from the company." Kuyter, another of the Eight involved in the same charges, received a similar but less severe punishment. He and Melyn sailed for Holland in the same ship with Kieft, which was lost on the coast of Wales (see *Kieft*), but both were saved, while eighty others were drowned. The proper authorities in Holland reversed the sentence, and Melyn and Kuyter returned to Manhattan, when he demanded that his vindication should be made as public as had the sentence of disgrace; but this redress was denied. Melyn was persistently persecuted by Stuyvesant, and at length, weary with suffering, he returned to Holland to seek justice there. He joined delegates of the commonalty of New Amsterdam, who wrote voluminous documents—the Great Remonstrance—filled with complaints against Stuyvesant's administration. There were promises of relief, but their fulfilment was delayed, and when Melyn returned to New Netherland Stuyvesant renewed his persecutions. He made new charges against the patroon, confiscated his property in New Amsterdam, and compelled him to confine himself to his manor on Staten Island. Melyn finally abandoned New Netherland (1657) and went to New Haven, where he took the oath of fidelity; and in 1661 he surrendered his manor and patroonship to the West India Company. Soon afterwards the whole of Staten Island became the property of the company.

Memminger, CHARLES GUSTAVUS, was born in Württemberg, Germany, June 7, 1803. He graduated at South Carolina College in 1820, and began to practise law in 1826. In the nullification movement in South Carolina (see *Nullification*) he was a leader of the Union men. In 1860 he was a leader of the Secessionists in that state, and on the formation of the Confederate government was made Secretary of the Treasury. He had been for nearly twenty years at the head of the Finance Committee of the South Carolina Legislature.

Memminger's Mission to Virginia. In January, 1860, C. G. Memminger, of South Carolina, as a representative of the political leaders in that state, appeared before the Legislature of Virginia as a special commissioner to enlist the representatives of the "Old Dominion" in a scheme of disunion. In the name of South Carolina, he proposed a convention of the slave-labor states to consider their grievances and to "take action for their defence." In an able plea he reminded the Virginians of their narrow escape from disaster by John Brown's Raid (which see), and the necessity of a Southern union to provide against similar perils. He concluded by saying, "I have delivered into the keeping of Virginia the cause of the South." He reported that he "found it difficult to see

through" the Virginia Legislature, for they hesitated to receive his gospel. The slaveholders of that state, who were deriving a princely revenue from the inter-state slave-trade—from \$12,000,000 to \$20,000,000 a year—were averse to forming a part of a confederacy in which the African slave-trade was to be reopened and encouraged. Mr. Memminger, in his report, said: "I see no men, however, who would take the position of leaders in a revolution."

Memorial of Revenue Officers (1768). On the day after the Massachusetts Circular (see *Circular Letter of Massachusetts*), the Board of Commissioners of the Revenue at Boston addressed, with great secrecy, a memorial to the Board of Trade in England, complaining of seditious writings like the *Letters of a Pennsylvania Farmer* (by Dickinson), the boldness of the newspaper press, the noxious influence of town-meetings in New England, the sin of Massachusetts in inviting the other provinces to discontinue the consumption of British manufactures, and giving their opinion that they would find it impracticable to execute the revenue laws unless the people should be made to feel the strong arm of the British government; in other words, until a fleet and an army should be sent to Boston. Governor Bernard made a report of like tenor. The crown officers in Massachusetts counselled the British government to change the charter of the colony and send a military force.

Memorial, or Decoration, Day. The 30th day of May is made by law a holiday for the citizens of the United States, when the touching ceremony of decorating the graves of Union soldiers all over the land is performed, in public and private cemeteries, with appropriate ceremonies. The 20th of May is observed in the Southern States as "Memorial Day," when the graves of Confederate soldiers are also decorated with flowers, with imposing ceremonies.

Memphis (TENN.), CAPTURE OF. After the capture of Island Number Ten, Commodore Foote went down the Mississippi with his flotilla, and transports bearing Pope's army, to attempt the capture of Memphis, but was confronted at Chickasaw Bluffs, eighty miles above that city, by a Confederate flotilla under Captain J. S. Hollins (see *Greytown, Attack upon*) and three thousand troops under General Jeff. M. Thompson, who occupied a military work on the Bluffs, called Fort Pillow, then in command of General Villepigne, an accomplished engineer. On April 14 (1862) Foote began a siege of Fort Pillow with his mortar-boats, and soon drove Hollins to the shelter of that work. Pope, whose troops had landed on the Arkansas shore, was unable to co-operate, because the country was flooded, and being soon called by Halleck to Shiloh, Foote was left to operate alone. He was finally compelled to turn over the command to Captain C. H. Davis on account of the painfulness of a wound he had received at Fort Donelson. On May 10 Hollins attacked Davis, but was repulsed, notwithstanding he was aided by the heavy guns of Fort Pillow. For more than a fortnight afterwards the belligerent fleets

watched each other, when a "ram" squadron (see *Southwest Pass*), commanded by Colonel Charles Ellet, Jr., joined Davis's flotilla and

ELLET'S STERN-WHEEL RAM.

prepared to attack Hollins. The Confederates, having just heard of the flight of Beauregard from Corinth, which uncovered Memphis, hastily evacuated Fort Pillow (June 4) and fled down the river in transports to Memphis, followed by Hollins's flotilla. On the 6th of June the National flotilla won a victory over the Confederate squadron in front of Memphis, when that city was surrendered to the Union forces. It was speedily occupied by troops under General Lew. Wallace, who were received with joy by the Union citizens. All Kentucky, western Tennessee, northern Mississippi, and Alabama were now in possession of the National authorities.

Men and Money called for (1782). The defeat of Cornwallis seemed to prophesy speedy peace, yet Washington wisely counselled ample preparations for carrying on the war. He spent some time in Philadelphia in arranging plans for the campaign of 1782. The Congress had already (Oct. 1, 1781) called upon the several states for \$8,000,000, payable quarterly in specie or commissary certificates, besides an additional outstanding requisition. The states were requested to impose separate and distinct taxes for their respective quotas of the sum of \$8,000,000; the taxes to be made payable to the Loan-office Commissioners, or to federal collectors to be appointed by the Superintendent of Finance, for whom was asked the same power possessed by the state collector. At Washington's suggestion, a circular letter, containing an earnest call for men and money, was sent to the executive of each of the states; but the people were so much impoverished by the war and exhausted by past efforts that the call was feebly responded to; besides, the general expectations of peace furnished excuses for backwardness.

Menendez Hangs Huguenots in Florida. (See *Huguenots in America*.)

Menendez, PEDRO, D'AVILES, was born at Aviles, Spain, in 1519, and entered the Spanish naval service in his youth. After successfully battling with French corsairs, Philip II. of Spain appointed him captain-general of the India fleet. Menendez carried that monarch to England to

marry Queen Mary, and took him back on his return. In 1565 Philip made him Governor of Florida; and just before he was to depart the king was informed of the Huguenot settlement there, and fitted out an expedition for their destruction. Menendez sailed with thirty-four vessels, bearing twenty-six hundred persons—farmers, mechanics, soldiers, and priests. Arriving at Porto Rico with a small part of his force, Menendez heard of the reinforcements Ribault had taken to Florida, and he immediately went to the mouth of the St. John with Philip's cruel order to murder all the Huguenots. Failing to catch the French fleet that escaped from the St. John, Menendez landed farther southward, built a fort, and founded St. Augustine. Marching overland, he attacked and captured the French Fort Carolina, putting nearly the whole of the garrison to death. Only seventy of the colonists escaped, and some of the prisoners were hanged. Ribault's ships that went out to drive Menendez from St. Augustine were wrecked, and a portion of the crew, with Ribault, falling into the hands of the Spaniards, were nearly all put to death. These outrages were avenged by a Frenchman named De Gourgues. In 1570 Menendez sent a colony of Jesuits to establish a mission near Chesapeake Bay. They were massacred by the Indians. In 1572 he explored the Potomac and the Chesapeake Bay, and was preparing to colonize that region, when his king appointed him commander of a fleet against the Low Countries. While preparing for this expedition he died, Sept. 17, 1574. (See *Huguenots in America*.)

Menomonees. A family of the Algonquin nation, residing always upon the Menomonee River, in Wisconsin, which empties into Green Bay. They assert that their ancestors emigrated from the east, but they were found on their present domain in 1640 by the French. Jesuit missions were established among them in 1670 by Allouez and others. The Menomonees were fast friends of the French, marched to the relief of Detroit in 1712, and subsequently drove the Foxes from Green Bay. Some of their warriors were with the French against Braddock in 1755; also at the capture of Fort William Henry, on Lake George, and on the Plains of Abraham with Montcalm. In the Revolution and the War of 1812 they were the friends of the English. They assisted in the capture of Mackinaw in 1812 (see *Mackinaw*), and were with Tecumtha at Fort Meigs and at Fort Stephenson in 1813. After that they made several treaties with the United States, and they served the government against the Sacs and Foxes in 1832. (See *Black Hawk War*.) The religion of the Menomonees was that of all the other tribes in the North. They are now about half pagans and half Roman Catholics. They refused to join the Sioux in their outbreak in 1861, and several of their warriors were volunteers in the National army. They are fading, like some of the other tribes. In 1822 they numbered nearly 4000; in 1872 their number was only 1480. The use of strong drink, introduced by white people, is destroying them.

Mercer, HUGH, was born at Aberdeen, Scotland, in 1721; died at Princeton, N. J., Jan. 12, 1777. He was a physician, and was assistant surgeon at the battle of Culloden, on the side of the Pretender, and was obliged to leave his country. He came to America in 1747, was a captain in the French and Indian War, was severely wounded in the battle where Braddock was defeated, and received a medal from the corporation of Philadelphia for his prowess in that expedition. He was made lieutenant-colonel in 1758. He entered heartily into the military service when the war for independence broke out, and was made colonel of a Virginia regiment in February, 1776. In June following Congress made him a brigadier-general. He led the column of attack at the Battle of Trenton (which see), and at the council of war there he suggested the daring night march on Princeton. In the battle that ensued the following morning he was mortally wounded. (See *Princeton*.)

HUGH MERCER, JR.

Congress provided for the education of his son, Hugh (portrait above), who died at Fredericksburg, Va., Dec. 2, 1853.

Merino Sheep were first introduced into the United States from Spain by Colonel David Humphreys (late minister to the Spanish court) in 1802. He brought one hundred of that breed to New England. For this act, so useful in providing for the improvement of sheep in America, the Massachusetts Society for Promoting Agriculture presented Colonel Humphreys with a gold medal.

Merritt, WESLEY, was born in New York in 1836. He graduated at West Point in 1860, entering the Dragoons. He became captain of cavalry in 1862, and brigadier-general of volunteers in 1863. He was a very active and efficient leader of cavalry until the end of the Civil War, his field of operations having been chiefly in Virginia, in the Army of the Potomac, to the surrender of Lee at Appomattox Court-house. In March, 1865, he was breveted brigadier-general in the United States Army, and afterwards received the brevet of major-general.

Merry Mount. (See *Salem*.)

Metcalfe, THOMAS, was born in Fauquier County, Va., March 20, 1780; died in Nicholas County, Ky., Aug. 18, 1855. He became a stone-

cutter at the age of sixteen, in Kentucky, whither his parents had removed, devoting all his leisure to study, and became quite a popular public speaker. When the War of 1812-15 broke out he entered the military service, and commanded a company at the siege of Fort Meigs in 1813. After serving several years in the Kentucky Legislature, he was elected to Congress, wherein he labored from 1819 to 1829. From 1828 to 1832 he was governor of Kentucky, State Senator in 1834, and United States Senator in 1849.

Methodist Bishop, THE FIRST, IN THE UNITED STATES. Soon after the close of the old war for independence, Thomas Coke, an able coaljutor of Wesley, and ordained by him bishop, arrived in New York (November, 1784), bringing with him Wesley's plan of government and discipline for the Methodist Episcopal Church. The new sect spread rapidly, especially in Maryland and Virginia, particularly among the poorer classes.

Methodists, THE, AND SLAVERY (1780). At their General Conference in 1780 the Methodists of the United States, agreeing with the Friends, or Quakers, voted "slave-keeping contrary to the laws of God, man, and nature."

Mexican Boundary Question. A serious difficulty had arisen between the United States and Mexico in 1853-54, which at one time threatened war between the two nations. The Mesilla valley, a fertile and extensive region, was claimed by the Province of Chihuahua, in Mexico, and by the United States Territory of New Mexico. Under the direction of Santa Ana (who was again President of Mexico in 1852), Chihuahua took armed possession of the disputed territory. The dispute was finally settled by negotiation, and friendly relations between the two governments have since been maintained. During the late Civil War the relations of the United States with Mexico were delicate, while French bayonets kept Maximilian on a throne in the latter country; but the government of the United States steadily acknowledged the Republic, and, diplomatically, the Emperor of Mexico was unknown at Washington. (See *Maximilian*.)

Mexican Migration and Settlement. The original Mexicans, it is said, lived in a country north of California until about the year A.D. 1160, when they began their migration southward towards the country of Anahuac. After a temporary residence at several intermediate places, they arrived on the borders of Lake Tezcucuo, and founded a city. They first erected a temple for their god, Huitzilopochtli, around which they built huts of reeds and rushes.

Mexico, when first discovered by the Spanish adventurers, was in the possession of the Aztecs, a semi-civilized race of dark-hued people, who called their country *Mexitli*. Older occupants were the Toltecs, who came to the Valley of Mexico about the sixth century, and were the first known tribe on this continent who left a written account of their nationality and polity. Their empire ended in the twelfth century. The

Aztecs appeared at the close of the thirteenth century, coming from Azatlan, an unknown-region in the North. They seem to have first halted in their migrations southward at the Great Salt Lake in Utah; the next on the River Gila; and the last on the high plateau in the Valley of Mexico, where they led a nomadic life until early in the fourteenth century, when they laid the foundations of a city upon an island in Lake Tezcenco, and called it Tenochtitlan; afterwards Mexitli (Spanish, Mexico), after their supreme god. It was a large and prosperous city when Cortez entered it on the 8th of November, 1519. Montezuma was then emperor of the extended domain of the Aztecs. He lived in a fine palace in the city. Another palace was assigned to the use of Cortez as a guest, large enough to hold his whole army. By treachery and violence that adventurer took possession of the city and empire, caused the death of Montezuma and his successor, and annexed Mexico as a province to Spain. (See *Cortez, Hernando*.) The Mexicans were then very much enlightened. They worked metals, practised many of the useful arts, had a system of astronomy, kept their records in hieroglyphics, and practised the fine arts of architecture and sculpture in a remarkable degree. They had a temple, pyramidal in shape, constructed solidly of earth and pebbles, and coated externally with hewn stones. The base was three hundred feet square, and its top was reached by one hundred and fourteen steps spirally constructed. The top was a large area paved with great flat stones, and on it were two towers or sanctuaries, and before each an altar on which fire was perpetually burning. There they made human sacrifices. The conquest by Cortez was accomplished by the aid of native allies who had been subjected by the Aztecs and hated them. He began to rebuild the city of Mexico on its present plan while he was governor, and it remained in possession of the Spanish government until 1821, or just three hundred years. After years of revolutionary movements the Spanish province of Mexico was declared independent, Feb. 24, 1821, with Don Augustin Iturbide, a native of Mexico, at the head of the government as a republic. He afterwards became emperor. The ambition of military leaders caused it to be convulsed by civil war for many years. In 1836 it lost the fine province of Texas by revolution, and ten years afterwards that portion of ancient Mexico was annexed to the United States. (See *War with Mexico*.) In 1863 the emperor of the French placed Maximilian, an archduke of Austria, on a throne in Mexico, with the title of emperor. The deposed president of the republic struggled for power with the troops of the usurper, and succeeded. The emperor of the French withdrew his troops and abandoned Maximilian, who, early in 1867, was defeated and made prisoner, and was shot on the 19th of June.

Mexico, CITY OF, TAKEN BY CORTEZ (1519). With four hundred and fifty Spaniards and six thousand Tlascalans (which see), Cortez appeared before the city of Mexico, Nov. 8, 1519. He was at Iztapalapan, six miles from the city.

He marched along a grand paved causeway, eight yards wide, extending across Lake Tezcuco directly to the city. It was crowded with people—as were all the towers, temples, and other causeways—many of them drawn by mere curiosity. Before them lay the great city of Mexico (an Indian name, signifying the place of Mexitli, the Mars of the Aztecs), but commonly called, before 1530, Tenochtitlan. The Spaniards, instead of meeting fierce warriors, were confronted by a great number of lords from the court of Montezuma, covered with mantles of fine cotton and wearing great plumes, who announced the approach of their emperor. Soon afterwards appeared two hundred other persons in a uniform dress, marching in couples in deep silence, barefooted, and their eyes fixed on the ground. Then came a company of higher rank, in showy apparel, in the midst of whom was Montezuma, borne on a magnificent litter, carried by his principal nobility. He and Cortez alighted at the same time, and approached each other with great respect and dignity. Montezuma's attendants covered the street with cotton cloth, that his feet might not touch the ground. He wore a superb dress, glittering with jewels. After mutual salutation, the emperor conducted Cortez to quarters in the city prepared for the latter, when he took leave of his intrusive guest with courtly expressions of hospitality. Cortez took precautions against treachery. He planted his cannons so as to command different avenues that led to his dwelling-place. He posted sentinels, and kept a large division of his troops constantly on guard. With audacity born of fear and desperation (for he was really at the mercy of the emperor), Cortez resolved to seize Montezuma in his palace and bring him to Spanish headquarters. With five of his principal officers and as many soldiers, and thirty of the latter class following at a distance, carelessly, as if for the gratification of mere curiosity, he went, at the usual hour of visiting Montezuma, directly to the palace on the hill Chapultepec, where they were admitted without suspicion. Cortez boldly made a charge against the emperor of a treacherous attempt against the Spaniards, and also a peremptory demand for satisfaction from Montezuma. Indignant at the conduct of Cortez, he as peremptorily refused; but, at the end of an altercation of three hours, the intimidated monarch complied. His officers, astonished and grieved, "carried him in silent pomp" to the quarters of Cortez. There he continued six months, exercising imperial rule, though really a prisoner in the hands of the invaders. He was compelled to acknowledge himself a vassal of the Spanish crown, and to pay tribute to it. So Mexico became a conquered city, without bloodshed at that time. (See *Montezuma*.)

MEXICO, FINAL CONQUEST OF, BY CORTEZ.

Early in 1521 Cortez, with more than 200 Spaniards, 3000 Tlascalans, and many of the Tezcuco nobility, marched upon Iztapalapan, near the city of Mexico. They found it nearly deserted, and the invaders sacked and burned the city. Cortez was now reinforced by native tribes, who

joined the standard of the Spaniards. He had caused thirteen brigantines to be built at Tlascalala, which, in sections, were carried on the shoulders of Tlascalans to Lake Tezcuco. Everything necessary for their equipment was carried on the backs of 8000 of their allies. For the transportation of provisions, 2000 were employed; and there were 30,000 of these dusky allies armed for battle. The brigantines were launched on the lake April 28, 1521. The allies, on notice being given, came in vast numbers to the aid of the Spaniards. At Tezcuco Cortez prepared his forces for the siege. He had 917 Spaniards, and more than 75,000 auxiliaries, which number was soon increased to 200,000. He seized the principal causeways, took command of the brigantines himself, divided his army into three parts, and began the siege on May 30. After several days the invaders penetrated to the great square of the city, but were so violently assailed that they were compelled to retreat. At length Cortez determined to make a general assault. On the day appointed he marched with twenty-five horses, all his infantry, and more than 100,000 allies; his brigantines, with more than 3000 canoes, forming the two wings of the army on each side of the causeway over which they approached. He entered the city with very little opposition, when the Mexicans feigned a retreat. Pushing easily into the city, the Spaniards left a broad gap in their line on the causeway. Suddenly the Mexican priests blew the horn of the god Painalon, the alarm in great danger, which excited the Mexicans, and a multitude assembled and poured with fury on their assailants, compelling them to retreat in confusion. When attempting to pass the gap, which seemed to be filled with fagots and other light materials, the causeway there sank with the weight of the multitude, and Spanish footmen and horsemen, Tlascalans and others, plunged into the abyss, the Mexicans rushing upon them from every side. Cortez was seized and borne away to become a human sacrifice, but was rescued. Forty of his Castilian companions were taken alive and immediately sacrificed in the great temple. Various successes followed subsequent struggles. Quonhtemotzin (see *Guatimozin*), the successor of Montezuma, daily lost an incredible number of his subjects, refused frequent demands for a surrender, and famine began its work in the city, for Cortez, by the vast number of his allies, had shut up all avenues of supplies for the besieged town. Cortez now made another combined assault, and 40,000 Mexicans, it is said, were slain. The stench of the slain was intolerable. Three fourths of the city, which contained 60,000 houses, were in ruins. During the last assault (Aug. 13, 1521), when it was seen that longer resistance would be useless, Quonhtemotzin and his court attempted to escape, but were caught. "I am your prisoner," said the king to his captors. "I have no favor to ask but that you will show the queen, my wife, and her attendants, the respect due to their sex and rank." The Mexicans were now expelled from the city without arms or baggage. The conquest of the capital, after a siege of sev-

enty-five days, was complete, and that conquest decided the fate of the empire. The whole of Mexico soon afterwards passed under the dominion of Spain. The Mexicans lost, in killed, wounded, and by sickness, about 100,000 souls. Believing immense treasures to be hidden, and that Quouhtemotzin knew where they were concealed, he was subjected to cruel torture—burning his feet slowly, after being anointed with oil. About three years afterwards, because of some suspicious circumstances in their conduct, this king, and those of Tezcuco and Tlacopan, were hanged on the same tree by their feet, to lengthen their torment.

Mexico, SURRENDER OF THE CITY OF (1847). On the fall of Chapultepec (see *Chapultepec, Battle of*) there was nothing between General Scott's veteran troops and the capital, on the evening of Sept. 13, 1847. That night terror reigned in the capital. Santa Aña, thoroughly alarmed, and his army hopelessly shattered, fled from the city with the remnant of his troops (about 2000 in number), accompanied by the officers of the civil government of the republic. Scott prepared to enter the city the next morning with Worth's division. At four o'clock a deputation of the City Council waited upon Scott to beg him to spare the town and propose terms of capitulation. He would make no terms, but ordered Generals Worth and Quitman to move forward through the Cosmo Gate to the Grand Plaza in the city. The American flag was there unfurled from the top of the national palace. At that moment the magnificent figure of Scott, in full uniform, and mounted on his powerful white charger, rode through the columns to the Grand Plaza, the bands playing "Yankee Doodle." The chief dismounted, took off his hat, and, drawing his sword and raising it high above his head, he proclaimed in a loud voice the conquest of Mexico, and took formal possession of the republic. At that moment a musket-fire upon the American troops began from windows and house-tops. Bands of Mexican soldiers had been hidden in the city, and this attack was made by them without the approval of the Mexican authorities. This kind of warfare continued nearly all day, and many American officers were killed or wounded. By sweeping the streets with light batteries and picking off the assailants with rifles, they were silenced before night. A threat to destroy the city put an end to this treacherous conduct. General Quitman was appointed by Scott civil and military governor, and the city of Mexico remained in the hands of the Americans until after the Treaty of Guadalupe-Hidalgo (which see) was made, some months afterwards. Scott imposed a contribution of \$150,000 on the city for the use of his army. In the battles in the vicinity of the city of Mexico the Americans lost, in killed, wounded, and missing, 2713; the loss of the Mexicans, in killed, wounded, and prisoners, was 10,730, the prisoners amounting to 3730.

Mexico, TREATY WITH (1854). Unfaithful American citizens plotted schemes against the honor of their own country, the peace of neigh-

boring provinces, and for the extinction of the Mexican republic. (See *Knights of the Golden Circle*.) While the plots were fast ripening, the two governments successfully negotiated a treaty by which the boundary-line between the United States and Mexico was defined and fixed. The treaty was ratified early in 1854, and it was agreed that the decisions of the commissioners appointed under it to revise the boundary should be final. By that treaty the United States was to be released from all obligations imposed by the treaty of peace with Mexico in 1848, and, as a consideration for this release and for the territory ceded by Mexico, the United States agreed to pay the latter \$10,000,000—\$7,000,000 on the ratification of the treaty, and the remainder as soon as the boundary-line should be established. These conditions were complied with, and peace between the two countries has never since been broken.

Mexico, WAR WITH (1846-48). The annexation of Texas, as had been predicted, caused an immediate rupture between the United States and Mexico, for the latter claimed Texas as a part of her territory, notwithstanding its independence had been acknowledged by the United States, England, France, and other governments. When Congress had adopted the joint resolution for the Annexation of Texas (which see) to the United States, General Almonte, the Mexican minister at Washington, protested against the measure and demanded his passports. On the 4th of June following, the President of Mexico (Herrera) issued a proclamation declaring the right of Mexico to the Texan territory, and his determination to defend it by arms, if necessary. At the same time there existed another cause for serious dispute between the United States and Mexico. The latter had been an unjust and injurious neighbor ever since the establishment of republican government in Mexico in 1824. Impoverished by civil war, it did not hesitate to replenish its treasury by plundering American vessels in the Gulf of Mexico, or by confiscating the property of American merchants within its borders. The United States government remonstrated in vain until 1831, when a treaty was made and promises of redress were given. These promises were never fulfilled. Robberies continued; and, in 1840, the aggregate value of property belonging to Americans which had been appropriated by the Mexicans amounted to more than \$6,000,000. The claim for this amount was unsatisfied when the annexation of Texas took place in 1845. Being fully aware of the hostile feelings of the Mexicans, President Polk ordered (July, 1845) General Zachary Taylor, then in command of the United States troops in the Southwest, to go to Texas and take a position as near the Rio Grande as prudence would allow. This force, about 1500 strong, was called the "Army of Occupation" for the defence of Texas. At the same time a strong naval force, under Commodore Conner, sailed to the Gulf of Mexico to protect American interests there. In September Taylor formed a camp at Corpus Christi, and there remained during the autumn and winter. He was ordered (Jan. 13,

1846) to move from his camp at Corpus Christi to the Rio Grande, opposite the Spanish city of Matamoras, because Mexican troops were gathering in that direction. This was disputed territory between Texas and the neighboring province of Tamaulipas. When he encamped at Point Isabel (March 25, 1846), on the coast, twenty-eight miles from Matamoras, Taylor was warned by the Mexicans that he was upon foreign soil. He left his stores at Point Isabel, under a guard of 450 men, and, with the remainder of his army, advanced to the bank of the Rio Grande, where he established a camp and began the erection of a fort, which he named Fort Brown, in honor of Major Brown, in command there. The Mexicans were so eager for war that, because President Herrera was anxious for peace with the United States, they elected General Paredes to succeed him. The latter sent General Ampudia, with a large force, to drive the Americans beyond the Nueces. This officer demanded of General Taylor (April 12) the withdrawal of his troops within twenty-four hours. Taylor refused, and continued to strengthen Fort Brown. Ampudia hesitated, when General Arista was put in his place as commander-in-chief of the Northern Division of the Army of Mexico. He was strongly reinforced, and the position of the Army of Occupation became critical. Parties of armed Mexicans soon got between Point Isabel and Fort Brown, and had cut off all intercommunication. A reconnoitring party under Captain Thornton was surprised and captured (April 24) on the Texas side of the Rio Grande, when Lieutenant Mason was killed. Having completed his fort, Taylor hastened to the relief of Point Isabel (May 1), which was menaced by a Mexican force, 1500 strong, collected in the rear. He reached Point Isabel the same day. This departure of Taylor from the Rio Grande emboldened the Mexicans, who opened fire upon Fort Brown (May 3) from Matamoras, and a large body crossed the river to attack it in the rear. Taylor had left orders that, in case of an attack, and peril appeared imminent, signal guns must be fired, and he would hasten to the relief of the fort. On the 6th, when the Mexicans began to plant cannons in the rear and Major Brown was mortally wounded, the signals were given, and Taylor marched for the Rio Grande on the evening of the 7th, with a little more than 2000 men, having been reinforced by Texan volunteers and marines from the fleet. At noon the next day he fought and defeated Arista, with 6000 troops, at Palo Alto (which see). At two o'clock the next morning his wearied army was summoned to renew its march, and, towards evening, fought a more sanguinary battle with the same Mexicans, at a place called Resaca de la Palma (which see). Again the Americans were victorious. The Mexican army in Texas was completely broken up. Arista saved himself by solitary flight across the Rio Grande. The garrison at Fort Brown was relieved. In the meanwhile, Congress had declared (May 11, 1846) that, "by the act of the Republic of Mexico, a state of war exists between that government and the United States,"

and authorized the President to raise 50,000 volunteers. They also (May 13) appropriated \$10,000,000 for carrying on the war. The Secretary of War and General Scott planned a magnificent campaign. On the 23d of May the Mexican government also declared war. (See *Taylor's Campaign*.) Taylor crossed the Rio Grande, drove the Mexican troops from Matamoras, took possession of the town (May 18), and remained there until August, when he received reinforcements and orders from his government. Then, with more than 6000 troops, he moved on Monterey, defended by General Ampudia with more than 9000 troops. It was a very strongly built town, at the foot of the great Sierra Madre. A siege commenced Sept. 21 and ended with the capture of the place on the 24th. General Wool had been directed to muster and prepare for service the volunteers gathered at Bexar, in Texas, and by the middle of July (1846) 12,000 of them had been mustered into the service. Of these, 9000 were sent to reinforce Taylor. Wool went up the Rio Grande with about 3000 troops, crossed the river at Presidio, penetrated Mexico, and, in the last of October, reached Monclova, seventy miles northwest of Monterey. He pushed on to Coahuila, where he obtained ample supplies for his own and Taylor's troops. General Taylor had agreed to an armistice at Monterey. This was ended Nov. 13, by order of his government, when, leaving General Butler in command at Monterey, he marched to Victoria, the capital of Tamaulipas, with the intention of attacking Tampico, on the coast. Meanwhile, General Worth, with 900 men, had taken possession of Saltillo (Nov. 15), the capital of Coahuila. Taylor, ascertaining that Tampico had already surrendered to the Americans (Nov. 14), and that Santa Anna was collecting a large force at San Luis Potosi, returned to Monterey to reinforce Worth, if necessary. Worth was joined at Saltillo by Wool's division (Dec. 20), and Taylor again advanced to Victoria (Dec. 29). Just as he was about to proceed to a vigorous campaign, Taylor received orders from General Scott, at Vera Cruz, to send the latter a large portion of his (Taylor's) best officers and troops, and to act only on the defensive. This was a severe trial for Taylor, but he cheerfully obeyed. He and Wool were left with an aggregate force of only about 5000 men, of whom only 500 were regulars, to oppose 20,000, then gathering at San Luis Potosi, under Santa Anna. Taylor and Wool united their forces (Feb. 4, 1847) on the San Luis road, determined to fight the Mexicans, who were approaching. The opportunity was not long delayed. The Americans fell back to Buena Vista, within eleven miles of Saltillo, and encamped in a narrow defile, and there a severe battle was fought (Feb. 23, 1847), resulting in victory for the Americans.—General S. W. Kearney was placed in command of the Army of the West, with instructions to conquer New Mexico and California. He left Fort Leavenworth in June, 1846, and, after a journey of nine hundred miles over the great plains and among mountain ranges, he arrived at Santa Fé (August 18), having met with no resistance.

Appointing Charles Brent governor, he marched towards California, and was soon met by an express from Commodore Stockton and Lieutenant-colonel Frémont, informing him that the conquest of California had been achieved. Frémont and a party of explorers, sixty in number, joined by American settlers in the vicinity of San Francisco, had captured a Mexican force at Sonoma Pass (June 15, 1846), with the garrison, nine cannons, and two hundred and fifty muskets. He then defeated another force at Sonoma, and drove the Mexican authorities out of that region of country. On July 5 the Americans in California declared themselves independent, and put Frémont at the head of affairs. On the 7th Commodore Sloat, with a squadron, bombarded and captured Monterey, on the coast; on the 9th Commodore Montgomery took possession of San Francisco. Commodore Stockton and Colonel Frémont took possession of Los Angeles on the 17th of August, and there they were joined by Kearney, who had sent the main body of his troops back to Santa Fé. With these officers, he shared in the honors of the final event which completed the conquest and pacification of California. Frémont, in disobedience of the commands of Kearney, his superior officer, went to Monterey, and there, in conjunction with Commodore Shubrick, assumed the office of governor, and proclaimed (Feb. 8, 1847) the annexation of California to the United States. Frémont was tried for disobedience and deprived of his commission. It was soon offered to him again, but he refused to accept it, and went to the wilderness on another exploring expedition. Meanwhile, Colonel Doniphan, detached by Kearney, with 1000 Missouri volunteers, marched towards Chihuahua to join General Wool. In two engagements with Mexicans he was victorious, and entered the capital of Chihuahua in triumph (March 2, 1847), and took possession of the province. After resting six weeks, he joined Wool at Saltillo, and thence returned to New Orleans, having made a perilous march from the Mississippi of about five thousand miles. The conquest of all northern Mexico was now complete, and General Scott was on his march for the capital. He had landed near Vera Cruz, March 9, 1847, with an army of 13,000 men. It had been borne thither by a powerful squadron, commanded by Commodore Conner. He invested the city of Vera Cruz on the 13th, and on the 27th it was surrendered, with the castle of San Juan de Ulloa. Scott took possession of the city two days afterwards, and, on the 8th of April, the advance of his army, under General Twiggs, began its march for the capital, by way of Jalapa. Santa Aña had advanced, with 12,000 men, to meet the invaders, and had taken post at Cerro Gordo, a difficult mountain pass at the foot of the Eastern Cordilleras. Scott had followed Twiggs with the rest of his army, and, on the 18th of April, defeated the Mexicans at that strong pass, and, pushing forward, entered Jalapa on the 19th. On the 22d the American flag was unfurled over the Castle of Perote, on the summit of the eastern Cordilleras, fifty miles from Jalapa. This

was considered the strongest fortress in Mexico, excepting Vera Cruz. It was surrendered without resistance, and with it fifty-four pieces of cannon, some mortars, and a large amount of munitions of war. Onward the victorious army marched, and entered the fortified city of Puebla (May 15), a city of eighty thousand inhabitants; and there the army rested until August. Being reinforced, Scott then pushed on towards the capital. From that very spot on the lofty Cordilleras, Cortez first looked down upon the quiet Valley of Mexico, centuries before. Scott now beheld that spacious panorama, the seat of the capital of the Aztecs—the "Halls of the Montezumas." He pushed cautiously forward, and approached the stronghold before the city. The fortified camp of Contreras was taken by the Americans on Aug. 20, 1847. Then the strong fortress of San Antonio yielded the same day. The heights of Churubusco were attacked. Santa Aña advanced, and soon the whole region became one great battle-field, under the eye and control of Scott, the American commander-in-chief. Churubusco was taken, and Santa Aña fled towards the capital. A Mexican army, 30,000 strong, had in a single day been broken up by another less than one third its strength, in number, and at almost every step the Americans were successful. Full 4000 Mexicans were killed and wounded, 3000 were made prisoners, and 37 pieces of cannon were taken on that memorable 20th of August. The Americans had lost 1100 in killed and wounded. They might now have entered the city of Mexico in triumph, but General Scott preferred to bear the olive-branch rather than the palm. As he advanced to Tacuba (Aug. 21), only seven miles from the city, he met a deputation from Santa Aña to ask for an armistice, preparatory to negotiations for peace. It was granted. N. P. Trist, appointed by the United States government to treat for peace, was present. The treacherous Santa Aña had made this only a pretext to gain time to strengthen the defences of the city. When the trick was discovered, Scott declared the armistice at an end, and advanced upon the city. Less than 4000 Americans attacked Santa Aña with 14,000 Mexicans (Sept. 8), at Molino del Rey (the King's Mill), near Chapultepec. The combatants fought desperately and suffered dreadfully. The Mexicans left almost 1000 dead on the field; the Americans lost 800. The lofty battlemented hill of Chapultepec was doomed. It was the last place to be defended outside of the city. It was attacked by mortar and cannon shells and round-shot (Sept. 12), and the assault continued until the next day, when the American flag waved in triumph over the shattered Castle of Chapultepec. The Mexicans fled into the city, pursued by the Americans to the very gates. That night Santa Aña and his troops, with the civil officers, fled from the city, and, at four o'clock the next morning, a deputation from the municipal authorities waited upon Scott, begging him to spare the town and treat for peace. He would make no terms, but entered the capital of Mexico (Sept. 13, 1847) a

conqueror; and from the Grand Plaza he proclaimed the conquest of the Republic of Mexico. Santa Anna made some feeble efforts to regain lost power, but failed. He was defeated in two slight battles. Before the close of October he was stripped of every command, and fled for safety to the shores of the Gulf. The president of the Mexican Congress assumed provisional authority, and, on Feb. 2, 1848, that body concluded a treaty of peace with the United States commissioners at Guadalupe-Hidalgo. It was ratified by both governments, and, on July 4, 1848, President Polk proclaimed it. It stipulated the evacuation of Mexico by the American troops within three months: the payment of \$3,000,000 in hand, and \$12,000,000 in four annual instalments, by the United States to Mexico, for New Mexico and California, which had become territory of the United States by conquest, and, in addition, to assume debts due certain citizens of the United States from Mexico to the amount of \$3,500,000. It also fixed boundaries and otherwise adjusted matters in dispute.

Miami (or **Maumee**), the name of a large Indian family in the Ohio country, and of three streams that run through that state—namely, "Maumee of the Lakes," that enters Lake Erie at Toledo, and Great and Little Miami, which flow into the Ohio River. Maumee more nearly indicates the pronunciation of the name to the English ear. The Indians pronounced it as if spelled Me-aw-me. So the French spelled it, according to their pronunciation of the *i* and *a*, Mi-a-mi.

Miami, **FORT**, standing near (present) Fort Wayne, Ind., was garrisoned by Ensign Holmes and ten men. On the morning of May 27, 1763, he was informed that the fort at Detroit had been attacked, and he put his men on their guard. The same day an Indian woman came to Holmes, saying a squaw in a cabin three hundred yards off was ill and wished him to bleed her. He went out and was shot. The sergeant followed and was made prisoner, when the rest of the garrison surrendered to the savages who swarmed in the forest near. (See *Pontiac's War*.)

Miamia. This Algonquin family, when discovered by the French in 1658, were seated near Green Bay, Wis.; and their chief, having a body-guard, was treated with more reverence than was usual among the Northern Indians. The English and the Five Nations called them Twightwees. In 1683 they and their kindred (the Illinois) were attacked by the Iroquois, whom they drove back, though engaged at the same time in war with the fiery Sioux. Acting alternately as friends and foes of the French, they were ruthless, and were not trusted by Europeans. Some of them were with De Nonville in his expedition against the Five Nations in 1687; and they joined the Iroquois against the Hurons and opened intercourse with the English. In their wars with the French and the Sioux, the Miamis lost heavily; and, finally, in 1721, they were mostly seated upon the St. Joseph and the Maumee, near Fort Wayne, in eastern Indiana. Miami and Maumee are the same, the

latter simply showing the French pronunciation of the word. When the struggle for dominion began, between the French and English, the Miamis hesitated; and when the French power fell they would not allow the English to pass through their country for a while, and joined Pontiac in his operations. (See *Pontiac*.) During the Revolution they were friends of the English; and when, in 1790, General Harmar was sent against them, they put fifteen hundred warriors in the field with the famous Little Turtle at their head. They defeated Harmar, but were crushed by Wayne, and were parties to the treaty at Greenville in 1795. (See *Greenville, Treaty at*.) When Tecumtha conspired, they refused to join him, but favored the British in the War of 1812. Since that time they have rapidly declined. Intemperance has done its horrid work among them. In 1822 they numbered about twenty-five hundred; in 1873 the wretched remnant on the Quapaw reservation was only one hundred and fifty.

Miantonomoh succeeded Canonius, his uncle, as sachem, or king, of the Narragansets in 1638. He was born in Rhode Island, and was a nephew of Ninegret. (See *Ninegret*.) As early as 1632 he visited Boston with his wife, and stayed two nights. He went to church with the English. Governor Winthrop took Miantonomoh and his attendants to his home and made much of them. In 1637 he assisted the English in the war with the Pequods. (See *Pequod War*.) At the beginning of 1638 he succeeded his uncle Canonius as sachem of the Narragansets; and in March he granted lands on the island of Rhode Island to William Coddington and others, to make a settlement. Entering into an agreement with Uncas, sachem of the Mohegans, not to make war upon each other without first appealing to the English, he fell under the suspicions of the latter, and was cited to appear before the governor and council at Boston in 1642. Nothing being found against him, he was dismissed with honor. It was the policy of the English to foment a rivalry between the Mohegans and Narragansets, and Uncas was induced to insult and injure Miantonomoh as much as it was in his power to do. When Uncas pressed hard upon Miantonomoh, the latter made war. The Narragansets were beaten and their sachem was made prisoner. Uncas conveyed him to the English at Hartford, where, by the advice and consent of the magistrates and elders of the Church, this uniform friend of the white people was put to death, in obedience to a policy that thus favored the Mohegans. His death left an indelible stain upon the Connecticut authorities.

Michigan was discovered and settled by French missionaries and fur-traders. As early as 1610 the site of Detroit was visited by Frenchmen, and in 1641 some Jesuits reached the Falls of St. Mary. The first European settlements within the present limits of Michigan were made there by the establishment of a mission by Father Marquette and others in 1668. Three years later Fort Mackinaw was established, and in 1701 Detroit was founded. Michigan made slow

progress in population from that time until it was made a territory of the United States. It came into possession of the English by the treaty of 1763 (which see). It suffered from the conspiracy of Pontiac (which see); and it was some time after the treaty of peace, in 1783, before the British gave up the territory. The Americans did not take possession until 1796. At first it was a part of the Northwest Territory, and afterwards it formed a part of the Territory of Indiana.

STATE SEAL OF MICHIGAN.

It was erected into an independent territory in 1805, with William Hull as its first governor. In August, 1812, it fell into the hands of the British (see *Detroit, Surrender of*), and remained so until the fall of 1813, when Harrison reconquered it. (See *Thames, Battle of the*.)

The lands of Michigan were first brought into market for public sale in 1813, and from that time it dates its prosperity. The territory was authorized in 1819 to send a delegate to Congress, and in the election the right of suffrage was extended to all taxable citizens. Afterwards the Indians made important territorial cessions, and in 1836 all the lower peninsula and part of the upper were freed from Indian titles. The same year Wisconsin Territory was formed from the western portion of Michigan. The legislative power of Michigan was vested in the governor and judges until 1823, when Congress transferred it to a council of nine persons, selected by the President of the United States from eighteen chosen by the citizens. The council was increased to thirteen in 1825; but two years later the citizens were allowed to elect the councillors without the interference of the President or Congress. In 1835-36 there was a territorial dispute between Ohio and Michigan that, at one time, threatened civil war; but it was settled by Congress admitting the latter into the Union as a state, on condition that it should relinquish its claim to the disputed territory and accept in its stead the upper peninsula. In January, 1837, Michigan was admitted. In 1847 the seat of government was removed from Detroit to Lansing. In 1850 a new constitution was adopted, which, with subsequent amendments, is now in force. Michigan furnished to the national army, during the Civil War, 90,747 soldiers, of which number 14,823 perished. The expenditures of the state for carrying on the war were \$3,784,408; by counties, cities, and townships for the same purpose, \$10,173,336; and for the relief of soldiers' families by counties, \$3,591,248, or a total of nearly \$17,600,000.

Michigan, Efforts to Recover (1813). In consequence of alarming despatches from Hull, at Detroit, in July, 1812, a force to support him was organized at Georgetown, Ky.; but before it had crossed the Ohio news of the surrender at Detroit (which see) reached them. That event

stirred the patriotic zeal of the whole western country, and the greatest warlike enthusiasm prevailed. Volunteers gathered under local leaders in every direction. Companies were formed and equipped in a single day, and were ready to march the next. They passed over the Ohio from Kentucky, Pennsylvania, and Virginia; and the governor of Ohio sent forward two thousand men under General Tupper for the recovery of Michigan. General Harrison was appointed commander-in-chief of the Army of the Northwest. For several weeks volunteers found employment in driving the hostile Indians from post to post, in Ohio and Indiana, on the borders of the extreme western settlements. They desolated their villages and plantations, after the manner of Sullivan in 1779, and thereby incurred the fiercest indignation of the tribes. Harrison took steps early to relieve the frontier posts—Fort Harrison, on the Wabash; Fort Wayne, at the head of the Maumee; Fort Defiance, at the junction of the Auglaize and Maumee; and Fort Deposit. At Vincennes General Hopkins had assembled about four thousand mounted Kentucky militia to chastise the Indians on the borders of Illinois. They penetrated the Indian country beyond the Wabash; but, becoming alarmed, returned to Vincennes, and left the honors of the campaign to be gathered by Ninian Edwards, Governor of the Territory of Illinois, who had advanced up the Illinois River with about four hundred men to co-operate with Hopkins. He succeeded in destroying several Indian villages above Peoria. Harrison, meanwhile, was busily employed in pushing forward provisions to forts towards the lake, whence his troops were to march for concentration at the rapids of the Maumee, where another depot was to be established. It was a miserable country to pass over—swampy, wooded, and made almost impassable by heavy rains. The troops became discontented and mutinous. Orders given to Tupper's division to advance to the Maumee Rapids were not, or could not be, obeyed; it fell back to Urbana. Harrison had been very anxious to retake Detroit before winter; but the nature of the country compelled him to wait for the freezing of the swamps. Another expedition, under Hopkins, marched up the Wabash to Tippecanoe (Nov. 1812); but the approach of winter and insufficient clothing of his troops compelled him to return to Vincennes after destroying one or two Indian villages. So ended in failure the effort to recover Michigan in the autumn of 1812. To this end Harrison had labored incessantly all through the months of October, November, and December.

Michigan, Position of (1861). This peninsular state—its shores washed by great inland seas, and its population numbering 800,000—took a decided stand against the Southern Secessionists. Its Legislature met at the beginning of January, 1861, when its retiring governor (Moses Wisner) denounced the President of the United States as a partisan, and the Democratic party as cause of the alarm, resentment, and discontent in the South, by persistent mis-

representations of the principles and intentions of the Republican party. He declared the Personal Liberty Act of his state to be right. "Let it stand," he said; "this is no time for timid and vacillating counsels while the cry of treason is ringing in our ears." The new governor (Austin Blair), who was inaugurated the next day (Jan. 3, 1861), took substantially the same ground. He recommended the Legislature to take action for the support of the national government, and they responded by passing resolutions (Feb. 2) pledging to that government all the military power and material resources of the state. They expressed an unwillingness "to make compromises with traitors," and refused to send delegates to the Peace Congress (which see). The best men of the state, serving in the Union armies, redeemed this pledge.

Micmac Indians, TREATMENT OF. At the instigation of La Loutre, a French priest, the Micmacs, in Nova Scotia, or Acadia, united with other tribes to annoy the feeble English settlements in that region. When threatened by the English governor, their ruler scornfully said: "The land on which you sleep is mine; I sprang out of it as the grass does; I was born on it from sire to son; it is mine forever." This defiant declaration caused the English Council at Halifax to vote the Micmacs "so many banditti, ruffians, or rebels;" and by the authority of that Council Colonel Cornwallis, in order to "bring the rascals to reason," offered for every one of them taken or killed ten guineas, to be paid on producing the savage or his scalp. The poor Indians soon suffered dreadfully at the hands of the English.

Micmacs. These were the most easterly family of the Algonquin nation. They spread over New Brunswick, Nova Scotia, Cape Breton, Newfoundland, and Prince Edward Island, and were called by the neighboring tribes "Salt-water Indians," because they also inhabited the sea-coasts. They carried on wars with the Little Esquimaux, north of the St. Lawrence, at a very early period; and their chief business, in peace, was fishing. When De Monts attempted settlements in that region and in Canada, the Micmacs numbered full three thousand. The French established missions among them and secured their friendship; and they were a source of great annoyance to the English in their wars in that region. The Micmacs plundered English vessels in the Bay of Fundy, and captured eighteen English vessels in 1722. They actually cruised in their prizes and attacked British armed vessels. From 1724 to 1760 they were the active enemies of the English in Nova Scotia; but at the latter date, Canada having been captured by the English, the Richibucto Micmacs, the most formidable of the tribe, laid down their arms and submitted to English rule. Their estimated number in 1873 shows them to be about as populous as they were at the beginning of the 17th century. The Micmacs were sun-worshippers.

Middleton, ARTHUR, signer of the Declaration of Independence, was born on the bank of

the Ashley River, South Carolina, in 1743; died Jan. 1, 1788. He was educated at Harrow and Westminster schools, England, graduating at Cambridge University in 1764. After his marriage he became a planter, and in politics became a leader of the patriots, and a most efficient member of the Council of Safety. In 1776 he helped to frame the state constitution, and was sent to Congress, where he voted for and signed the Declaration of Independence. In 1779 he took up arms in defence of Charleston, and was made a prisoner when it fell, in 1780, when his estate was sequestered and he was sent a prisoner, first to St. Augustine and then to the horrible prison-ship *Jersey*. In 1781 he was exchanged, and was a member of Congress from 1781 to 1783. He was a skilful stenographer, and took notes of the debates in which he was engaged. Mr. Middleton wrote some effective political essays over the signature of "Audrey Marvel." His father, Henry Middleton, was President of Congress in 1775; and his grandfather, Arthur, who was born at Twickenham, England, was often in public affairs in South Carolina, as early as 1712. His influence was always on the side of the people. He was governor of the colony (1725-31), and was afterwards in the Council.

Mifflin, THOMAS, was the son of Quaker parents, and was born in Philadelphia in 1744; died at Lancaster, Penn., Jan. 21, 1800. He was educated in the Philadelphia College, visited Europe in 1765, and, on his return, became a mer-

THOMAS MIFFLIN.

chant. Having served in the Legislature of Pennsylvania, he was chosen a member of the First Continental Congress in 1774, was appointed major of one of the first regiments raised in Philadelphia, and accompanied Washington as his aide-de-camp to Cambridge in the summer of 1775. All through the war for independence Mifflin was a faithful and efficient officer, rising to the rank of major-general in 1777. He was eloquent in speech, and was efficient in rousing his countrymen to action when neces-

ary. In this way, traversing Pennsylvania, he caused large numbers of its citizens to flock to the standard of Washington before the attack on the enemy at Trenton. He was quartermaster-general, and, in 1777, was a member of the Board of War. Mifflin was one of "Conway's Cabal" (which see), a conspiracy to put Gates in the place of Washington. Late in 1782 he was elected to Congress, and was president of that body in the last month of that year, when Washington resigned his commission into their hands. General Mifflin was a delegate to the convention that framed the national Constitution (1787), and was president of the Supreme Executive Council of Pennsylvania (1788-90). He was also president of the convention that framed his State Constitution (1790), and was governor of the state from 1791 to 1800. He was very efficient in quelling the whiskey insurrection in 1794.

Milan Decree. (See *Orders and Decrees*.)

Miles, NELSON A., was born in Wachusettville, Mass., Aug. 8, 1839. He entered the military service, as first lieutenant, in October, 1861, and was wounded at Fair Oaks, or Seven Pines, near Richmond, Va. He was distinguished at Malvern Hills. Miles was adjutant-general of a brigade of the Second Army Corps from Seven Pines to Harrison's Landing. In September, 1862, he was made colonel of the Sixty-first New York Regiment, which he led at Fredericksburg. He was badly wounded at Chancellorsville (which see); and he commanded a brigade in the campaign against Richmond in 1864, having been created brigadier-general in May. He was breveted for gallantry at Reams's Station (which see); was made major-general of volunteers in October, 1865; and in 1867 was breveted major-general United States Army.

Military Chest, THE, REPLENISHED (1776). Hard money was lacking to pay the bounties offered by the Congress when Washington attempted to recruit his army (December, 1776). It was an urgent necessity at a critical moment. The Congress had just ordered the issue of \$5,000,000 in paper-money, but the credit of that body was already so low that many good republicans refused to take that currency. Washington applied to Robert Morris, whose credit stood high as well as his skill as a financier, for a large sum in hard money. Morris doubted his ability to raise it. In a desponding mood he left his counting-room at a late hour, musing as he walked on the subject of the requisition. He met a wealthy member of the Society of Friends, to whom he made known his wants. "Robert, what security canst thou give?" asked the Friend. "My note and my honor," Morris replied. "Thou shalt have it," was the response of the Quaker; and the next day Morris wrote to Washington, "I was up early this morning to despatch a supply of \$50,000 to your excellency."

Military Council at Boston (1757). The Earl of Loudoun called a military council at Boston, Jan. 19, 1757, to determine a plan for the military campaign for that year. The command-

er-in-chief insisted upon confining the operations to an expedition against Louisburg, and to the defence of the frontiers. Better men acquiesced in his plan, but deplored his weakness. The people of New England were disappointed to find that their favorite scheme of driving the French from Lake Champlain was to be deferred, yet the general ardor of the colonies was not abated.

Military Departments (1861). When the Civil War broke out there were only two military departments, named, respectively, the Eastern and the Western. Three new departments were created April 27, 1861—namely, the Department of Washington, Colonel J. K. Mansfield, commander; Department of Annapolis, Brigadier-general Benjamin F. Butler, commander; and the Department of Pennsylvania, Major-general Robert Patterson, commander.

Military Districts (1813). The states were divided into nine military districts, to each of which a general officer of the army was assigned. These districts were composed as follows: 1st. Massachusetts and New Hampshire; 2d. Rhode Island and Connecticut; 3d. New York from the sea to the Highlands and the State of New Jersey; 4th. Pennsylvania from its eastern limit to the Alleghany Mountains, and Delaware; 5th. Maryland and Virginia; 6th. The two Carolinas; 7th. The states of Tennessee and Louisiana and the Territory of Mississippi; 8th. Kentucky and Ohio, and the territorial governments of Michigan, Indiana, Illinois, and Missouri; 9th. Pennsylvania from the Alleghany Mountains westward, New York north of the Highlands, and Vermont. The commandant of each district was charged with the superintendence and direction of all the means of defence within the domain under his military control.

Military Division of the Mississippi. The national government determined to hold Chattanooga and East Tennessee at all hazards. For that purpose it ordered the concentration there of three armies under one commander, and on the 10th of October (1863) the departments of the Ohio, of the Cumberland, and of the Tennessee were constituted the Military Division of the Mississippi, and placed under the command of Ulysses S. Grant, "with his headquarters in the field." His field of authority comprised three departments and nine states and parts of states, from the Mississippi between the Gulf and the Great Lakes eastward into the heart of the Appalachian range of mountains. General W. T. Sherman was placed in command of the Army of the Tennessee (Grant's command), and General Thomas succeeded Rosecrans in command of the Army of the Cumberland.

Military Events in Kentucky. Late in 1861, the Confederates occupied a line of military posts across southern Kentucky, from Cumberland Gap to Columbus, on the Mississippi River, a distance of nearly four hundred miles. Don Carlos Buell, major-general, had been appointed commander of the Department of the Ohio with his headquarters at Louisville. There he gathered a large force, with which he was enabled

to strengthen various advanced posts and throw forward along the line of the Nashville and Louisville Railway a large force destined to break the Confederate line. He had under his command 114,000 men, arranged in four columns, commanded respectively by brigadier-generals A. McDowell, McCook, O. M. Mitchel, G. H. Thomas, and T. L. Crittenden, acting as major-generals, and aided by twenty brigade commanders. These troops were from states northward of Ohio and loyalists of Kentucky and Tennessee. They occupied an irregular line across Kentucky, parallel with that of the Confederates. General McCook led 50,000 men down the railroad, and pushed the Confederate line to Bowling Green, after a sharp skirmish at Mumfordsville, on the south side of the Green River. In eastern Kentucky, Colonel James A. Garfield struck (June 7, 1862) the Confederates under Humphrey Marshall, near Prestonburg, on the Big Sandy River, and dispersed them. This ended Marshall's military career, and Garfield's services there won for him the commission of a brigadier-general. On the 19th, General Thomas defeated General George B. Crittenden near Mill Spring, when General Zollicoffer was slain and his troops driven into northwestern Tennessee. (See *Mill Spring, Battle of*.) This latter blow effectually severed the Confederate lines in Kentucky, and opened the way by which the insurgents were soon driven out of the state and also out of Tennessee. The Confederate line was paralyzed eastward of Bowling Green, and their chief fortifications and the bulk of their troops were between Nashville and Bowling Green and the Mississippi. On that line was strong Fort Donelson, on the Cumberland River. Believing Beauregard to be a more dashing officer than Johnston, the Confederates appointed him commander of the Western Department, late in January, 1862, and he was succeeded in the command at Manassas by General G. W. Smith, formerly a politician in New York city.

Military Force (1788). When the new national government went into operation early in 1789, the military force consisted of about six hundred men under the command of General Harmar, with several forts, military posts, arsenals, etc. Two companies of artillery had been formed out of the recruits enlisted at the time of Shays's Rebellion (which see), one of which was stationed at Springfield, Mass., to defend the armory there, and the others at West Point, on the Hudson. The stations on the frontier were, Pittsburgh; Fort McIntosh, on Beaver Creek, Penn.; Fort Franklin, on French Creek, half-way between Pittsburgh and Lake Erie; Fort Harmar, at the mouth of the Muskingum River; Fort Steuben, opposite Louisville; and Fort Vincennes, on the Wabash. All the posts on the lakes were still held by the British. The principal arsenals were at Springfield, West Point, and Philadelphia. There were temporary depositories of arms, ordnance, and stores at Providence, New London, on the Mohawk River, Manchester, opposite Richmond, Va., and Charleston, S. C. The Canadian refugees—the remainder of Hazen's regiment—were still a source of ex-

pense, though lately settled on lands on Lake Champlain granted to them by the State of New York.

Military Instruction. Since the Civil War, provision has been made by act of Congress for military education apart from the Military Academy at West Point (which see). An act passed July 28, 1866, authorizes the President to detail officers of experience to act as professors in institutions of learning having upwards of one hundred and fifty masculine students. Several colleges have availed themselves of such instruction. By the same act provision is made for the instruction of enlisted men in barracks, or in camp, in the common branches of English education, and especially in the History of the United States. An artillery school was organized at Fortress Monroe in 1867, to which one battery from each of the artillery regiments is ordered every year for theoretical and practical instruction in that branch of military tactics. Several military schools, such as the Virginia Military Institute at Lexington, Va., and the Kentucky Military Institute at Frankfort, Ky., are now in a flourishing condition. Two or three colleges are under partial military organization, and numerous private schools. Since 1866, the standard of qualification has been raised at West Point, and appointments to cadetships must now be made one year previous to admission.

Military Lands. By a proclamation of King George III., dated Oct. 7, 1763, grants of lands in America were authorized to the reduced officers and discharged soldiers who had served during the French and Indian War—5000 acres each to field-officers, 3000 to captains, 2000 to subaltern and staff officers, 200 to non-commissioned officers, and 50 to private soldiers.

Military Stores, GATHERING OF, BY PATRIOTS. The new Provincial Congress of Massachusetts, composed of more than three hundred members, met at Cambridge (Feb. 1, 1775), published a warning to the people that reinforcements of troops expected at Boston indicated an intent to destroy the liberties of the colony, and urged them to prepare for war. Elbridge Gerry, a merchant, was appointed chairman of the Committee of Supplies, and actively engaged in laying up magazines of provisions and military stores at Concord, Worcester, and other places. For some time the patriots, without being suspected, had carried arms and ammunition secretly out of Boston. Cannon-balls and muskets were conveyed in carts under loads of manure, and powder was concealed in the panniers of market-women, while cartridges were conveyed without suspicion, for a time, in candle-boxes. Finally, the guard at the Neck discovered the business, and seized 13,425 musket-cartridges and a quantity of balls. After that, no more could elude the vigilance of the guard.

Militia, CALL FOR, RESISTED (1812). On the proclamation of war (June, 1812) the few regular troops of the United States were employed in the attempted invasion of Canada. To man the seaboard forts the President called upon the

governors of states for militia to be placed under officers of his own appointment. The governors of Massachusetts (Strong), Rhode Island (Jones), and Connecticut (Griswold) resisted the demand on the twofold ground that no constitutional exigency had arisen, and that the militia could not be compelled to serve under any other than their own officers, with the exception of the President himself, when personally in the field. As the British did not invade either of those states during the year, the militia remained unemployed.

Militia, ORGANIZATION OF THE. The pressure of wars with the Indians in the Northwest forced Congress to undertake the organization of the militia throughout the Union. This was a difficult task, for at once there was a conflicting claim for authority in the matter between the national and state governments. The President called the attention of Congress to the subject on the 7th of August, 1789. Immediate action was taken. The matter was referred to a committee, but they did not report that session, and a new committee was appointed Jan. 15, 1790. A plan was arranged by General Knox, Secretary of War. A bill was offered on July 1, 1790, but there were no further proceedings on the subject during that session. Soon after the assembling of the third session of the First Congress, another committee was appointed (Dec. 10, 1790) by the House of Representatives, and a bill reported, but no result was reached at that session. The President, in his message at the opening of the Second Congress called attention to it, and another committee was appointed (Oct. 31, 1791). A bill for the organization of the militia passed the House of Representatives, and the Senate made amendments which the House would not agree to. A committee of conference was appointed, and the bill was passed March 27, 1792. Some amendments were made the next session, and the militia system then adopted remained, with very little alteration, until the breaking-out of the Civil War in 1861. It provided for a geographical arrangement of the militia by the state legislatures into companies, battalions, regiments, brigades, and divisions; each company to consist of sixty-four men, each battalion of five companies, each regiment of two battalions, and each brigade of four regiments. Each company, battalion, regiment, and division officered as now, except that the commander of a regiment held the rank of lieutenant-colonel. This arrangement was long perpetuated in the regular army, as well as in the militia. The rank of colonel, however, had been established in both services. There was provision made for one company of light troops to each battalion, and at least one company of artillery and one of horse to each division, to be formed out of volunteers, and to be clad in uniform at their own expense. Each state was to appoint an adjutant-general for the general superintendence of the whole militia system. Every able-bodied male citizen between the ages of eighteen and forty-five years, with certain exceptions, was to be enrolled in the militia by the captain of the company within whose bounds he might reside; such citizen to arm and equip

himself and appear for exercise when called. This law simply adopted the system as it stood in each state. By another act it authorized the President, in case of invasion by any foreign nation or Indian tribe, or imminent danger thereof, or in case of insurrection in any state, application being made by its Legislature or its executive, to call forth the militia of the state or states most convenient to the scene of action. Whenever there should be an invasion, or insurrection, or combination to resist the laws too strong to be suppressed by the civil authorities, the President was authorized to call out the militia in such numbers as he might deem necessary.

Milledge, JOHN, was born in Savannah in 1757; died at the Sand Hills, Feb. 9, 1818. He was brought up in the office of the king's attorney of Georgia, but when the revolution approached he took the side of the colonists. He was one of the party who captured Governor Wright. (See *Wright, Sir James*.) He was active in civil and military affairs in Georgia during the war, and in 1780 was appointed attorney-general of the state. From 1792 to 1802 he was member of Congress, excepting one term, and from 1802 to 1806 he was governor of the state. Mr. Milledge was the principal founder of the University of Georgia, and the Legislature of that state evinced their profound respect for him by giving his name to the capital of Georgia.

Miller, JAMES, was born at Peterborough, N. H., April 25, 1776; died at Temple, N. H., July 7, 1851. He entered the United States Army as major in 1808, and was lieutenant-colonel and leader of the Americans in the battle at Brownstown (which

JAMES MILLER.

see) in 1812. He was distinguished in events on the Niagara frontier, especially in the battle at Niagara Falls, or Lundy's Lane (which see), in July, 1814. For his services there he was breveted brigadier-general, and received from Con-

grew a gold medal. He was governor of Arkansas from 1819 to 1825, and collector of the port of Salem from 1825 to 1849.

Miller, SAMUEL, LL.D., was born at Dover, Del., Oct. 31, 1769; died at Princeton, N. J., Jan. 7, 1850. He graduated at the University of Pennsylvania in 1789. From 1793 to 1813 he was minister of a Presbyterian church in New York city, and was noted as a political and theological writer. From 1813 to 1849, a period of thirty-six years, he was professor of Ecclesiastical History and Church Government in the Theological Seminary at Princeton. His published works are quite numerous. Dr. Miller was an early member of the American Philosophical Society.

Miller, WILLIAM, founder of the sect of "Millerites," or Second Adventists, who prophesied that the world would be consumed by fire in 1843. He was born at Pittsfield, Mass., in 1781; died at Hampton, N. Y., in 1849. He was an uneducated man. So early as 1826 he began to promulgate his peculiar views on the subject of the millennium, and earnestly uttered his prophecies and warnings in public after 1833. He declared that in 1843 Christ would descend in clouds, the true saints would be caught up into the air, and the earth would be purified by fire. Thousands embraced his doctrine and withdrew from church-fellowship. Other preachers appeared on the field, and before the arrival of the appointed time he had between 30,000 and 40,000 followers, who called themselves "The Church of the Latter-day Saints." The delusion rapidly subsided when the prophecy was not fulfilled.

Mill Spring, BATTLE OF. At Beech Grove and Mill Spring, Ky., there were gathered by the middle of January, 1862, about 10,000 effective Confederate soldiers, with twenty pieces of artillery, under the command of General Crittenden. General George H. Thomas was sent to attack them, and, if successful, to push over the Cumberland Mountains and liberate the East Tennesseans from Confederate rule. He divided his forces, giving a smaller number to the command of General Schoepf, and leading the remainder himself. When he was within ten miles of the Confederate camp, the insurgents came out to meet him. At early dawn (Jan. 19, 1862) the Confederates, 5000 strong, led by Zollicoffer, met the Union pickets—Woolford's cavalry. A severe battle was soon afterwards begun, on the side of the Nationals, by the Kentucky and Ohio regiments, and Captain Kinney's battery. It was becoming very warm, when Colonel R. L. McCook came up with Ohio and Minnesota troops, also a Tennessee brigade and a section of artillery. For a time it was doubtful which side would prevail. They were hotly contesting the possession of a commanding hill, when Zollicoffer was killed at the head of his column. General Crittenden immediately took his place, and the struggle for the hill continued about two hours. A galling fire from Minnesota troops, and a charge of Ohio troops with bayonets, compelled the Confeder-

ates to give way and retreat towards their camp at Beech Grove. They were hard pressed by the Nationals, who had gained a position where their great guns commanded the Confederate works and the ferry across the Cumberland River. Such was the situation when the conflict ended that (Sunday) evening. The next morning the Confederates were gone. The beleaguered troops had escaped silently across the river, under cover of darkness, abandoning everything in their camp, and destroying the vessels that carried them over the stream. The Confederates were dispersed, and suffered much among the hills on the borders of Tennessee. The Nationals lost 247 men, of whom 39 were killed; the Confederates lost 349, of whom 192 were killed and 89 were made prisoners. As the Confederates were then threatening Louisville, it was thought best for Thomas not to attempt the liberation of East Tennessee at that time.

Milla, SAMUEL JOHN, founder of the American Foreign Missionary Society, was born at Torrington, Conn., April 21, 1783; died at sea, June 18, 1818. He graduated at Williams College in 1809. (See *Missions*.) He was the originator of the American Bible Society, founded in 1816, and was also instrumental in the formation of the American Colonization Society (which see). In its behalf he explored the western coast of Africa for a suitable site for a colony, in 1818, and died on his passage homeward.

Milroy, ROBERT H., was born in Indiana in 1814; became a lawyer; served as a volunteer in the Mexican War; entered the service as a volunteer in 1861, as brigadier-general of Indiana troops, the most of his military career being in western Virginia and the Shenandoah valley.

Mine Run, OPERATIONS NEAR. Early in November, 1863, General Lee was preparing to go into winter-quarters near Culpepper Court-house, when the National victory at Rappahannock Station (which see) and the crossing of that stream by Meade (Nov. 8) caused him, under cover of darkness, to withdraw beyond the Rapid Anna, and intrench his army on Mine Run and its vicinity, a strong defensive position. Meade lay quietly between the Rappahannock and Rapid Anna, until late in November, when, his communications being perfect with his supplies and the capital, he undertook a bold forward movement. He proceeded to attempt to turn the right of the Confederates, and, sweeping round towards Orange Court-house, overwhelm Ewell, turn the works on Mine Run, and effect a lodgment at Orange and Gordonsville. This would involve the perilous measure of cutting loose from his supplies, but he took the risk. He left his trains parked at Richardsville, on the north side of the Rapid Anna, and moved on the morning of Nov. 26; but instead of crossing that stream in a short time, so as to march rapidly and surprise the Confederates, the whole day was consumed in the passage. It was ten o'clock the next day before any of the troops reached the designated point, when the move-

ment had become known to the Confederates. Warren, with 10,000 men, followed by an artillery reserve, was confronted by a large portion of Ewell's corps, and brisk skirmishing began. French's troops, that were to support Warren, did not, for various causes, come up until night, when the latter was so hard pressed that Meade was compelled to send troops from his left to Warren's assistance. These various delays had given Lee ample time to prepare to meet his antagonist, and Meade's plans, so well laid, were frustrated. He concentrated his whole army on the west bank of Mine Run, and extended his fortifications along the line of that stream until they crossed the two highways on which Meade's army lay. In front of all was a strong *abatis*.

the night of July 19, 1779, Joseph Brant, the Mohawk chief, at the head of sixty Indians and twenty-seven Tories disguised as savages, stole upon the little town of Minisink, Orange Co., N. Y., which was wholly unprotected, and, before the people were aroused from their slumbers, set on fire several houses. The inhabitants fled to the mountains. Their small stockade fort, mill, and twelve houses and barns were burned; their orchards and plantations were laid waste; their cattle were driven away, and booty of every kind was borne to the banks of the Delaware, where the chief had left the main body of his warriors. Several of the inhabitants were killed, and some were made prisoners. When news of this invasion reached Go-

ABATIS.

Meade, however, resolved to attack Lee, and to Warren was intrusted the task of opening the assault, his whole force being about 26,000 men. He was to make the attack at 8 o'clock, Nov. 30. At that hour Meade's batteries on the left and centre were opened, and skirmishers of the latter dashed across Mine Run and drove back those of the Confederates. But Warren's guns were not heard. He had found the Confederates much stronger than he expected, and prudently refrained from attacking. Satisfied that Warren had done wisely, Meade ordered a general suspension of operations. Lee's defences were growing stronger every hour, while Meade's strength was diminishing. His rations were nearly exhausted, and his supply-trains were beyond the Rapid Anna. To attempt to bring them over might expose them to disaster, for winter was at hand and rains might suddenly swell the streams and make them impassable. Meade therefore determined to sacrifice himself, if necessary, rather than his army. He abandoned the enterprise, recrossed the Rapid Anna, and went into winter-quarters on his old camping-ground between that stream and the Rappahannock.

Minisink Settlement, DESOLATION OF. On

shen, Dr. Tusten, colonel of the local militia, ordered the officers of his regiment to meet him at Minisink, the next day, with as many volunteers as they could muster. They promptly responded, and one hundred and forty hardy men were gathered around Tusten the next morning, many of them the most respected citizens. They pursued the invaders, under Colonel Hathorn, who joined Tusten with a small reinforcement, and, being senior officer, took chief command. The more prudent officers counselled against pursuit, when the great number of Indians at Brant's command became known. But hot-heads ruled, and the expedition soon became involved in a desperate fight with the Indians on July 22. The barbarians pressed upon the white people on every side, until they were hemmed within the circumference of one acre, on a rocky hill that sloped on all sides. The conflict began at 11 o'clock in the morning, and lasted till sunset. Into that hollow square the Indians broke. The survivors of the conflict attempted to escape. Behind a ledge of rocks Dr. Tusten had been dressing the wounds of his companions all day. When the retreat began he had seventeen under his care. The Indians fell upon these with fury, and all, with the doctor, were

slain. The flower of the youth and mature manhood of that region had perished. The dreadful event made thirty-three widows in the congregation of the Presbyterian Church at Goshen. It gave firmness to Sullivan's men, who, a few weeks afterwards, desolated the beautiful land of the Cayugas and Senecas. (See *Sullivan's Indian Campaign*.) In 1822, the citizens of Orange County collected the bones of the slain, and caused them to be buried near the centre of the green at the foot of the main street of the village of Goshen. There was a great multitude of citizens present. Over their remains a new marble monument was erected the same year, the corner-stone of which was laid by General Hathorn,

then over eighty years of age, and one of the survivors of the massacre. The monument bears the names of the slain.

Minnesota is the most flourishing of the younger states of the Union. The first Europeans who trod its soil were two Huguenots, Sieur Groselliers and Sieur Radisson, who, in search of a northwest passage to China, passed through this region in 1659. Returning to Montreal in 1660 with sixty canoes laden with skins,

MONUMENT AT GOSHEN.

they excited others to go in search of peltries, and this was the beginning of the French fur-trade which afterwards interfered with the Hudson's Bay Company (which see). To se-

STATE SEAL OF MINNESOTA.

cure this trade, which the English were grasping, Daniel Greysolon du Luth, a native of Lyons, left Quebec in September, 1678, with twenty men, and entered Minnesota. The next year

Father Hennepin and two others, who were a part of La Salle's expedition (see *La Salle*), penetrated the country far above the Falls of St. Anthony. The territory was formally taken possession of in the name of the French monarch, by Perrot and his associates, in 1689. They built a fort on the west shore of Lake Pepin; and Le Seur built another fort, in 1695, on an island in the Mississippi, just below the mouth of the St. Croix River, after which the fur-traders flocked into that region. In 1763, Jonathan Carver (which see) visited Minnesota and published a description of the country. In the year 1800, a part of Minnesota lying west of the Mississippi was included in the Territory of Indiana. The purchase of Louisiana, in 1803, gave the United States possession of the whole country west of the Mississippi, and in 1816 Congress passed a law excluding foreigners from the fur-trade in that region. Fort Snelling was built and garrisoned in 1819, and active trade with the Indians was carried on there. In 1820 that region was explored by a party under General Lewis Cass, and by Major Long in 1821. A third exploring party went there in 1832, led by Henry R. Schoolcraft, who discovered the main source of the Mississippi River. In 1837, some lumbering operations began in Minnesota, upon the St. Croix River. The town of St. Paul was founded in 1842, and in 1849 the Territory of Minnesota was created. At that time one half the lands included in the territory belonged to the Indians, and the white population was less than 5000. Emigrants flocked in, and at the end of eight years (1857) the number was 150,000. In 1851 the Sioux ceded to the United States all their lands in Minnesota. In 1857 application was made by the people for the admission of Minnesota into the Union as a state. This was effected May 11, 1858. Minne-

sota furnished to the national army and navy during the Civil War 25,034 soldiers. The estimated population in 1876, less than thirty years after the first settlement, was 650,000.

Minnesota, POSITION OF (1861). The people of this new state were faithful to the old flag; so was the governor, Alexander Ramsay. The Legislature that assembled Jan. 26, 1861, passed a series of loyal resolutions, in which secession was denounced as revolution, and the acts of the South Carolinians in Charleston harbor as treasonable; and said that the full strength of the national authority under the national flag should be put forth. It gave assurance that the people of Minnesota would never consent to the obstruction of the free navigation of the Mississippi River (see *Mississippi Ordinance of Secession*) "from its source to its mouth by any power hostile to the Federal government."

Minor Events of the Civil War. The following are brief notices of the most important of the minor events of the Civil War:

1860. — *Nov. 18th.* The Georgia Legislature voted \$100,000 for the purpose of arming the state, and ordered an election for a state convention. — *29th.* The Legislature of Vermont re-

passed, by a vote of 125 to 58, to repeal the Personal Liberty Bill. (See *Personal Liberty Bills*.) The Legislature of Mississippi voted to send commissioners to confer with the authorities of the other slave-labor states.—*Dec. 6th.* In Maryland, a Democratic State Convention deplored the hasty action of South Carolina.—*10th.* The Legislature of Louisiana voted \$5000 to arm the state.—*22d.* The Crittenden Compromise voted down in the United States Senate.—*24th.* The South Carolina delegation in Congress offered their resignation, but it was not recognized by the speaker, and their names were called regularly through the session.—*31st.* The Senate Committee of thirteen reported that they could not agree upon any plan of adjustment of existing difficulties, and their journal was laid before the Senate.

1861.—*Jan. 2d.* The authorities of Georgia seized the public property of the United States within its borders.—*4th.* Governor Pickens, having duly proclaimed the "sovereign nation of South Carolina," assumed the office of chief magistrate of the new empire, and appointed the following cabinet ministers: A. G. Magrath, Secretary of State; D. F. Jamison, Secretary of War; C. G. Memminger, Secretary of the Treasury; A. C. Garlington, Secretary of the Interior; and W. W. Harlee, Postmaster-general.—*7th.* The U. S. House of Representatives, by a vote, commended the course of Major Anderson in Charleston Harbor.—*12th.* The five representatives of Mississippi withdrew from Congress.—*14th.* The Ohio Legislature, by a vote of 58 to 31, refused to repeal the Personal Liberty Bill.—*21st.* Jefferson Davis of Mississippi, Benjamin Fitzpatrick and C. C. Clay of Alabama, and David L. Yulee and Stephen R. Mallory of Florida, finally withdrew from the United States Senate. Representatives from Alabama withdrew from Congress.—*23d.* Representatives from Georgia, excepting Joshua Hill, withdrew from Congress. Hill refused to go with them, but resigned.—*24th.* The Anti-slavery Society of Massachusetts, at its annual session, broken up by a mob.—*25th.* Rhode Island repealed its Personal Liberty Bill by act of its Legislature.—*Feb. 5th.* John Slidell and J. P. Benjamin, of Louisiana, withdrew from the United States Senate; the representatives in the Lower House also withdrew, excepting Bouligny, under instructions from the Louisiana State Convention. Bouligny declared he would not obey the instructions of that illegal body.—*11th.* The House of Representatives "Resolved, that neither the Congress nor the people or governments of the non-slaveholding states have a constitutional right to legislate upon or interfere with slavery in any slave-holding state of the Union."—*28th.* Jefferson Davis, President of the Southern Confederacy, vetoed a bill for legalizing the African slave-trade.—*March 16th.* A convention at Mesilla, Arizona, passed an ordinance of secession, and subsequently the Confederate Congress erected a territorial government there.—*April 17th.* Governor Letcher, of Virginia, recognized the Confederate government.—*20th.* Property valued at \$25,000,000, belonging to the United States gov-

ernment, lost at the Gosport navy-yard, Virginia. Eleven vessels, carrying 602 guns, were scuttled.—*21st.* The Philadelphia, Wilmington, and Baltimore Railway taken possession of by the United States government.—*23d.* The first South Carolina Confederate regiment started for the Potomac.—*28th.* Virginia proclaimed a member of the Confederacy by its governor.—*30th.* The Legislature of Virginia, by act, established a state navy.—*May 3d.* The Legislature of Connecticut voted \$2,000,000 for the public defence.—*4th.* The governors of Pennsylvania, Ohio, Wisconsin, Michigan, Indiana, Illinois, and other states met at Cleveland, O., to devise plans for the defence of the Western States.—*7th.* The governor of Tennessee announced a military league between the state and the Confederacy.—*10th.* The President of the United States proclaimed martial law on the islands of Key West, the Tortugas, and Santa Rosa.—*11th.* The blockade of Charleston, S. C., established.—*13th.* The blockade of the Mississippi River at Cairo established.—*15th.* The Legislature of Massachusetts offered to loan the United States government \$7,000,000.—*20th.* All mail-steamships on the coast, and running in connection with the insurgents, were stopped.—*21st.* The Confederate Congress, at Montgomery, adjourn to meet at Richmond, July 20.—*26th.* New Orleans blockaded by sloop-of-war *Brooklyn*.—*27th.* The ports of Mobile and Savannah blockaded.—*June 1st.* The postal system in the Confederacy put into operation.—*10th.* Forty-eight locomotives, valued at \$400,000, belonging to the Baltimore and Ohio Railroad, were destroyed by the insurgents at Martinsburg, Va.—*July 11th.* The United States Senate expelled from that body James M. Mason, R. M. T. Hunter, T. L. Clingman, Thomas Bragg, Louis T. Wigfall, J. A. Hemphill, Charles B. Mitchell, W. K. Sebastian, and A. O. P. Nicholson, charged with treasonable acts.—*25th.* The governor of New York called for 25,000 more troops.—*Aug. 16th.* Several newspapers in New York presented by the Grand Jury for hostility to the government.—*19th.* Secretary of State ordered that all persons leaving or entering the United States shall possess a passport. Mayor Berrett, of Washington, D. C., arrested on a charge of treason, and conveyed to Fort Lafayette, in the Narrows, at the entrance of New York Harbor.—*24th.* Transmission of Secession journals through the mails prohibited.—*Sept. 12th.* Colonel John A. Washington, formerly of Mount Vernon, aid of General Robert E. Lee, killed while reconnoitring in western Virginia.—*18th.* Bank of New Orleans suspended specie payments.—*21st.* John C. Breckinridge fled from Frankfort, Ky., and openly joined the insurgents.—*24th.* Count de Paris and Duc de Chartres entered the United States service as aids to General McClellan.—*Oct. 11th.* Marshal Kane, of Baltimore, sent to Fort Lafayette.—*15th.* Three steamers despatched from New York after the Confederate steamer *Nashville*, which escaped from Charleston on the 11th.—*23d.* The privilege of the writ of *habeas corpus* suspended in the District of Columbia.—*30th.* All the state prisoners (143) in Fort Lafayette transferred to

Fort Warren, Boston Harbor.—*Nov. 3d.* Rising of Union men in East Tennessee, who destroy railroad bridges.—*Dec. 1st.* Loyal Legislature of Virginia meet at Wheeling.—*3d.* Henry C. Burnett, representative from Kentucky, and John W. Reid, representative from Missouri, expelled from the House of Representatives because of alleged treacherous acts. Fortifications at Bolivar Point, Galveston Harbor, Tex., destroyed by the United States frigate *Santee*.—*9th.* The Confederate Congress passed a bill admitting Kentucky into the Southern Confederacy.—*20th.* Insurgents destroyed about one hundred miles of the North Missouri Railroad, with its stations, bridges, ties, fuel, water-tanks, and telegraph-poles.—*30th.* The banks of New York, Albany, Philadelphia, and Boston suspend specie payments.

1862.—*Jan. 10th.* Waldo P. Johnson and Truett Polk, of Missouri, expelled from the United States Senate.—*11th.* Bridges of the Louisville and Nashville Railroad burned by the Confederates.—*16th.* The Ohio Legislature authorized the banks of that state to suspend specie payments.—*17th.* Cedar Keys, Fla., captured by Union troops.—*22d.* A convention at Great Salt Lake City adopt a state constitution for Utah, and ask for admission into the Union under the name of "Deseret".—*30th.* The *Monitor* launched.—*Feb. 3d.* Confederate steamer *Nashville* ordered to leave Southampton (England) harbor; the United States gunboat *Tuscarora*, starting in pursuit, stopped by the British frigate *Shannon*.—*5th.* Jesse D. Bright, of Indiana, expelled from the United States Senate. British schooner *Mars* captured off Florida.—*8th.* General Hunter declared martial law throughout Kansas.—*9th.*—*13th.* The House Treasury-note Bill, with legal-tender clause, passed the United States Senate. Chesapeake and Albemarle Canal destroyed by Union forces.—*17th.* Confederates defeated at Sugar Creek, Ark. First regular Congress of the Confederates assembled at Richmond.—*10th.* Confederate government ordered all Union prisoners to be released.—*20th.* Full 4000 Confederates, sent to reinforce Fort Donelson, captured on the Cumberland River.—*21st.* First execution of a slave-trader under the laws of the United States took place at New York, in the case of N. P. Gordon.—*22d.* Martial law proclaimed over West Tennessee.—*24th.* Fayetteville, Ark., captured by the Union troops, but burned by the Confederates on leaving it.—*25th.* Telegraph lines taken possession of by government, and army news not to be published until authorized.—*26th.* Legal Tender Bill approved by the President.—*28th.* Confederate steamer *Nashville* ran the blockade at Beaufort, N. C. Fast-day in the Confederacy.—*March 1st.* John Minor Botts arrested at Richmond, Va., for treason to the Confederate States. Schooner *British Queen* captured while trying to run the blockade at Wilmington, N. C.—*2d.* Brunswick, Ga., captured by Union troops.—*6th.* President Lincoln asks Congress to declare that the United States ought to co-operate with any states which may adopt a gradual abolition of slavery, giving to such state pecuniary indem-

nity.—*8th.* Fort Clinch, St. Mary (Ga.), and Fernandina (Fla.) taken by Dupont's expedition.—*10th.* Confederate troops from Texas occupy Santa Fé, New Mexico.—*11th.* General McClellan relieved of the supreme command of the army, and made commander of the Army of the Potomac. Resolution recommending gradual emancipation adopted by the House of Representatives.—*13th.* Point Pleasant, Mo., captured by Pope.—*18th.* Name of Fort Calhoun, at the Rip Raps, Hampton Roads, changed to Fort Wool.—*21st.* Washington, N. C., occupied by Union troops. Departments of the "Gulf" and "South" created.—*26th.* Skirmish near Denver City, Col., and fifty Confederate cavalry captured.—*31st.* Baltimore and Ohio Railroad reopened, after being closed nearly a year. Confederate camp at Union City, Tenn., captured, with a large amount of spoils.—*April 1st.* General Banks drove the Confederates from Woodstock, Va. Battle at Putnam's Ferry, Ark., and Confederate stores captured.—*2d.* The emancipation and compensation resolution passed the U. S. Senate. Appalachicola, Fla., surrendered to Union troops.—*4th.* Departments of the Shenandoah and Rappahannock created. Pass Christian, on the Gulf coast, taken by National troops.—*8th.* National Tax Bill passed the House of Representatives.—*11th.* Bill for the abolition of slavery in the District of Columbia passed the House of Representatives.—*12th.* General Hunter declares all the slaves in Fort Pulaski and on Cockspur Island free. Engagement at Martinsburg, Va.—*15th.* Confederates cut the levee on the Arkansas side of the Mississippi, near Fort Wright, causing an immense destruction of property.—*16th.* President Lincoln signed the bill for the abolition of slavery in the District of Columbia. Battle of Lee's Mills, near Yorktown.—*17th.* Skirmish on Edisto Island.—*19th.* Battle of Camden, or South Mills, N. C.—*21st.* Santa Fé evacuated by the Texans. Confederate Congress at Richmond broken up and dispersed.—*24th.* Destruction of the Dismal Swamp Canal completed.—*May 1st.* Skirmish at Pulaski, Tenn., and 200 Union troops captured.—*3d.* Skirmish near Monterey, Tenn., and Union victory. Skirmish near Farmington, Miss., and Union victory.—*4th.* British steamer *Circassian* captured near Havana, Cuba. Skirmish at Lebanon, Tenn.; the Confederates defeated, with the loss of 105 men, their guns and horses. The Confederates burn their gunboats on the York River. Battle of West Point, Va., and Union victory.—*8th.* Union cavalry surprised and captured near Corinth, Miss.—*9th.* Attack on Sewell's Point by the *Monitor*. Confederates evacuated Pensacola. Skirmish at Slater's Mills, Va. Bombardment of Fort Darling, on James River.—*10th.* Craney Island abandoned by the Confederates. General Butler seized \$800,000 in gold in the office of the Netherlands Consulate, New Orleans, when all the foreign consuls entered a protest.—*11th.* Pensacola occupied by Union troops; the navy-yard and public buildings, excepting the custom-house, had been burned by the Confederates.—*12th.* President Lincoln proclaimed that the ports of Beaufort, N. C.,

Port Royal, S. C., and New Orleans should be open to commerce after June 1.—13th. Natchez, Miss., surrendered to Union gunboats.—17th. Naval expedition up the Pamunkey River, and Confederate vessels burned.—18th. Suffolk, seventeen miles below Norfolk, occupied by National troops.—19th. May, recorder and chief-of-police of New Orleans, arrested and sent to Fort Jackson.—22d. The United States Senate organized as a High Court of Impeachment for the trial of W. H. Humphreys, a United States district judge, for treason.—23d. Confederates defeated at Lewisburg, Va.—26th. The government, by proclamation, took possession of all railroads for the transportation of troops and munitions of war. Confiscation Bill passed the U. S. House of Representatives. Hanover Courthouse, Va., captured by National troops.—29th. Skirmish at Pocotaligo, S. C.—June 2d. General Wool transferred to the Department of Maryland, and General Dix ordered to Fortress Monroe.—3d. National troops landed on James Island, S. C.—4th. Battle near Trenton's Creek, N. C. Skirmish on James Island, S. C.—5th. Artillery battle at New Bridge, near Richmond; Confederates defeated.—6th. Tax Bill passed United States Senate. Battle of Union Church, near Harrisonburg, Va.—14th. A severe battle on James Island, S. C.—17th. Battle between Union gunboats and Confederate batteries at St. Charles, on the White River, Ark., the batteries being carried.—18th. Confederate works at Cumberland Gap, Tenn., occupied by National troops.—19th. An act confiscating the slaves of Confederates passed the United States House of Representatives.—20th. Commodore Porter arrived before Vicksburg with ten mortar-boats. Free territory act signed by President Lincoln.—26th. High Court of Impeachment ordered Judge Humphreys to be removed from office and disqualified. Confederates destroy their gunboats on the Yazoo River.—27th. Vicksburg bombarded.—28th. The governors of eighteen loyal states petition the President of the United States to call out additional troops.—30th. Battle of Charles City Cross-roads.—July 1st. Defeat of Confederates at Booneville, Mo. Brunswick, Ga., established as a port of entry. Skirmish at Turkey Bend, on the James River. President Lincoln calls for 600,000 volunteers to put down the great insurrection.—2d. The President signed the Tax Bill, Pacific Railway Bill, and bill to prohibit polygamy in Utah.—6th. Engagement at Duval's Bluff.—7th. Battle of Bayou de Cachi, Ark.; the Confederates defeated. Engagement ten miles above Duval's Bluff; all the camp-equipage and provisions of the Confederates captured.—8th. Union expedition up Roanoke River started from Plymouth, N. C.—9th. Confederate batteries at Hamilton, on the Roanoke River, with steamers, schooners, and supplies, captured.—11th. General H. W. Halleck appointed commander of all the land forces of the Republic.—13th. National troops at Murfreesborough, Tenn., captured by Confederate cavalry.—14th. Battle of Fayetteville, Ark.; the Confederates defeated.—15th. Confederate "ram" *Arkansas* ran past the Union flotilla, and

reached the batteries at Vicksburg.—17th. Congress authorized the use of postage and other stamps as currency, to supply a deficiency of small change, and made it a misdemeanor for any individual to issue a fractional paper currency, or "shin-plasters." National troops defeated at Cynthiana, Ky.—20th. National cavalry struck a guerilla band between Mount Sterling and Owensville, Ky., and scattered them, taking their cannons and horses.—22d. The President issued an order for the seizure of supplies in all the states wherein insurrection prevailed; directed that persons of African descent should be employed as laborers, giving them wages; also that foreigners should not be required to take the oath of allegiance.—23d. General Pope ordered to arrest all disloyal citizens within the lines under his command. National troops victors in a sharp engagement near Carmel Church.—25th. The Confederates notified by the President of the provisions of the Confiscation Act.—27th. The steamer *Golden Gate*, from San Francisco with 230 passengers and \$1,354,000 of treasure, was burned at sea near Manzanilla, and the treasure and 206 of the passengers were lost.—28th. Skirmish at Bollinger's Mills, Mo.—29th. Confederates driven from Mount Sterling, Ky., by "Home Guards." Confederate guerillas defeated at Moore's Mills, near Fulton, Mo.—30th. Skirmish at Paris, Ky., when a part of a Pennsylvania regiment drove Morgan's guerillas from the town.—Aug. 1st. Retaliatory order issued by the Confederate government, and General Pope and his officers declared not to be entitled to the consideration of prisoners of war. Confederates attacked Newark, Mo., and captured 70 Union troops; the next day the Unionists recovered everything.—2d. Orange Court-house, Va., taken by Pope's troops. A draft of the militia to serve nine months was ordered by the President.—5th. Malvern Hills occupied by National troops.—6th. Battle near Kirksville, Mo.; the Union troops victorious.—8th. Battle near Fort Fillmore, N. M.; Unionists victorious. The privilege of the writ of *habeas corpus*, in respect to all persons arrested under it, suspended; also for the arrest and imprisonment of persons who by act, speech, or writing discourage volunteer enlistments.—11th. Skirmishes near Williamsport, Tenn., and also at Kinderhook, Tenn.; Confederates defeated. Independence, Mo., surrendered to the Confederates.—12th. Gallatin, Tenn., surrendered to Morgan's guerillas. Battle at Yellow Creek, Clinton Co., Tenn.; Confederates defeated.—18th. Confederate Congress reassembled at Richmond.—19th. Department of the Ohio formed of the states of Ohio, Michigan, Indiana, Illinois, Missouri, and Kentucky east of the Tennessee River, and including Cumberland Gap. Cavalry expedition to Charleston, Missouri.—20th. Clarkesville, on the Cumberland, Tenn., surrendered to the Confederates. An attack on Fort Ridgely, Minn., by Sioux Indians was repulsed.—21st. Gallatin, Tenn., surrendered to the Confederates.—22d. Catlett's Station, Va., captured by Stuart's cavalry.—24th. Battle between Bloomfield and Cape Girardeau, Mo.; the Confederates were defeated.—25th. Skirmish at Waterloo Bridge, Va. Com-

bined military and naval expedition under General Curtis and Commander Davis returned to Helena, Ark., having captured a Confederate steamer (*Fair Play*) containing a large quantity of small-arms and ammunition, also four field-guns, and another laden with tents and baggage, and, proceeding up the Yazoo River, captured a Confederate battery of four guns, with a large quantity of powder, shot, shells, and grape.—27th. Skirmish near Rienza, Mo. Confederates routed by General Hooker at Kettle Run, near Manassas, Va.—28th. Battle near Centreville, Va., by Nationals under McDowell and Sigel, and Confederates under Jackson, when the latter were defeated with a loss of 1000 made prisoners and many arms. Skirmish near Woodbury, Tenn.; Confederates defeated.—29th. City Point, on the James River, shelled and destroyed by Union gunboats.—30th. Bukhannon, Va., entered and occupied by Confederates. Battle of Bolivar, Tenn.; Confederates routed.—31st. Skirmish at Weldon, Va.; Confederates defeated.—Sept. 1st. The Legislature of Kentucky, alarmed by Confederate raids, adjourned from Frankfort to Louisville. Battle at Britton's Lane, near Estanaula, Tenn.; Confederates defeated. Skirmish near Jackson, Tenn.; Confederates defeated.—2d. Major-general McClellan placed in command of the defences of, and troops for the defence of, Washington, D. C. Martial law declared in Cincinnati. Fighting between Fairfax Court-house and Washington.—3d. Centreville, Va., evacuated by the Union forces.—4th. Confederate steamer *Oreto* ran the blockade into Mobile harbor.—6th. Confederate cavalry attacked the Union outposts at Martinsburg, Va., and were repulsed.—8th. General Pope relieved of the command of the Army of Virginia, and assigned to that of the Northwest. General Lee issued his celebrated proclamation to the people of Maryland. Indian fight at the Lower Agency in Minnesota, in which the Indians were defeated. Skirmish near Cochran's Cross Roads, Miss. Restrictions on travel rescinded, and arrests for disloyalty forbidden except by direction of the judge-advocate at Washington.—9th. Confederate cavalry attacked a Union force at Williamsburg, Va., and were repulsed.—10th. Governor Curtin, of Pennsylvania, issued an order calling on all able-bodied men in the state to organize immediately for its defence. Confederates attacked Union troops near Gauley, Va.; the latter burned all the government property and fled. Skirmish near Covington, Ky.—11th. Maysville, Ky., taken by the Confederates. Bloomfield, Mo., captured by the Confederates, and recaptured by the Unionists the next day.—12th. Eureka, Mo., captured by the Nationals.—13th. Confederates attacked Harper's Ferry, and the next night the National cavalry escaped from that post, and it was surrendered on the 15th.—17th. Cumberland Gap, Tenn., evacuated by the Union forces. Confederate soldiers captured at Glasgow, Ky.—18th. A day of fasting and prayer held by the Confederates. Prentiss, Miss., shelled and burned.—19th. Confederates evacuated Harper's Ferry. Confederates attacked Owensborough, Ky., and were repulsed.—21st. Sharp skirmish on the Vir-

ginia side of the Potomac near Shepherdstown, Va., and the Nationals forced back across the river with considerable loss. Cavalry fight near Lebanon Junction, Ky.—22d. President Lincoln's preliminary Proclamation of Emancipation for the slaves issued.—23d. Fight with the Sioux Indians in Minnesota, who attacked the National troops, when the barbarians were repulsed.—24th. Convention of the governors of the loyal states at Altoona, Penn. Up to this time sixty-five blockade-running steamers had been taken or destroyed in attempts to reach Wilmington, N. C., the vessels and cargoes being worth \$13,000,000.—6th. Milroy defeated the Confederates near Murfreesborough, Tenn.—8th. Confederate plot to burn Detroit discovered.—15th. Rousseau, at Murfreesborough, defeated Forrest, who lost 1500 men.—17th. To keep out improper persons from Canada, the Secretary of State issued an order that all persons entering the United States from a foreign country must have passports, excepting emigrants coming direct from sea to our ports.—19th. The President issued a call for 300,000 volunteers, any deficiency to be made up by a draft on Feb. 5, 1865.—Colonel Mulford reached Fortress Monroe with the last of the 12,000 Union prisoners he was able to obtain by exchange.—21st. Admiral Farragut made Vice-admiral, in reward for his great achievements, that grade corresponding to General Grant's rank in the army.—27th. Completion of the destruction of the Mobile and Ohio Railroad from Corinth to below Okolona, by a raiding force sent out by General Dana.

1865.—Jan. 6th. A fleet of transports and 9000 troops, under General Terry, sailed from Fortress Monroe for an attack on Fort Fisher.—10th. Meeting in Philadelphia to give charitable aid to Confederates in Savannah. On the 14th two vessels left New York with supplies for the suffering citizens of Savannah.—14th. Dr. Gwynn, of California, a zealous Secessionist, said to have been made a duke by Emperor Maximilian of Mexico.—15th. Confederate post at Pocotaligo Bridge, S. C., taken by the Nationals, and the (railroad) bridge saved.—16th. Magazine in captured Fort Fisher exploded and killed or wounded about 300 National troops. Another vessel left New York laden with provisions for the suffering citizens of Savannah. The policy of Jefferson Davis unsparringly assailed in the Confederate Congress at Richmond.—17th. The "monitor" *Patapsco* blown up by a torpedo at Charleston and sunk, with seven officers and sixty-five men.—18th. Three fine blockade-runners went into the Cape Fear River, ignorant of the fall of Fort Fisher, and were captured.—23d. The main ship-channel at Savannah was

opened.—25th. Jefferson Davis proclaimed March 10 a day for a public fast.—26th. This day was observed as a festival in Louisiana, by proclamation of Governor Hahn, in honor of the emancipation acts in Missouri and Tennessee.—Feb. 1st. The Legislature of Illinois ratifies the emancipation amendment to the National Constitution; the first to do so. John S. Rock, a negro of pure blood, admitted to practice as a lawyer in the Supreme Court of the United States; the first.—2d. General Robert E. Lee made commander-in-chief of the Confederate forces.—4th. Lieutenant-commander Cushing, with fifty-one men, in four boats, destroyed cotton valued at \$15,000 at All-Saints, N. C.—5th. Harry Gilmore's camp broken up and himself captured at Moorefield, W. Va., by Lieutenant-colonel Whittaker, who marched over mountains and across streams filled with floating ice—one hundred and forty miles in forty-eight hours—with 300 picked cavalry for the purpose.—6th. A number of soldiers in Early's army send a petition to Jefferson Davis to stop the war.—7th. The Confederate Senate rejected the plan to raise 200,000 negro soldiers. Of 500 Confederate prisoners at Camp Chase, Ohio, ordered for exchange, 260 voted to remain prisoners, preferring their good treatment there.—13th. Superintendent Conway, in charge of free labor in Louisiana, reported that during the year 1864 14,000 freedmen had been supported by the national government, at a cost of \$113,500; and that 50,000 freedmen were at work under him, and 15,000 others under military rule.—16th. By permission of the Confederate authorities, vessels were allowed to take cotton from Savannah to New York to purchase blankets for Confederate prisoners; the first two vessels of the fleet arrived at New York with cargoes valued at \$6,000,000. Confederate iron-works in the Shenandoah valley destroyed by National troops.—17th. A Confederate paper-dollar worth two cents in Richmond this day.—18th. General Lee wrote a letter to a Confederate Congressman declaring that the white people could not carry on the war, and recommending the employment of negroes as soldiers.—21st. Generals Crook and Kelly seized in their beds at Cumberland, Md., and carried away prisoners by Confederate guerillas.—22d. The divisions of Terry and Cox enter Wilmington, N. C., evacuated by the Confederates.—24th. John Y. Beale, of Virginia, hanged as a spy at Fort Lafayette, N. Y. He was one of the pirates who tried to seize the *Michigan* on Lake Erie.—25th. General Joseph E. Johnston supersedes Beauregard in command of the Confederate forces in North Carolina.—March 1st. Admiral Dahlgren's flag-ship *Harvest Moon* blown up by a torpedo and sunk; only one life lost. New Jersey rejects the emancipation amendment to the national Constitution.—2d. The Confederates at Mobile fire twenty-four shots at a flag-of-truce steamer. A secret council of Confederate leaders in Europe ended at Paris this day.—8th. Battle near Jackson's Mills, N. C., in which the Confederates captured 1500 Nationals and three guns.—10th. Up to this day, Sherman's march through the Carolinas has resulted in the capt-

ure of fourteen cities, the destruction of hundreds of miles of railroad and thousands of bales of cotton, the taking of 85 guns, 4000 prisoners, and 25,000 animals, and the freeing of 15,000 white and black refugees; also the destruction of an immense quantity of machinery and other property.—18th. The Confederate Congress adjourned *sine die*. It was their final session. One of its latest acts was to authorize the raising of a negro military force.—25th. R. C. Kennedy hanged at Fort Lafayette for having been concerned in the attempt to burn the city of New York.—27th. General Steele encounters and defeats 800 Confederates at Mitchell's Fork.—28th. "Monitor" *Milwaukee* blown up and sunk by a torpedo in Mobile Bay; only one man injured. The "monitor" *Oseage* blown up and sunk the next day by a torpedo in Mobile Bay. Of her crew, four were killed and six wounded. The *Milwaukee*, having sunk in shallow water, kept up her firing.—30th. The amount of cotton taken at Savannah reported at 38,500 bales, of which 6000 bales were Sea Island.—31st. The transport *General Lyon* burned off Cape Hatteras, and about 500 soldiers perished.—April 1st. Newbern, N. C., fired in several places by incendiaries; little harm done. Battle of Big Mulberry Creek, Ala.; Confederates defeated by Wilson.—2d. The Confederates at Richmond blow up their forts and "rams" preparatory to evacuating the city.—3d. Rejoicing throughout the loyal states because of the evacuation of Richmond by the Confederate troops and flight of the Confederate government. National troops enter Petersburg at three o'clock in the morning. This day a Richmond paper quoted flour at from \$900 to \$1000 per barrel (Confederate money); corn, \$100 per bushel; butter, \$20 per pound, etc.—4th. President Lincoln sent a despatch dated "Jefferson Davis's late Residence in Richmond," and held a reception in that mansion.—8th. The last of the state prisoners in Fort Lafayette discharged. First review of Union troops in Richmond took place.—9th. Secretary Stanton ordered a salute of two hundred guns at West Point, and at each United States post, arsenal, and department and army headquarters, for Lee's surrender.—10th. The American consul at Havana hoisted the American flag, when the Confederate sympathizers there threatened to mob him, but were prevented by the authorities.—11th. A proclamation was issued to the effect that hereafter all foreign vessels in American ports were to have exactly the same treatment that ours have in foreign ports. Latham, the Superintendent of the Grand Trunk Railway, who tore a Union flag from a train on the 10th, was made to parade through Portland, Me., in United States soldiers' uniform, with a United States flag in his hands; to salute it; and to make patriotic speeches. The flag was left nailed to his house.—13th. An order from the War Department announced that it would stop all drafting and recruiting in the loyal states, curtail military expenses, and discontinue restrictions on commerce and trade as soon as possible. Raleigh, N. C., occupied by National cavalry.—14th. The colored men of

eastern Tennessee presented a petition in the State Senate for equality before the law and the elective franchise. Four National vessels—two gunboats, a tug, and a transport—blown up by torpedoes in Mobile Bay.—15th. General Saxton called a mass meeting at Charleston, and William

PORT LAFAYETTE.*

Lloyd Garrison addressed them.—18th. The Confederate prisoners at Point Lookout, 22,000 in number, express, by resolutions, their abhorrence of the assassination of President Lincoln.—22d. General Hancock reported that nearly all of the command of Moseby, the guerilla chief, had surrendered, and some of his men were hunting for him to obtain the \$2000 reward offered for him. [In 1878 Moseby was appointed United States Consul-general in China.]—26th. Booth, the murderer of President Lincoln, found in a barn belonging to one Garnett, in Virginia, three miles from Port Royal, with Herrold, an accomplice, and refused to surrender. The barn was set on fire, and Booth, while trying to shoot one of his pursuers, was mortally wounded by a shot in the head, fired by Sergeant Corbett, and died in about four hours.—27th. Edward Ingersoll, a reputable citizen of Philadelphia, a sympathizer with the insurgents, having made a disloyal speech in New York, was required by citizens of Philadelphia to apologize for it. He drew a pistol, when he was knocked down and beaten, and afterwards imprisoned for carrying concealed weapons and for assault and battery with intent to kill. General Howard issued an order to the citizens along the line of march of Sherman's army to the capital to the effect that they were to keep at home; that foraging was stopped; that supplies were to be bought; and all marauders punished.—28th. The steamer *Sultana*, with 2106 persons on board, mostly United States soldiers, blew up, took fire, and was burned at Memphis. Only about 700 of the people were saved.—29th. President Johnson removed all restrictions on commerce not foreign in all territory east of the Mississippi, with specified exceptions.

Mint of the United States. An act was passed April 2, 1792, for the establishment and

* Fort Lafayette was built in the narrow strait between Long Island and Staten Island, known as "The Narrows," at the entrance to the harbor of New York. During the Civil War it was used as a state prison for persons disaffected towards the national government.

regulation of a mint, but it was not put into full operation until January, 1795. During the interval of about three years its operations were chiefly experimental, and hence the variety of silver and copper coins which appeared between 1792 and 1795, now so much sought after by coin-collectors. The most noted of these is the "Washington cent," or "Liberty-cap cent," so called because it has the profile of Washington on one side and a liberty-cap on the other. The subject of a device for the national coin caused much and sometimes warm debate in Congress. The bill for the establishment of the mint originated in the Senate, and provided for an eagle on one side of the gold and silver coins. To this there was no objection. The bill proposed for the reverse a representation of the head of the President of the United States for the time being, with his name and order of succession to the

Presidency and the date of the coinage. To this it was objected that a President might not always be satisfactory to the people, who would be disturbed by the effigy of an unpopular or unworthy one. Besides, the head of the President might be viewed as a stamp of royalty on our coins, and would wound the feelings of many. The House, after much debate, did not agree with the Senate, and the bill was sent back. Then it was proposed to substitute a head or figure of Liberty. This was finally agreed to, but an attempt was afterwards made to substitute the head of Columbus. At last the eagle, in the place of the head of Liberty, was chosen for the golden coins. David Rittenhouse, of Philadelphia, had been chosen the first director of the mint. At that city (being the seat of government) it was established, and was never moved from it. It was the sole mint until 1835, when Congress created three branches. The dies used in coinage in all the mints in the United States are made under the supervision of the engraver of the mint at Philadelphia. (See *Coinage in the United States*.)

Minty, ROBERT H. G., was born in Mayo, Ireland, Dec. 4, 1831; served in the British army from 1849 to 1853; went to Michigan; and was made lieutenant-colonel of Michigan cavalry in 1861. He became distinguished in battles in the West and South, notably at Stone's River, Chickamauga, and in the Atlanta campaign, raiding with Kilpatrick in Georgia. He was made brigadier-general of volunteer cavalry in 1864.

Minute-men. Late in November, 1774, the Provincial Congress of Massachusetts authorized the enrolment of twelve thousand men in the province, who should be prepared to take the field at a minute's warning. Already there had been local organizations of this kind all over the province. Out of these an enthusiastic army was soon formed. Fathers and sons, encouraged by mothers, wives, and sisters, received lessons together in the art of war. Dea-

cons of churches, and even pastors, became captains of companies, and magistrates led the people in their preparations for immediate action. This army of twelve thousand men in Massachusetts were, from the conditions of their enlistment, called "Minute-men." There were similar organizations in other colonies, especially in Virginia.

Miranda, FRANCISCO, was born in Caracas, S. A., in 1750; died in a dungeon in Cadiz, Spain, in 1816. At the age of twenty he travelled extensively on foot in the English-American colonies. He visited the United States in 1783. He also made long journeys on foot in Continental Europe and Great Britain. He was a born agitator and revolutionist, and tried to free Spanish-American colonies from the Spanish yoke, presenting his projects to various European courts. In the French Revolution he acquired a high reputation as a military leader, especially as an engineer and tactician, and became a general of division. Twice he was expelled from France as a dangerous intriguer. Early in this century he was engaged in revolutionary projects in South America; and, aided by citizens of Great Britain and the United States, he was moving successfully towards the establishment of a consular government in Caracas (of which his grandfather had been governor), when internal dissensions ruined his scheme. He escaped to Carthage, when Bolivar delivered him to the Spaniards, who confined him in a dungeon in Cadiz the remainder of his days.

Miranda's Expedition. Francisco Miranda, a native of South America, became a resident of France at about the time of the establishment of the republic, when he took an active part in public affairs. Being suspected of intrigues, he was expelled from France three or four times; and about the beginning of the year 1806 he was in the United States for the purpose of fitting out an expedition having for its object the revolutionizing of the Spanish province of Caracas, which now constitutes the Republic of Venezuela. At that time there was much irritation of feeling between the United States and Spain, and the government officers averted their eyes from Miranda's doings. His preparations for the expedition were made at New York, while he resided at Washington city, and was on intimate social relations with President Jefferson and Secretary Madison. He chartered the ship *Leander* at New York, and she sailed from that port (February, 1806) with arms and about two hundred and fifty men. He was joined by other vessels. The expedition reached Caracas in safety, and, with the help of the English in that quarter, Miranda took possession of two or three towns on the coast. The people would not listen to his offers of liberty. The Spaniards captured two transports, with about sixty Americans, and the expedition ended in failure about three months after the *Leander* left New York.

Mischianza, THE. Sir Henry Clinton succeeded Sir William Howe as commander-in-chief of the British army in America. Before

Howe's departure from Philadelphia (May 24, 1778) he and his brother, the admiral, were honored by a grand complimentary entertainment, "the most splendid," the accomplished Major André wrote, "ever given by an army to their commander." It was given at the Wharton Mansion and lawns on the present Fifth Street. André was the chief inventor of the pageant, which was called, in the Italian tongue, *mischianza*, a medley, and the ticket of admission was

MISCHIANZA TICKET.

designed by him. It began with a grand regatta on the Delaware, in the presence of thousands of spectators, and accompanied by martial music and the flutter of banners. This over, the scene changed to a tournament on Wharton's lawn, in which young ladies of Tory families in Philadelphia joined in a spectacle imitating the noted military pastimes of the Middle Ages. There were "Knights" and "Ladies," a "Queen of Beauty," and all the paraphernalia of a scene of ancient chivalry. Then there was a grand ball and supper in a temporary hall, decorated by the skilful hand of André, with painted scenery, and with evergreens, lustrous mirrors, and a host of chandeliers. The entertainment was concluded by a grand display of fireworks. It was an appropriate closing of a round of dissipation in which the British army had indulged in Philadelphia for six months, where profligacy among the officers became so conspicuous that many of the Tory families who had welcomed the invaders had prayed for their departure.

Missionaries' Ridge (or Chattanooga), BATTLE OF. General W. T. Sherman was lying, with his corps, along the line of the Big Black River, in Mississippi, when General Grant called him (Sept. 22, 1863) and a greater portion of his command to Chattanooga. Sherman fought his way eastward. He crossed the Tennessee River to the north side, at Eastport (Nov. 1),

under cover of gunboats, and, pushing on, reported to Grant in person on Nov. 15. Sherman's corps was now in command of General Frank Blair, and, on the afternoon of Nov. 23, they were ready to cross the Tennessee above Chattanooga, on a pontoon-bridge which they had stealthily brought with them, at the moment when General Thomas was moving the centre of the Nationals towards the Confederates on Missionaries' Ridge, to ascertain whether Bragg was preparing to flee or to fight. He was ready for the latter act. When Thomas moved, the heavy guns at Fort Wood, Chattanooga, played upon Missionaries' Ridge and upon Orchard Knob, a lower hill a considerable distance in advance of the former. Wood's division, of Granger's corps, led the left, and Sheridan's the right. General Palmer supported Granger's right, Johnson's division remained in the trenches, and Howard's corps was in reserve. The Nationals soon drove the Confederates from Orchard Knob by a vigorous charge, carrying the rifle-pits on that eminence and taking 200 prisoners. Wood immediately intrenched; Howard moved up and took position on the left, and Bridge's (Illinois) battery was placed in position on the crest. Bragg had been fatally outgeneralled. To get Sherman's troops across the Tennessee without discovery, Hooker was ordered to divert the attention of the Confederates by an attack on Bragg's left on Lookout Mountain. (See *Lookout Mountain*.) The troops had all crossed before noon of the 24th, and proceeded to attack the Confederates on the northern end of Missionaries' Ridge, and secured an important point. The night of the 24th was spent in important preparations for battle the next day. Bragg drew all his troops across Chattanooga Creek and concentrated them on Missionaries' Ridge on the morning of the 25th. Hooker moved down to the Chattanooga valley from Lookout Mountain, and, in the afternoon, drove the Confederates out of Ross's Gap, capturing a large quantity of artillery, small-arms, ammunition, wagons, and stores. He then attempted to clear the Ridge of Confederates, but found them strongly fortified behind the intrenchments cast up there by Thomas at the time of the battle of Chickamauga (which see). Osterhans was leading the Nationals parallel with the Ridge on its eastern side, while Cruft was ordered to move along its crest, and Geary, with the batteries, marched up the valley on the western side. This dangerous movement in the valley Bragg's skirmishers attempted to meet, but were driven back upon their main line by a part of Cruft's forces. Meanwhile, the remainder of Cruft's column formed in battle line, and, moving at a charging pace, steadily pushed the Confederates back, their front line, under General Stewart, retreating, while fighting, upon the second line, under General Bate, while Geary and Osterhans were pouring murderous fires upon their flanks. So the half-running fight continued until near sunset, when the Confederates broke into confusion and fled, and full 2000 of them were made prisoners. Hooker's victory in that part

of the field was complete at twilight. Meanwhile, Sherman had been busy clearing the Ridge at the other extremity of the battle line, where Hardee was in command. His order of battle was similar to that of Hooker, and his troops were roused at sunrise. The ground to be traversed was very difficult; instead of a continuous ridge, it was a chain of hills, each wooded and fortified. General Corse led the way. Having gained the second crest from his point of departure, Corse, in moving forward, had a severe hand-to-hand struggle for an hour, but could not carry the works, nor could the Confederates repulse him. At the same time, General Morgan L. Smith and Colonel Loomis were advancing on both sides of the Ridge, fighting their way to the Confederate flanks. Up to three o'clock P.M. Sherman had not been able to gain much advantage. General Grant, from his post on Orchard Knob, had been watching all these movements. Early in the afternoon he ordered General Thomas to advance with the National centre. The divisions of Wood, Baird, Sheridan, and Johnson moved steadily forward. They created such a panic among the occupants of the rifle-pits at the base of the Ridge that they fled in great haste towards the crest. The Nationals stopped but for a moment to re-form, when, by an irresistible impulse, the troops, without orders from their commanders, began to follow the fugitives. The men of Willich's and Hazen's brigade had commenced running forward for security under the Ridge, but as they reached it they commenced its ascent. Hazen then gave the order "Forward!" and sent his staff-officers to urge everybody forward up the declivity. The fire they passed through was dreadful, but the men, without preserving lines, formed into groups wherever the ground gave cover; and each group, led by a color, steadily made its way up. Their colors were often shot down, but they were at once seized and borne along. The men pressed vigorously on, in the face of a terrible storm of grape and canister shot from about thirty guns on the summit, and murderous volleys of musketry from the well-filled rifle-pits on the crest. The Nationals did not waver for a moment, but pressed forward, when Lieutenant-colonel Langdon, with Ohio volunteers, sprang forward and made a lodgment on the hill-top, within five hundred yards of Bragg's headquarters. With shouts the remainder of the Nationals pushed upwards, and very speedily the whole battle line of the Confederates on Missionaries' Ridge was in their possession, with all the Confederate cannons and ammunition. Sherman soon drove the Confederates from the front, and the battle ceased at that end of the line. The divisions of Wood and Baird were obstinately resisted until dark, when, at the edge of the evening, the Confederates fled. General Breckinridge barely escaped capture. Grant reported the Union loss in the series of struggles which ended in victory at Missionaries' Ridge at 5286, of whom 757 were killed and 330 missing. Bragg's loss was about 3000 in killed and wounded and 6000 made pris-

oners. The Nationals captured 40 pieces of artillery and 7000 small-arms.

Missions to the Indians. The first act of the Legislature of Massachusetts for carrying the Gospel to the Indians passed in 1645, and it recommended the ministers to consult on the best means of effecting the design. By their advice, it is probable, the first Indian mission was organized. On the 28th of October, that year, the apostle Eliot (see *Eliot, John*) began his systematic labors among the Indians. His first regular services were at Nonantum, four or five miles from Roxbury. When he approached the village, with three other persons, several Indians, led by a grave and wise one, gave him a welcome and conducted him to a large wigwam, where a number of barbarians were assembled to hear the new doctrine. Eliot had given them notice of his coming. After a short prayer in English, he preached for an hour in the Indian tongue, and was well understood by his auditors, some of them listening with tears.

Mississippi. The first Europeans who traversed this region were De Soto (which see) and his companions. They made no settlements. La Salle discovered the river in 1682, and took formal possession of the country it watered in the name of his king. (See *La Salle, Robert Cavalier de*.) In 1716 the French erected a fort on the site of Natchez. The colonies planted there grew slowly until New Orleans was founded, when many settlers were attracted to the Mississippi River; but hostile Indians suppressed rapid growth, and it was not until after the creation of the Territory of Mississippi (April 7, 1798) that the population became numerous. The boundaries of the territory at first included all of Alabama north of the thirty-first parallel. In 1817 Mississippi was admitted into the Union as a state. A new constitution was adopted in

STATE SEAL OF MISSISSIPPI.

1832. In November, 1860, the Legislature, in extraordinary session, provided for an election of delegates to a convention to be held on Jan. 7, 1861, to consider the subject of secession. That convention passed an ordinance of secession on the 9th, and, on March 30, ratified the Constitution of the Confederate States. (See *Mississippi Ordinance of Secession*.) The northern portion of the state was the theatre of military operations in 1862 (see *Corinth* and *Iuka Springs*), but the most important military operations were in 1863, in movements connected with the siege and capture of Vicksburg (which see). On June 13, 1865, President Johnson appointed a provisional governor (W. L. Sharkey), who ordered an election of delegates to a convention which met Aug. 14. By that convention the constitution of the state was so amended as

to abolish slavery (Aug. 21, 1865), and the ordinance of secession was repealed. In October Benjamin G. Humphreys was elected governor of Mississippi, and congressmen were also chosen. The latter were not admitted to seats, for Congress had its own plan for reorganizing the Union. By that plan Mississippi and Arkansas constituted one military district, and military rule took the place of civil government. Early in January, 1868, a convention assembled to adopt a constitution, and remained in session until May 18. General Ames was appointed governor (June 16, 1868), in place of Governor Humphreys, and, at an election held June 22, the constitution was rejected. On April 10, 1869, Congress authorized the President to submit the constitution again to a vote of the people, with such clauses separate as he might deem proper. The constitution was almost unanimously ratified at an election in November. Objectionable clauses, such as those disfranchising and disqualifying persons who had taken part against the government in the Civil War, being voted upon separately, were rejected. A Republican governor (James L. Alcorn) was elected. In January, 1870, the Legislature ratified the Fourteenth and Fifteenth Amendments to the national Constitution. By act of Congress (Feb. 23, 1870) Mississippi was readmitted into the Union, and on March 10 Governor Alcorn was inaugurated, and the civil authority assumed rightful control.

Mississippi Company, THE. Anthony Crozat (which see), after large outlay and small returns, for five years, was glad to resign his patent. Other speculators were ready to take it up. John Law, a gambler, who had established a bank in Paris, under royal authority, established (1717) an association which he called the "Mississippi Company," or West India Company, based on a scheme of colonizing and drawing profits from the French possessions in North America. It soon became known as the "Company of the Indies." The company undertook to introduce into Louisiana 600 white settlers and half as many negroes. It extended its capital to 624 shares, of 500 livres (\$92.50) each, and offered to lend the King of France 1,600,000,000 livres, at three per cent. An extraordinary fever of stock-gambling ensued. Shares of the company rose to forty times their par value. A crash came in 1720, and Law became a fugitive. The Mississippi bubble burst. Law had received twelve square miles of land on the Arkansas River, which he attempted to settle with 1500 Germans. They came, but, on the bankruptcy of the company, finding themselves abandoned, went down to New Orleans, received allotments on both sides of the river, and settled there on cottage farms, raising vegetables for the supply of the town and the soldiers. So was begun the settlement of the rich tract known as "The German Coast."

Mississippi Ordinance of Secession. Elections for a state convention were held Dec. 20, 1860. The convention met at Jackson, the state capital, on July 7, 1861. The politicians in the

state, though a unit for secession, were divided into "Secessionists" and "Co-operationists," the latter favoring delay, so as to have the co-operation of the other states. These counselled waiting for an overt act of wrong on the part of the national government. But the hotspurs denounced this advice as cowardly in thought and disastrous in practice, and a local poet put submissive words into their mouths, calculated to stir the passions of the people. He said:

"We are waiting till Abe Lincoln grasps the *purse* and grasps the *sword*,
And is sending down upon us all his abolition horde;
Waiting till our friends are murdered and our towns and cities sacked,
And 'poor Sambo' gets his freedom—waiting for the 'overt act.'
Waiting till our fields of cotton, cane, and rice, and waving grain,
All are desolate and lonely 'neath King Cuffee's stupid reign;
Till our sisters, wives, and daughters are compelled to his embrace;
Yes, we're waiting, only waiting, for this horrible disgrace!"

When the convention met again only about one third of their number were found to be "Co-operationists." These tried to postpone action, but they were voted down by decided majorities. Delegates from South Carolina and Alabama, who were present, were invited to take seats in the convention. The leaders in the secession movement having prepared an ordinance, the committee appointed to report one was not long at the task. It was reported on the 8th, and many of the "Co-operationists" were so intimidated by threats, that, on the final vote the next day, only fifteen had the courage to vote No. It received eighty-four affirmative votes, and it was afterwards declared to be unanimous. Like the South Carolina Ordinance of Secession (see *South Carolina Secession Convention*), the Mississippi ordinance repealed all laws connecting that state with the other states of the Union, and declared it to be an independent sovereignty. They acknowledged the "sovereignty" of South Carolina. They assumed the right to dictate the terms on which the Mississippi should be navigated, in the portion that washed the borders of their commonwealth, and a company of artillerymen, calling themselves the "Quitman Battery," hastened to Vicksburg and planted cannons on a bluff there. This was the beginning of the fortifications at Vicksburg.

Mississippi River. Old writers spell its Indian name *Micho-sepé*, meaning "Great Water," or "Father of Waters." It was first discovered by Europeans with De Soto, in June, 1541, not far from the site of Helena, Ark., it is supposed. De Soto died on its banks in May or June, 1542. (See *De Soto, Fernando*.) In 1673 Joliet and Marquette descended the river to a point within three days' journey of its mouth. Father Hennepin explored it from the mouth of the Illinois River up to the Falls of St. Anthony in 1680, and in 1682 La Salle descended it to the Gulf of Mexico, and took possession of the country drained by it and its tributaries in the name of the French king, and named the great stream River Colbert. (See *La Salle, Robert Cavelier de*.) In 1699 Iberville built Fort Biloxie near its

mouth, and in 1703 the first settlement of Europeans in that region was made at St. Peter's, on the Yazoo branch. New Orleans was laid out in 1708, and the building of levees was commenced there.

Mississippi Valley on the East. The French, in pursuance of their policy for spreading their dominions in America, had always concealed from the English all knowledge of the country beyond the Appalachian range of mountains. In 1714 Colonel Alexander Spotswood, Lieutenant-governor of Virginia, resolved to acquire some knowledge of that mysterious region, and he went in person, with a few attendants, over those lofty ranges to the headwaters of the Tennessee and Kentucky rivers. He made the first certain discovery of a passage through those everlasting hills; but the country was very little known to Europeans until the middle of the eighteenth century.

Missouri was a part of what was originally known as "Upper Louisiana." By the grant of Louis XIV. to Crozat (which see), Sept. 14, 1712, "all the country drained by the waters emptying, directly or indirectly, into the Mississippi River, is included in the boundaries of Louisiana. In northern Louisiana were included Arkansas, Missouri, Iowa, Kansas, and Nebraska. Below the Missouri the settlements were more

STATE SEAL OF MISSOURI.

rapid. In 1720 the discovery of lead-mines within its present borders drew adventurers there. Its oldest town, St. Genevieve, was founded in 1755, and, by the treaty of Paris (which see), in 1763, that whole region passed into the possession of the English. Already many of the Canadian French had settled on the borders of the Mississippi. Lands were liberally granted to the colonists by the English. Emigrants from Spain flocked in. In 1775 St. Louis, which had been first a fur-trading establishment (see *Fur-trade, The American*), contained 800 inhabitants, and St. Genevieve about 460. In the region of Missouri there were soon stirring events; for Spain, taking sides with the Americans, made war on the English, and that country became master of Lower Louisiana and Florida. In 1780 the British from the lakes attacked St. Louis, but the timely arrival of George Rogers Clarke in Illinois saved it

from capture. (See *Clarke, George Rogers*.) After the war Spain retained Louisiana, and the country on the east bank of the Mississippi became the property of the United States. American settlers crossed the Mississippi, and collisions with the Spanish authorities ensued. Diplomacy settled the disputes, and the navigation of the Mississippi was made free to both parties. The purchase of Louisiana made a final settlement. (See *Louisiana*.) It was divided into the "Territory of Orleans" and the "District of Louisiana." The latter was admitted into the Union as the State of Louisiana in 1812. The name of the District of Louisiana was changed to Missouri, and at that time the population was full 22,000. In 1817 it had increased to 60,000, and application was made to Congress for permission to frame a state constitution. It was framed, and application was made for the admission of Missouri as a state. Then came the struggle between the friends and foes of the slave-labor system, which ended in the famous compromise (see *Missouri Compromise*), in accordance with the provisions of which Missouri was admitted to the Union, Aug. 10, 1821. From that time the material prosperity of the state rapidly increased. It was checked somewhat by the Civil War (1861-65). Popular feeling in Missouri was opposed to secession, but the state authorities favored it. Civil war was begun in that state by the governor (C. F. Jackson), who, on June 12, 1861, issued a call for the active service of 50,000 of the state militia, "for the purpose of repelling invasion, and for the protection of the lives, liberty, and property of the citizens." It was simply a call for revolt against the authority of the United States. From that time until the close of the Civil War some part of the state, particularly the southern portion, was the scene of military movements—of skirmishes and battles. A state convention, authorized by the Legislature, had assembled at St. Louis, March 4, 1861, to consider the subject of secession, and maintained its organization until the summer of 1863, when it passed an ordinance providing for the emancipation of all slaves in the state in 1870. (See *President Lincoln's Emancipation Proclamation*.) On Jan. 6, 1865, another convention assembled at St. Louis and framed a new constitution, which was ratified by a popular vote in June following. During the war Missouri furnished to the National army 108,773 troops. In 1869 the Legislature of Missouri, by a large majority, ratified the Fifteenth Amendment to the national Constitution.

Missouri Compromise. In 1817 the inhabitants of the Territory of Missouri petitioned Congress for admission into the Union as a state. A bill was introduced into Congress (Feb. 13, 1819) for that purpose, when James Tallmadge, Jr., of New York, moved to insert a clause prohibiting any further introduction of slaves within its domains, and granting freedom to the children of those already there, on their attaining the age of twenty-five years. This motion brought the slavery question again before Congress most conspicuously. After a three days'

vehement debate, it was carried, 87 to 76. As a companion to the Missouri bill, another to organize the Territory of Arkansas was introduced (Feb. 16). When it was taken up, John W. Taylor, of New York, moved to add a provision that neither slavery nor involuntary servitude should hereafter be introduced into any part of the territories of the United States north of 36° 30' north latitude, the northern boundary of the proposed new Territory of Arkansas. Arthur Livermore, of New Hampshire, who had been zealous for the Missouri restrictions, conceived that this proposition had been made "in the true spirit of compromise," but thought the line of division not sufficiently favorable to freedom. General W. H. Harrison agreed to the necessity of some such partition, but he proposed a line due west from the mouth of the Des Moines River, thus giving up to slavery the State of Missouri and all territory south of that latitude. This partition policy was warmly opposed by a large number of members of Congress from the North and the South, declaring themselves hostile to any compromise whatever. Slavery was either right or wrong, and there could be no compromise. Taylor withdrew his motion. The proposition for a compromise which was finally agreed to was originated by a Northern member, and not by Henry Clay, of Kentucky, as is generally supposed. This Missouri bill caused one of the most exciting debates on the slavery question ever before known in the national Legislature. Extreme doctrines and foolish threats were uttered on both sides. Southern members threatened a dissolution of the Union. There was much adroit management by the party leaders, who used great dexterity in trying to avoid a compromise—for one party insisted upon Missouri entering, if at all, as a free-labor state, and the other party insisted that it should enter as a slave-labor state. But compromise seemed to be the only door through which Missouri might enter; and, by adroit management, a compromise bill was carried (March 2, 1820) by a vote of 134 against 42. John Randolph denounced it as "a dirty bargain," and the eighteen Northern men who voted for it as "dough-faces." Monroe hesitated to sign the bill. There was an almost solid North against admitting Missouri as a slave-labor state. He consulted his cabinet concerning its constitutionality. The matter was allowed to go over until the next session, and it occupied much time during that session. At length Henry Clay moved a joint-committee (February, 1821) to consider whether or not it was expedient to admit Missouri into the Union; and if not, what provision adapted to her actual condition ought to be made. The motion prevailed—101 to 55—all of the Southern members, excepting Randolph and two or three followers, voting for it. The committee was appointed, and they reported. The closing decision on the Missouri question was finally reached by the adoption of a compromise (Feb. 27, 1821) substantially as proposed by Taylor of New York in 1819—namely, that in all territory south of 36° 30' north latitude (the southern boundary of the State of Missouri) slavery

might exist, but was prohibited in the region north of that line. So Missouri was admitted as a free-labor state. In the course of the later debates there was much angry feeling displayed, and unwise men, North and South, uttered the cry of disunion. A member from Georgia said, prophetically, in the course of the debate: "A fire has been kindled which all the waters of the ocean cannot put out, and which only seas of blood can extinguish." The "seas of blood" shed in the late Civil War did alone "extinguish it."

Missouri Compromise Act, SIGNING OF THE. President Monroe hesitated about signing the Missouri Compromise Act, because of doubts about the interpretation of a phrase and its constitutionality. He submitted two questions to his cabinet—"Has Congress the power to prohibit slavery in a territory?" and "Was the term 'forever,' in the prohibitive clause in the bill, to be understood as referring only to the territorial condition of the district to which it related, or was it an attempt to extend the prohibition of slavery to such states as might be erected therefrom?" The cabinet was unanimous in the affirmative on the first question. On the second question, Adams (John Quincy, Secretary of State) thought the term meant *forever*, and not to be limited to the existence of the territorial condition of the district. Others limited it to the territorial condition—a territorial "forever"—and not interfering with the right of any state formed from it to establish or prohibit slavery. Calhoun wished not to have this question mooted, and at his suggestion the second question was modified into the mere inquiry, Is the provision, as it stands in the bill, constitutional or not? This was essentially a different question. To it all could answer yes, and did so answer in writing. It was a deceptive show of unanimity of opinion in the cabinet. This writing was ordered to be deposited in the archives of state, but it afterwards mysteriously disappeared. The act was signed by the President, but with a different understanding from that which had been adopted by Congress. The transaction has upon the face of it the appearance of a trick to induce all parties to acquiesce in the measure.

Missouri Convention, THE (1861), assembled at Jefferson City, Feb. 28. On the second day of the session it adjourned to St. Louis, where it reassembled, March 4, with Sterling Price as president, and Samuel A. Lowe as secretary. Price professed to be a Unionist, and so obtained his election. He soon afterwards became one of the most active Confederate military leaders in that region. Luther J. Glenn, an accredited commissioner from Georgia, was allowed to address the convention on the first day of the session at St. Louis. He strongly urged Missouri to join the "Southern Confederacy;" but it was found that the atmosphere of St. Louis, in and out of the convention, was not congenial to the nonrishment of such seditious doctrines. The population of that city was made up largely of New-Englanders and Ger-

mans, who were loyal; while emigrants from slave-labor states, especially Virginia, composed the great body of the Secessionists. Glenu's remarks were greeted with hisses by spectators at the convention. The convention itself officially assured him that his views were not acceptable to that body. The proceedings of that convention throughout were marked by great dignity and propriety. The report of a Committee on Federal Relations, submitted to the convention on March 9, deplored the offensive language used towards the slave-labor states and the institution of slavery by the anti-slavery speakers and writers in the free-labor states; but declared that "heretofore there has been no complaint against the actions of the Federal government, in any of its departments, as designed to violate the rights of the Southern States." The committee concluded that, while the possession of the government by a sectional party might lead to dangerous sectional strife, the history of the country taught that there was not much to be feared from political parties in power. The report closed with seven resolutions evincing attachment to the Union; declaring the Crittenden Compromise (which see) to be a proper basis for an adjustment; that a convention of the states to propose amendments to the Constitution would be useful in restoring peace and quiet to the country; that an attempt to "coerce the submission of the seceding states, or the employment of military force by the seceding states to assail the government of the United States," would inevitably lead to civil war; and earnestly entreated the national government and the Secessionists to "stay the arms of military power." The convention substantially adopted this report, March 19; and an amendment was agreed to recommending the withdrawal of the national troops from the forts within the borders of the seceding states where there is danger of collision between the state and national troops. After appointing delegates to a border state convention, and giving power to a committee to call another session when it might seem necessary, the convention adjourned to the third Monday in December.

Missouri, LAST INVASION OF (1864). Emboldened by the failure of the Red River expedition (which see), the Confederates, by raiding bands, awed the Unionists in Arkansas into inactivity, and gave General Price an opportunity, early in the fall of 1864, to invade Missouri again, this time chiefly for a political purpose. Secret societies in sympathy with the "Knights of the Golden Circle" (which see) had been formed in Missouri and neighboring Southern States, whose object was to give aid to the Confederate cause and assist in the election of General McClellan, who, through the influence of the Peace faction, had been nominated for the office of President of the United States by the Democratic party. Price had been promised twenty thousand recruits if he should enter Missouri with a respectable military force. He and General Shelby crossed the Missouri border early in September with twenty thousand fol-

lowers, and pushed on to Pilot Knob, half-way to St. Louis. But the promised recruits did not appear. The vigilant Rosecrans, in command of the Department of Missouri, had discovered the plans of the disloyalists, and, by some arrests, had so frightened the remainder that they prudently remained in concealment. Price was disappointed; and he soon perceived that a web of great peril was gathering around him. General Ewing, with a brigade of National troops, struck him an astounding blow at Pilot Knob. Soon afterwards these and other troops under General A. J. Smith and General Mower sent Price flying westward towards Kansas, closely pursued. This chase was enlivened by several skirmishes, and late in November Price was a fugitive in western Arkansas with a broken and dispirited army. This was the last invasion of Missouri by the Confederates. In the expulsion of Price from Missouri General Pleasanton bore a conspicuous part. The total loss of the Nationals during the invasion was three hundred and forty-six killed and wounded. Price left Missouri much weaker than when he entered it.

Missouri, POSITION OF, IN 1861. The inhabitants of this state, lying west of the Mississippi, had been much agitated by the political events in Kansas. (See *Kansas, Civil War in.*) They had pretty well learned the merits of the question at issue, and when they were called upon to act they did so intelligently. They knew the value of the Union; and the great body of the people deprecated the teachings of the disloyal politicians, and determined to stand by the national government. Claiborne F. Jackson, a co-worker with the Secessionists, and an enemy to the Union, was inaugurated Governor of Missouri, Jan. 4, 1861. In his message to the Legislature, he recommended the people to stand by their sister slave-labor states in whatever course they might pursue. He recommended the calling of a convention. This the Legislature authorized (June 16), but decreed that its action on the subject of secession should be submitted to the people before it should be valid. The election resulted in a large Union majority. The convention assembled at Jefferson City, Feb. 28. Its action was chiefly on the side of the Union. It declared substantially, like Kentucky, that the State of Missouri would stand by the national government on certain conditions. The Legislature of Missouri was in session at the same time. As the governor could not mould the action of the convention to his views, he labored to that end with the Legislature. Determined to give the Secessionists control of the strong Union city of St. Louis, the chief depository of fire-arms within the state, he procured an act for the establishment of a metropolitan police in that city, under five commissioners to be appointed by the governor. This was the first and an important step towards measures which involved Missouri in the horrors of civil war. (See *St. Louis, Revolutionary Movements at.*)

Missouri, PREPARATIONS FOR WAR IN (1861).

The capture of the Secessionist troops at St. Louis (see *Arsenal at St. Louis*) produced consternation among the Secessionists at Jefferson City, where the Missouri Legislature was in session. A bill was immediately passed by which the governor was authorized to receive a loan of \$500,000 from the banks and to issue \$1,000,000 in state bonds for war purposes. He was also authorized to purchase arms, and the whole military power of the state was placed under his control. Meanwhile General Harney had issued a proclamation denouncing the bill as an indirect secession ordinance, and null; yet, anxious for peace, he was ready to pursue a conciliatory policy. He entered into a compact (May 21) with Sterling Price, a general of the state militia, which had for its object the securing of the neutrality of Missouri in the impending conflict. Price, in the name of the governor, pledged the power of the state to the maintenance of order. Harney, in the name of his government, agreed to make no military movements so long as that order was preserved. The loyal people were alarmed, for they well knew the governor would violate his pledge. The national government did not sanction the compact. General Harney was relieved of his command, and on May 29 Lyon, who had been commissioned (May 16) a brigadier-general, was put in his place and made commander of the Department of Missouri. The purse and sword of Missouri were in the hands of the governor, and he defied the national government. He determined to wield the power of the state in favor of the Southern Confederacy. Finally General Lyon and others held a conference (June 11) with Governor Jackson. He demanded as a vital condition of pacification the disbanding of the "Home Guards"—loyal citizens—throughout the state, and that no National troops should be allowed to set foot on the soil of Missouri. Lyon refused compliance, and on the following day the governor raised the standard of revolt. He issued a proclamation calling into active service fifty thousand of the state militia "for the purpose of repelling invasion, and for the protection of the lives, liberty, and property of the citizens," telling the people their primary allegiance was to the State of Missouri. He ordered two important railway bridges between St. Louis and Jefferson City to be burned and the telegraph wires to be cut. So Governor Jackson inaugurated civil war in Missouri.

Missouri Proclaimed a Member of the Confederacy. Thomas C. Reynolds, Lieutenant-governor of Missouri, issued a proclamation at New Madrid (July 31, 1861), as acting chief-magistrate in the "temporary absence," he said, "of Governor Jackson," in which he declared the absolute severance of Missouri from the Union. "Disregarding forms," he said, "and looking to realities, I view any ordinance for the separation from the North and union with the Confederate States as a mere outward ceremony to give notice to others of an act already consummated in the hearts of the people; consequently, no authority of the United States will hereafter be permitted in Missouri." This short

way of transferring the allegiance of the people of a state from one power to another was followed by the announcement, in the same proclamation, that they were placed under the military rule of the Confederacy, and that, by invitation of Governor Jackson, General G. J. Pillow, of Tennessee, had already entered Missouri with troops. The fugitive governor (Jackson) had been to Richmond to prepare the way for the admission of Missouri into the Confederacy. From New Madrid he proclaimed (Aug. 5, 1861) that Missouri was "a sovereign, free, and independent republic." On the 20th of the same month the Confederate Congress at Richmond passed an act to "aid the State of Missouri in repelling invasion by the United States, and to authorize the admission of said state as a member of the Confederate States of America." Measures were speedily adopted for the consummation of the alliance, and during a greater portion of the war men claiming to represent the people of Missouri occupied seats in the Confederate Congress at Richmond. The old Legislature of Missouri met at Neosho, Oct. 21, and on the 28th passed an Ordinance of Secession. An act to provide for the defence of the State of Missouri was adopted Nov. 1, in which provision was made for the issue of what were called "Defence Bonds" to the amount of \$10,000,000, payable in three, five, and seven years.

Missouri Purged. Strengthened by the successes of Pope (see *Blackwater, Battle at the*), General Halleck, in command of the Department of Missouri, prepared to put forth more vigorous efforts to purge that state of insurgents and to effectually suppress the insurrection. On Dec. 3, 1861, he declared martial law in St. Louis, and afterwards extended it to all railroads and their vicinities. Meanwhile Price, being promised reinforcements from Arkansas, moved back to Springfield, where he concentrated about twelve thousand men, and prepared to spend the winter there. Halleck sent General S. R. Curtis to drive him out of the state. Curtis was assisted by Generals Davis, Sigel, Asboth, and Prentiss. They moved in three columns. Early in February, 1862, Price fled into Kansas, whither he was pursued by Curtis; and Halleck wrote to his government, late in February, that he had "purged Missouri," and that the flag of the Union was "waving in triumph over the soil of Arkansas." In accomplishing this work no less than sixty battles—most of them skirmishes—had been fought on Missouri soil, beginning with Booneville, at the middle of June, 1861, and ending at the middle of February, 1862. These conflicts resulted in the loss, to both parties, in killed, wounded, and prisoners, of about eleven thousand men.

Missouri River, THE. Recent investigations seem to make it certain that the Mississippi River, from its confluence with the Missouri, should be called the Missouri; and that the Mississippi proper, above that confluence, is a branch of the Missouri. Above their confluence the Mississippi drains 169,000 square miles, and the Missouri drains 518,000 square miles.

From that point to Lake Itasca the length of the Mississippi is 1330 miles; while that of the Missouri, from its sources in Madison, Red Rock, and Gallatin lakes, is about 3047 miles. At the confluence of the rivers the Mississippi has a mean discharge of 105,000 cubic feet of water a second, and the Missouri 120,000 cubic feet of water a second. Above that confluence the Missouri is navigable to Fort Benton, Montana, by good-sized steamboats, a distance of 2682 miles, or more than twice the length of the Mississippi from Lake Itasca to its confluence with the Missouri. Reckoning the Mississippi below the confluence as the Missouri makes the latter, to the Gulf—4347 miles—the longest river in the world.

Missouri Union Convention. This convention, which had been held in February, 1861, and adjourned, reassembled at Jefferson City, the capital of the state, on July 22, and proceeded to reorganize civil government for Missouri, which had been broken up by the flight of the governor and other officers and the dispersion of the Legislature, many of whom were now insurgent soldiers. By a vote of fifty-six to twenty-five the convention declared the various state offices vacant; also that the seats of the members of the General Assembly were vacant; and they proceeded to fill the executive offices to carry on a provisional government, and appointed the first Monday in November as the time for the people to elect all the state officers and a new Assembly. The convention issued an address to the people, in which they set forth the dangers with which the commonwealth was menaced by the acts of the Secessionists, and exposed the treasonable acts of the governor and his associates. H. R. Gamble was appointed Provisional Governor; W. P. Hall, Lieutenant-governor; and M. Oliver, Secretary of State. The new provisional government, by discreet action, secured the confidence and support of the majority of the people of Missouri.

Mitchel, ORMSBY McKNIGHT, LL.D., was born in Union County, Ky., Aug. 28, 1810; died

ORMSBY M. MITCHEL

at Beaufort, S. C., Oct. 30, 1862. He graduated at West Point in 1829, and was assistant pro-

fessor of mathematics there until 1831. He became a lawyer, and for ten years (1834-44) he was professor of mathematics, philosophy, and astronomy in Cincinnati College. When an observatory was established at Cincinnati he became its director. Soon afterwards he became engineer of a railroad, and from 1859 to 1861 he was director of the Dudley Observatory at Albany, N. Y. Professor Mitchel was a very popular lecturer on astronomy, but the breaking-out of the Civil War turned his extraordinary energies into another field of effort. In August, 1861, he was made brigadier-general of volunteers and ordered to the Department of the Ohio. He made a most successful march southward from Nashville, taking possession of an important region along the line of the Charleston and Memphis Railroad; and his successes promised liberation for East Tennessee, when he was restrained by the excessive caution of his chief commander, General Buell. For these exploits Mitchel was made major-general in April, 1862. (See *Mitchel's Expedition*.) In September he was made commander of the Department of the South, with his headquarters at Hilton Head, where he was working with his usual energy in preparations for a vigorous campaign, when he perished by yellow fever.

Mitchell, MARIA, an American astronomer, and a member of the Society of Friends, was born at Nantucket, Aug. 1, 1818. She inherited from her father, William Mitchell (who died at Vassar College, Poughkeepsie, N. Y., in April, 1869, aged seventy-five years), a fondness for astronomical studies, and became a valuable assistant to him in the study of astronomy when she was quite young. Examining nebulae and searching for comets, her industry and efforts were rewarded when, on Oct. 1, 1847, at the age of twenty-nine years, she discovered a telescopic comet, for which she received a gold medal from the King of Denmark. She was afterwards employed in making observations connected with the coast survey, and for many years assisted in the compilation of the *Nautical Almanac*. In the spring of 1865 she was appointed professor of astronomy and superintendent of the observatory at Vassar College (the first institution of the kind for the higher education of women established on the earth), and entered upon her duties in September. That position she now (1880) fills. Miss Mitchell is a member of the American Association for the Advancement of Science, being the first woman admitted to that body. She has received the honorary degree of Ph. D.

Mitchel's Expedition. The Confederate forces under General A. S. Johnston, when they passed through Nashville (see *Nashville, Evacuation of*), pushed on to Murfreesborough, and there, taking a southwesterly course, joined the forces under Beauregard at Corinth, in northern Mississippi. General Ormsby M. Mitchel was sent by General Buell, with a part of his force, in the direction of Huntsville, Ala., to seize and hold the Memphis and Charleston Railway at that place. He performed this task with most wonderful vigor.

With engines and cars captured at Bowling Green he entered Nashville, and pushed on southward. He reached the southern boundary of Tennessee on April 10, crossed the state-line the same day, and entered northern Alabama. He had passed through a very hostile region, but now saw signs of loyalty. Pushing on to Huntsville, before dawn, April 11, while the unsuspecting inhabitants were soundly snoring, he surprised and captured the place. He did not tarry long there. Finding himself in possession of an ample supply of rolling-stock, he speedily organized two expeditions to operate along the line of the railway each way from Huntsville. Colonel Sill led the expedition eastward to Stevenson, and Colonel Turchin the other westward to Tusculmbia. On April 16 Mitchel said to his soldiers: "You have struck blow after blow with a rapidity unparalleled. Stevenson fell sixty miles to the east of Huntsville; Decatur and Tusculmbia have been in like manner seized, and are now occupied. In three days you have extended your front of operations more than one hundred miles, and your morning-gun at Tusculmbia may now be heard by your comrades on the battle-field made glorious by their victory before Corinth." (See *Corinth, Battle of*.)

Mitchill, SAMUEL LATHAM, M.D., LL.D., was born at North Hempstead, L. I., Aug. 20, 1764; died in New York city, Sept. 7, 1831. He studied medicine with Dr. Bard (which see), but turned his attention to law, and began a public career by serving as commissioner (1788) to treat with the Iroquois (which see) in New York State for the purchase of their lands. In 1790 he was in the Legislature, and at the age of twenty-eight became professor of chemistry, natural history, and philosophy in Columbia College. Dr. Mitchill was ever ready to labor for the enlargement of the bounds of human knowledge and to advance the interests of mankind. He was one of the founders of the Society for the Promotion of Agriculture, Manufactures, and the Useful Arts, and his scientific labors made him famous at home and abroad when he was little past thirty years of age. In 1797 he assisted in establishing the *Medical Repository*, a magazine which he edited sixteen years. He was a member of the Lower House of Congress from 1801 to 1804 and a United States Senator from 1804 to 1809. From 1808 to 1820 he was professor of natural history in the New York College of Physicians and Surgeons; of botany and materia medica from 1820 to 1826, and was vice-president of the Rutgers Medical School. With Drs. Hosack and Williamson he founded the New York Literary and Philosophical Society. Dr. Mitchill possessed a very retentive memory, and acquired vast stores of learning. He believed in Fulton's ability to establish navigation by steam, promoted his interests in the Legislature, and was one of the friends who accompanied him on his experimental voyage from New York to Albany in September, 1807.

Mob in Baltimore (1861). (See *Massachusetts Troops in Baltimore*.)

Mobile Bay, NAVAL BATTLE IN. After the destruction of the *Alabama* (which see) it was determined to seal up the ports of Mobile and Wilmington against English blockade-runners. These were the only ports then open to them. Admiral Farragut was sent for that purpose to the entrance of Mobile Bay, full thirty miles below the city of Mobile, with a fleet of eighteen vessels, four of them iron-clad, while a co-operating land force 5000 strong, under General Gordon Grauger, was sent from New Orleans to Dauphin Island. Farragut appeared Aug. 5, 1864. The entrance to Mobile Bay is divided into two passages by Dauphin Island. On the eastern side of this island was Fort Gaines, commanding the main entrance; and southeasterly from it was Fort Morgan, a still stronger work, with a light-house near it. These forts the Confederates had well armed and manned, and within the bay lay a Confederate flotilla under Admiral Buchanan. (See *Monitor and Merrimac*.) His flag-ship was the *Tennessee*, a powerful "ram," and it was accompanied by three ordinary gunboats. Farragut lashed his wooden ships together in couples, his own flag-ship, the *Hartford*, being tethered to the *Metacomet*. Wishing to have a general oversight of the battle, he had himself lashed to the main-top of the *Hartford*, that he might not be dislodged by a sudden shock, and by means of a tube extending to the deck he gave orders. In this position he went into the battle, boldly sailing in between the forts, and delivering terrific broadsides of grape-shot, first upon Fort Morgan. The "monitor" *Tecumseh*, which led the National vessels, was struck by the explosion of a torpedo directly under her turret, carrying down with her Commander Craven and nearly all of his officers and crew—only 17 of 130 were saved. Farragut ordered the *Hartford* to push on and the others to follow, unmindful of torpedoes. The forts were silenced by the storm of grape-shot poured upon them, but as the National fleet entered the bay the Confederate vessels opened upon them. The "ram" *Tennessee* rushed at the *Hartford*, but missed her. The fire of the three gunboats was concentrated on the flag-ship. The fight was short. One of the Confederate gunboats was captured, and the other two sought safety under the cannons of the fort. Under cover of night one of them escaped to Mobile. Believing the battle over at dusk, Farragut had anchored his vessels, when, at nearly nine o'clock, the "ram" *Tennessee* came rushing at the *Hartford* under a full head of steam. The other National vessels were ordered to close upon her. A tremendous fight with the monster at short range occurred, and very soon the *Tennessee*, badly injured, surrendered. Her commander (Buchanan) was severely wounded. The Confederate squadron was destroyed. The forts were assailed by land and water the next day, and the three were surrendered, the last (Fort Morgan) on the morning of Aug. 23. With this victory the government came into possession of 104 guns and 1464 men, and it effectually closed the port of Mobile to blockade-runners. This victory, and that at Atlanta soon afterwards, together with the

hearty response given by the people of the free-labor states to the call of the President (July 18, 1864) for 300,000 men, gave assurance that the Civil War was nearly ended.

Mobile, CAPTURE OF (1865). General Joseph E. Johnston said Mobile was the best-fortified place in the Confederacy. It was garrisoned by about 15,000 men, including troops on the east side of the bay and 1000 negro laborers subject to the command of the engineers. The department was then (1865) in command of General Richard Taylor, son of President Taylor. For several months after the harbor of Mobile was sealed (see *Mobile Bay, Naval Battle in*) there was comparative quiet in that region; but when Sherman had finished his triumphal march from Atlanta to the sea (which see) the government determined to repossess Alabama, beginning with a movement against Mobile, and by other operations in the interior. General E. R. S. Canby, commanding the West Mississippi Army, was charged with the conduct of the expedition against Mobile, and the co-operating force was that of General J. H. Wilson, the eminent cavalry leader, under the direction of General Thomas. Early in 1865 General A. J. Smith's corps joined Canby at New Orleans (Feb. 21). That corps went to Dauphin Island, at the entrance to Mobile Bay, where a siege-train was organized, consisting of ten batteries. Kuiper's cavalry, attached to the corps, marched overland from New Orleans. Everything was in readiness for an attack on Mobile by the middle of March, with from 25,000 to 30,000 troops, including cavalry; and the West Gulf Squadron, under Admiral Thatcher, was ready to co-operate. It was so strongly fortified by three lines of works on its land side that it was determined to flank the post by a movement of the main army up the eastern side of the bay. The Thirteenth Corps began a march on the 17th from Fort Morgan over a swampy region in heavy rain, and the Sixteenth Corps crossed the bay from Fort Gaines and joined the other. At the same time a feint was made on Mobile to attract attention from this movement. General Steele, with Hawkins's division of negro troops and some cavalry, had been marching from Pensacola to Blakely, ten miles north of Mobile, to induce the belief that Montgomery was Canby's real objective point. On March 25 this force encountered and defeated 800 Alabama cavalry under General Clanton. The Confederates lost about 200 men killed and wounded, and 275 made prisoners. Steele found very little opposition afterwards until he reached the front of Blakely. The Nationals on the east side of the bay pushed on to Spanish Fort, seven miles east of Mobile. It was invested (March 27), but its garrison of nearly 3000 of Hood's late army (see *Nashville, Battle at*), with its neighbors, made it a stout antagonist, willing to give blow for blow. Warmer and warmer waxed the fight on that day, and before sunset a tremendous artillery duel was in progress, in which gunboats of both parties joined, and kept it up all night. Then a siege was formally begun (March 28). The Nationals finally brought to bear upon the

fort sixteen mortars, twenty heavy guns, and six field-pieces. Towards sunset, April 8, Canby began a general assault by a consecutive fire from all his heavy guns, his field-pieces, and his gunboats. An Iowa regiment, encountering some Texas sharpshooters, charged upon and overpowered them. Sweeping along the rear of the intrenchments, they captured 300 yards of them, with 350 prisoners and three battle-flags. This exploit made the Confederates evacuate the fort, and by two o'clock the next morning it was in possession of the Nationals. The garrison, excepting 600 made prisoners, escaped. It had expected assistance from Forrest, but Wilson was keeping him away. (See *Wilson's Raid*.) The spoils were thirty heavy guns and a large quantity of munitions of war. Forts Huger and Tracy were also captured, April 11. The key to Mobile was now in the hands of the Nationals. Torpedoes were fished up, and the National squadron approached the city. The army moved on Blakeley, and on April 9 the works there were attacked and carried. (See *Blakeley, Battle of*.) Meanwhile the Thirteenth Corps had been taken across the bay to attack Mobile. But the army found no enemy to fight, for General D. H. Maury, in command there, had ordered the evacuation of the city; and on the 11th, after sinking two powerful "rams," he fled up the Alabama River with 9000 men on gunboats and transports. On the 12th General Granger and Rear-admiral Thatcher demanded the surrender of the city. This was formally done the same evening by the civil authorities, and on the following day Veatch's division entered the city and hoisted the national flag on the public buildings. Generals Granger and Canby entered the city soon afterwards. The "repossession" of Mobile cost the national government 2000 men and much treasure. Seven vessels-of-war had been destroyed by torpedoes. During this campaign of about three weeks the army and navy captured about 5000 men, nearly 400 cannons, and a vast amount of public property. The value of ammunition and commissary stores found in Mobile was valued at \$2,000,000. Wilson's raid in the interior had kept reinforcements from being sent to Mobile. (See *Wilson's Raid*.)

Mobile, SEIZURE OF (1812). Under the act of cession of Louisiana from France the United States claimed all of West Florida, including Mobile. A large portion of that territory had been annexed to the Territory of Mississippi, and in the winter and spring of 1812, when war had been determined upon, the importance to the United States of possessing Mobile was very apparent. In March, General Wilkinson, in command of the United States troops in the Southwest, was ordered to take possession of it. Wilkinson sent Commodore Shaw, with gunboats, to occupy Mobile Bay and cut off communication with Pensacola. Lieutenant-colonel Bowyer, then with troops at Fort Stoddart, was ordered to be prepared to march on Mobile at a moment's notice for the purpose of investing the fort there. Wilkinson left Mobile March 29, on the sloop *Alligator*, and, after a perilous voy-

age, reached Petit Coquille, when he sent a courier with orders to Bowyer to march immediately. Wilkinson's troops arrived in Mobile Bay April 12, landed the next morning, and at noon six hundred men appeared before Fort Charlotte, commanded by Captain Cayetano Perez, and demanded its surrender. On the 15th the Spaniards evacuated the fort and retired to Pensacola, and the Americans took possession. Placing nine cannons in battery on Mobile Point, Wilkinson marched to the Perdido. There he began the erection of a fort, but the place was soon abandoned, and another was begun and finished on Mobile Point, and called Fort Bowyer, in honor of the brave lieutenant-colonel of that name. Such was the beginning of a movement which resulted in the acquisition of all Florida by the Americans.

Mobilians, or Floridians. These composed a large number of tribes, and were next to the Algonquins in the extent of their domain and power when Europeans discovered them. They were superior to most of the Algonquins in the attainments which lead to civilization; and they were evidently related to the inhabitants of Central and South America. The domain of the Mobilians extended along the shores of the Gulf of Mexico from the Atlantic to the Mississippi River, more than six hundred miles. It stretched northward along the Atlantic coast to the mouth of the Cape Fear River, and up the Mississippi to the mouth of the Ohio, comprising a large portion of the present cotton-states. A greater portion of Georgia, the whole of Florida, Alabama, and Mississippi, and parts of South Carolina, Tennessee, and Kentucky were included in their territory. The nation was divided into three grand confederacies—viz., Muscoghees, or Creeks, Choctaws, and Chickasaws. See *Creek Confederacy, Choctaws, and Chickasaws*.

Model North Carolina Tory, A. David Fanning was one of the most brutal of the loyalist leaders in North Carolina, and was a favorite of the British commanders. (See *Scotch Spy*.) He was at the head of about one thousand desperate men in 1782, and maintained a reign of terror in central North Carolina for a long time. His letters to the British commanders reveal his infamy. In March, 1782, he wrote: "My men being all properly equipped, on the 12th assembled together to give the rebels a small scourge, which we set out for." Then he details some of his operations. They broke into the house of Andrew Balfour, of Randolph County, N. C., a member of the Legislature, and in the presence of his sister and daughter shot him through the body and neck. On their way to the house of another victim they "burned several rebels' houses," he reported. The man they were after escaped from his house with three balls through his shirt, when they desolated his whole plantation. When they reached the house of "another rebel officer," "I told him," says Fanning, "if he would come out of the house I would give him his parole." The officer too well knew the character of the man to believe his promise, and refused. "With that," wrote Fanning, "I

ordered the house to be set on fire. As soon as he saw the flames increasing he called out to me to spare his house for his wife's and children's sake, and he would walk out with his arms in his hands. When he came out he said 'Here I am;' with that he received two balls through his body." After this infamous act he proceeded to "destroy all the rebel property on the settlement for forty miles." On April 18, while on his way towards Chatham, he learned that there was a wedding-party assembled. "We surrounded the house," Fanning wrote, "and drove all out one by one. I found one concealed up stairs. Having my pistols in my hands, I discharged them both at his breast. He fell and that night expired." Such was the man to whom the British gave the commission of colonel of the loyal militia in Randolph and Chatham counties, N. C., with authority to give commissions to subalterns and captains as brutal as himself. Notwithstanding his confession in his letters of high crimes, he was recommended by the British officer of American claims as a proper person to be put upon the half-pay list; and that reward, for such services as are here recorded, he enjoyed in Nova Scotia for forty-two years. He died in 1825. (See *Fanning, David*.)

Modocs. These Indians were originally a part of the Klamath nation. Their name means "enemies," and was given to them by others. Such is the case with almost all existing tribes, their real names being obscured or lost by the substitution of nicknames. The Modocs were first found on the south shore of Lake Klamath, in California, when both sexes were decently clothed in skins. In their wars they held captives as slaves, and traded in them. The early emigrants to California encountered them as hostiles, and they massacred many white people. In 1852 Ben Wright, who sought revenge, invited a band of Modocs to a peaceful feast, when he and his men murdered forty-one out of forty-six Indians who were there. The Modocs never forgave the outrage, and war with them was kept up at intervals until 1864, when, by a treaty, they ceded their lands to the United States, and agreed to go on a reservation. The treaty was not ratified by the government until 1870, nor the reservation set apart until 1871. The Modocs meanwhile had gone upon the Klamath reservation, but it was so sterile that they could not live there. They were cheated by the government and harassed by the Klamaths, who were anciently their enemies, and some went to another reservation. Unfortunately some Klamaths were put with them, and trouble continued, when two Modoc bands left the reservation. A clan known as Captain Jack's band were uneasy and turbulent. Their tribe complained of them, and in the spring of 1872 they were ordered back to the Klamath reservation. They refused to go, and late in November (1872) United States troops and citizens of Oregon attacked their two camps on opposite sides of a river. The people were repulsed with loss, and the united Modocs, retreating, massacred some white settlers on the way, and took refuge in the Lava Beds, a volcanic region difficult for a

foe to enter if moderately defended. In June, 1873, General Wheaton attempted to drive the Modocs from their stronghold, but could not penetrate within three miles of them, after the loss of several men. General Gillem made an equally unsuccessful attempt to dislodge them. In the meantime the government had appointed a commission of inquiry, and clothed it with power to adjust all difficulties. It met the Modocs in conference on the 11th of April, 1873, when the Indians killed General Canby and Dr. Thomas, two of the commissioners, and wounded Mr. Meacham, another commissioner. After this foul act of treachery, operations against the Modocs were pressed with vigor. A long and stubborn resistance ensued, but finally Captain Jack and his band were compelled to surrender. The chief and three of his prominent associates were tried by a military commission and executed at Fort Klamath, Oct. 3, 1873. The remainder were placed on the Quappaw reservation, in the Indian Territory. Jack's band numbered one hundred and forty-eight; those left at the Klamath agency, and who took no part in hostilities, numbered about one hundred.

Mohawk Valley, THE. The valley of the Mohawk River, extending from near the middle of the State of New York to the Hudson River, is one of the most interesting historical regions in the Republic. Within it, according to tradition, was formed the powerful Iroquois Confederacy, the members of which have been called "The Romans of the Western World." (See *Iroquois Confederacy*.) French missionaries spread through the valley a knowledge of the Christian religion, and a hundred years before the old war for independence it was the scene of sharp conflicts between the natives and intruding Europeans. Within its borders, before that time, its chief inhabitant (William Johnson) received the honors of knighthood, and ruled not only over a vast private manorial domain, but also over Indian tribes of the Confederacy as their official superintendent. When the Revolution broke out his family were the leaders of the adherents to the crown in the northern regions of New York; and his son, Sir John, who inherited his title and his possessions, with a large number of Scotch retainers and other white people, organized a corps of loyalists called "Johnson Greens," which, with Indians under Brant, his kinsman by marriage, carried on a most distressing warfare against the patriots, and gave the region the name of the "Dark and Bloody Ground" (which see). Later, the Erie Canal, the most gigantic single work of internal improvement in our country, was dug the whole length of the valley, and became the aqueous highway for a vast commerce between the Western States and the Atlantic Ocean.

Mohawks. These were the most celebrated of the Five Nations. (See *Iroquois Confederacy*.) Their proper name was Agmagne, and they called themselves, as a tribe, She-bears. That animal was their totemic symbol. The neighboring tribes called them Mahaqua, which name the

English pronounced Mohawk. Champlain and his followers, French and Indians from Canada, fought them in northern New York in 1609. At Norman's Kill, below the site of Albany, the Dutch made a treaty with them in 1698, which was lasting; and the English, also, after the conquest of New Netherland, gained their friendship. The French Jesuits gained many converts among them, and three villages of Roman Catholics on the St. Lawrence were largely filled with the Mohawks. They served the English against the Canadians in the French and Indian War (which see), and in the old war for American independence, influenced by Sir William Johnson and his brother-in-law Brant, they made savage war on the patriots, causing the valleys in central New York to be called the "Dark and Bloody Ground" (which see). After that struggle, the greater portion of them removed to Grand River, fifty or sixty miles west of the Niagara River, where they still are. Many of them are Christians, and have a church there, with a communion-service presented by Queen Anne. The Common Prayer-book has been translated into their language, one edition by Eleazar Williams, the "Lost Prince." Tradition says that at the formation of the Confederacy Hi-a-wat-ha (which see) said, "You, the Mohawks, sitting under the shadow of the 'Great Tree,' whose roots sink deep into the earth, and whose branches spread over a vast country, shall be the first nation, because you are warlike and mighty." The Confederacy being called "the long house," the Mohawks were denominated the "Eastern Door."

Mohawks, FRENCH EXPEDITION AGAINST THE (1661). The Mohawks in eastern New York made frequent incursions into Canada. Finally, in 1661, M. de Tracy, French Viceroy of New France, although over seventy years of age, led a military expedition against the Mohawks. He was accompanied by M. de Courcelles, Governor of Canada. A regiment had lately been sent to Canada from France. With twenty-eight companies of foot, and all the militia of the colony of Quebec, he marched seven hundred miles into the Mohawk country in the dead of winter, easily crossing the swamps and streams on bridges of ice, and burrowing in the snow at night. The Mohawks, on the approach of the French, retired deeper into the forest with their women and children, and all the invaders accomplished was to burn several villages and murder some sachems.

Mohawks, THE, AND THE FRENCH AND ENGLISH. The treacherous Mohawks had been coquetting with the French a long time, now offering friendship, now attacking them, until the spring of 1667, when the exasperated Canadians resolved to chastise them for their perfidy. Tracy, a bold leader, set out in person at the head of twelve hundred white soldiers and one hundred Indian allies, passed down Lake Champlain in boats and canoes, and in October marched through the Mohawk country, burning the villages and setting up the arms of France at conspicuous places. On his return to Quebec, Tra-

cy sent back prisoners with terms of peace for the Mohawks to consider. The English, made anxious by these events, tried to persuade the Mohawks to remain faithful to them; but the latter, remembering how well the French could fight, and also the fearful sight of their burning villages, their women and children hiding in the woods, and their dead warriors, would not listen to the appeals of the English. When the warm weather came, deputations from the Mohawks and Oneidas appeared in Quebec and promised submission. The Indians brought their families with them to attest their sincerity, and a treaty was made by which the Mohawks promised allegiance to the French monarch. They also consented to listen to the teachings of the Jesuit missionaries. This treaty left the whole northern frontier exposed to incursions by the French and Indians.

Mohawks, THE, ATTACKED BY THE FRENCH (1693). Count Frontenac, Governor of Canada, unable to effect a treaty of peace with the Five Nations, meditated a blow on the powerful Mohawks. In midwinter, 1693, he collected an army of about seven hundred French and Indians, well supplied with everything for a campaign at that season. They left Montreal Jan. 15, and after severe hardships reached the Mohawk valley early in February, and captured three castles. At the third castle they found some Indians engaged in a war-dance. There a severe conflict ensued, in which the French lost about thirty men. In the expedition they captured about three hundred Indians in the English interest, and were making their way back to Canada when they were pursued by Colonel Schuyler and several skirmishes ensued. In the Scarron (Schroon) valley the pursuit ended. The French had desired to kill their prisoners to facilitate their retreat, but their Indian allies would not consent. Of these Schuyler recaptured about fifty. The Mohawks called Colonel Schuyler "Great Swift Hero," because of his promptness in coming to their relief. The Mohawks, discouraged by their heavy loss, were disposed to make a treaty of peace with the French, but Schuyler prevented it. (See *Schuyler, Peter*.)

Mohawks, THE, ON GRAND RIVER, CANADA. The governors of Canada during the American war for independence promised those of the Six Nations who joined the British in that war that they should be well provided for at its close. In the treaty of peace (1783) no such promise was kept. At that time the Mohawks, with Brant at their head, were temporarily residing on the American side of the Niagara River below Lewiston. The Senecas offered them a home in the Genesee valley, but Brant and his followers had resolved not to reside within the United States. He went to Quebec to claim from Governor Haldimand a fulfilment of his and Carleton's promises. The Mohawks chose a large tract of land comprising two hundred square miles on the Quise or Grand River, or six miles on each side of that stream from its source to its mouth. It is chiefly a beautiful and fertile region. Of all

that splendid domain, the Mohawks now retain only a comparatively small tract in the vicinity of Brantford, on the Grand River. In 1830 they surrendered to the government the town-plot of Brantford, when it was surveyed and sold to actual settlers. On their present reservation is a church built of wood in 1783, a plain, unpretend-

MOHAWK CHURCH.

ing structure. It is furnished with a silver communion-service which Queen Anne presented to the Mohawks in 1712. Upon each piece is engraved the royal arms of England and the monogram of the queen, "A. R."—Anne Regina—with the following inscription: "The Gift of her Majesty, Anne, by the Grace of God, of Great Britain, France, and Ireland, and of her Plantations

COMMUNION PLATE.

in North America, Queen, to her Indian Chapel of the Mohawks."

Mohegans (or **Mohicans**). This was an Algonquin family found by the Dutch on the Hudson River above the Highlands. The name was also given to several independent tribes on Long Island, and in the country between the Lenni-

Lenapes or Delawares (see *Delawares*) and the New England Indians. Of this family the Pequods, who inhabited eastern Connecticut, were the most powerful, and exercised authority over thirteen cantons on Long Island. They received the Dutch kindly, and gave them lands on which they erected Fort Orange, now Albany. They were then at war with the Mohawks, and when furiously attacked by the latter the Mohegans fled to the valley of the Connecticut, whither a part of the nation had gone before, and settled on the Thames. This portion was the Pequods. A part of them, led by Uncas, seceded, and these "rebels" aided the English in their war with the Pequods in 1637. The bulk of the nation finally returned to the Hudson, and kept up a communication with the French in Canada, who called them Loups (wolves), which is the meaning of Mohegan. When the English and French began their great struggle for the mastery in America (about 1690), the Hudson Mohegans made peace with the Mohawks and joined the English, but were soon reduced to two hundred warriors, and the Connecticut Mohegans to about one hundred and fifty. Some of the latter were collected at Stockbridge, Mass.; and from 1740 to 1744 the Moravians had a flourishing mission among them at Shekomeco, in Dutchess County, N. Y. Some of these went to Pennsylvania under the care of the Moravians. In the Revolution they joined the Americans, and were found in the ranks at Bunker's Hill, White Plains, and other fields. After the war, some of the Mohegans emigrated to Oneida, under the Rev. Samson Occum, a native preacher, and others, and before 1830 they had emigrated to Green Bay, Wis., where they abandoned their tribal relations and became citizens. They have almost given up their own language for the English, and are nearly extinct. Those who remained in Connecticut took up their abode near Norwich, at a place known as Mohegan Plains, and also near the village of Kent, in western Connecticut. At the latter place they have intermingled with other races, until now, among less than a hundred, not one of pure blood remains. The last surviving Pequod of pure blood was Eunice Mauwee, who died near Kent in 1860, aged about one hundred years. The last lineal descendant of Uncas, the "rebel," was buried at Norwich in 1827. The tribe in Connecticut is extinct.

Monarchies in Danger. When it became known in England (Aug. 19, 1768) that Massachusetts had refused to rescind its Circular Letter (which see) by a large majority, the governments of Europe were amazed at the audacity of the Americans. Chief-justice Mansfield, of England, was of opinion that all the members of the Massachusetts Assembly ought to be sent for to give an account of their conduct, and that all the rigors of the law should be exercised against those who should persist in refusing to submit to Parliament. "When rebellion begins," he said, "the laws cease, and they can invoke none in their favor." He insisted that the Americans must first be reduced to absolute submission before inquiry should be made into their real or pretended grievances. Every court in

Europe became interested in the quarrel. The Spanish minister at the French court expressed the wish that Great Britain might master her colonies, "lest the Spanish colonies should also catch the flame." The British ministry saw the danger of a dismemberment of the empire, but did not have wisdom sufficient to arrest it by justice. "Depend upon it," said Hillsborough to the agent of Connecticut, "Parliament will not suffer its authority to be trampled upon. We wish to avoid severities towards you, but if you refuse obedience to our laws, the whole fleet and army of England shall enforce it."

Monckton, ROBERT, Governor of New York in 1762, was born in England; died May 3, 1782. He was son of the first Viscount Galway, and began his military life in Flanders in 1742. In 1754 he was governor of Annapolis (Port Royal), Nova Scotia; assisted in the reduction of the French power in that peninsula, and was lieutenant-governor of Nova Scotia in 1756. He commanded a battalion at the siege of Louisburg in 1758, and the next year he was second in command under General Wolfe at the capture of Quebec, where he acted as brigadier-general and was severely wounded. In 1761 he was made major-general, and the next year was governor of New York. He commanded the expedition against Martinique in 1762; was a member of Parliament in 1768; made lieutenant-general in 1770, and was offered the command of the British forces in America in 1775, but he declined to draw his sword against British subjects.

Monitor and Merrimac. At the moment when the Confederates evacuated Manassas (which see), a strange naval battle occurred in Hampton Roads. The insurgents had raised the sunken *Merrimac* in the Gosport Navy-yard and converted it into an iron-clad ram, which they called the *Virginia*, commanded by Captain Buchanan, late of the United States Navy. She had gone down to Hampton Roads and destroyed (March 8, 1862) the wooden sailing frigates *Congress* and *Cumberland*, at the mouth of the James River, and it was expected she would annihilate other transports there the next morning. Anxiously the army and navy officers of that vicinity passed the night of the 8th, for there appeared no competent human agency near to avert the threatened disaster. Meanwhile another vessel of novel form and aspect had been constructed at Greenpoint, L. I., under the direction of the eminent engineer Captain J. Ericsson. It was a dwarf in appearance by the side of the *Merrimac*. It presented to the eye, when afloat, a simple platform, sharp at both ends, and bearing in its centre a round Martello tower twenty feet in diameter and ten feet in height, made, as was the rest of the vessel, of heavy iron. It presented a bomb-proof fort, in which were mounted two 11-inch Dahlgren cannons. The hull of this vessel was only eight feet six inches in depth, with a flat

bottom, and was one hundred and twenty-four feet in length, and thirty-four feet in greatest width at top. On this hull rested another, five feet in height, that extended over the lower one three feet seven inches all around, excepting at the ends, where it projected twenty-five feet, by which protection was afforded the anchor, propeller, and rudder. The whole was built of three-inch iron, and was very buoyant. Its exposed parts were guarded by a wall of white-oak, thirty inches in thickness, on which was

INTERIOR OF THE MONITOR'S TURRET.

laid iron armor six inches in thickness. A shot to strike the lower hull would have to pass through twenty-five feet of water, and then strike an inclined plane of iron at an angle of about 10°. The deck was well armed also. Such was the strange craft that entered Hampton Roads from the sea, under the command of Lieutenant John L. Worden, unheralded and unknown, at a little past midnight (March 9), on its trial trip. It had been named *Monitor*. It had been towed to the Roads by steamers, outriding a tremendous gale. Worden reported to the flag-officer of the fleet in the Roads, and was ordered to aid the *Minnesota* in the expected encounter with the *Merrimac* in the morning. It was a bright Sabbath morning. Before sunrise the dreaded *Merrimac* and her company came down from Norfolk. The stern guns of the *Minnesota* opened upon the formidable iron-clad, when the little *Monitor*, which the Confederates called in derision a "cheese-box," ran out and placed herself by the side of the huge monster. She was like a pigmy by the side of a giant. Suddenly her mysterious citadel began to revolve, and from it her guns hurled ponderous shot in quick succession. The *Merrimac* answered by heavy broadsides, and so they struggled for some time without injuring each other. Then the *Monitor* withdrew a little to seek a vulnerable part of her antagonist, while the *Merrimac* pounded her awfully, sometimes sending upon her masses of iron weighing two hundred pounds at a velocity of two hundred feet in a second. These struck her deck and tower without harming them, and conical bolts that struck the latter glanced off as pebbles would fly from solid granite. The *Merrimac* drew off

and attacked the *Minnesota*. Seeing the latter in great peril, the *Monitor* ran between them. A most severe duel ensued. The *Merrimac* was so much disabled that she fled up to Norfolk, and did not again invite her little antagonist to combat. General Lincoln endeavored to keep an open communication with the country, across the Cooper River, so as to receive reinforcements, and, if necessary, to make a retreat. To close that communication Sir Henry Clinton detach-

BATTLE BETWEEN THE MONITOR AND MERRIMAC, IN HAMPTON ROADS.

bat. Worden was severely injured by concussion in the tower of the *Monitor*, and for a few days his life was in peril. This class of vessels was multiplied in the National navy, and did good service. A comparison of the appearance of the two vessels may be made in looking at the engraving of the *New Ironsides* and *Monitor*. ed Lieutenant-colonel Webster, with 1400 men. The advanced guard, composed of Tarleton's legion and Ferguson's corps, surprised the American cavalry (about 300 men), with militia attached to them, under the command of General Isaac Huger, who were stationed at Biggin's Bridge, near Monk's Corner. The Americans

THE NEW IRONSIDES AND MONITOR.

The *New Ironsides* was a powerful vessel built in Philadelphia. It had a wooden hull covered with iron plates four inches in thickness. Her aggregate weight of guns was 284,000 pounds, two of them 200-pound Parrott guns. She had two horizontal steam-engines, and was furnished with sails. At her bow was a formidable wrought-iron ram or beak. She was accidentally set on fire and destroyed at her moorings at League Island, below Philadelphia, Dec. 15, 1866.

**Monk's Corner, SURPRISE OF AMERICAN CAV-
ALRY AT.** While the British were besieging Charleston in 1780 (see *Siege of Charleston*),

were attacked just at dawn (April 14) and were scattered. Twenty-five of the Americans were killed; the remainder fled to the swamps. Tarleton secured nearly 300 horses, and, after closing Lincoln's communications with the country, he returned to the British camp in triumph.

Monmouth Court-house, BATTLE OF. Just before the dawn (June 18, 1778) the British began their evacuation of Philadelphia. They crossed the Delaware to Gloucester Point, and that evening encamped around Haddonfield, a few miles southeast from Camden, N. J. The news of this evacuation reached Washington, at Valley Forge, before morning. He immediately

sent General Maxwell, with his brigade, to co-operate with the New Jersey militia under General Dickinson, in retarding the march of the British, who, when they crossed the river, were 17,000 strong, in effective men. They marched in two divisions, one under Cornwallis and the other led by Knyphausen. General Arnold, whose wounds kept him from the field, entered Philadelphia with a detachment before the rear-guard of the British had left it. The remainder of the army, under the immediate command of Washington, crossed the Delaware above Trenton and pursued. General Charles Lee, who had been exchanged, was now with the army, and persistently opposed all interference with Clinton's march across New Jersey, and found fault with everything. (See *Treason of General Lee*.) Clinton had intended to march to New Brunswick and embark his army on Raritan Bay for New York; but, finding Washington in his path, he turned, at Allentown, towards Monmouth Court-house, to make his way to Sandy Hook, and thence to New York by water. Washington followed him in a parallel line, prepared to strike him whenever an opportunity should offer, while Clinton wished to avoid a battle, for he was encumbered with baggage-wagons and a host of camp-followers, making his line twelve miles in length. He encamped near the court-house in Freehold, Monmouth Co., N. J., on the 27th of June, and

OLD MONMOUTH COURT-HOUSE.

there Washington resolved to strike him if he should move the next morning, for it was important to prevent his reaching the advantageous position of Middletown Heights. General Lee was now in command of the advanced corps. Washington ordered him to form a plan of attack, but he omitted to do so, or to give any orders to Wayne, Lafayette, or Maxwell, who called upon him. And when, the next morning (June 28)—a hot Sabbath—Washington was told Clinton was about to move, and ordered Lee to fall upon the British rear, unless there should be grave reasons for not doing so, that officer so

tardily obeyed that he allowed his antagonist ample time to prepare for battle. When Lee did move, he seemed to have no plan, and by his orders and counter-orders so perplexed his generals that they sent a request to Washington to appear on the field with the main army immediately. And while Wayne was attacking with vigor, with a sure prospect of victory, Lee ordered him to make only a feint. At that moment Clinton changed front, and sent a large force, horse and foot, to attack Wayne. Lafayette, believing there was now a good opportunity to gain the rear of the British, rode quickly up to Lee and asked permission to attempt the movement. He at first refused, but, seeing the earnestness of the marquis, he yielded a little, and ordered him to wheel his column by the right and attack Clinton's left. At the same time he weakened Wayne's detachment by taking three regiments from it to support the right. Then, being apparently disconcerted by a movement of the British, he ordered his right to fall back; and Generals Scott and Maxwell, who were then about to attack, were ordered to retreat. At the same time Lafayette received a similar order, a general retreat began, and the British pursued. In this flight and pursuit Lee showed no disposition to check either party, and the retreat became a disorderly flight. Washington was then pressing forward to the support of Lee, when he was met by the astounding intelligence that the advance division was in full retreat. Lee had sent him no word of this disastrous movement. The fugitives, falling back upon the main army, might endanger the whole. Washington's indignation was fearfully aroused, and when he met Lee, at the head of the second retreating column, he rode up to him, and, in a tone of withering reproof, he exclaimed, "Sir, I desire to know what is the reason and whence comes this disorder and confusion?" Lee replied sharply, "You know the attack was contrary to my advice and opinion." The chief replied in a tone that indicated the depth of his indignation, "You should not have undertaken the command unless you intended to carry it out." There was no time for altercation, and, wheeling his horse, he hastened to Ramsay and Stewart, in the rear, and soon rallied a greater portion of their regiments, and ordered Oswald to take post on an eminence near, with two cannons. These pieces, skilfully handled, soon checked the enemy. Washington's presence inspired the troops with courage, and ten minutes after he appeared the retreat was ended. The troops, lately a fugitive mob, were soon in orderly battle array on an eminence on which General Lord Stirling placed some batteries. The line, then, was commanded on the right by General Greene and on the left by Stirling. The two armies now confronted each other. The British, about 7000 strong, were upon a narrow road, bounded by morasses. Their cavalry attempted to turn the American left flank, but were repulsed and disappointed. The regiments of foot came up, when a severe battle occurred with musketry and cannons. The American artillery, under the general direction

of Knox, did great execution. For a while the result seemed doubtful, when General Wayne came up with a body of troops and gave victory to the Americans. Colonel Monckton, perceiving that the fate of the conflict depended upon driving Wayne away or capturing him, led his troops to a bayonet charge. So terrible was Wayne's storm of bullets upon them that almost every British officer was slain. Their brave leader was among the killed, as he was pressing forward, waving his sword and shouting to his men. His veterans then retreated, and fell back to the heights occupied by Lee in the morning. The battle ended at twilight, when the wearied armies rested on their weapons, prepared for another conflict at dawn. Through

Baltimore. Already General Grant had been informed of the invasion, and had sent General Wright, with the Sixth Corps, to protect the capital. General E. B. Tyler was at Frederick with about 1000 troops, and Wallace gathered there, on the 6th, all the available troops in his department that could be spared from the duties of watching the railways leading into Baltimore from the North. He sent Colonel Clendennin to search for positive information, with 400 men and a section of artillery, and at Middletown he encountered 1000 Confederates under Bradley Johnson, a Marylander, who pushed him steadily back towards Frederick. There was a sharp fight near Frederick that day (July 7, 1864), and, at six o'clock, Gilpiu's regiment

BATTLE GROUND AT MONMOUTH.

the deep sands of the roads, Clinton withdrew his army so silently, towards midnight, that he was far on his way towards

Sandy Hook when the American sentinels discovered his flight in the morning (June 29). Washington did not pursue, and the British escaped to New York. They had lost 1000 men by desertion while crossing New Jersey, and they left four officers and 245 non-commissioned officers and privates on the field, taking with them many of the wounded. They lost fifty-nine by the terrible heat of the day. More than fifty Americans died from the same cause. The loss of the Americans was 228, killed, wounded, and missing. Many of the latter afterwards returned to the army. Washington marched northward, crossed the Hudson River, and encamped in Westchester County, N. Y., until late in the autumn.

Monocacy, BATTLE OF. On July 5, 1864, General Lew. Wallace, in command of the Middle Department, with his headquarters at Baltimore, received information that General Jubal A. Early, with 15,000 or 20,000 Confederates, who had invaded Maryland, were marching on

charged the Confederates and drove them back to the mountains. Satisfied that the destination of the invaders was Washington, and knowing it was then too weak in troops to resist the Confederates successfully, Wallace threw his little force in front of them to impede their march. He withdrew his troops from Frederick to a chosen position on the left bank of the Monocacy, and on the 9th fought the invaders desperately for eight hours. Wallace had been joined by the brigade of Ricketts, the advance of the oncoming Sixth Corps. Although finally defeated, this little band of Nationals had kept the invading host at bay long enough to allow the remainder of the Sixth Corps to reach Washington. Wallace's troops had thus gained a real victory that saved the capital. So declared the Secretary of War and the Lieutenant-general. The check to the Confederates, altogether, was over thirty hours. The number of National troops engaged in the battle was about 5500; the Confederates numbered about 20,000. The Nationals lost 1959 men, of whom 98 were killed, 579 wounded, and 1282 missing.

Monopoly of Colonial Trade. In 1663 Parliament passed an act for securing the monopoly of the trade of the English-American colonies for the benefit of the English shipping interest, then a powerful factor in politics. It prohibited the importation into any of the English

colonies of any commodities of the growth, production, and manufacture of Europe, unless they were shipped from the British islands in English-built vessels.

Monroe Doctrine, THE. There appearing a disposition on the part of the great powers of Europe to assist Spain in efforts to regain her American colonial possessions, the independence of which the government of the United States had formally acknowledged (see *Spanish-American Governments*), President Monroe called special attention to the matter in his seventh annual message (Dec. 2, 1823), in which he said: "We owe it to candor and to the amicable relations existing between the United States and those [great European] powers, to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere; but with the governments who have declared their independence and maintained it, and whose independence we have, on great considerations and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as a manifestation of an unfriendly disposition towards the United States." This was an assurance that moral support should be given by the United States to the other American republics in preventing any future colonization on the shores of the two American continents by European powers. This is called "the Monroe Doctrine." Congress, by resolution (Dec. 23, 1823), made inquiries of the President for information relative "to the determination of any sovereign, or combination of sovereigns, to assist Spain in the subjugation of her late colonies on the American continent." "The Monroe Doctrine" has ever since been recognized as a part of the settled policy of the Republic. When, at the breaking-out of the American Civil War, the Emperor of the French, believing the ruin of the United States government to be certain, attempted to plant a monarchy in Mexico, on our southern border, and actually placed his dupe, Maximilian, on a throne there by the force of military power, the government of the United States warned him to desist, or his troops would be expelled by force. When he saw, at the conclusion of the Civil War, that the Republic of the West was stronger than ever, he hastened to withdraw the French troops, and, with perfidy unparalleled in the history of dynasties, he left poor Maximilian helpless before the exasperated people of the Republic of Mexico, whose political power he had usurped.

Monroe, JAMES, fifth President of the United States, was born in Westmoreland County, Va., April 28, 1759; died in New York city, July 4, 1831. He graduated at the College of William and Mary in 1776. He immediately joined the patriot army as a cadet in Mercer's regi-

ment, and was in the engagements at Harlem Plains, White Plains, and Trenton. He was wounded in the latter engagement, and was promoted to a captaincy for his bravery. In

JAMES MONROE.

1777-78 he was aid to Lord Stirling, and was distinguished at the battles of Brandywine, Germantown, and Monmouth. After the latter battle he left the army, studied law under Jefferson, and again took up arms when Virginia was invaded by Cornwallis. In 1780 he visited the Southern army under De Kalb as military commissioner from Virginia, and was a member of the Virginia Assembly in 1782. He soon became a member of the Executive Council, a delegate in Congress, and in his state convention in 1788 he opposed the ratification of the national Constitution. From 1790 to 1794 he was United States Senator. In May of the latter year he was appointed minister to France, though an opponent of Washington's administration, but was recalled, in 1796, because of his opposition to Jay's treaty (which see). In defence of his conduct, he published the whole diplomatic correspondence with his government while he was in Paris. From 1799 to 1802 he was governor of Virginia, and in 1802 was sent as envoy to France. The next year he was United States minister at the court of St. James. In 1805 he was associated with C. C. Pinckney in a negotiation with Spain, and, with William Pinkney, he negotiated a treaty with England in 1807, which Jefferson rejected because it did not provide against impressments. Serving in his state Assembly, he was again elected governor of Virginia in 1811, and was Madison's Secretary of State during a large portion of that President's administration. From September, 1814, to March, 1815, he performed the duties of Secretary of War. Elected President of the United States in 1816, he served eight years. During his administration he rec-

ogized the independence of several of the South American states, and promulgated the "Monroe Doctrine" (which see). He retired to private life in 1825, and in 1831, after the death of his wife, he left Virginia and made his residence with his son-in-law (Samuel L. Gouverneur) in the city of New York, where he died.

Monroe, JAMES, PRESIDENT OF THE UNITED STATES. Before the close of Madison's administration the Federal party had so much declined in strength that a nomination for office by the Democratic party was equivalent to an election. On the 16th of March, 1816, a Congressional Democratic caucus (which see) was held, at which the names of James Monroe and William H. Crawford were presented for nomination. There were many who did not like Monroe who were ready to press the nomination of Crawford, and, had he been inclined for a struggle, he might have received the votes of the caucus. There had been much intriguing before the caucus. At that gathering Henry Clay and John Taylor, of New York, moved that Congressional caucus nominations for the presidency were inexpedient and ought not to be continued. These motions having failed, Monroe received sixty-five votes to fifty-four for Crawford. Daniel D. Tompkins received eighty-five votes of the caucus for Vice-President to thirty for Governor Snyder. At the election in the autumn the Monroe electors received a large majority of the votes of the people. The elections, by the system of Congressional caucuses (as now by national conventions), had been sunk into ciphers. It was found, when the votes of the electoral colleges were counted, that Monroe had received the votes of all the states excepting Massachusetts, Connecticut, and Delaware, which gave Rufus King thirty-four electoral votes. Three Federal electors chosen in Maryland and one in Delaware did not vote at all. Monroe received 183 of the 221 votes, and Tompkins the same number for Vice-President. Monroe was inaugurated March 4, 1817, and entered upon the duties of his office under the most favorable circumstances. His inaugural address was liberal in its tone and gave general satisfaction; and the beginning of his administration was regarded as the dawning of an "era of good feeling."

Monroe, JAMES, RECEPTION OF, IN FRANCE. When Genet was recalled, the French government desired the United States to recall Gouverneur Morris, who had succeeded Jefferson as minister to France. The President yielded, for reasons of policy, and sent (May, 1794) in his place James Monroe. He was received in the most theatrical manner, as he was properly regarded as the representative of the ultra sympathizers with the French revolutionists in America. At a public reception in the National Convention he read an address which so pleased his audience that an enthusiastic member of the convention replied in a grandiloquent manner, closing his oration with these words: "To-day, the sovereign people themselves, by the organ of their faithful representatives, receive you;

and you see the tenderness, the effusion of soul, that accompanies this touching and simple ceremony. I am impatient to give you the fraternal embrace, which I am ordered to give in the name of the French people. Come and receive it in the name of the American people, and let this spectacle complete the annihilation of an impious coalition of tyrants." Then Monroe, according to precedent, stepped forward and received and returned the "fraternal" and "national" embrace and kiss of the representative of the French people. Having opposed Jay's treaty at the French republican court, he was recalled in 1796.

Monroe, RE-ELECTION OF PRESIDENT (1820). So faithfully had President Monroe adhered to the promises of his inaugural address, that he was not only renominated, with Tompkins as Vice-President, but was elected by an almost unanimous vote in the electoral college. Only one elector voted against Monroe, and but fourteen against Tompkins. That re-election was at the commencement of a new political era. The reannexation of Florida to the United States, the recognized extension of the domain of the Republic to the Pacific Ocean, and the partition of those new acquisitions between freedom and slavery marked a new departure. All the old landmarks of party had been uprooted by embargoes and the war; and, by the question of the United States Bank (which see), internal improvements, and the tariff, had been almost completely swept away.

Monroe's Cabinet Ministers. President Monroe had been urged by General Jackson, with whom he was on terms of great intimacy, to disregard former party divisions in the formation of his cabinet, and to use his influence and power to destroy party spirit by appointing the best men to office without regard to their political preferences. He preferred to follow the example of Jefferson and Madison, and appoint only those of his own political faith. He chose John Quincy Adams, of Massachusetts, for Secretary of State; William H. Crawford, of Georgia, Secretary of the Treasury; and John C. Calhoun, of South Carolina, for Secretary of War. These were all aspirants for the Presidential chair. B. W. Crowninshield was continued Secretary of the Navy, to which office Madison had appointed him in December, 1814, and Richard Rush continued in the office of Attorney-General until succeeded, Nov. 13, 1817, by William Wirt. Return J. Meigs was continued Postmaster-general, to which office Madison had appointed him in 1817.

Monroe's Eastern and Northern Tour. Determined to know more of the country and the people, President Monroe, sixty days after he was seated in the Presidential chair, left the capital for an extended tour in New England and the Northern States. He was clad in the undress uniform worn by the officers of the Revolution—a blue coat of domestic manufacture, light waistcoat and breeches, high top-boots known as "Wellingtons," and a cocked hat. He journeyed to far eastern New England, and

then, turning westward, traversed the sparsely settled country towards the northern border of the Union to Vermont, crossed Lake Champlain to Plattsburg, and thence through the forests northward to the St. Lawrence River, where he embarked for Lake Ontario. He halted at Sackett's Harbor, Fort Niagara, and Buffalo; and from the latter place sailed over Lake Erie to Detroit. From that then remote region he journeyed through the woods of Michigan, Ohio, Pennsylvania, and Maryland, and reached Washington after an absence of more than three months. He was everywhere cordially received, for his inaugural address commended him to the kindness and courtesy of all political parties. The President became acquainted with leading men of all parties on this journey, and the tour was in every way beneficial.

Montana, TERRITORY OF, lies on the borders of the British-American dominions, between Dakota and Idaho. By act of Congress, May, 1864, Montana was organized as a territory out of the eastern portion of Idaho. The capital is Virginia City; but its largest town is Helena, in the midst of the rich placer mines of southwestern Montana. The territory is rich in gold, silver, and copper lodes. Lead, iron, and coal abound in some parts; and it is called one of the best stock countries on the continent, every kind of domestic animal doing remarkably well there. The herds and flocks winter well on the grass of the valleys and foot-hills without hay or grain. It is also a fine grain-producing territory.

Montcalm de St. Véran, LOUIS JOSEPH, Marquis de, born at the Château Candiac, near Nismes, France, Feb. 28, 1712; died at Quebec, Sept. 14, 1759. Well educated, he entered the French army at the age of fourteen years, distinguished himself in Germany in the War of the Austrian Succession (see *King George's War*), and gained the rank of colonel for his conduct in the disastrous battle of Piacenza, in Italy, in 1746. In 1756 he was appointed to the command of the troops in Canada, where, in the three campaigns which he conducted, he displayed skill, courage, and humanity. (See *Oswego*, *Fort William Henry*, *Ticonderoga*, and *Quebec*.) Weakly seconded by his government, he did not accomplish what he might have done. He prepared, with all the means at his command, for the struggle for the supremacy of French dominion in America, in 1759, in which he lost his life. He had resolved, he said, "to find his grave under the ruins of the colony," and such was his fate. The English had spared not to make the campaign a decisive one. The final struggle occurred at Quebec, and there, on the 13th of September, 1759, he was mortally wounded, and died the next day. Wolfe, the commander of the English, was mortally wounded at the same time. (See *Quebec, Capture of*.) When Montcalm was told that his death was near, he calmly replied, "So much the better; I shall not live to see the surrender of Quebec." A fine monument stands on Cape Diamond, at Quebec, erected to the memory of both Montcalm and Wolfe. The

skull of Montcalm, with a military coat-collar of blue velvet embroidered with gold lace, is preserved in the Ursuline convent at Quebec.

WOLFE AND MONTCALM'S MONUMENT.

Monterey, SIEGE AND CAPTURE OF. After General Taylor had entered Mexico at Matamoras (which see), he remained there until September, waiting for further instructions from his government and reinforcements for his army. Early in September the first division of his army, under General W. J. Worth, moved towards Monterey, the capital of New Leon, which was strongly fortified, and then defended by General Ampudia with about 9000 Mexican troops. Taylor soon joined Worth, and they encamped within three miles of the city, on the 19th of September, with about 7000 men, and on the morning of the 21st attacked the stronghold. Joined by other divisions of the army the assault became general on the 23d, and the conflict in the streets was dreadful. The Mexicans fired volleys of musketry from the windows of the strong storehouses upon the invaders, and the carnage was terrible. Finally, on the fourth day of the siege, Ampudia asked for a truce. It was granted, and he prepared to evacuate the city. Taylor demanded absolute surrender, which was done on the 24th, when General Worth's division was quartered in the city, and General Taylor, granting an armistice for eight weeks if permitted by his government, encamped with the remainder of his forces at Walnut Springs, a few miles from Monterey. In the siege of that city, the Americans lost over 500 men. That of the Mexicans was about double that number. (See *Mexico, War with*.)

Montezuma, the last Aztec emperor of Mexico, was born about 1470. Because of his merits as a warrior and priest, he was elected emperor in 1502. He was in the act of sweeping the stairs of the great temple-teocalle at Mexico when his elevation was announced to him. His sumptuous style of living, and great public expenses, caused a grievous imposition of taxes. This, with his haughty deportment, made many of his subjects discontented. His empire was invaded by Cortez in 1519, when he gave the

audacious Spaniard, at first, great advantages, by a temporizing policy. Cortez seized him and held him as a hostage. He would not accept Christianity in exchange for his own religion, but he formally recognized the supremacy of the crown of Spain, to whom he sent an immense quantity of gold as tribute. While Cortez was about to assail a force sent against him by Velasquez (which see), the Mexicans revolted against the Spaniards. Cortez either persuaded or compelled Montezuma to address his turbulent subjects and try to appease the rising tumult; but the latter, having lost respect for their emperor, assailed and wounded him with missiles. From the injuries thus received he died in June, 1520.

Montgomery, JOHN, Governor of New York, 1728-31. He was a native of Ayrshire, Scotland, and died in New York, July 1, 1731. Montgomery was officially attached to the person of George II. before he came to America, and had served in Parliament several years.

Montgomery, JOHN B., was a native of New Jersey, and entered the United States navy as midshipman in 1812. He passed through the various grades of office until, in July, 1862, he was made commodore, and in July, 1866, he was created rear-admiral on the retired list. He served on Lake Ontario under Chauncey, and was in the *Niagara* with Perry at the battle on Lake Erie (which see), and received a sword and thanks from Congress for his gallantry. He was with Decatur in the Mediterranean in 1815. In command of the sloop *Portsmouth*, in the Pacific squadron (1845-48), he took possession of California. In 1861 he was in command of the Pacific squadron.

Montgomery, RICHARD, born at Convoy House, near Raphoe, Ireland, Dec. 2, 1736; killed at Quebec, Dec. 31, 1775. His father was a member of Parliament for Lifford. Richard was educated at Triuity College, Dublin, and entered

RICHARD MONTGOMERY.

the army at the age of eighteen. Fighting under Wolfe at the siege of Louisburg (1756), he won the approval of that commander. After its

surrender his regiment formed a part of Amherst's force, sent to reduce the French forts on Lake Champlain, in 1759. Montgomery became adjutant of his regiment in 1760, and was under Colonel Haviland in his march upon Montreal when that city was surrendered. In 1762, Montgomery was promoted to captain, and served in the campaign against Havana in the same year. After that he resided in this country a while, but revisited England. In 1772 he sold his commission and came to America, and the following year he bought an estate at Rhinebeck, on the Hudson, and married a daughter of R. R. Livingston. He was chosen representative in the Colonial Assembly, and was a member of the Provincial Convention in 1775. In June following he was appointed by the Continental Congress one of the eight brigadiers for the Continental army. Appointed second in command, under Schuyler, in the Northern Department, he became acting commander-in-chief because of his superior's protracted illness. He entered Canada early in September, with a considerable army, captured St. John, on the Sorel or Richelieu River, Nov. 3, took Montreal on the 13th, and pushed on towards Quebec, and stood before its walls with some troops under Arnold Dec. 4. On the 9th the Continental Congress made him a major-general. He invested Quebec and continued the siege until Dec. 31, when he attempted to take the city by storm. In that effort he was slain in the evening twilight by grape-shot from a masked battery. His death was regarded as a great public calamity, and on the floor of the British Parliament he was eulogized by Burke, Chatham, and Barré; Even Lord North spoke of him as "brave, humane, and generous;" but added, "still he was only a brave, humane, and generous rebel; curse on his virtues, they've undone his country." To this remark Fox retorted: "The term 'rebel' is no certain mark of disgrace. All the great assertors of liberty, the saviors of their country, the benefactors of mankind in all ages, have been called 'rebels.' We owe the constitution which enables us to sit in this House to a rebellion." Montgomery was buried at Quebec. In 1818 his remains were removed to the city of New York, at the expense of the state, and they were deposited near the monument which the United States had erected to his memory in the front of St. Paul's Church, Broadway, New York.

MONTGOMERY'S MONUMENT.

Montreal, CAPTURE OF (1775). When the Republicans invaded Canada, General Carleton was in command of a few troops at Montreal. With about 800 men he marched to the relief of the garrison at St. John, after he heard of the capture of Chambly. He crossed the St. Lawrence in small boats, and when about to land at Longueuil was attacked by Colonel Seth Warner and about 300 Green Mountain Boys, and driven back in great confusion. The news of this repulse caused the speedy surrender of St. John, when Montgomery pressed on towards Montreal. Carleton, knowing the weakness of the fort, at once retreated on board a vessel of a small fleet lying in the river, and attempted

pulsed by Frontenac (August, 1690). The remainder of the troops did not proceed farther than Lake George, where they were stopped by a deficiency of provisions and the prevalence of the small-pox. Mutual recriminations followed, and Leisler actually caused Winthrop's arrest. The latter charged the failure to Milborne, who, it was alleged, had failed to furnish needed provisions and transportation. (See *Quebec, Expedition against, in 1690.*)

Montreal, EXPEDITION AGAINST (1711). Within a fortnight after Colonel Nicholson had given notice of the intended expedition against Canada, New York and the New England colonies were busy in preparations for the movement

VIEW OF MONTREAL AND ITS WALLS IN 1760. (From an old French print.)

to flee to Quebec with the garrison. Montgomery entered Montreal without opposition, and sent a force under Colonel Easton to intercept the intending fugitives. He hastened to the mouth of the Sorel with troops, cannons, and armed gondolas. The British fleet could not pass, and Prescott, several other officers, members of the Canadian Council, and 120 private soldiers, with all the vessels, were surrendered. Carleton escaped. Then Montgomery wrote to the Congress, "until Quebec is taken Canada is unconquered." Leaving Wooster in command at Montreal, Montgomery pushed on towards Quebec.

Montreal, EXPEDITION AGAINST (1690). Sir William Phipps having been successful in an expedition against Port Royal, Acadia, a plan for the conquest of Canada was speedily arranged. A fleet under Phipps proceeded against Quebec, and colonial land forces were placed under the supreme command of Fitz-John Winthrop, son of Governor Winthrop, of Connecticut. Milborne, son-in-law of Leisler, undertook, as commissary, to provide and forward subsistence for the march. Colonel Schuyler with a party of Mohawks, the van of the expedition, pushed forward towards the St. Lawrence, but was re-

Massachusetts issued bills of credit amounting to about \$200,000 to guarantee bills drawn on the imperial treasury; New York issued bills to the amount of \$50,000 to defray the expenses of her share of the enterprise; and Pennsylvania, under the name of a present to the queen, contributed \$10,000 towards the expedition. About 1800 troops — the quotas of Connecticut, New York, and New Jersey — assembled at Albany with the intention of attacking Montreal simultaneously with the appearance of the fleet from Boston before Quebec. Nicholson was in general command; and at Albany he was joined by 500 warriors of the Five Nations and 1000 palatines, chiefly from the Mohawk valley, making the whole force about 4000 strong. Nicholson was assisted by Colonels Schuyler, Whiting, and Ingoldsby, and on the 28th of August they began their march for Canada. At Lake George Nicholson heard of the miscarriage of the naval expedition, and returned to Albany, abandoning the enterprise. (See *Quebec, Expedition against, in 1711.*)

Montreal, MASSACRE AT. On July 12, 1689, about twelve hundred of the Five Nations (see *Iroquois Confederacy*) invaded the island of Montreal, burned all the plantations, and murdered

men, women, and children. This event threw the whole French colony into consternation. It was reported that one thousand of the French were slain during the invasion, besides twenty-six carried into captivity and burned alive. It was this massacre that the French sought to avenge the next year, when Frontenac sent into the Mohawk country the mongrel party that destroyed Schenectady, and two others which attacked Salmon Falls and Casco, in Maine.

Monument on Bull's Run Battle-ground. About four years after the battle of Bull's Run, National soldiers erected on the spot where the hottest of the contest occurred a substantial monument of stone in commemoration of their compatriots who fell there. It is made of ordinary sandstone. It is in the form of a cone, rising from a broad pedestal, and surmounted by a 100-pounder conical bomb-shell. At each corner of the pedestal there is a block of sandstone, each bearing a spherical shell. Its total height is twenty-seven feet. On one side of the monument are the words, "IN MEMORY OF THE PATRIOTS WHO FELL AT BULL'S RUN, JULY 21, 1861." On another side, "ERECTED JUNE 10, 1865." A hymn, written for the occasion by Rev. John Pierrepont (then eighty years of age), was sung at the dedication.

Moorea, BENJAMIN, was born at Haverhill, Mass., April 1, 1758; died at Plattsburg, N. Y., Feb. 20, 1838. He was in the Continental army; was at the surrender of Burgoyne; and served as lieutenant in Hazen's regiment to the end of the war. In 1783 he settled in the wilderness on the western shore of Lake Champlain, near the present Plattsburg. He was eight years in the New York Legislature, and, as major-general of militia, commanded that body of soldiers in the battle of Plattsburg (which see) in 1814.

Moore, JACOB BAILEY, was born at Andover, N. H., Oct. 31, 1797; died at Bellows' Falls, Vt., Sept. 1, 1853. He learned the printer's art at Concord, N. H.; married a sister of Isaac Hill, proprietor of the *New Hampshire Patriot*; became his business partner; and afterwards established the *New Hampshire Statesman*. He was a member of the State Legislature in 1828. He and Mr. Farmer published, from 1822 to 1824, three volumes of *Historical Collections of New Hampshire*, of great value; and this was one of the first publications in this country devoted to local history. He pursued journalism in New York (whither he went in 1839) for a while, when he was appointed to a position in the General Post-office; and from 1845 to 1848 he was Librarian of the New York Historical Society. Mr. Moore was the first postmaster in California, serving in San Francisco from 1848 to 1852.

Moore, SIR HENRY, Governor of New York, was born in Jamaica, W. I., in 1713. He was made governor of that island in 1756; and for his services in suppressing a slave insurrection there he was rewarded with the title of baronet. He was Governor of New York from 1764 until his death, Sept. 11, 1769. He arrived in

New York in November, 1765, in the midst of the Stamp Act (which see) excitement.

Moore's Creek Bridge, BATTLE AT. In January, 1776, Sir Henry Clinton sailed from Boston on secret service. Suspecting his destination to be New York, Washington sent General Lee thither. His presence probably deterred Clinton from landing, after a conference with Governor Tryon, and he proceeded to the coast of North Carolina to assist Governor Martin in the recovery of his power in that province. (See *Royal Power in North Carolina*.) Martin, aware of his approach, and anticipating an armament from Ireland, kept up a continual intercourse from his "floating palace" on the Cape Fear with the Scotch Highlanders (who had settled in large numbers in that province) and other Tories. He commissioned Donald McDonald brigadier-general. He was a veteran, who had fought for the Young Pretender at the battle of Culloden (1745). Under him, as captain, was Allan McDonald. These two men had great influence over the Scotch Highlanders. They enlisted for the royal cause about 1500 men, and marched from the vicinity of Fayetteville for the coast to join the governor and his friends on the Cape Fear. Colonel James Moore, on hearing of this movement, marched with more than 1000 men to intercept McDonald. At the same time minute-men of the Neuse region, under Colonels Caswell and Lillington, were gathering to oppose the loyalists, and on the evening of Feb. 26 were encamped at a bridge near the mouth of Moore's Creek, in Hanover County. There McDonald, chased by Colonel Moore, came upon the minute-men. He was sick, and the force was commanded by Lieutenant-colonel McLeod. A sharp battle ensued the next morning, when McLeod was killed. The Scotchmen were routed and dispersed, and about 350 of them were made prisoners, among them the two McDonalds. The loyalists lost seventy men, killed and wounded. The republicans had only two wounded, one mortally. Captain Allan McDonald was the husband of Flora McDonald, who assisted the defeated Young Pretender in his flight from Scotland. She was in North Carolina at this time, and was an influential loyalist. The defeat of McDonald disconcerted the plans of Clinton and Martin.

Moravian Town is a little village in the township of Oxford, Canada West, on the bank of the River Thames, near which General Harrison defeated General Proctor in battle on Oct. 5, 1813. The settlers were Indians who had been converted to Christianity by the Moravians, who fled to Canada from the Muskingum, in Ohio, in 1792. (See *Christian Indians, Massacre of*.) By an order of the Provincial Council in 1793, about fifty thousand acres of land were granted for their use, on which they proceeded to build a church and a village. Rev. John Scott, of Bethlehem, ministered there for some time. At the time of the battle this Christian Indian village had about one hundred houses, mostly well built, a school-house and chapel, and very fine gardens.

Moravians in America. The church of

evangelical Christians known as Moravians, or United Brethren, has a most remarkable history. Its germs appear as early as the ninth century, when Christianity was introduced into Bohemia and Moravia; but it does not appear distinct in history until 1457, when a separate church was formed. The members of that church always manifested the spirit afterwards called "Protestantism," and, like the primitive church, held the Bible to be the only rule of faith and practice. They have an episcopacy, and the episcopal succession from 1457 to 1874 embraces 174 bishops. Their episcopate is not diocesan, but their bishops are bishops of the whole United Brethren. When, in 1621, Ferdinand II. of Austria began the persecution of all Protestants, 50,000 of his subjects emigrated to other lands. The church in Bohemia and Moravia was almost extinguished, and its faith—a hidden seed—was preserved by a few families for a hundred years, when it was renewed with strength. In 1722 two Moravian families found a refuge on the estate of Count Zinzendorf, of Saxony, then an officer in the Saxon court, and a lover of pure and simple worship. In five years three hundred Moravians gathered there. Zinzendorf became a bishop, and afterwards he spent his life and fortune in missionary work. (See *Zinzendorf*.) Churches were established on the Continent, in Great Britain, and in North America; and in 1749 the British Parliament passed acts to encourage their settlement in the English-American colonies. The Trustees of Georgia granted five hundred acres of land to Count Zinzendorf for the purpose, and also gave Bishop Spangenberg one hundred and fifty acres embraced in a part of the site of Savannah. A number of Moravians settled in Georgia in 1735. Others followed the next year, led by Bishop David Nitschmann; and on Feb. 28, 1736, the first Moravian church in America was organized, under the pastorate of Anthony Seiffert, who was ordained in the presence of John Wesley. In Georgia their labors were mostly among the Indians and negroes. As they could not conscientiously take up arms to defend Georgia against the Spaniards at St. Augustine (see *Georgia, Invasion of, by Spaniards*), they abandoned their settlement and went to Pennsylvania with Whitefield. Bishops Nitschmann and Spangenberg returned to Europe. Whitefield had purchased lands at the forks of the Delaware, and invited the Moravians to settle upon them; but doctrinal differences produced a rupture between them and Whitefield, and he ordered them to leave his domain forthwith. (See *Whitefield, George*.) Bishop Nitschmann came back, and founded a settlement on the Lehigh, the first house being completed in 1741. When, on Christmas-day, Count Zinzendorf visited the settlement, he called it "Bethlehem." That is the mother-church in America. Their labors among the Indians were extended far and wide, and their principal station in the West was at Gnadenhütten—"tents of grace"—in Ohio, where many Indian converts were gathered, and where nearly one hundred of them were massacred by white people in March, 1782, un-

der the false impression that they were British spies or were concerned in some Indian outrages in Pennsylvania. The first Indian congregation gathered by the Moravians was in the town of Pine Plains, Dutchess Co., N. Y., at a place called She-kom-e-ko. A mission was established there by Christian Henry Rauch in August, 1740. The next year a sickly young German from Bethlehem, named Gottlob Büttner, joined Rauch in his work. He preached fervently, and many converts were the fruits of the mission of Rauch and Büttner. Count Zinzendorf and his daughter visited the mission in 1742. Here Büttner died in 1745, and over his grave the Moravians placed a handsome monument in 1859. In 1745 the mission was broken up. The Moravian Church is divided into three provinces—namely, Continental, British, and American. The American province is divided into two districts—Northern and Southern—the respective centres being at Bethlehem, Northampton Co., Penn., and Salem, Forsyth Co., N. C. There were in 1875, in the American province, 75 churches, 8315 communicants, and 14,731 souls attached to the society. There are five church boarding-schools, at which full 600 pupils are educated annually; and at Bethlehem is a college and theological seminary. At first the social and political exclusiveness of the Moravians prevented a rapid increase in their numbers; but within forty or fifty years there have been great changes in this respect, as well as in the constitution of the church, whose grand centre is at Herrnhut, in Saxony, the village built on Count Zinzendorf's estate. The Moravians use a liturgy, and their ritual is similar to that of the Protestant Episcopal Church.

Morgan, DANIEL, was born in Hunterdon County, N. J., in 1736; died at Winchester, Va., July 6, 1802. At the age of seventeen he was a wagoner in Braddock's army, and the next year

DANIEL MORGAN.

he received five hundred lashes for knocking down a British lieutenant who had insulted him. That officer afterwards made a public apology.

Morgan became an ensign in the militia in 1758; and while carrying despatches he was severely wounded by Indians, but escaped. After the French and Indian War (which see) he was a brawler and fighter and a dissipated gambler for a time; but he reformed, accumulated property, and commanded a company in Dunmore's expedition against the Indians in 1774. (See *Dunmore's War*.) In less than a week after he heard of the affair at Lexington he had enrolled ninety-six men, the nucleus of his famous rifle-corps, and marched them to Boston. He accompanied Arnold in his march to Quebec in 1775, commanding three companies of riflemen (see *Arnold's Expedition*); and in the siege of that city he was made prisoner. As colonel of a rifle regiment, he bore a conspicuous part in the capture of Burgoyne and his army in 1777. After serving in Pennsylvania, he joined the remnant of the defeated army of Gates at Hillsborough, N. C.; and on Oct. 1 he was placed in command of a legionary corps, with the rank of brigadier-general. He served under Greene; gained a victory in battle at the Cowpens (for which Congress gave him thanks and a gold medal); and was in Greene's retreat (which see). He led troops that suppressed the Whiskey Insurrection (which see), and was a member of Congress from 1795 to 1799. He made Winchester his residence in 1800.

Morgan, EDWIN DENNISON, was born at Washington, Berkshire Co., Mass., Feb. 8, 1811. At the age of seventeen years he became a clerk in a grocery establishment in Hartford, Conn., and at twenty was a partner in the business. He

EDWIN D. MORGAN.

was active, industrious, and enterprising; and six years later (1836) he removed to New York, where he became a very successful merchant and amassed a large fortune. Mr. Morgan took an active interest in the political movements of his time, and in 1849 was elected to a seat in the Senate of the State of New York, which position he occupied until 1853. The Republican party, formed in 1856, had no more efficient and wise adviser and worker than Mr. Morgan, and he was made chairman of the Republican State Committee. In 1849 he was elected Governor of the State of New York,

and was re-elected in 1861. Governor Morgan was one of the most energetic of the "war governors" during the first two years of the Civil War, and until it was ended his brain, his hand, and fortune were at the service of his country. His administration was marked by a great decrease in the public debt of the state and an increase in the revenue from the canals. Such impetus did his zeal, patriotism, and energy give to the business of raising troops for the war that the state sent about 220,000 men to the field. From 1863 to 1869 Mr. Morgan was United States Senator, when he retired from public life. In 1867 Williams College conferred upon Governor Morgan the honorary degree of LL.D.

Morgan, GEORGE W., was born in Washington County, Penn., Sept. 20, 1820. In the Texan war for independence he was a captain. He studied two years at West Point (1841-43), and began the practice of law in Ohio in 1845. He engaged in the war against Mexico as colonel of an Ohio volunteer regiment, and for his gallantry won the brevet of brigadier-general. From 1856 to 1858 he was consul at Marseilles; was resident minister at Lisbon from 1858 to 1861; and in November of the latter year was made brigadier-general of volunteers. He was in command of a division in the Army of the Ohio in 1862. He served under Rosecrans, and commanded a division under Sherman at Vicksburg in 1863. That year he resigned. He was a member of Congress from 1868 to 1872.

Morgan in Kentucky. The most famous of the guerilla chiefs in the Mississippi valley was John Morgan, an Alabamian, about thirty-six years of age, six feet in height, well made, and perfectly self-possessed. He led mounted troops, which were called Confederate cavalry, but much of their service consisted of the business of a roving band searching for plunder. His first noted exploit was his invasion of Kentucky from East Tennessee (July, 1861), with twelve hundred followers, under a conviction that vast numbers of young men would flock to his standard and he would become the "liberator" of that commonwealth. Dispersing a small National force at Tompkinsville, Monroe Co., he issued a flaming proclamation to the people of Kentucky. He was preparing the way for Bragg's invasion (which see) of that state. Soon recruits joined Morgan, and he roamed about the state, plundering and destroying. At Lebanon he fought a Union force, routed them, and took several prisoners. His raid was so rapid that it created intense excitement. Louisville was alarmed. He pressed on towards the Ohio, destroying a long railway bridge (July 14) between Cynthiana and Paris, and laying waste a railway track. On July 17 he had a sharp fight with the Home Guards at Cynthiana, who were dispersed. He hoped to plunder the rich city of Cincinnati. His approach inspired the inhabitants with terror; but a pursuing cavalry force under Green Clay Smith, of Kentucky, caused him to retreat southward in the direction of Richmond. (See *Richmond, Battle at.*) On his retreat his raiders

stole horses and robbed stores without inquiring whether the property belonged to friend or foe.

Morgan, JAMES D., was born at Berlin, Mass., Nov. 19, 1810. He had felt bitter experience at sea in very early life. He was in the mercantile business in Quincy, Ill., when the war against Mexico began, and was captain of a company of Illinois volunteers in that war. In 1861 he was colonel of an Illinois regiment, and was made a brigadier-general in July, 1862. He commanded a brigade at Nashville late in that year, and was in command of a division in the Fourteenth Corps in Sherman's Atlantic campaign.

Morgan, JOHN, M.D., F.R.S., born in Philadelphia, Penn., in 1735; died there, Oct. 15, 1789. Graduating at the Philadelphia College in 1757, he studied medicine and served as a surgeon of Pennsylvania troops in the Freuch and Indian

JOHN MORGAN.

War, when he went to England. He attended the lectures of the celebrated Dr. Hunter; and after spending two years in Edinburgh, and receiving the degree of M.D., he travelled on the Continent. On his return to London (1765) he was elected a fellow of the Royal Society, also of the College of Physicians in Edinburgh and London. Returning to Philadelphia the same year, he was elected to a professorship in the college there, in which he founded a medical school. When the treason of Church was discovered, Dr. Morgan was appointed, by the Continental Congress (Oct. 17, 1775), director-general of the Army General Hospital, in which capacity he served until 1777. Dr. Morgan was one of the founders of the American Philosophical Society.

Morgan, JOHN H., guerilla chief, was born at Huntsville, Ala., June 1, 1826; killed at Greenville, Tenn., Sept. 4, 1864. He settled near Lexington, Ky., in 1830, with his parents; served under Taylor in the war with Mexico; and in 1851, at the head of the Lexington Rifles, he joined Buckner of the Kentucky State Guard (which see). At the battle of Shiloh he commanded a squadron of cavalry, and soon afterwards began his regular guerilla warfare by raids

in Kentucky, during which he destroyed many millions of dollars' worth of military stores, railways, and railway trains, and spread such alarm throughout the state that every important town was garrisoned. Accompanied by a telegraph operator, he continually gained important information by stealth, and confused his adversaries. In 1863 he made a bold raid north of the Ohio (see *Morgan's Last Raid*); but he and nearly all his men were captured or dispersed. He was killed in a garden at Greenville, in attempting to escape from a house surrounded by National troops.

Morgan, WILLIAM, was born in Culpepper County, Va., in 1775; died by violence, Sept. 19, 1826. He had been in the battle of New Orleans; and in 1821 was a brewer in Toronto, Canada. He was a resident, in 1826, of Batavia, N. Y., where he was seized, carried to Fort Niagara, and murdered, because he was about to publish an exposure of the work of Freemasons. This outrage created intense excitement and a new political party. (See *Anti-Masonic Party*.)

Morgan's Last Raid. When Longstreet left Knoxville, Tenn., late in 1863, he lingered awhile between there and the Virginia border. He had been pursued by cavalry, and near Bean's Station he had a sharp skirmish (Dec. 14, 1863), when the Nationals were pushed back with a loss of 200 men; Longstreet's loss was greater. Longstreet finally retired to Virginia, leaving Colonel John H. Morgan, the noted guerilla chief, in East Tennessee. General John G. Foster was there, in command of the Army of the Ohio; and on Dec. 29, General S. D. Sturgis, with the National advance at Knoxville, between Mossy Creek and New Market met and fought Morgan and Armstrong, who led about 6000 Confederates. The latter were defeated. On Jan. 16, 1864, Sturgis was attacked by Morgan and Armstrong at Dandridge, the capital of Jefferson County. After a severe encounter, Sturgis fell back to Strawberry Plains, where his soldiers suffered intensely from the extreme cold. Morgan lingered in East Tennessee until May, and late in that month, with comparatively few followers, he went over the mountains into Kentucky, and raided rapidly through the eastern counties of that state, plundering as they sped on in the richest part of that commonwealth. They captured several small places, dashed into Lexington, burning the railway station and other property there, and hurried towards Frankfort. General Burbridge, who, when he heard of Morgan's passage of the mountains, had started in pursuit, struck him a severe blow near Cynthiana, by which 300 of the raiders were killed or wounded, 400 made prisoners, and 1000 horses captured. Burbridge lost about 150 men. This staggering blow made Morgan reel back into East Tennessee. Early in September he was at Greenville with his shattered brigade. Morgan and his staff were at the house of Mrs. Williams in that town. It was surrounded by troops under General Gillem, and Morgan, attempting to escape, was shot dead in the garden of Mrs. Williams.

Morgan's Raid in Indiana and Ohio. The famous guerilla chief, John H. Morgan, raided through Kentucky and crossed the Ohio River in June and July, 1863. His object was fourfold—namely, for the purpose of plunder for himself and followers; to prepare the way for Buckner to dash into Kentucky from Tennessee and seize Louisville and, with Morgan, to capture Cincinnati; to form the nucleus of an armed counter-revolution in the Northwest, where the "Knights of the Golden Circle," or the "Sons of Liberty" of the Peace faction, were numerous; and to prevent reinforcements from being sent to Meade from that region. Already about eighty Kentuckians had crossed the Ohio (June 19) into Indiana to test the temper of the people. They were captured. Morgan started (June 27) with thirty-five hundred well-mounted men and six guns, crossing the Cumberland River at Burkesville, and, pushing on, encountered some loyal cavalry at Columbia (July 3), fought them three hours, partly sacked the town, and proceeded to destroy a bridge over the Green River, when he was driven away, after a desperate fight of several hours, by two hundred Michigan troops under Colonel Moore, well intrenched. Morgan lost two hundred and fifty killed and wounded; Moore lost twenty-nine. He rushed into Lebanon, captured a small Union force there, set fire to the place, and lost his brother—killed in the fight. He reached the Ohio, forty miles above Louisville, July 7. His ranks were swelled as he went plundering through Kentucky, and he crossed the Ohio with four thousand men and ten guns. He captured two steamers, with which he crossed. He was closely pursued by some troops under General Hobson, and others went up the Ohio in steamboats to intercept him. He plundered Corydon, in Indiana, murdered citizens, and stole three hundred horses. On he went, robbing mill and factory owners by demanding one thousand dollars as a condition for the safety of their property. In like manner he went from village to village until the 12th, when, at a railway near Vernon, he encountered Colonel Lowe with twelve hundred militiamen. Morgan was now assured that Indiana was aroused, and that there was a great uprising of the loyal people against him. The victories at Gettysburg and Vicksburg inspired the people. Governor Morton called on the citizens to turn out and expel the invaders. Within forty-eight hours sixty-five thousand citizens had tendered their services, and were hastening towards the rendezvous. Only members of the Peace faction (which see) refused to respond. Morgan was alarmed. He stole fresh horses for the race before Hobson, his persistent pursuer. He passed swiftly north of Cincinnati through the southern counties, and struck the river a little above Pomeroy. The people of Ohio, also, were aroused. General Judah went up the Ohio, from Cincinnati, in steamboats, to head him off; and the people were gathering from different points. At Bufington Ford he attempted to cross the river and escape into Virginia; but there the head of Hobson's column, under General Shackleford,

struck his rear, General Judah struck his flank, and two armed vessels in the stream opened upon his front. Hemmed in, about eight hundred of his men surrendered, and the remainder, leaving all their plunder behind them, followed their leader up the river, and again attempted to cross to Belleville by swimming their horses. About three hundred crossed, but the remainder were driven back by a gunboat, when Morgan fled inland to McArthur, fighting militia, burning bridges, and plundering. At last he was obliged to surrender to General Shackleford (July 26, 1863). That was at New Lisbon, the capital of Columbiana County. Morgan and some of his officers were confined in the Ohio penitentiary at Columbus, from which he and six of them escaped in November, and joined the Confederate forces in northern Georgia. The race between the troops of Morgan and his pursuers had continued three weeks, without cessation, at the rate of thirty-five miles a day. Morgan afterwards received an ovation at Richmond as a great hero.

Mormon Exodus. The inhabitants of Illinois determined to drive the Mormons from their borders. Armed mobs attacked the smaller settlements, and also Nauvoo, their city. At length a special resolution commanded their departure for the western wilderness; and in February, 1846, sixteen hundred men, women, and children crossed the Mississippi River on the ice, and, travelling with ox-teams and on foot, penetrated the Indian country and rested at Council Bluffs, on the Missouri River. Other bands continued to emigrate; and, finally, in September, 1846, the last lingering Mormons at Nauvoo were driven out at the point of the bayonet by sixteen hundred troops, and these homeless exiles traversed the wilderness of Missouri westward. Led by Brigham Young, the Mormon host—men, women, and children—crossed the Mississippi and reached the Missouri River, beyond the boundaries of the state, at the opening of the next summer. There they were met by a requisition for five hundred men for the army in Mexico, which was complied with. The remainder stayed, turned up the virgin soil, and planted there. Leaving a few to cultivate and gather for wanderers who might come after them, the host moved on. Order reigned. To them the voice of their Seer (Brigham Young) was the voice of God. Every ten wagons were under the command of a captain, who obeyed a captain of fifty, and he, in turn, obeyed a centurion, or captain of one hundred. Discipline everywhere prevailed. They formed *Tabernacle Camps*, where a portion of them stopped to sow and reap, spin and weave, and perform necessary mechanical work. They had singing and dancing; they made short marches and encamped in military order every night; they forded swift-flowing streams and bridged the deeper floods. Many were swept away by miasmatic fevers; and when winter fell upon them in the vast plains, inhabited by Indians, they suffered much, though more kindly treated by the barbarians than they had been by their own race. They made caves in the sand-hills; and in the spring

of 1847 they marked out the site of a city upon a great prairie, on the bank of the Missouri River, where the Omahas dwelt. There more than seven hundred houses were built, a tabernacle was raised, mills and workshops were constructed, and a newspaper (*The Frontier Guardian*) was established. The city was called *Kane*, in honor of Colonel Kane (brother of the Arctic explorer), who gave them much aid in their exodus. During the summer and early autumn bountiful harvests were gathered. From Kane they sent out missionaries to Oregon and California, and even to the Sandwich Islands, while others went forward deeper into the wilderness to spy out a "promised land" for "an everlasting habitation." They chose the Great Salt Lake valley, enclosed within lofty and rugged mountains, fertile, isolated, and healthful; and thitherward, in the early summer of 1847, a chosen band of one hundred and forty-three men, with seventy wagons drawn by horses, accompanied by their wives and children and the members of the High Council (see *Mormonism*), proceeded as pioneers to take possession of the country. They passed up the north fork of the Platte River to Fort Laramie, crossed that stream, followed its course along the banks of the Black Hills to South Pass, which they penetrated. Along the rivers, through deep cañons, over the lofty Utah Mountains, they toiled on until, on the evening of July 20, they saw, from the summits of the Wasatch Mountains, the placid Salt Lake glittering in the beams of the setting sun. It was like the vision of the Hebrew lawgiver on Mount Pisgah. It was a scene of wondrous interest. Stretched out before them was the Land of Promise where they hoped never to be molested by "Gentiles," or the arm of "Gentile" government. The pilgrims entered the valley on July 21, and on the 24th the President and High Council arrived. They chose the site for a city on a gentle slope, on the banks of a stream which they called Jordan, connecting the more southern Utah Lake with the Great Salt Lake. They built a fort, planted seed, and with solemn ceremonies the land was consecrated to the Lord. In the early autumn great swarms of black bugs came and began to devour their crops, when large flocks of beautiful white birds, such as they had never seen before, came every morning from the hills and destroyed the "black Philistines." They saved a part of their crop, yet famine came; but soon deliverance appeared also. A large party from Missouri came with abundance of food. In the spring of 1848 fields were seeded, crops were raised, and the blessings of plenty ensued. The inhabitants of Kane pressed forward to the new Canaan; other Saints followed; and the New Jerusalem was laid out within an area of four square miles, and called *Salt Lake City*.

Mormon Temple at Nauvoo. Upon a rich delta formed by the Des Moines and Mississippi rivers, in Hancock County, Ill., homeless and starving Mormons, driven from Missouri, pitched their tents, and consecrated the spot as an "everlasting habitation" for the Saints. (See *Mormons*.) There they built a town and called it Nauvoo—"the City of Beauty." They chose a

site for a temple on a bluff, the plan of which, it was said, had been revealed to Joseph Smith, their leader, and a "Gentile" architect was employed to build it. Its corner-stone was laid April 6, 1841. It was built of beautiful white limestone. In style, size, and decorations, it was intended to rival every other fane on the globe. Rumors of scandalous practices among the Mormons went abroad, and the people of Illinois determined to drive them beyond their borders. Their prophet (Smith) was killed by an excited mob, but an energetic successor (Brigham Young) controlled affairs. The Mormons were so much persecuted that they resolved to desert "the City of Beauty." They had expended \$1,000,000 on their temple, and it was not yet finished; but they resolved to dedicate it. That ceremony was a scene of great interest. Young men and maidens came with festoons of flowers to decorate the twelve elaborately carved oxen upon which rested the great baptismal laver. Prayers were uttered, chants were sung, and, in the midst of bishops in their sacerdotal robes, the voice of the Seer (Brigham Young) was heard pronouncing the temple dedicated to the service of Almighty God. Over the door was placed this inscription:

THE HOUSE OF THE LORD.
BUILT BY THE CHURCH OF JESUS CHRIST OF LATTER-DAY
SAINTS.
HOLINESS TO THE LORD.

On the day when the temple was dedicated it was abandoned to the "Gentiles." Thirty months afterwards it was destroyed by fire; and in May, 1850, "the City of Beauty" was desolated by a tornado, and the partially restored temple was cast to the earth a heap of ruins.

Mormonism as it Existed in 1875. The priesthood was organized into the following quorums: The first presidency, the twelve apostles, the high council, the seventies, the high-priests, elders, priests, teachers, and deacons. The first presidency consisted of three men, who presided over and directed the affairs of the whole church. The twelve apostles constituted a travelling presiding high council. The hierarchy was divided into two bodies, the Melchizedek priesthood and Aaronic priesthood. To the former (which was the highest) belonged several orders; to the latter, who could be only "literal descendants of Aaron," and were designated as such by revelation, belonged the duties and offices of bishop, priest, teacher, and deacon. The church teaches that there are many gods; that eminent Saints like Joseph Smith and Brigham Young become gods in heaven, and rise one above another in power and glory to infinity. Joseph Smith is now the god of this generation, whose superior god is Jesus, whose superior god is Adam, whose superior is Jehovah, whose superior is Elohim, etc. All these gods have many wives, and they all rule over their descendants, who are constantly increasing in number and dominion. The glory of a Saint, when he becomes a god, depends on the number of his wives and children; therefore

polygamy is inculcated and wives are "sealed" on the earth to augment the power of these gods in heaven. The ten commandments are considered the rule of life, together with a revelation made to Joseph Smith in 1833, called the *Book of Wisdom*, which inculcates some virtuous maxims and useful instructions. They practised baptism for the dead, a living person receiving the rite as proxy. In that way Washington, Franklin, and other famous men have been baptized into the Mormon church. They held that there had been many religious dispensations since the days of Adam, ending with the greatest of all by a revelation to Joseph Smith. Brigham Young had occasional revelations to suit certain exigencies in his own career and that of the church.

Mormons. In the heart of the American continent is a flourishing community whose members call themselves Mormons, or Latter-day Saints. This sect, whose origin and growth are strange social phenomena, originated with Joseph Smith, a native of Vermont, who pretended that so early as 1823, when he was living with his father in Ontario (now Wayne) County, N. Y., at the age of fifteen years, he began to have visions. He said God had then revealed to him that in a certain hill were golden plates, on which were written the records of the ancient inhabitants of America, and that with the plates would be found two transparent stones, which were called in the Hebrew tongue Urim and Thummim, on looking through which the inscriptions on the golden plates would become intelligible. He said that four years afterwards (Sept. 22, 1827) the angel of the Lord had placed these golden plates and their interpreters in his hands. The inscriptions were neatly engraved on the plates in hieroglyphics of the "reformed Egyptian," then not known on the earth. From these plates, with the aid of the Urim and Thummim, Smith, sitting behind a blanket-screen to hide the plates from eyes profane, read the *Book of Mormon* (or *Golden Bible*, as he sometimes called it) to Oliver Cowdery, who wrote it down as Smith read it. It was printed in 1830 in a volume of several hundred pages. Appended to the narrative is a declaration signed by Oliver Cowdery, David Whitmer, and Martin Harris in these words: "We declare, with words of soberness, that an angel of God came down from heaven, and he brought and laid before our eyes, that we beheld and saw the plates and the engravings thereon." These the Mormons call the "Three Witnesses." Several years afterwards these men quarrelled with Smith, renounced Mormonism, and solemnly declared that their testimony was false. The fact has been fully established that Smith was a knave and the whole thing a fraud; the real author of the work which he pretended to read behind the blanket-curtain from plates of gold was Solomon Spaulding, a graduate of Dartmouth College in 1785, who entered the ministry, afterwards engaged in mercantile pursuits in Cherry Valley, N. Y., thence went to Conneaut, O., in 1812 removed to Pittsburgh, Penn., and from that place went to Amity, in the same state, where

he died in 1816. He wrote some worthless novels which were never published, but were read from manuscript to his friends. In Ohio his imagination was quickened by the sight and partial study of the ancient mounds found there. During his residence in Ohio Spaulding wrote a fanciful history of the ancient people of America, according to a theory that they were descendants of the lost tribes of Israel. He styled his work *Manuscript Found*. Its publication was announced in the newspapers as early as 1813 as containing the *Book of Mormon*. The manuscript, according to the testimony of Spaulding's widow, was placed in a printing-office in Pittsburgh, in which Sidney Rigdon (afterwards a conspicuous actor in the fraud) was employed, who made a copy of it. The original manuscript was afterwards returned to the author, and his widow had it in her possession when Smith's *Book of Mormon* appeared, with which it was found to be identical. It is asserted that, through Rigdon, Smith obtained a copy of Spaulding's manuscript, and that it was from that copy that Smith, behind the blanket, read to the scribe Cowdery. The *Book of Mormon* is a collection of sixteen distinct books, professing to be written at different periods by successive prophets. Its style is that of our English version of the Bible, from which quotations to the amount of three hundred pages of the work are made without allusion to their source. Smith and Rigdon became partners in the scheme of establishing a new church. With this *Book of Mormon* in their hands as text and authority, they began to preach the new gospel. They found dupes and followers, and in April, 1830, organized the first Mormon church at Manchester, N. Y., when the members numbered thirty. Smith pretended to be guided by a series of revelations. By one of these he was directed to lead the believers to Kirtland, O., which was to be the seat of the New Jerusalem. They went, and converts rapidly appeared. Desiring a wider field for the growth of the church, Smith and Rigdon found it in Jackson County, Mo., where, at Independence, Smith dedicated the site for the temple to be erected by the Saints. Then they went back to Kirtland to remain five years and "make money." There they established a mill, a store, and a bank. Smith was president of the latter, and Rigdon was cashier, and the neighboring country was flooded with the bank's worthless notes. Justly accused of fraudulent dealing, a mob dragged Smith and Rigdon from their beds (March 22, 1832), and tarred and feathered them. About this time Brigham Young, a native of Vermont, a painter and glazier, became a convert, and joined the Mormons at Kirtland. His ability and shrewdness soon made him a leader, and when a new organization of the church occurred, and a hierarchy was established with twelve apostles, he was ordained one of them, and was sent out to preach the new gospel. They built a costly temple at Kirtland, which was dedicated in 1836. Their first missionaries to Europe were sent in 1837. Early the next year the bank at Kirtland failed, and Smith and Rigdon, to avoid arrest

for fraud, decamped in the night and took refuge in Missouri, where a large number of Mormons had gathered. They were driven by the exasperated inhabitants towards the western border of the state, where Smith and Rigdon joined them. In conflicts with the Mormons, several were killed on each side. Finally, late in 1838, these conflicts assumed the character of civil war, and apostates from the Mormon church declared that Smith was regarded by his followers as superior to all earthly magistrates, and that it was his avowed intention to possess himself of the state. The armed Mormons defied the laws. Smith and Rigdon were arrested on a charge of treason, murder, and felony. The Mormons were finally driven out of Missouri; and, to the number of several thousands, they crossed the Mississippi into Illinois, where they were joined by Smith, who had broken out of jail. The Mormons were kindly received in Illinois. Lands were given them, and Smith was directed by a revelation to build a city, to be called Nauvoo, at Commerce. He laid out the city, sold lots to his followers at high prices, and amassed a considerable fortune. Nauvoo soon became a city of several thousand inhabitants, the Saints being summoned by a new revelation to assemble there from all parts of the world, and to build a temple for the Lord, and a hotel in which Smith and his family should "have place from generation to generation, for ever and ever." Extraordinary privileges were given to Nauvoo by the Legislature of Illinois, and Smith and Rigdon exercised almost unlimited power. They organized a military corps called the "Nauvoo Legion," of which Smith was made lieutenant-general. The foundations of the temple at Nauvoo were laid April 6, 1841. Smith was almost absolute in power and influence; and so early as 1838 he had by persuasion corrupted several women, calling them "spiritual wives," although he had a lawful wife to whom he had been married eleven years. She naturally became jealous, and, to pacify her, Smith pretended to receive (July 12, 1843) a revelation authorizing men to have more than one wife. So polygamy was established among the Mormons. Much scandal was created at Nauvoo. The "Apostles" strenuously denied the fact until it could no longer be concealed, when it was admitted (1852), and boldly avowed and defended on the authority of the revelation in 1843. Smith's licentiousness became so flagrant that a great uproar was created at Nauvoo, and he was denounced as a corrupter of virtue. The affidavits of sixteen women were published to the effect that Smith and Rigdon had tried to persuade them to become "spiritual wives." Great excitement followed. Smith and some followers having destroyed the property of one of his accusers, attempts were made to arrest him, when the Mormons, armed, defended him. At last he, his brother Hyrum, and others were lodged in jail at Carthage in 1844. On the evening of June 27 a mob attacked the jail, and the "Prophet" and his brother were shot dead. Rigdon now aspired to be the leader of the Mormons, but Brigham Young had him-

self appointed president of the church, and Rigdon, becoming contumacious, was cast out to be "buffeted for a thousand years." Public sentiment in Illinois set strongly against the Mormons, and early in 1846 they prepared for an exodus to the Rocky Mountains. A place was selected on the borders of the Great Salt Lake by Brigham Young in 1847, and the next year the main body of the Saints set out for the land of promise in the heart of the continent. The story of that exodus is wonderful. They founded Salt Lake City. A large number of converts arrived from Europe, and in 1849 the Mormons organized an independent state, called Deseret—"the land of the honey-bee." A legislature was elected, and a constitution framed and sent to Washington. Congress refused to recognize it, but formed a territorial government for their country under the name of Utah, and appointed Brigham Young territorial governor. (See *Utah*.) Utah has never been admitted as a state of the Union, owing to the polygamous practices of its people, who have from time to time given the government much trouble. "Gentiles" have settled among them, but the Mormon church is supreme in Utah. Polygamy continues to be practised, each man being allowed as many wives as he can support. They keep missionaries abroad, and converts are yet crossing the ocean in considerable numbers. The foreign-born are chiefly from the working-classes of England, Wales, Denmark, Sweden, and Norway.

Morris, CHARLES, was born at Woodstock, Conn., July 26, 1784; died at Washington, Jan. 27, 1856. He entered the navy in July, 1799, and helped in the destruction of the *Philadelphia*

CHARLES MORRIS.

(which see) at Tripoli. In the encounter between the *Constitution* and *Guerriere* (which see) he was shot through the belly. In 1814, while he commanded the frigate *John Adams*, he took

her up the Penobscot River for repairs, was blockaded there, and on the approach of the British he destroyed her. (See *Hampden* [Me.], *British at.*) In 1825 he commanded the frigate *Brandywine*, which conveyed Lafayette back to Europe after his visit to this country. He was constantly employed in the public service, afloat or ashore, and at the time of his death was chief of the Bureau of Ordnance and Hydrography. He had the supervision of the Naval Academy at Annapolis for several years. Commodore Morris had no superior in the world as a naval commander. His remains lie in the beautiful Oak

best songs may be found in Allibone's *Dictionary of British and American Authors*. William Howitt, after speaking of the beauty and naturalness of Morris's love-songs, gives, in the following words, a generous touch of the character of all of his writings: "He has never attempted to robe vice in beauty; and, as has been well remarked, his lays can bring to the cheek of purity no blush but that of pleasure." He is properly called "*the song-writer of America*."

MORRIS, GOUVERNEUR, was born at Morrisania, N. Y., Jan. 31, 1752; died there, Nov. 6, 1816. He graduated at King's (now Columbia) College in 1768. He was a brother of Lewis, the signer of the Declaration of Independence. He

Hill Cemetery, at Georgetown, District of Columbia, and over them is a neat white marble monument.

MORRIS, GEORGE P., lyric poet, was born in Philadelphia, Oct. 10, 1802; died in New York city, July 6, 1864. In early life he made New York his residence, and contributed verses to the newspapers when he was fifteen years of age. He edited and published the *New York Mirror* for nineteen years (1823-42), and in 1843 was associated with N. P. Willis in the publication of the *New Mirror*, and afterwards (1844) in the daily *Evening Mirror*. In 1845 he began the *National Press*, and in 1846 the *Home Journal*, yet (1880) continued. The latter is a "society journal." Mr. Morris achieved great popularity as a song-writer. His lyrics are very numerous, one of the best-known being "*Woodman, spare that tree*." In 1825 he wrote a drama, *Briercliff*, in five acts, founded upon events of the American Revolution. It was performed forty successive nights, and paid the author \$3500. In 1842 he wrote an opera for C. E. Horne, entitled *The Maid of Saxony*, which had a run of fourteen successive nights. A brief catalogue of Morris's

GOUVERNEUR MORRIS.

was admitted to the bar in 1771, and soon acquired great reputation as a lawyer. One of the committee that drafted the constitution of the State of New York, a member of Congress from 1777 to 1780, and one of the most useful of committee-men in that body, he gained much political influence. In 1779 he published a pamphlet containing *Observations on the American Revolution*. In 1781 he was the assistant of Robert Morris, the Superintendent of Finance. Having lived in Philadelphia six years, he purchased (1786) the estate of Morrisania from his brother, and made it his residence ever afterwards. Prominent in the convention that framed the national Constitution, he put that instrument into the literary shape in which it was adopted. In 1791 he was sent to London as private agent of the United States, and from 1792 to 1794 was American minister to France; afterwards travelled in Europe, and in 1798 returned to the United States. In 1800 he was chosen United States Senator. He was one of the early advocates of the construction of the Erie Canal, and chairman of the Canal Commission from 1810 until his death.

MORRIS, GOUVERNEUR, IN FRANCE (1794). The sagacious Gouverneur Morris was Jefferson's successor as minister to the French government. He had seen many of the phases of the French Revolution, and with a tantalizing coolness had pursued Washington's policy of neutrality towards France and England. This course offended the ardent French Republicans, and when making out the letters recalling Genet (which see) the Committee of Public Safety, in which Robespierre and his associates were predominant, solicited the recall of Morris. For reasons

of policy the President complied, but accompanied the letter of recall with a private one, expressing his satisfaction with Morris's diplomatic conduct. This letter, sent by a British vessel, fell into the hands of the French government, and greatly increased the suspicion with which the American administration was regarded. To allay that suspicion, Washington sent Monroe, an avowed friend of the French Revolutionists, as Morris's successor.

Morris, LEWIS, a signer of the Declaration of Independence, was born at Morrisania, N. Y., in 1726; died there, Jan. 22, 1798. He graduated at Yale College in 1746, and was in Congress in 1775, serving on some of the most important committees. To him was assigned the delicate task of detaching the Western Indians from the British interest, and early in 1776 he resumed his seat in Congress. His fine estate near New York was laid waste by the British. In 1777 he left Congress, was in the State Legislature, and became major-general of the militia. Three of his sons were soldiers in the Continental army.

Morris, LEWIS, son of the founder of the estate of Morrisania, Westchester Co., N. Y., was born at Morrisania in 1671; died at Kingsbury, N. J., May 21, 1746. His father was an officer in Cromwell's army. He was judge of the Supreme Court of New Jersey, and a member of the Council; for several years was chief-justice of New York and New Jersey, and governor of New Jersey from 1738 to 1746.—His son, **ROBERT HUNTER**, was chief-justice of New Jersey for twenty years, and for twenty-six years one of the Council. He died Feb. 20, 1764.

Morris, ROBERT, financier, and a signer of the Declaration of Independence, was born in Lancashire, England, Jan. 20, 1734; died in Philadelphia, May 8, 1806. He came to America at the age of thirteen years; entered the mercantile

ROBERT MORRIS

house of Charles Willing, of Philadelphia, and in 1754 entered into partnership with his son. At the beginning of the Revolution it was the largest commercial house in Philadelphia. The firm existed until 1793. Mr. Morris espoused the cause of the colonies, and was a member of the Continental Congress in 1775. On the 2d of

July, 1776, he voted against the resolution for independence, and on the 4th he refused to vote on the Declaration because he considered the movement premature. When it was adopted, he signed it. He served in Congress at different times during the war, and at the same time was largely engaged in managing the financial affairs of the country, making use of his personal credit to support the public credit. With other citizens he established a bank in Philadelphia in 1780, by which means the army was largely sustained. In 1781 he supplied almost everything to carry on the campaign against Cornwallis. Appointed Superintendent of Finance and Secretary of the Treasury under the Confederation in 1781, he served until 1784, when the fiscal affairs of the country were placed in the hands of three commissioners. At the same time, he managed naval affairs. He assisted in framing the national Constitution, and was chosen the first United States Senator for Pennsylvania under it. Washington offered him the secretaryship of the Treasury, but he declined it. In 1784 he, in partnership with Gouverneur Morris, sent to Canton, China, the first American ship ever seen in that port. Entering into land speculations in his old age, he lost his fortune, and was in prison for debt for some time.

Morris, ROBERT, AND THE MILITARY CHEST. When Washington received a letter from Count De Grasse saying that he could not yet leave the West Indies, Robert Morris was at headquarters at Dobbs's Ferry with Richard Peters, Secretary of the Board of War. The commander-in-chief was sorely disappointed, for he saw little chance of success against the British at New York without the aid of a French fleet. He instantly conceived the campaign against Cornwallis. Turning to Peters, he said, "What can you do for me?" "With money, everything; without it, nothing," replied the secretary, at the same time turning an anxious look towards Morris, who comprehended the expression. "Let me know the sum you want," said the Superintendent of Finance. Washington soon handed him estimates. Morris borrowed 20,000 hard dollars from the French commander, promising to repay it in October. The arrival of Colonel Laurens (Aug. 25) at Boston with a part of the subsidy of over \$1,000,000 from France for which he had negotiated enabled Morris to keep his engagement.

Morris, ROGER, was born in England, Jan. 28, 1717; died there, Sept. 13, 1794. He entered the royal army as captain in 1745; accompanied Braddock in his unfortunate expedition in 1755; served under Loudoun in 1757, and in 1758 married Mary Phillipse, heiress to the Phillipse Manor, N. Y. He served with distinction under Wolfe, and was with him in the siege of Quebec in 1759. Morris (holding the rank of major) retired from the army in 1764, and took a seat in the Executive Council of New York late in that year. Adhering to the British crown, when the Revolution came his property and that of his wife were confiscated, and at the peace Colonel Morris retired, with his family, to England.

Morris, STAATS LORING, was born at Morrisania, N. Y., Aug. 27, 1728; died in 1800. In 1756 he was a captain in the British army, and was lieutenant-colonel of a regiment of Highlanders in 1761. He was a brigadier-general as early as 1763, and in 1796 had reached the rank of general. The next year he was made governor of Quebec. His first wife was the Duchess of Gordon.

Morris, WILLIAM WALTERS, was born at Ballston Springs, N. Y., Aug. 31, 1801; died at Fort McHenry, Baltimore, Dec. 11, 1865. He graduated at West Point in 1820, and served against the Indians under Colonel Leavenworth in 1823; gained promotion to a majorship for services in the Seminole War (which see), and to a colonelcy in 1861. He served under Taylor in the war against Mexico, and was military governor of both Tampico and Puebla. When the Civil War broke out he was in command at Fort McHenry, where he boldly defied the threatening Secessionists, and promptly turned the guns of the fort menacingly on the city during the riots in Baltimore (which see), April 19, 1861. He was breveted brigadier-general in June, 1862, and major-general in December, 1865.

Morris's Funding Scheme. Robert Morris, as Superintendent of Finance, proposed a scheme for funding the public debt of the United States in 1782, and to provide for the regular payment of the interest on it. For these purposes he proposed a very moderate land-tax, a poll-tax, and an excise on distilled liquors. He also proposed to add to the sum thus raised five per cent. of the duties on imports, if the states would consent to it, and to reserve the back public lands as security for new loans in Europe. This plan, if carried out, it was thought, would establish the public credit. But the jealous states would not give their consent.

Morristown, ENCAMPMENT AT (1777). After the battle at Princeton (June 3, 1777), Washington led his wearied troops to Morristown, and placed them in winter encampment. There he issued a proclamation requiring the inhabitants who had taken British protection to abandon their allegiance to the king or go within the British lines. (See *Proclamation of Washington*.) Hundreds joined his standard in consequence. From that encampment he sent out armed parties, who confined the British in New Jersey to three points on the sea-shore of the state, and the commonwealth was pretty thoroughly purged of Toryism before the spring. The ranks of his army were rapidly filled by volunteers; and when the campaign opened in June, his

force, which numbered about 8000 when he left headquarters at Morristown in May, had swelled to 14,000. He had maintained through the winter and spring a line of cantonments from the Delaware River to the Hudson Highlands. Washington and his army again encamped at Morristown in the winter of 1779-80. In 1777 his headquarters were at Freeman's Tavern; in 1780 he occupied as such the fine mansion in the suburbs of the village belonging to the widow Ford. It is yet (1880) standing. It was purchased a few

WASHINGTON'S HEADQUARTERS AT MORRISTOWN IN 1850.

years ago for the purpose of preserving it, on account of its historical associations. It remains as when occupied by Washington.

Morse, JEDEDIAH, D.D., was born at Woodstock, Conn., Aug. 23, 1761; died in New Haven, Jan. 9, 1826. He graduated at Yale College in 1783, and in 1789 was installed pastor of the First Congregational Church at Charlestown, Mass. In the twenty-third year of his age he prepared a small geography, which was the first ever published in America. This was followed by larger geographies and gazetteers of the United States, with the help of Jeremy Belknap, the historian, Thomas Hutchins, the geographer, and Ebenezer Hazen. For thirty years Mr. Morse was without an important competitor in this field of literature, and translations of his works were made into the French and German languages. Dr. Morse was a life-long polemical theologian, and combated Unitarianism in New England most sturdily. In 1805 he established the *Panoplist*, and was prominent in founding the Andover Theological Seminary. His persistent opposition to liberalism in religion brought upon him much persecution, which affected his naturally delicate health, and he resigned his pastoral charge in 1820. In 1822 he was commissioned by the government to visit the Indian tribes on the northwestern frontiers. He published (1804) *A Compendious History of New England*, and in 1824 a *History of the American Revolution*. He also published twenty-five special sermons.

Morse, SAMUEL FINLEY BREESE, LL.D., was born in Charlestown, Mass., April 27, 1791; died in New York, April 2, 1872. He graduated at Yale College in 1810, and went to England with Washington Allston in 1811, where he studied

SAMUEL FINLEY BREESE MORSE.

the art of painting under Benjamin West. In 1813 he received the gold medal of the Adelphi Society of Arts for an original model of a "Dying Hercules," his first essay in the art of sculpture. On his return home in 1815, he practised the art of painting, chiefly in portraiture, in Boston, Charleston, S. C., and in New York, where, in 1824-25, he laid the foundation of the National Academy of Design, organized in 1826, of which he was the first president, and in which position he continued for sixteen years. While he was abroad the second time (1829-32), he was elected professor of the Literature of the Arts of Design in the University of the City of New York. Previous to his leaving home, he had become familiar with the subject of electro-magnetism by intimate personal intercourse with Professor J. Freeman Dana. On his return passage from Europe in 1832 in the ship *Sully*, in conversation with others concerning recent electric and magnetic experiments in France, Professor Morse conceived the idea of an electro-magnetic and chemical recording telegraph as it now exists. Before the close of that year, a part of the apparatus was constructed in New York. In 1835 he had a mile of telegraph-wire, producing satisfactory results, in a room at the university, and in September, 1837, he exhibited it to some friends. That year he filed a caveat at the Patent-office in Washington, and asked Congress to give him pecuniary aid to build an experimental line from that city to Baltimore. A favorable report was made by the House committee, but nothing else was done at that session. He continued to press the matter. Morse went to Europe to interest foreign governments in his discovery, but failed. With scanty pecun-

iary means, he struggled on four years longer; and on the last evening of the session of 1842-43 his hopes were extinguished, for one hundred and eighty bills before his were to be acted upon in the course of a few hours. The next morning, as he was about to leave with dejected spirits for his home in New York, he was cheered with the announcement by a young daughter of the Commissioner of Patents (Ellsworth) that at near the midnight hour Congress had made an appropriation of \$30,000 to be placed at his disposal. A line was completed between the Capitol at Washington and the city of Baltimore in the spring of 1844; and then from Professor Morse, at the seat of government, to his assistant, Henry T. Rogers (who died in August, 1879), in the latter city, passed the first appropriate message — "What hath God wrought!" suggested by the fair young friend of the inventor. At that time the Democratic National Convention was in session at Baltimore, and the first public message that was flashed over the wires was the announcement of that convention to their friends in Washington of the nomination of James K. Polk for President of the United States. So was given the assurance that the great experiment had resulted in a perfect demonstration not only of the marvellous ability, but of the immense value, of the discovery and invention. With that perception came violations of the inventor's rights, and for a long series of years most vexatious and expensive litigation. But Morse triumphed everywhere, and he received most substantial testimonials of the profound respect which his great discovery and invention had won for him. In 1846 Yale College conferred on him the degree of LL.D., and in 1848 the Sultan of Turkey gave him the decoration of the *Nishan Iftikar*. Gold medals for scientific merit were given him by the King of Prussia, the King of Württemberg, and the Emperor of Austria. In 1856 he received from the Emperor of the French the cross of Chevalier of the Legion of Honor. In 1857 the King of Denmark gave him the cross of Knight-commander of the first class of the Dannebrog. In 1858 the Queen of Spain presented him the cross of Knight-commander of the Order of Isabella the Catholic; the King of Italy gave him the cross of SS. Maurice and Lazarus, and from the King of Portugal he received the cross of the Order of the Tower and the Sword. A banquet was given him in London (1856) by British telegraph companies, and in Paris (1858) by about a hundred Americans, representing nearly every state in the Union. In the latter part of that year, after a telegraphic cable had been laid under the Atlantic Ocean (see *Atlantic Telegraph*), representatives of France, Russia, Sweden, Belgium, Holland, Austria, Sardinia, Tuscany, the Papal States, and Turkey met in Paris, at the suggestion of the Emperor of the French, and voted to him about \$80,000 in gold as a personal reward for his labors. In 1868 (Dec. 29) the citizens of New York gave him a public dinner, and in 1871 a bronze statue of him was erected in Central Park, N. Y., by the voluntary contributions of telegraph employes. Will-

iam Cullen Bryant unveiled the statue in June, 1871, and that evening, at a public reception of the inventor at the Academy of Music, Professor Morse, with one of the instruments first employed on the Baltimore and Washington line, sent a message of greeting to all the cities of the continent, and to several in the eastern hemisphere. The last public act performed by Professor Morse was the unveiling of the bronze statue of Franklin in Printing-house Square, New York, Jan. 17, 1872. He was the father of submarine telegraphy (which see), and he lived to see performed what he believed to be a possibility—the transmission of messages each way, at the same instant, over one wire. Professor Morse made the acquaintance of Daguerre in Paris in 1839, and from drawings furnished him by the latter he constructed the first daguerreotype apparatus and took the first “sun-pictures” ever made in America. Some of the first plates on which are delineated the human face are now in the possession of Vassar College, at Poughkeepsie.

Morse, SIDNEY EDWARDS, brother of Samuel F. B., was born in Charlestown, Mass., Feb. 7, 1794; died in New York, Dec. 23, 1871. He graduated at Yale College in 1811, and in the next year as well as in that following (in the eighteenth and nineteenth years of his age) he wrote a series of newspaper articles against the multiplication of new states in the South. He studied law at Litchfield, Conn., and in 1815 established the *Boston Recorder*, the first so-called religious newspaper issued in America. He prepared a geography for schools; and in 1823, in connection with his younger brother (Richard C.), he founded the *New York Observer*, now (1890) the oldest weekly newspaper in New York city. In 1834 he invented a process for making maps and outline pictures to be printed typographically, which he named cerography. It was first used in making a geography for schools, of which more than 100,000 copies were printed and disposed of the first year. The last years of Sidney E. Morse's life were devoted to the inventing and perfecting of a bathometer for rapid explorations of the depths of the sea.

Morse's Plan for Peace. Professor Samuel F. B. Morse was an earnest advocate for peace and one of the most conspicuous opponents of the government policy during the Civil War. Immediately after the adjournment of the Peace Convention (which see) he was made President of the “American Society for the Promotion of National Union,” and he worked zealously for the advancement of measures that might satisfy the slaveholders and their political friends. Professor Morse proposed a convention of all the states, to which body should be referred the whole subject of differences. He also proposed a temporary yielding to the desire of the South for a separate confederacy; in other words, an assent to negotiations for a temporary dissolution of the present Union. Professor Morse evidently believed that the trouble had entirely grown out of the intermeddling with slavery by fanatics of the North. “If we cannot refrain

from the use of exasperating and opprobrious language towards our brethren,” he said, “and of offensive intermeddling with their domestic affairs, then, of course, the plan fails, and so will all others for a true Union.” He said, “Coercion of one state by another, or of one federated union by another federated union,” was not to be thought of. In reply to his own question, “What is to become of the flag of the Union?” he replied, “If the country can be divided, why not the flag? The ‘Stars and Stripes’ is the flag in which we all have a deep and self-same interest. It is hallowed by the common victories of our several wars.” He proposed to “divide the old flag, giving half to each. It may be done in a manner to have a salutary moral effect upon both parties. Let the blue Union be diagonally divided, and the thirteen stripes longitudinally so as to make six and a half stripes in the upper and the same in the lower portion.” He proposed that the Northern “federal union” should have the upper half (that being north on geographical maps), and the Southern “federal union” the lower half, of the “diagonal division of the blue field and horizontal division of the thirteen stripes.” The reason he gave for this division was that “it prevents all disputes on a claim for the old flag for either confederacy. . . . Each flag being a moiety of the old flag, will retain something, at least, of the sacred memories of the past for the sober reflection of each confederacy.” The two confederacies having made a mutual treaty of offence and defence, they would combine in any war with a foreign nation. Then “the two separate flags, by natural affinity, would clasp fittingly together, and the glorious old flag of the Union in its entirety would again be hoisted, once more embracing all the sister states.” In this way reconciliation and union between the states were to be effected. Morse's plan was not favorably considered by either side. The Secessionists had determined on a wide and eternal separation, with a flag of their own; the loyal people and the government as firmly resolved that neither the Union nor the flag should be divided.

Mortality at New Plymouth. Most of the women and children remained on board the *Mayflower* until suitable log huts were erected for their reception, and it was March 21, 1621, before they were all landed on the shore. Those on shore were exposed to the rigors of winter weather and insufficient food, though the winter was a comparatively mild one. Those on the ship were confined in foul air, with unwholesome food. Scurvy and other diseases appeared among them, and when, late in March, the last passenger landed from the *Mayflower*, nearly one half the colonists were dead. Governor Carver and his wife died; also the young wife of Edward Winslow, and the wives of Miles Standish and Isaac Allerton. John Allerton and Thomas English died; also the father and mother of Mary Chilton. (See *Landing of the Pilgrims*.) In some cases whole families perished. For four months there was a death almost daily.

Morton, JAMES ST. CLAIR, was born in Philadelphia, Penn., in 1829; died near Petersburg, Va., June 17, 1864. He graduated at West Point in 1851; and in 1860, as engineer, he was employed by Congress to explore a railroad route across the Isthmus, in Central America, through the Chiriqui country. He superintended the fortifying of the Tortugas in March, 1861, and was made Chief-engineer of the Army of the Ohio in May, 1862. Rosecrans placed Morton in command of the pioneer brigade late in that year, and he rendered efficient service in the battle of Stone's River. He was wounded at Chickamauga; was chief-engineer of the Ninth Army Corps in the Richmond campaign in 1864; and was killed while leading an attack on Petersburg. He was breveted brigadier-general in the United States Army. General Morton was author of a *Manual on Fortifications* and one or two other works.

Morton, JOHN, a signer of the Declaration of Independence, was born at Ridley, Penn., in 1724; died April, 1777. He was of Swedish descent. A well-educated man, he was for many years member of the Assembly of Pennsylvania, and its speaker from 1772 to 1775. He was a delegate to the Stamp Act Congress (which see) in 1765, and became a judge of the Supreme Court of the province. Mr. Morton was a member of the Continental Congress from 1774 to 1776, and voted for the Declaration of Independence. He assisted in the first formation of the Articles of Confederation (which see), and died soon afterwards.

Morton, NATHANIEL, an early New England historian, was born in England in 1618; died at Plymouth, Mass., June 29, 1685. He came to America in 1623, and was secretary of the Plymouth colony from 1647 until his death. His *New England Memorial* was prepared chiefly from the MSS. of his uncle, Governor Bradford. It relates chiefly to the history of the Plymouth colony. In 1680 he wrote a history of the church at Plymouth.

Morton, OLIVER P., one of the most efficient

OLIVER P. MORTON.

of the "war governors" in 1861, was born in Wayne County, Ind., Aug. 4, 1823; died Nov.

1, 1877. He was educated at the Miami University, and admitted to the bar in 1847. In 1852 he was appointed Judge of the Fifth Judicial District of Indiana, and was elected lieutenant-governor in 1860. He became governor in 1861, and in that office, during the whole Civil War, he performed services of inestimable value. He issued his first war message April 25, 1861, and from that time he labored incessantly for the salvation of the Republic. In 1867 the Legislature of Indiana elected him United States Senator for six years. He was appointed minister to England in September, 1870, but declined the office. Governor Morton did more than any other man in the state to thwart the disloyal plans of the secret association in aid of the enemies of the government known as the "Order of the Golden Circle" (which see) or "Sons of Liberty."

Morton, SAMUEL GEORGE, M.D., was born in Philadelphia, Jan. 26, 1799; died there, May 15, 1851. He was a physician, and became a noted naturalist. In 1840 he was President of the Academy of Natural Sciences at Philadelphia. So early as 1834 he made a voyage to the West Indies in pursuit of his studies of the diversity of the human races and the relations resulting from their contact. He was the leading ethnologist of his time; and his *Crania Americana* and *Crania Egyptica* are standard works on ethnology, as contributions to the natural history of man. He had a collection of 1512 skulls, of which 900 were human—the largest and most valuable collection in the world.

Morton, WILLIAM THOMAS GREEN, M.D., a discoverer of the use of ether as an anæsthetic in surgery, was born at Charlton, Mass., Aug. 9, 1819; died in New York city, July 15, 1868. After studying dentistry in Baltimore in 1840, he settled in Boston (1842), where he successfully manufactured artificial teeth. While attending lectures at a medical college, he conceived the idea that sulphuric ether might be used to alleviate pain. Assured of its safety by experiments on himself, he first administered it successfully in his dental practice Sept. 30, 1846, extracting a firmly rooted tooth without pain. At the request of Dr. J. C. Warren, ether was administered to a man in the Massachusetts General Hospital, from whose groin a vascular tumor was removed while the patient was unconscious. Dr. Morton obtained a patent for his discovery in November, 1846, under the name of "Lætheon," offering, however, free rights to all charitable institutions; but the government appropriated his discovery to its use without compensation. Other claimants arose, and he suffered great persecution in private and before Congress. His business was ruined, and at the end of eight years of ineffectual struggle to procure from Congress remuneration for his discovery he and his family were left in poverty. Honorable medical men of Boston, New York, and Philadelphia assigned to Dr. Morton the credit of the great discovery—"the most important benefaction ever made by man to the human race"—and said so by signing an appeal for a national testimonial to him. In 1858 he

sued a marine hospital surgeon for infringing his patent, and recovered damages. In 1848 Richard Dana published a pamphlet in vindication of his claim.

Mother Ann. The name given to Ann Lee, the founder of the religious sect known as "Shakers" in the United States. She was an Englishwoman, who pretended to have a revelation that she was a second manifestation, in female form, of the Christ. Her followers say: "The man who is called Jesus and the woman who was called Ann are truly the two great pillars of the church." She was acknowledged to be a "spiritual mother in Israel," and was called "Mother Ann." Strict celibacy is inculcated and practised by her followers. Ann Lee came to America, and, with a few followers, settled opposite Troy, N.Y., in 1776. They preached against the war, and Ann was suspected of being a British spy. Charged with high-treason, she was imprisoned at Albany and Poughkeepsie, but was released by Governor Clinton. In 1780 a wild revival broke out under her ministrations, and many were added to the society of the Shakers. She declared to her deluded converts that she was the "woman clothed with the sun" spoken of in the Apocalypse, and by mysterious mutterings, groans, and strange gestures she excited their fear and admiration. Mother Ann introduced dancing, whirling, hopping, and other eccentricities in their worship, and declared that she would never die, but be translated into heaven alive. She did die, in 1784, but her followers say it was not real death. They declare that

"In union with the Father, she is the second Eve,
Dispensing full salvation to all who do believe."

Mother Goose. The alleged author of a collection of popular nursery rhymes. Mrs. Goose was of a wealthy family in Boston, Mass. Her eldest daughter married Thomas Fleet, an enterprising printer, and Mrs. Goose lived with them. When their first child was born she was delighted, and spent nearly the whole time in singing songs and ditties which she had learned in her youth, to please the baby. The unmusical sounds annoyed everybody, and especially Fleet, who loved quiet. He remonstrated, coaxed, scolded, and ridiculed, but in vain. He could not suppress the old lady; so he resolved to turn the annoyance to account by gathering up and publishing the songs, ditties, and nonsensical jingles of his mother-in-law, and punishing her by attaching her name to them. In 1719 they were published in "Pudding Lane" (now Devonshire Street), Boston, with the title of *Songs for the Nursery; or, Mother Goose's Melodies for Children*. The latter portion of the title was intended by Fleet to get even with his musical mother-in-law.

Mother of Presidents. This name is given to Virginia, which has furnished six Presidents of the United States—namely, Washington, Jefferson, Madison, Monroe, Harrison, and Taylor. It is also called "Mother of States," as it was the first settled of the original thirteen states that formed the Union.

Motley, JOHN LOTHROP, LL.D., D.C.L., was born at Dorchester, Mass., April 15, 1814. He graduated at Harvard University in 1831, and afterwards spent a year at the universities of Göttingen and Berlin; travelled in Italy, and, returning, studied law, and was admitted to the bar in 1836. He wrote two historical novels—*Master's Hope* (1839) and *Merry Mount* (1849). In 1840 he was Secretary to the American Legation in Russia. He became interested in the history of Holland, and embarked for Europe in 1851 to gather materials for his great work, in three volumes, *The History of the Rise of the Dutch Republic*, which was published in London and New York in 1856. In 1861 he published *The United Netherlands*—two volumes—which was completed in 1867 in two additional volumes. This work was followed, in 1874, by *The Life and Death of John of Barneveld, Advocate of Holland, with a View of the Primary Causes of the Thirty Years' War*. On the accession of General Grant to the presidency in 1869, Mr. Motley was appointed minister at the Court of Great Britain. He was recalled late in 1870, when he revisited Holland in pursuit of historical studies. He afterwards went to England, where he died, May 29, 1877.

Mott, GERSHOM, was born in Mercer County, N. J., in 1822, and was an officer in the war with Mexico. He was lieutenant-colonel of a New Jersey volunteer regiment that hastened to the field in 1861, and, as colonel, served with distinction in the campaign on the Peninsula. He was made brigadier-general in September, 1862, and was wounded in the battle of Manassas (which see). At Chancellorsville he commanded a New Jersey brigade in Sickles's division, and was again wounded. He also distinguished himself in the battle of Gettysburg. In the operations before Petersburg in 1864-65 he commanded a division of the Third Corps, and while in pursuit of Lee was again wounded. He was breveted major-general in September, 1864.

Mott, LUCRETIA (Coffin), was born in Nantucket, Jan. 3, 1793. In 1804 her parents, who were Friends, or Quakers, removed to Boston. She was soon afterwards sent to the Nine Partners' Boarding-school, in Dutchess County, N. Y., where her teacher (Deborah Willetts) lived until 1879. Thence she went to Philadelphia, where her parents were residing, and at the age of eighteen years she married James Mott. In 1818 she became a preacher among Friends, and all her life she has labored for the good of her fellow-creatures, especially for those who were in bonds of any kind. She has ever been an earnest advocate of temperance, pleaded for the freedom of the slaves, and was one of the active founders of the "American Anti-slavery Society" in Philadelphia in 1833. She was appointed a delegate to the World's Anti-slavery Convention, held in London in 1840, but was denied a seat in it on account of her sex. She has also been a prominent advocate of the emancipation of her sex from the disabilities to which law and custom subject them. She is still (1880) living in Philadelphia. Her motto is, "Truth for authority, not authority for truth."

Mott, VALENTINE, M.D., LL.D., surgeon, was born at Glen Cove, L. I., Aug. 20, 1785; died in New York, April 26, 1865. He studied medicine and surgery in London and Edinburgh, and on his return in 1809 he was appointed to the chair of Surgery in Columbia College, and subsequently in the College of Physicians and Surgeons of New York, and the Rutgers Medical College. He was greatly distinguished as an operating surgeon, after some most difficult and dangerous treatment of patients in his early practice. He was the first to tie the primitive iliac artery for aneurism, and was the first surgeon who removed the lower jaw for necrosis. The eminent Sir Astley Cooper said: "Dr. Mott has performed more of the great operations than any man living or that ever did live."

Motte, REBECCA, a heroine of the Revolution, was a daughter of Mr. Brewton, an Englishman. She married Jacob Motte, a South Carolina planter, in 1758, and was the mother of six children. Left a widow of fortune at

REBECCA MOTTE.

about the beginning of the war for independence, she resided in a fine mansion near the Santee River, from which she was driven by British soldiers. Her patriotic devotion at that time is attested in the article entitled "Fort Motte, Capture of."

Moultrie, WILLIAM, was born in South Carolina in 1731; died in Charleston, S. C., Sept. 27, 1805. He was captain of infantry in the Cherokee War (which see); a member of the Provincial Congress from St. Helena Parish in 1775, and was made colonel of a South Carolina regiment in June of that year. He gained great fame by his defence of Fort Sullivan (see *Charleston, Defence of*), in Charleston Harbor. In September, 1776, he was made a brigadier-general. He was engaged in the local service, and in May, 1779, he, with one thousand militia, opposed the advance of Prevost upon Charleston, which he held until Lincoln relieved him. He was distinguished at the siege of Charleston in 1780,

when he was made a prisoner, and remained so until 1782, when he was exchanged for Burgoyne. While he was a prisoner he wrote his *Memoirs*, pub-

WILLIAM MOULTRIE.

lished in 1802. In October, that year, he was made major-general, and was governor of South Carolina in 1785-86, and from 1794 to 1796.

Mound-builders, THE. This is a name given to an unknown people who inhabited the central portion of North America at an unknown period in its history. They have left traces of agriculture and skill in arts, and evidences of having attained to a considerable degree of civilization. All over the continent between the great range of hills extending from the northern part of Vermont far towards the Gulf of Mexico and the Rocky Mountains, traces of this mysterious people are found in the remains of earthworks, exceedingly numerous, especially in the region northward of the Ohio River. These consist of, evidently, military works, places of sepulture, places of sacrifice, and mounds in the forms of animals, such as the buffalo, eagle, turtle, serpent, lizard, alligator, etc. It is estimated that more than 10,000 mounds and more than 2000 earth-enclosures are in the State of Ohio alone. One of the most interesting of these earth-enclosures is near Newark, Ohio, in the midst of the primeval forest, and is used as fair grounds by the Licking County Agricultural Society. It is composed of a continuous mound that sweeps in a perfect circle a mile in circumference, broken only by the entrance to it, as seen in the foreground of the engraving on page 935, where the banks, higher than elsewhere, turn outward for fifty feet or more, and form a magnificent gateway. The embankment averages fifteen or twenty feet in height, and is covered with beech, maple, and hickory trees of every size, indicating the origin of the structure to be far more remote than the advent of the Europeans in America. The ditch from which the earth was thrown is within the embankment, extending entirely around it, showing that the work was not a fortification. In the centre of the area (which is perfectly level and covered with forest-trees) is a slight elevation, in the form of a

spread-eagle, covering many yards, and is called the Eagle Mound. The evidently military works sometimes occupy hundreds of acres of land, and consist of circumvallations. On these walls ancient forest-trees are now growing. The sepulchral mounds are sometimes sixty feet in height, and always contain human remains, accompanied by earthen vessels and copper trinkets. Some of the vessels show considerable skill in the art of design. In some of these have been found the charred remains of human bodies, showing that these people sometimes practised cremation. The sacrificial mounds, on which temples probably stood, are truncated pyramids, with graded approaches to the tops, like those found by the Spaniards in Central America and Mexico. The animal mounds usually rise only a few feet above the surface of the surrounding country. Some of these cover a large area, but conjecture is puzzled in endeavoring to determine their uses. The great Serpent Mound, in Adams County, O., is one thousand feet in length; and in Licking County, O., is Alligator Mound, two hundred and fifty feet in length and fifty feet in breadth. The Grave Creek Se-

the enclosed area. The squares and circles in these works are perfect squares and circles, and their immense size implies much engineering skill in their construction. They all show some fixed and general design, for works scores of miles apart seem to indicate a common geometrical rule in their construction. In Ohio, a square and two circles are often found combined, and they usually agree in this, that each of the sides of the squares measures exactly 1080 feet, and the adjacent circles 1700 and 800 feet, respectively. The moats, or ditches, found on the inside of these works indicate that they were not intended as defences, but may have been the enclosures of public parks, or the boundaries of grounds held sacred by a superstitious and religious people. The mounds are divided by expert explorers into altar or sacrificial mounds, sepulchral mounds, temple mounds, mounds of observation, and animal mounds. In the mounds, pottery, bronze, and stone axes, copper bracelets, bronze knives, flint arrow-points, and various other implements, belonging to the arts of both peace and war, are found. Near the shores of Lake Superior are

GREAT EARTH-WORK NEAR NEWARK.

pulchral Mound, not far from Wheeling, Va., is seventy feet in height and nine hundred feet in circumference. The great age of these sepulchral mounds is attested, not only by the immense forest-trees that grow upon them, but by the condition of human bones found in them, which do not admit of their removal, as they crumble into dust on exposure to the air. Bones in British tumuli, or mounds, older than the Christian era, are frequently taken out and remain entire. The supposed military works, more than any others, show the forecast of the soldier and the skill of the engineer. Their works of circumvallation also show a degree of mathematical knowledge very remarkable. These are usually upon table-lands, and often extend, in groups, several miles, but are connected with each other. The groups are made up of squares, circles, and other mathematical figures, which range from two hundred and fifty to three hundred feet in diameter to a mile in circuit. Among the groups of circumvallating mounds are sometimes seen traces of avenues of imposing width, passing between embankments several feet in height, and often connected with

evidences of ancient mining for copper, of which the present race of Indians have no traditions. In a filled trench, eighteen feet below the present surface of the ground, was found a mass of copper weighing about six tons, raised upon a frame of wood five feet high, preparatory to removal. From these mines the ancient people, a thousand miles away, evidently obtained their copper for making their implements and ornaments. In their pottery, and especially in their clay pipe-bowls, may be seen figures of animals and of the heads of men, made with striking fidelity to nature. In the representations of the human head there is observed a noticeable similarity between those of the northern Mound-builders and the sculptured heads found among the ruins in Yucatan. They have the same remarkable recession of the forehead and general facial angle. The Aztecs found in Mexico by Cortez, and the ancient Peruvians, whose empire was ruined by Pizarro, may have been the remains of the mound-building race, who, by some unknown circumstances, had been compelled to abandon their more northern homes and give place to a wild and savage race of invaders. But all is

conjecture. The veil of truth which covers their history may never be penetrated. (See *Indians*.)

Mount Desert Island, ATTACK UPON. In 1613 Samuel Argall, a sort of freebooter from Virginia, visited the coast of Maine, ostensibly for fishing; but his vessel carried several pieces of artillery. Hearing that French Jesuits were on Pemetig or Mount Desert Island, he went there and attacked a French vessel that lay at anchor, which, after firing one gun, was compelled to surrender. Du Thet, who discharged the gun, was mortally wounded. The other Jes-

uits there remonstrated with Argall, when he landed and began to search the tents. He broke open the desk of the Jesuit leader, took out and destroyed his commission, and then, pretending that they were within English jurisdiction, without authority, he turned more than a dozen of the little colony loose upon the ocean in an open boat, to seek Port Royal, in Acadia. Two fishing vessels picked them up and carried them to France. The remainder were carried to Virginia, and there lodged in prison and badly treated. Argall's conduct was approved in Virginia, and he was sent back to destroy all the settlements in Acadia. (See *Acadia* and *Argall, Samuel*.)

MOUNT DESERT ISLAND FROM BLUE HILL BAY.

uits there remonstrated with Argall, when he landed and began to search the tents. He broke open the desk of the Jesuit leader, took out and destroyed his commission, and then, pretending that they were within English jurisdiction, without authority, he turned more than a dozen of the little colony loose upon the ocean in an open boat, to seek Port Royal, in Acadia. Two fishing vessels picked them up and carried them to France. The remainder were carried to Virginia, and there lodged in prison and badly treated. Argall's conduct was approved in Virginia, and he was sent back to destroy all the settlements in Acadia. (See *Acadia* and *Argall, Samuel*.)

Mount Vernon Threatened. In July, 1776, when Governor Dunmore was driven from Gwyn's Island (see *Dunmore's War on the Virginians*), he ascended the Potomac as far as Occoquan and burned the mills there. The Virginia militia repulsed him. It is supposed his chief destination was Mount Vernon, a few miles above, which he intended to lay waste, and seize Mrs. Washington as a hostage. The British frigates, after they entered Chesapeake Bay, in the spring of 1781, ascended the Potomac and levied contributions upon all the tide-water counties. They menaced Mount Vernon, and, to save the buildings, Washington's manager (Lund Washington) consented to furnish a supply of provisions. In a letter to his manager Washington reproved him for the act. "It would have been a less painful circumstance to me to have heard that, in consequence of your

sels, carry them refreshments, commune with a parcel of scoundrels, and request a favor by asking a surrender of my negroes was exceedingly ill-judged, and, it is to be feared, will be unhappy in its consequences, as it will be a precedent for others and may become a subject of animadversion."

Mower, JOSEPH A., was born in Vermont in 1830; died in New Orleans, Jan. 6, 1870. He was a private in an engineer company in the Mexican War, and entered the United States army as lieutenant in 1855. He was made captain in 1861, and was prominent in the battle of Island No. Ten (which see). He was conspicuous at other places, and was made brigadier-general of volunteers in November, 1862. He commanded a brigade in front of Vicksburg in 1863, and was in command of a division under Banks in the Red River expedition (which see) in 1864; also in the Atlanta campaign. He was made major-general of volunteers in August, 1864, and rose to the command of the Twentieth Corps. In July, 1866, he was made colonel in the United States army, and was breveted brigadier and major-general in the same.

Mowing-machines. The invention of the mowing-machine is coeval, in our country, with the reaping-machine. The "Manning Mower" was invented in 1831. That and the "Ketcham" (1844) held the place of superior excellence until about 1850, when other inventors had made improvements. In 1850 less than 5000 mowing machines had been made in our country. Now (1876), every farmer in the old free-

labor states finds a mower indispensable. There are several improved mowing-machines of almost equal merit. The American machines are sold all over Europe and South America. In 1870 there were about 190 establishments for the manufacture of reapers and mowers, which produced, that year, 60,000 of the former and 40,000 of the latter, and full 60,000 reapers and mowers combined—a total of 160,000, having an aggregate value of \$24,000,000. Almost 1,000,000 scythes are annually manufactured in the United States, of which number Connecticut produces one third. The horse-rake has largely superseded the hand-rake. There were, in 1870, horse-rakes of various kinds manufactured in our country to the number of 80,000.

Moylan, STEPHEN, was born in Ireland in 1734; died in Philadelphia, April 11, 1811. He was a brother of the Roman Catholic Bishop of Cork. He was appointed aide-de-camp to Washington in March, 1776, and commissary-general in June. Soon resigning that post, early in 1777 he commanded a regiment of light dragoons, serving in the battle at Germantown, with Wayne in Pennsylvania, and with Greene in the South. In November, 1783, he was breveted brigadier-general. In 1792 he was register and recorder of Chester County, Penn., and was commissioner of loans for the District of Pennsylvania.

Mühlenberg, FREDERICK AUGUSTUS, was born at La Trappe, Penn., June 2, 1750; died at Lancaster, Penn., June 4, 1801. He was a Lutheran minister; took an active part in the revolutionary movements, and was a member of the Continental Congress (1779–80). He was an active member of the Pennsylvania Assembly, and its speaker from 1781 to 1784; was a member of the council and treasurer of the state, and president of the convention that ratified the national Constitution. He was Receiver-general of the Land Office, and was speaker of the first and second Congress. In that capacity his casting vote carried Jay's treaty (which see) into effect.

Mühlenberg, HENRY AUGUSTUS, was born at Lancaster, Penn., May 13, 1782; died at Reading, Penn., Aug. 11, 1844. From 1802 until 1828 he was pastor of a Lutheran church at Reading, when, on account of failing health, he left the ministry. He was member of Congress from 1829 to 1838; an unsuccessful candidate of the Democratic party for governor in 1835, and was minister to Austria from 1838 to 1840.

Mühlenberg, HENRY MELCHIOR, D.D., was born at Einbeck, Hanover, Germany, Sept. 6, 1711; died Oct. 7, 1787. He was the patriarch of the Lutheran Church in America, having come to Philadelphia as a missionary in the fall of 1742. He afterwards lived at La Trappe, Montgomery Co., Penn. He was devoted to the service of building up churches, relieving the destitute, and doing his "Master's business" continually, travelling as far as Georgia. In 1748 he was chiefly instrumental in organizing the first Lutheran Synod in America, that of Pennsylvania.

Mühlenberg, JOHN PETER GABRIEL, was born at La Trappe, Penn., Oct. 1, 1746; died near Schuylkill, Penn., Oct. 1, 1807. He was educated at Halle, Germany. He ran away, and for a year was a private in a regiment of dragoons. His father designed him for the ministry. He was ordained in 1772, and preached at Woodstock, Va., until the war for independence

JOHN PETER GABRIEL MÜHLENBERG.

broke out. One Sunday he told his hearers that there was a time for all things—a time to preach and a time to fight—and that then was the time to fight. Casting off his gown, he appeared in the regimentals of a Virginia colonel, read his commission as such, and ordered drummers to beat up for recruits. Nearly all the able-bodied men of his parish responded, and became soldiers of the Eighth Virginia (German) Regiment. He had been an active patriot in civil life, and was efficient in military service. In February, 1777, he was made brigadier-general, and took charge of the Virginia line, under Washington. He was in the battles of Brandywine, Germantown, and Monmouth, and was at the capture of Stony Point (which see). He was in chief command in Virginia in 1781, until the arrival of Steuben; and was second in command to Lafayette in resisting the invasion of the state by Cornwallis. At the siege of Yorktown (which see) he commanded a brigade of light infantry, and was made a major-general at the close of the war. Removing to Pennsylvania, he was elected a member of the Council, and, in 1785, vice-president of the state. He was a member of Congress much of the time from 1789 to 1801, and in 1801–2 he was United States Senator. He was Supervisor of the Revenue for the District of Pennsylvania, and, in 1803, Collector of the Port of Philadelphia.

Mulligan, JAMES A., was born at Utica, N. Y., of Irish parents, June 25, 1830; died of wounds at Winchester, Va., July 26, 1864. He graduated at the University of St. Mary of the Lake, Illinois, in 1850, and the next year accompanied John L. Stephens (which see) on his expedition

in Central America. He edited a paper in Chicago for a while, and was admitted to the bar in November, 1855. In 1861 he became colonel of an Illinois volunteer regiment; and in September of that year he took command of the Union post at Lexington, Mo., where, after a desperate defence against an attack by General Price, he was compelled to surrender. (See *Lexington, Mo., Siege of.*) He afterwards took command at Camp Douglas, Chicago; and in 1864 he participated in hard-fought battles in the Shenandoah valley.

Mumfordsville (Ky.), BATTLE AT. Bragg crossed the Cumberland at Lebanon, and entered Kentucky on Sept. 5, 1862. His advance, 8000 strong, pushed on towards Louisville; and on the 13th two of Buckner's brigades encountered about 2000 Nationals, under Colonel T. J. Wilder, at Mumfordsville, where the railway crosses the Green River. There the Nationals had hastily constructed some earthworks. A demand for a surrender being refused, the Confederates drove in the National pickets early the next morning (Sept. 14). Then a battle began, which lasted about five hours, when a reinforcement reached Wilder, and the assailants were repulsed with heavy loss. Assured of final success, the Confederates remained quiet until the 16th, when a heavy force under General Polk, not less than 25,000 strong, appeared. Wilder had been reinforced, and, with 4000 effective men, sustained a battle nearly a whole day, hoping Buell (then at Bowling Green) would send him promised relief. It did not come; and when, at sunset, another demand for surrender was made, and Wilder counted forty-five cannons trained upon his works, he gave up, and at six o'clock the next morning his troops marched out with the honors of war. Wilder reported his entire loss at thirty-seven killed and wounded. The Confederates admitted a loss of 714 killed and wounded in the encounters of the 14th and 16th.

Municipal Indignation. When the Alabama Ordinance of Secession was passed (June 11, 1861) the Mayor of Mobile called for one thousand laborers to cast up defences for the city, and the Common Council, to show their indignation against New England, changed the names of several of the streets of the city, as follows: "Maine Street" to Palmetto Street, "Massachusetts Street" to Charleston Street, "New Hampshire Street" to Augusta Street, "Rhode Island Street" to Savannah Street, etc.

Munitions of War, SEIZURES OF (1774). A royal proclamation prohibiting the exportation of munitions of war to America, and the seizure of powder at Charlestown by General Gage, caused much indignation in the colonies. There was an evident determination virtually to disarm them and leave them at the mercy of British soldiers. The people determined to seize what they might. In the absence of ships-of-war usually stationed in Narraganset Bay, they seized (Dec. 6, 1774) forty-four pieces of cannon in battery at Newport and conveyed them to Providence; and when the British naval commander

demanding of Governor Wanton an explanation of the act, he bluntly avowed that it was to prevent the ordnance falling into the hands of the British officers, and that they were to be used for the defence of the rights of the people. This was soon followed at Portsmouth, N. H., where a party of citizens, led by John Sullivan (afterwards a general in the Continental army) and John Langdon, one of the principal merchants of that town, seized (Dec. 13) the fort there and carried off one hundred barrels of gunpowder, some cannons, and small-arms. Similar belligerent demonstrations were made in New York, Philadelphia, and cities farther south. The Connecticut Assembly gave orders to the towns to lay in a double supply of ammunition, and directed cannons to be mounted at New London.

Munson, ÆNEAS, M.D., was born at New Haven, June 24, 1734; died there, June 16, 1828. He was an army chaplain in 1755, and began the practice of medicine at Bedford, N. Y., in 1756. In 1760 he removed to New Haven, where he practised his profession more than fifty years. He was a legislator, and was a professor in the Medical School of Yale College from its organization.—His son Æneas, who graduated at Yale College in 1780, was assistant-surgeon under Dr. Thacher in the Continental army from 1780 to

ÆNEAS MUNSON, JR.

1783. He afterwards became a merchant in New Haven, and died there, Aug. 22, 1852, aged eighty-nine years.

Murfreesborough (or Stone's River), BATTLE OF. As the year 1862 was drawing to a close, General Grant had concentrated the bulk of his army at Holly Springs, Miss., where he was confronted by Van Dorn; and at about the same time General Rosecrans, with a greater part of the Army of the Cumberland, was moving southward to attack Bragg below Nashville. Rosecrans was assisted by Generals Thomas, McCook, Crittenden, Rousseau, Palmer, Sheridan, J. C. Davis, Wood, Van Cleve, Hazen, Negley, Matthews, and others; and Bragg had as his lieutenants Generals Polk, Breckinridge, Hardee, Kirby Smith, Cheatham, Withers, Cle-

burne, and Wharton. On Dec. 30 the two armies lay within cannon-shot of each other on opposite sides of Stone's River, near Murfreesborough, along a line about three miles in length. Bragg's superior cavalry force gave him great advantage. On the night of the 30th both armies prepared for battle. Rosecrans had Crittenden on the left, resting on Stone's River, Thomas in the centre, and McCook on the right. The troops breakfasted just at dawn, and before sunrise Van Cleve—who was to be supported by Wood—crossed the river to make an attack; but Bragg had massed troops, under Hardee, on his left in the dim morning twilight, and four brigades under Cleburne charged furiously upon McCook's extreme right before Van Cleve had moved. The divisions of Cheatham and McCown struck near the centre, and at both points National skirmishers were driven back upon their lines. Towards these lines the Confederates pressed in the face of a terrible tempest of missiles—losing heavily, but never faltering—and fell with crushing force on the brigades of Willich and Kirk, pressing them back in confusion and capturing two batteries. With equal vigor the Confederates fell upon McCook's left, composed of the divisions of Sheridan and Davis, striking them in the flank. After a very severe struggle these divisions gave way, and fell back in good order to the Nashville pike, losing a battery. Every brigade commander in Sheridan's division had been killed or wounded. It was now eleven o'clock. The National right wing, comprising full one third of Rosecrans's army, was now broken up; and Bragg's cavalry were in his rear, destroying his trains and picking up his stragglers. Rosecrans, when he heard of the severe pressure on the right, had given orders to Thomas to give aid to Sheridan. Rousseau went with two brigades and a battery to Sheridan's right and rear, but it was too late. Crittenden was ordered to suspend Van Cleve's operations against Breckinridge. It seemed as if the Nationals had lost the day. But there were good leaders and brave fighters left. Thomas, with the centre, while Confederate batteries were playing fearfully upon him, fought the victors over Sheridan and Davis. Negley's division was in the thickest of the battle. His ammunition began to fail, his artillery horses became disabled, and a heavy Confederate column crowded in between him and the right wing. These circumstances caused Thomas to recoil, when Rousseau led his reserves to the front and sent a battalion of regulars under Major Ring to assist Negley. These made a successful charge, and checked the Confederates, but with heavy loss. The brunt of the battle had now fallen upon Thomas, who, compelled to change his position, took a more advantageous one, where he stood firmly against overwhelming odds. This firmness enabled Rosecrans to readjust the line of battle to the state of affairs. But the dreadful struggle was not over. Palmer had repulsed an assault in his rear, but was attacked with great fury on his front and right flank, which was exposed by Negley's retirement while the new line was being formed.

Cruft's brigade was forced back, when the Confederates fell upon another, under acting Brigadier-general Hazen, of the Forty-first Ohio Volunteers, who was posted in a cotton-field. This little brigade, only 1300 strong, stood firmly in the way of the Confederates, who made desperate but unsuccessful attempts to demolish it. They stayed the tide of victory for the Confederates, which had been flowing steadily forward for hours. Gallantly men fought on both sides, and did not cease until night closed upon the scene. Rosecrans had lost heavily in men and guns, yet he was not disheartened. At a council of officers it was resolved to continue the struggle. Bragg felt confident of final victory, and sent a jubilant despatch to Richmond. He expected Rosecrans would attempt to fly towards Nashville during the night, and was astonished to find the National army before him, in battle order, in the morning. But he attempted very little that day. On Friday (Jan. 2, 1863) Rosecrans found he had his army well in hand and in an advantageous position. Bragg had stealthily planted four heavy batteries during the night that would sweep the National lines, and these he opened suddenly in the morning; but they were soon silenced by the guns of Walker and Sheridan, and there was a lull in the storm of battle until the afternoon. Adhering to his original plan of turning Bragg's right and taking possession of Murfreesborough, Rosecrans strengthened Van Cleve's division by one of Palmer's brigades. Suddenly a heavy force of Confederates emerged from a wood and fell upon Van Cleve. It was Breckinridge's entire corps, with ten 12-pound cannons and 2000 cavalry. At the same time Van Cleve received a galling enfilading fire from Polk's artillery, near. The Nationals gave way, and were speedily driven in confusion across the river, pursued to the stream by the entire right wing of Bragg's army in three heavy battle lines. Now Crittenden's artillery, massed along the ground on the opposite side of the river, enfiladed the elated pursuers with fifty-eight heavy guns, while the left of the Nationals prepared for action. These guns cut fearful lanes through the Confederate ranks. At the same time the troops of Davis and Negley pushed forward to retrieve the disaster. A fierce struggle ensued, and both sides felt that it must be decisive. Both sides had massed their artillery, and for a while it seemed as if mutual annihilation would be the result. Finally, Generals Stanley and Miller charged simultaneously and drove the Confederates rapidly before them. This charge decided the question of victory. In twenty minutes the Confederates had lost 2000 men. At sunset their entire line had fallen back, leaving 400 men captives. Darkness was coming on, and the Nationals did not pursue. It rained heavily the next day, and preparations were made for another attack; but at midnight (Jan. 4, 1863) Bragg and his army retreated in the direction of Chattanooga. He had telegraphed to Richmond, Jan. 1, "God has granted us a happy New Year." The Nationals in the fight numbered 43,400; the Confederates, 62,720.

The Nationals lost 12,000 men, of whom 1538 were killed. Bragg reported his loss at 10,000. It was estimated by Rosecrans to be much greater than his own. On the spot where Hazen's thin brigade so gallantly held the Confederates at bay, a lasting memorial of the event has been erected in the form of a substantial stone monument in the centre of a lot surrounded by a heavy wall of limestone.

Murray, ALEXANDER, was born at Chestertown, Md., in 1755; died near Philadelphia, Oct. 6, 1821. At the age of eighteen he commanded a vessel engaged in the European trade, and at twenty-one was appointed lieutenant in the Continental navy; but before entering upon his duties as such he served under Colonel Smallwood in the land service. He did good public service as a privateer during the Revolution, and also in the regular naval service. During the war he was in thirteen battles in the army and navy. After being captured and exchanged, he volunteered his services as a lieutenant on board the *Trumbull*, which, on leaving the Delaware, was attacked and taken by two British vessels of war, after a fierce engagement during a terrible storm on a dark night. In this battle Murray behaved gallantly, and was severely wounded. After his recovery he was made first-lieutenant of the frigate *Alliance*. On the organization of the national navy in 1798 he was commissioned a captain, and was in command of the frigate *Constellation* at one time. At his death he was in command of the navy-yard at Philadelphia, and was then the senior officer in the navy.

Murray, ALEXANDER, was born in Pennsylvania, Jan. 2, 1818. He entered the navy as a midshipman in 1835, and was made commander in 1862. He served on the Mexican coast during the war against that country, and was afterwards engaged in the coast survey. He was in the battle at Roanoke Island (which see), and also of Newbern, in February, 1862. His chief theatre of operations in the Civil War was on the coast of North Carolina. He was made captain in 1866, and commodore in 1871.

Murray, JAMES, fifth son of Lord Elibank, entered the British army in 1751, and served with Wolfe in Europe and America, being brigadier-general in the expedition against Louisburg in 1758. Junior brigadier-general at the capture of Quebec (of which city he was made military governor), he held it against great odds when assailed by De Levi. He was made major-general in 1762, and the next year was again Governor of Quebec. He was Governor of Minorca in 1774.

Murray, LINDLEY, grammarian, was born at Swatara, near Lancaster, Penn., in 1745; died near York, England, Feb. 16, 1826. He was a member of the Society of Friends. His father was a successful merchant in New York, to which place he had removed in 1753. Lindley became a lawyer. During the Revolution he acquired such a handsome property by mercantile pursuits that he was able to retire from business, and in 1784 went to England for his health,

where he purchased a small estate near York. In 1787 he published a tract entitled *The Power of Religion on the Mind*, which passed through

LINDLEY MURRAY.

many editions. But he is chiefly known as author of an English grammar (1795), an English reader, and an English spelling-book.

Murray, MARY, AND THE BRITISH. The country-seat of Robert Murray, a wealthy merchant of New York, was on the Ingleberg, now known as Murray Hill, in the city. She was a warm Whig, and favored the American cause, though a friend, or Quaker. As the British army, after landing at Kip's Bay, on the East River (Sept. 15, 1776), was marching across the island towards the Hudson, and would intercept the retreating Americans, on approaching Mrs. Murray's she invited Howe and his officers to luncheon. The invitation was accepted; the army was halted, the excellence of the repast, heightened by fine old Madeira wine, and the charms of the hostess made the officers tarry long enough to allow Putnam, with the American rear-guard, to escape to Harlem Heights.

Murray, WILLIAM VANS, was born in Maryland in 1762; died at Cambridge, in the same state, Dec. 11, 1803. After the peace in 1783 he studied law in the Temple, London, and returned about 1785, practised law, served in his State Legislature, and was in Congress from 1791 to 1797. He was an eloquent speaker and a keen diplomatist; was appointed by Washington minister to the Batavian republic, and by Adams sole envoy extraordinary to the French republic. Ellsworth and Davie afterwards joined him. He was instrumental in the arrangement of the convention signed at Paris in September, 1800 (see *Treaties*), between America and France, and then returned to his mission at the Hague. Mr. Murray returned to America late in 1801.

Musgrave, SIR THOMAS, was born in 1738; died Dec. 31, 1812. He was captain in the British army in 1759, came to America with General Howe in 1776, and in the battle of Germantown (which see) saved the day for his king by throwing himself, with five companies, into Chew's strong stone house, and holding the American forces at bay until the repulsed British columns could rally.

Musgrove, MARY, Oglethorpe's interpreter, was a half-breed Creek, and wife of John Musgrove, a South Carolina trader. She lived in a hut at Yamacraw, poor and ragged. Finding she could speak English, Oglethorpe employed her as interpreter, with a salary of \$500 a year. Her husband died, and she married a man named Mathews. He, too, died, and about 1749 she became the wife of Thomas Bosomworth, chaplain of Oglethorpe's regiment, a designing knave, who gave the colony much trouble. He had become heavily indebted to Carolinians for cattle, and, to acquire fortune and power, he persuaded Mary to assert that she had descended in a maternal line from an Indian king, and to claim a right to the whole Creek territory. She accordingly proclaimed herself empress of the Creeks, disavowed all allegiance to the English, summoned a general convocation of the Creek chiefs, and recounted the wrongs she had suffered at the hands of the English. Inflamed by her harangue, dictated by Bosomworth, the Indians pledged themselves to defend her royal person and lands. The English were ordered to leave; and, at the head of a large body of warriors, Mary marched towards Savannah. The white inhabitants, led by President Stephens, armed and prepared to meet them. The Indians were not permitted to enter the town with arms. Then Bosomworth, in full canonicals, with his "queen" by his side, marched in, followed by sachems and chiefs, greatly terrifying the people by their formidable appearance. The prudent Stephens, ordering Bosomworth to withdraw, told the assembled Indians who Mary was, what kind of a character her husband was, and how they had been deceived. They saw the matter clearly, smoked the pipe of peace with the English, and returned to their homes. After giving more trouble, Mary and her husband were put into close confinement; but finally, confessing their errors and craving pardon, they were allowed to depart from Savannah.

Musgrove's Mill, AFFAIR AT. The patriots of South Carolina were not conquered, only made to pause, by the cruelty of Cornwallis. Among those who took protection as a necessary expedient was Colonel James Williams, who commanded the post at Ninety-six. (See *Ninety-six*.) He lost no time in gathering the patriots in that region, and on Aug. 18, 1780, fell upon a body of five hundred British troops—regulars and loyalist militia—who had established a post at Musgrove's Mill, on the Ennoree River. He routed them, killed sixty, and wounded a greater number, with a loss to himself of eleven men.

Mutilation of the British Standard. Late in 1634, while Dudley was governor of Massachusetts, John Endicott, incited by Roger Williams, caused the red cross of St. George to be cut out of the military standard of England used at Salem, because he regarded it as a "relic of Anti-Christ," it having been given by the pope to a former king of England as an ensign of victory. He had so worked upon the minds of many citizens of Salem that they refused to follow the standard with the cross upon it. At

about that time the British government, jealous of the independent spirit manifested in Massachusetts, watched its development with great vigilance, and the enemies of the colony pointed to this mutilation of the standard as evidence of disloyalty to the crown. It was simply loyalty to bigotry. The whole aspect of the act was theological, not political; but the royalists chose to interpret it otherwise, and it was one of the reasons for tyrannical action towards the colony when orders were issued to the authorities of Massachusetts to produce their charter before the Privy Council in England. At a Court of Assistants at Boston complaint was made of the mutilation of the standard, for trouble with the home government was anticipated. The ensign-bearer was summoned before the court. Afterwards the assistants met at the governor's house to advise about the defacing, and it was agreed to write to England about the matter. Endicott was, after three months' longer deliberation, called to answer for the act. The court could not agree whether all the ensigns should be laid aside, as many would not follow them with the cross visible. The Commissioners of Military Affairs ordered all the ensigns to be put away. Nothing more was done in the matter then. Two years later there was more trouble about the colors. Henry Vane, "son and heir to a privy-councillor," was elected governor of Massachusetts (1636), and fifteen ships in the harbor having arrived with passengers, the seamen commemorated his election by a volley of great guns. But, the ensigns being "laid away," the fort in Boston could not acknowledge the compliment by displaying colors. The English sailors accused the colonists of treason, and the ship-masters requested the governor to spread the king's colors at the fort, because the question of their loyalty might be raised in England. The magistrates were all persuaded that the cross in the colors was idolatrous, and the governor dissimulated by pretending that he had no colors. The ship-masters offered to lend him theirs, and this was accepted as a compromise with the consciences of the authorities, they arguing that, as the fort was the king's, the colors might be displayed there at his peril.

Mutineers and the Congress (1781). Soldiers furloughed after the proclamation of peace were to receive three months' pay. There was some delay in preparing the treasury-notes to be used for this purpose. A body of Pennsylvania troops, about three hundred in number, lately arrived from Greene's army, had already given signs of insubordination by sending an insulting letter to Congress. A part of that corps, stationed at Lancaster, marched for Philadelphia, at the instigation of two of their leaders, though they left all their officers behind. Having reached Philadelphia, the mutineers were presently joined by the troops in the barracks there; and, under the command of seven sergeants, without their muskets, but wearing side-arms, they beset for three hours the doors of the State-house, in which Congress and the Pennsylvania Council were assembled. It had been suggested that

the city militia should be called out to oppose the mutineers, but it was quite certain that they would be disinclined to interfere. Such proved to be the case. General St. Clair, then in command in Philadelphia, tried to pacify the mutineers by allowing them to choose a committee to state their grievances. Congress, perceiving that the Pennsylvania Council were indisposed to do anything against the mutineers, or save the national Legislature from insult, notified Washington of the revolt. The latter sent one thousand five hundred men to Philadelphia, and the mutiny was speedily suppressed. Several of the offenders were tried by court-martial and sentenced to death, but were subsequently pardoned. The Congress, disgusted with the Pennsylvanians, civil and military, adjourned to Princeton, where they were received with great respect, and accommodated in Nassau Hall, of the College of New Jersey.

Mutiny Act. Until 1717 mutiny and desertion in the British army had been adjudicated and punished by the civil authority. In that year an act was passed giving power to military courts to punish these offences with death. The act was extended so as to compel inhabitants to quarter troops where necessity called for it. The English-American colonists denied (1757) that the act extended to them, and in 1769 it was re-enacted, with a provision that troops in the colonies should be quartered and provided for at the expense of the colonists. (See *Standing Army*.)

Mutiny Act, RESISTANCE TO (1757). Some British recruiting officers in Boston demanded to be quartered on the town. The magistrates refused compliance. The officers insisted on the enforcement of the Mutiny Act. The magistrates declared that the act did not extend to the colonies. (See *Mutiny Act*.) Lord Loudoun warmly espoused the cause of his officers, and sent word to the authorities in Boston that in "time of war the rules and customs of war must prevail." He ordered the messenger to wait for an answer forty-eight hours, and threatened to send three regiments, and more if needed, to enforce the act. The General Court so far yielded that it passed a law of its own enacting

some provisions of the Mutiny Act for billeting troops. This partial compliance was accepted with reluctance, and trouble was avoided. It was the only victory Loudoun gained in America. While his message was on its way to Boston another was on its way across the Atlantic from Pitt recalling him.

My Country. This was a phrase which the American colonists applied to their respective provinces, and so it was applied by many long after the Declaration of Independence had vastly expanded the idea involved in the expression. It took some time for the advice of enlightened patriots like Christopher Gadsden, of South Carolina—for the people to think and speak of themselves not as Americans, but as "South Carolinians," "Virginians," etc.—to have effect. This phrase was kept alive by many Southerners who adhered to the doctrine of state supremacy, and it was intensified during the late Civil War.

Myer, ALBERT J., was born at Newburgh, N. Y., Sept. 20, 1828. He graduated at Geneva College in 1847, became a physician, and in 1854 was appointed assistant-surgeon in the United States army. From 1858 to 1860 he was on special duty in the Signal Service, and in the latter year he was appointed chief signal-officer with the rank of major. In June, 1861, he was made chief signal-officer on General Butler's staff, and afterwards on that of General McClellan, and was very active during the whole Peninsular campaign. Major Myer took charge of the Signal Bureau at Washington in November, 1862, and for service at various points, and especially in giving timely signals that saved the fort and garrison at Allatoona, Ga., he was breveted through all the grades from lieutenant-colonel to brigadier-general. In 1866 he was made colonel and signal officer of the United States army, and introduced a course of signal studies at West Point and Annapolis. He was the author of the weather signal system, and the chief of that department of the public service (see *Weather Signals*); and he had full control of the whole matter. In 1873 he was a delegate to the International Meteorological Congress at Vienna. He published a *Manual of Signals for the United States Army*. Died Aug. 24, 1880.

N.

Naglee, HENRY MORRIS, was born in Philadelphia, Jan. 15, 1815, and graduated at West Point in 1835. He served in the war against Mexico, and afterwards engaged in commercial pursuits in San Francisco. He was an active officer in the Army of the Potomac through the campaign of 1862, and rose to the rank of brigadier-general of volunteers. He afterwards commanded a division in the Department of North Carolina, and in the Department of the South in 1863. In July and August of that year he commanded the Seventh Army Corps. He was mustered out in April, 1864, and became afterwards a banker in San Francisco.

Nail-making. Machines for making nails are

of comparatively recent invention. Ezekiel Reed, of Bridgewater, Mass., invented a machine for cutting tacks and nails in 1786, which, being improved afterwards, made 150,000,000 tacks in 1815. His son invented a machine in 1807 for making and heading tacks at one operation that turned out 60,000 a day. Samuel Briggs, of Philadelphia, patented a machine for making nails, screws, and gimlets in 1791, the first patent issued in the United States for a nail-making machine. The first patent for a cutting and heading machine combined was granted to Isaac Garrettson, of Pennsylvania, in 1796. There are now (1876) machines each of which cuts and heads 15,000 nails or tacks in an hour.

Nanticookes. An Algonquin tribe, who once inhabited the peninsula between the Chesapeake and Delaware bays. They were early made vassals to the Five Nations and their allies by compulsion. In 1710 they left their ancient domain, and occupied lands upon the Susquehanna in Pennsylvania until the war of the Revolution, when they crossed the Alleghany Mountains and joined the British in the west. They are now scattered among many tribes, and have no tribal existence.

Naples, SETTLEMENT OF UNITED STATES CLAIMS UPON. Claims had been made upon the Neapolitan government by citizens of the United States for indemnity for losses occasioned by depredations upon American commerce by Murat, King of Naples, from 1809 to 1812. The restored Bourbons had refused to comply, on the ground that they were not responsible for the acts of one who was a usurper of their power, and from whom they had suffered more than had the Americans. Finally, a convention was negotiated at Naples, in October, 1832, by John Nelson, chargé d'affaires on the part of the United States, and the Neapolitan Secretary of State, Prince Cassaro, by which it was stipulated that the sum of \$1,720,000 should be paid to the United States. These claims had been considered hopeless, but the negotiation was undoubtedly expedited by the appearance at that time of a considerable force of the United States Navy in the Bay of Naples.

Napoleon Bonaparte, FIRST DOWNFALL OF (1814). The allied powers of Europe pushed Napoleon back to France, and hemmed him and his army almost within the walls of Paris. On March 31 the Emperor of Russia and the Duke of Wellington entered the city as conquerors, and on May 11 the Emperor Napoleon abdicated the throne of France and retired to the island of Elba. His downfall was hailed with joy, not only in Europe, but by the great Federal party in the United States, who considered his ruin as the most damaging blow that could be given to their political opponents and the war party. Pulpits, presses, public meetings, and social gatherings were used as proclaimers of their satisfaction, notwithstanding it was evident that the release thereby of a large British army from service on the Continent would enable the common enemy to send an overwhelming force across the Atlantic that might crush the American armies and possibly reduce the states to British provinces. They hoped the threatened peril would induce the administration to seek peace as speedily as possible. The downfall of Napoleon did release British troops from Continental service, and several thousands of them were sent to Canada to reinforce the little British army there. Many of them were Wellington's veterans, hardy and skilful. They arrived at Quebec late in July, and in August were sent up the St. Lawrence to Montreal.

Napoleon I. Bonaparte, First Consul of France, had coveted the imperial diadem from the time when he broke up the government of the Directory. In the spring of 1804, he pro-

cured his election (May 18) to a seat on an imperial throne, and on the 2d of December following he appeared before the high-altar of the Church of Notre Dame, in Paris, where he was created "The High and Mighty Napoleon the First, Emperor of the French." In 1806 he was made monarch of Italy. This political change in France from a republic to an empire had much influence upon American affairs.

Napoleon III. and the United States. The Emperor of the French, who had by force of arms established monarchy in the neighboring republic of Mexico, with the ulterior design of assisting the Confederates in breaking up the American Union and establishing the domination of the Italian hierarchy on its borders, notified by the Secretary of State (Mr. Seward) that the continuation of French troops in Mexico was not agreeable to the United States, prudently gave assurance (April 5, 1866) that they should be withdrawn within a specified time, and they were withdrawn.

Napoleon's Downfall, EFFECT OF, IN AMERICA. When news of the abdication of Napoleon, his retirement to Elba, and the restoration of the Bourbons reached the United States, the effect upon the two great political parties was very dissimilar. The administration or war party were alarmed, for they saw in his fall the removal of a check upon the insolence of Great Britain, and a chance for a release of British soldiers from service on the Continent, which might (as they were soon afterwards) be sent over to fight the Americans. The Federalists, or opposition party, hailed the event with joy and exultation as the harbinger of peace, and a promise of a revival of commerce. The event was celebrated at Boston by a religious ceremony, including a sermon by Dr. Channing. There was a public celebration, and an oration by Gouverneur Morris, in New York, and demonstrations of delight were shown in many other places. The administration now became more anxious than ever for peace, and steps were soon taken to accomplish that end.

Narraganset, FORT, DESTRUCTION OF. The Narragansets engaged in King Philip's War had a strong fort in a swamp in South Kingstown, R. I. It was erected on a spot of dry ground of about six acres, and defended with palisades and an abatis. Against this fort marched about a thousand New-Englanders at the middle of December, 1675. With these troops were about one hundred and fifty Mohegan Indians, and Governor Winslow, of Plymouth, was the commander-in-chief. They marched through deep snow, and at four o'clock in the afternoon (Dec. 16) they attacked the fort. There was but one entrance, which had to be reached in the face of a fire from a block-house. The Massachusetts men, who first attacked, were repulsed, and several of the captains were killed. Captain Church gained the rear and an entrance, when he was wounded by three bullets. There was then a desperate hand-to-hand fight, and the Indians were driven out into the open country. The six hundred wigwags were set on fire, and the winter

store of corn was destroyed. About seven hundred of the Indians were killed, including several chiefs, and of a large number wounded about three hundred died. Many old men, women, and children perished, some of them in the flames. In this encounter Connecticut alone lost eighty men. Captains Johnson, Davenport, and Gardiner, of Massachusetts, and Gallop, Seely, and Marshall, of Connecticut, were slain. (See *King Philip's War*.)

Narraganset Indians, TREATY WITH. The Narragansets having violated the terms of a treaty made in 1644, the New England Congress, under the provisions of the union or Confederation (which see), sent messengers to the offending Indians requiring their appearance at Boston. At first they treated the messengers kindly, but finally declared that they would not have peace until they received the head of Uncas. (See *Miantonomoh* and *Uncas*.) Roger Williams warned the Congress that the Narragansets would suddenly break out against the English, whereupon that body drew up a declaration justifying them in making war on the reculant Indians. They determined to raise three hundred men at once. The news of this preparation alarmed the Indians, and they sued for peace. As their own breach of covenant had caused the expense of making preparations for war, they were required to pay in instalments two thousand fathoms of wampum; to restore to Uncas all the captives and canoes they had taken from him, and make satisfaction for destroying his corn; to submit all matters of controversy between Uncas and them to the Congress; keep perpetual peace with the English, and give hostages for the performance of the treaty. It was signed on Aug. 30, 1645.

Narragansets. This Algonquin family of the New England Indians (which see) occupied the territory now comprised in the State of Rhode Island. Industrious and hardy, they were numerous, and had twelve towns within a distance of twenty miles. Their chief, Canonicus, sent a bundle of arrows tied with a snake-skin to Governor Bradford, of Plymouth, indicating his hostility. Bradford returned the skin filled with gunpowder. Canonicus was alarmed, and remained peaceable, especially after banished Roger Williams won their good-will by his kindness. They accompanied Massachusetts troops against the Pequods in 1637, and in 1644 they ceded their lands to the British king. Suspected of an alliance with King Philip (see *King Philip's War*), a force of one thousand white men, with some Mohegans and Pequods, captured and burned their fortress. Their chief stronghold on an island in a swamp near Kingston, R. I., was taken, and one thousand Indian men, women, and children perished. The Narragansets were almost exterminated in that war. The remnant settled at Charlestown, R. I., and were prosperous for a while, but the tribe is now extinct.

Narragansets, TREATY OF PEACE WITH. When it was evident that there would be war with the Pequods, it was deemed important to prevent the Narragansets, who could then mus-

ter five thousand fighting-men, from joining them. The Massachusetts authorities sent an embassy to Canonicus, then chief sachem, who, being old, had resigned the government to his nephew, Miantonomoh. This young chief, with two of the sons of Canonicus and twenty men, went to Boston, and there made a treaty which secured mutual action and consent concerning conduct towards the Pequods, and also friendship, good-will, and free-trade between the contracting parties. It is said that young Prince Miantonomoh was of great stature, stern and cruel, and that his nobility and attendants trembled at his speech.

Narvaez, PAMFILO DE, a Spanish explorer, was born at Valladolid, Spain, about 1480. He went to Santo Domingo in 1501, and thence to Cuba, where he was the chief lieutenant of Velasquez, the governor. Cortez carrying matters with a high hand in Mexico, Narvaez was sent by Velasquez to Cuba to supersede him, but was defeated, lost an eye, and was held a prisoner by Cortez. On his release Narvaez returned to Spain, and in June, 1527, he sailed from San Lucar, by authority of the king, with six hundred men in five vessels, commanded to conquer Florida and govern it. After long detention at Santo Domingo and Cuba, he sailed for Florida with four hundred men and eighty horses, accompanied by Cabeça de Vaca as treasurer of the expedition, who was to be deputy-governor. They landed at Tampa Bay on the 13th of April, 1528, where Narvaez raised the standard of Spain and took possession of the country in the name of its king, and his officers took the oath of allegiance to him as governor. Instead of treating the native inhabitants kindly, and winning their friendship and an easy conquest, Narvaez followed the cruel example of his countrymen in Santo Domingo and Cuba. He marched into the interior with high hopes, directing his vessels to sail along the coasts. He pressed forward in daily expectation of finding some city sparkling with wealth. All before him were creations of imagination, all behind him were gloomy disappointments. Treachery met his cruelty at every step. Compelled to fight foes and failing to find gold, Narvaez turned towards the sea—the Gulf of Mexico—and at the mouth of the Appalachicola; failing to find his ships, he caused frail boats to be built, embarked with his followers, and coasted towards the mouth of the Mississippi. One by one his followers died from starvation, and finally a "nother" struck and dispersed the flotilla. Narvaez was never heard of afterwards. The boat that carried De Vaca stranded on an island, where they were kindly treated by the natives. De Vaca was the only Spaniard of the expedition who returned to Spain.

Nash, FRANCIS, a native of North Carolina, was clerk of the Supreme Court of that province, and was a captain, under the crown, on service under Governor Tryon against the Regulators. (See *Regulators*.) He was a member of the Provincial Congress of North Carolina in 1775, and was appointed by that body a lieu-

tenant-colonel. In February, 1777, he was promoted to brigadier-general in the Continental army. Joining Washington before the battle at the Brandywine (Sept. 11, 1777), he participated in that action, and also at Germantown (Oct. 4), where he was mortally wounded.

Nashville, BATTLE OF. General A. J. Smith had arrived at Nashville when Schofield reached there (see *Franklin, Battle of*), and Thomas's forces there were put in battle array on Dec. 1, 1864. They were on an irregular semicircular line on the hills around the city, on the southern side of the Cumberland River. General Smith's troops were on the right; the Fourth Corps, under General T. J. Wood (in the absence of the wounded Stanley), was in the centre; and the Twenty-third Corps, under J. M. Schofield, was on the left. About 5000 troops, outside of these corps—white and colored—were posted on the left of Schofield. To these were added the troops comprising the garrison at Nashville and Wilson's cavalry at Edgefield; on the north side of the Cumberland. The troops of Thomas were better and more numerous than those of Hood, but, on account of the absence of cavalry and a deficiency of transportation, he withheld an attack upon Hood, who was in front of him for about a fortnight. The latter had formed his line of investment on the 4th, with his salient within six hundred yards of Wood, at Thomas's centre. For a few days there was some skirmishing, and then for a week the cold was so intense that very little was done. Thomas made a general advance, on the morning of the 15th, from his right, while Steedman made a vigorous movement of his left to distract Hood. The country was covered with a dense fog, which did not rise until near noon. A. J. Smith pressed forward, while Wilson's cavalry made a wide circuit to gain Hood's rear. Other troops were busy on the right, striking vigorous blows here and there; but finally, at one o'clock in the afternoon, General Wood, commanding the centre, having moved forward parallel with Smith's troops, directed a brigade led by Colonel S. P. Post to charge Hood's works on Montgomery Hill. This was done, and some Confederates were made prisoners. Then Schofield, in reserve, moved rapidly to the right of Smith, by which the National cavalry was allowed to operate more freely on the Confederate rear. Then the whole line moved forward. Wood carried the entire body of Confederate works on his front, captured several guns, and took 500 prisoners; while Smith and Schofield and the dismounted cavalry pressed back the left flank of the Confederates several miles to the foot of the Harpeth Hills. Steedman, meanwhile, had gained some advantage on Thomas's extreme left. But darkness closed the contest, which resulted in the capture by the Nationals of 1200 prisoners, 16 guns, 40 wagons, and many small-arms. Thomas now readjusted his lines. On the morning of the 16th Wood advanced, forced back Hood's skirmishers on the Franklin pike, and, pushing on southward, was confronted by Hood's new line of defences on Overton's Hill, five miles from the city. Steedman now

secured Wood's flank by taking post on his left, and Smith came in on Wood's right, while Schofield threatened the Confederate left. Wilson's cavalry, dismounted, formed on his right. The movement on Hood's left, so successful the day before, was now continued. The whole National line moved to within six hundred yards of that of the Confederates. Wilson's cavalry was soon upon their left flank, and at three o'clock in the afternoon two of Wood's brigades assailed the Confederates on Overton's Hill, in front, and Thompson's negro brigade assailed them further to the National left. These attacks were repulsed with fearful loss to the assailants. The troops were rallied, and Smith and Schofield, charging with great impetuosity upon the Confederate works on their respective fronts, carried all before them. Wilson's dismounted men charged farther to the right and blocked a way of retreat. This successful movement was announced by shouts of victory, which Wood and Steedman heard, and again charged the Confederate works on their front which were taken and secured. The Confederates fled in such haste that they left behind them their dead, wounded, prisoners, and guns. It was a complete rout. During the two days, Thomas had captured from Hood 4462 prisoners, 53 guns, and many small-arms. He had broken the spirit of Hood's army beyond hope of recovery. The Confederates fled towards Alabama, pursued for several days, while rain was falling copiously. The streams were swollen, and, as the fugitives destroyed the bridges behind them, and the Nationals had no pontoons, the chase was unsuccessful. Then the weather became extremely cold. At Columbia, on the Duck River, Forrest joined the retreating host, and with his cavalry and 4000 infantry he covered the shattered Confederate army. This rear-guard struck back occasionally. The pursuit was suspended at Lexington, Ala., on the 28th. Thomas estimated his entire loss in his campaign, from Sept. 7, 1864, to Jan. 20, 1865, at 10,000 men; or less than half the loss of Hood. During that time he had captured 11,857 men, besides 1332 who had been exchanged, making a total of about 13,000. He had also captured 72 serviceable guns and over 3000 small-arms.

Nashville, SURRENDER OF. General Pillow had telegraphed to Nashville while the siege of Fort Donelson (which see) was going on, "Enemy retreating! Glorious result! Our boys following and peppering their rear! A complete victory!" This despatch made the people of Nashville happy, and they were comfortably seated in their churches on Sunday, Feb. 16, 1864, when the news reached them of the surrender of Fort Donelson to the Nationals and the cowardly conduct of Floyd and Pillow. There was panic everywhere. General A. S. Johnston, at Bowling Green, ordered the troops there to fly to Nashville, for General Mitchell, of Buell's army, was pressing on them. They did so, after destroying property valued at \$500,000. They were followed by the Army of the Ohio. At the same time National gunboats were ascending the Cumberland River to co-operate

with the troops. The Secessionists of Nashville were fearfully excited. The Governor of Tennessee (Harris) rode through the streets like a madman, and he and his associates gathered as many papers as possible at the Capitol as concerned themselves and fled by railway to Memphis. The officers of banks bore away their specie. Citizens, with their most valuable portable possessions, fled by railway to Decatur and Chattanooga. Every kind of wheeled vehicle was brought into requisition, and hack-hire rose to twenty-five dollars an hour. The public stores were thrown wide open, and everybody was allowed to carry away provisions and clothing. Johnston and his troops passed rapidly through the city, southward, and Nashville was surrendered to the Nationals (Feb. 26) by the civil authorities. The state government being abdicated, and the Confederates expelled from Tennessee, Andrew Johnson, of East Tennessee, was appointed provisional governor, with the military rank of brigadier. He entered upon the duties, at Nashville, March 4, 1862.

Natchez. This Indian nation inhabited the eastern borders of the Mississippi River. They were known to Europeans as early as the year 1560, when De Luna aided the Gulf tribes in a war against them. Their traditions aver that they came from the southwest, driven by hostile ancient inhabitants, when some of them made a stand on the Gulf coast, and others penetrated to the spot where the modern city bears the name of their nation. Their sun-worship, mound-building, and language point to a relationship with the inhabitants of Yucatan. La Salle, coming from the north, planted a cross in their country in 1683. Iberville also visited them, and proposed to build a city there. They were brave, wild, and dissolute. Their chief was called the Great Sun, whose power was despotic. They averred that their first civilizers were a man and woman who descended from the sun. In a temple built on a mound they kept a perpetual fire. They dressed in robes made of skins or feathers in winter, and in summer light garments were made of the bark of the mulberry-tree or of native flax. They had many feasts and revelled in sensual indulgence. After European traders found them they rapidly declined in numbers and power, while they fought the French. The Natchez were joined by the Yazooes and Chickasaws (which see), while the Choctaws (which see) joined the French, early in the last century. In 1730 the French fell upon and almost annihilated the Natchez, and they never recovered from the shock. After maintaining a feeble nationality for a century, they were merged into the Creek confederacy. The nation and its language is almost extinct.

Natchez, THE FRENCH AT WAR WITH THE. The French had built a fort on the site of Natchez, called Rosalie (see *Crozat*), and had secured the friendship of the Choctaws, a numerous confederacy. (See *Choctaws*.) Surrounded by the people of the confederacy, and dwelling

chiefly in a single village near Fort Rosalie, was the tribe of the Natchez, limited in numbers and territory, but remarkable in language, religion, and manners. (See *Natchez*.) Alarmed by the encroachments of the French at Fort Rosalie, by whom their village was demanded as a site for plantations, the Natchez, whose temple of worship was there, began to grow hostile; and this feeling was stimulated by the Chickasaws, who lived north of them, on the same side of the Mississippi. (See *Chickasaws*.) Around Fort Rosalie a French settlement had been planted. Encouraged by their neighbors, the Natchez fell upon this settlement (November, 1729) and massacred 200 men and made captives of the women and children. The negro slaves joined the Indians. This event gave great alarm to the inhabitants at New Orleans and its vicinity. They numbered, at that time, about 6000, a third of whom were negro slaves. The settlers were in fear of an insurrection among the negroes, as well as Indian forays, and were in great distress. The adults, who were armed, fortified the little town; and a military leader, with a body of 700 Choctaw warriors, surprised the Natchez while feasting over their victory. Other forces from New Orleans joined Le Sueur, and the Natchez were dispersed (1730), some fleeing to the Chickasaws and others across the Mississippi. Only a few made their escape. The great chief—"child of the sun"—and 400 of his people were sent to Santo Domingo and sold as slaves. Thus that ancient nation was destroyed.

Nation, THE, ESTABLISHED. While the Articles of Confederation remained the supreme law of the land, and the prevailing political doctrine, exemplified in the practical workings of the government of the League of States, was that of "state supremacy," no respect was paid to the inchoate Republic as a "nation" by foreign governments. They were indifferent to the government of the United States, because they believed it would, in the very nature of things, be temporary. History furnished no example of a league of independent states long adhering as a unit. England would not send a representative to our seat of government, and the other powers withheld important diplomatic intercourse. Great Britain scornfully rejected overtures for establishing reciprocal commercial relations with the Americans; and John Adams, who, in February, 1785, was sent to England clothed with the full powers of a plenipotentiary, was treated with so much coldness that he asked and received permission to return home. But when, under the shadow of the national Constitution, the new nation was born—a nation whose existence had been decreed by the will of true sovereignty, the people, and whose perpetuity depends upon that will—it immediately arrested the profound attention of the civilized world. It was seen that its commerce, its diplomacy, and its dignity no longer depended upon and was subordinate to thirteen distinct and clashing legislative bodies, but were guarded by a central power of wonderful energy. England, France, Spain, and

Holland placed their representatives at the seat of the new government, and the world was swift to acknowledge that the new-born nation was a power—positive, tangible, indubitable.

National Capital. By act of Congress the national capital was to be located on the Potomac, not far below the falls, and the spot was left to the determination of commissioners. They chose the lands adjacent to Georgetown, lying between Rock Creek and the eastern branch of the Potomac, along the shores of the river, and made arrangements with owners of the land for them to cede to the United States the whole, containing from three to five thousand acres, on the condition that, when it should be surveyed and laid off as a city, the proprietors should retain every other lot; and for such parts of the land as should be taken for public use—for squares, walks, etc.—they should be allowed at the rate of about seventy-five dollars an acre, the public having the right to reserve such part of wood on the land as might be thought necessary to be preserved for ornament; the landholders to have the use and profits of all the lands until the city should be laid off into lots and sale should be made of the lots. Nothing was to be allowed for the ground which might be occupied as streets or alleys. The lands were surveyed by Major

L'Enfant (an engineer who had served in the Continental army), under the general direction of Andrew Ellicott, of Maryland; and the city was laid out on a magnificent scale in 1791, with broad avenues radiating from the Capitol, bearing the names of the several states, with streets intersecting them in such a peculiar way that they have ever been a puzzle to strangers. The corner-stone of the Capitol was laid by Washington in 1793, with Masonic ceremonies. Only the two wings were first built, and these were not completed until 1803. The seat of government was transferred to the national capital (which had received the name of Washington City) in 1800, when the President's house was first occupied by Adams and his family. It was then a dreary place. There was only a path leading from the President's house to the Capitol, which were a mile apart, through an elder swamp, along the line of (present) Pennsylvania Avenue, and the officers of government suffered many privations for a while. Oliver Wolcott, Secretary of the Treasury, wrote, in the fall of 1800: "There is one good tavern, about forty rods from the Capitol, and several houses are built or erecting, but I don't see how members of Congress can possibly secure lodgings unless they will consent to live like scholars in a college, or monks in a monastery; ten or twenty crowded in one house." Great inconvenience was felt at the unfinished presidential mansion. "I could content myself anywhere for three months," wrote Mrs. Adams, "but, surrounded

with forests, can you believe that wood is not to be had, because people cannot be found to cut and cart it! . . . We have, indeed, come into 'a new country.'"

National Capitol, THE, A CITADEL. The Capitol at Washington was made a vast citadel on the arrival of troops there after the close of April, 1861. Its halls and committee-rooms were used as barracks for the soldiers; its basement galleries were converted into store-rooms for barrels of pork, beef, and other provisions for the army; and the vaults under the broad terrace on the western front of the Capitol were

GOVERNMENT BAKERIES AT THE CAPITOL.

converted into bakeries, where sixteen thousand loaves of bread were baked every day. The chimneys of the ovens pierced the terrace at the junction of the freestone pavement and the grassy slope of the glacis; and there, for three months, dense volumes of black smoke poured forth.

National Cavalry Raids in Virginia. While Hooker and Lee were contending near Chancellorsville (which see) a greater part of the cavalry of the Army of the Potomac was raiding on the communications of Lee's army with Richmond. Stoneman, with ten thousand men, at first performed this service. He rode rapidly, crossing rivers, and along rough roads, and at two o'clock in the morning struck the Virginia Central Railway near Louisa Court-house, destroying much of it before daylight. They were only slightly opposed, and at midnight of the 2d (May, 1863) the raiders were divided for separate work. On the morning of the 3d one party destroyed canal-boats, bridges, and Confederate supplies at Columbia, on the James River. Colonel Kilpatrick, with another party, struck the Fredericksburg Railway at Hungary Station and destroyed the depot and railway there, and, sweeping down within two miles of Richmond, captured a lieutenant and eleven men within the Confederate works of that capital. Then he struck the Virginia Central Railway at Meadows Bridge, on the Chickahominy; and thence pushed on, destroying Confederate property, to Gloucester Point, on the York River.

Another party, under Lieutenant-colonel Davis, destroyed the station and railway at Hanover Court-house, and followed the road to within seven miles of Richmond, and also pushed on to Gloucester Point. Another party, under Gregg and Buford, destroyed the railway property at Hanover Junction. They all returned to the Rappahannock by the 8th of May; but they had not effected the errand they were sent upon — namely, the complete destruction of Lee's communications with Richmond.

National Cemeteries. An act of Congress, approved July 17, 1862, provided "That the President of the United States shall have power, whenever in his opinion it shall be expedient, to purchase cemetery grounds and cause them to be securely enclosed, to be used as a national cemetery for the soldiers who shall die in the service of their country." There was no appropriation of money for the purpose, and the act remained a dead letter for a long time. In December, 1863, and March, 1864, General George H. Thomas, in command of the Department of the Tennessee, issued orders for the establishment of national cemeteries at Chattanooga and at Stone's River, near Murfreesborough, to receive the remains of those who fell on the battle-fields around the former and at the latter place. In October, 1865, circulars of a general nature were issued by the quartermaster-general, calling upon the officers of his department for information of the condition of the graves of Union soldiers, for the humane purpose of protecting and identifying their remains. A full and minute report for the district of Middle Tennessee, made by Brevet Lieutenant-colonel E. B. Whitman, Dec. 1, 1865, and forwarded to the quartermaster-general, revealed the necessity of more extended and systematic explorations, and led to the organization of a plan which was finally extended in its operations over the whole area of the war, or wherever Union soldiers were buried. Colonel Whitman was at once assigned by General Thomas to the duty of visiting and reporting upon the battle-fields and localities wherever Union soldiers were buried in the Department of the Tennessee, embracing the states of Kentucky, Tennessee, Mississippi, Alabama, and Georgia; a duty which he performed with singular fidelity, intelligence, and success. Preliminary steps were taken in preparation for an extended and thorough exploration, by the publication in over three hundred newspapers and other periodicals of a call for "important information" concerning the honored dead. Facts so gathered and classified formed important guide-books. Lists of the dead were collected from every conceivable source; appeals were made to the interested, and every step was taken to collect the desired information. A competent corps of explorers of the battle-fields and other localities was organized, instructed to make careful notes, as follows: 1. Location of graves, giving direction and distance from some known and prominent point or object; 2. Number of graves, marked and unmarked separately; 3. Condition of graves and character of location, whether in

open fields or woods, on high or low ground, and whether enclosed or not; 4. Names of the owners of the land, with its value, and the name or names of the nearest resident; 5. Lists of the inscriptions on head-boards, except in case of large cemeteries of which there were official records; 6. Names of persons to be referred to for further information, citizens or ex-military; 7. In the neighborhood of hospitals the name or names of surgeons or others who had been in charge; 8. At posts or public cemeteries, the name of the person in charge of making interments, or sextons, undertakers, or officers; 9. Any information and statements of facts and incidents procured from people in the neighborhood; 10. Suggestions in regard to proper places to locate permanent cemeteries; 11. Statements in regard to Confederate graves found in the same neighborhood with Union dead, their estimated number and general condition. Tabulated statements of explorers were made, giving the name of the state and county searched; number of localities visited; of bodies found; of remains identified by names on head-boards and copied, in enclosures or public cemeteries, and on the route of what corps. Mortuary records were kept, and so was preserved information concerning the dead which would otherwise have been lost forever. The searching parties consisted generally of a leader, cook, servant, recording-clerks, and a small military escort. They followed the routes of the armies, visited all camping-grounds and localities of field-hospitals, and swept in a line over battle-fields, forwards and backwards, until the whole area was searched. This work was timely performed, for the elements and other causes would soon have hidden the graves from recognition. Items like the following abound in the field-books of the explorers within less than a year after the close of the war: "The first row of graves is almost entirely covered with briars, and the head-boards and inscriptions are in a bad condition; the second row is better, and the marks on the head-boards are plain; but a few months more will make both the head-boards and inscriptions nearly useless." These preliminary steps were followed by the location of cemeteries, the appointment of superintendents of construction, and the gathering in of remains and reburial of them. The work of reinterment was carried on as speedily as possible, and under acts of Congress measures were adopted for protecting and beautifying these resting-places of the dead defenders of the Union, and for their permanent identification. It was ordered that at each cemetery a record of burials should be kept, in which the name, rank, company, regiment, and date of death of every known officer or private soldier should be recorded; if unknown, it was to be so recorded. A duplicate of these records was to be sent to the quartermaster-general. The Secretary of War was directed to select superintendents from any enlisted men in the army, disabled in service, who should permanently reside at the cemetery and give information to parties visiting it. On June 30, 1876, the quartermaster-general reported that there were eighty-one na-

tional military cemeteries for soldiers and sailors, with seventy-one superintendents, and containing the graves of 310,356 persons, of whom 164,655 are known, and 145,710 are unknown. Besides these, there were 17,000 Union soldiers buried by the Quartermaster's Department in various public and private incorporated cemeteries, not known as national military cemeteries, making the total number of known burials of men who perished in defence of the Republic and were buried where they fell and died, 327,356. Permanent enclosures of stone, brick, or iron have been made for these cemeteries, also permanent lodges at the entrances to them. These cemeteries are distributed in various states, as follows: New York, New Jersey, Pennsylvania, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Illinois, Indiana, Iowa, Missouri, Kansas, Nebraska, Arkansas, and Louisiana; also in the District of Columbia and the city of Mexico. The greater number (sixteen) are in Virginia. The entire cost of these cemeteries was over \$6,500,000. By acts of Congress (Feb. 22, 1867, and Jan. 8, 1872) the Secretary of War was directed to cause each grave to be marked with a small head-stone or block of marble, with the number of the grave on each, corresponding with the number opposite to the name of the party in a register of burials kept at each cemetery, the name of the soldier, his rank, company, and regiment, and the time and place of his death, if known; if not known, to be marked "Unknown." This business was placed in charge of the Quartermaster's Department, and has been thoroughly completed. Advertisements were published calling for proposals for furnishing the little monuments, and requiring them to be marked in the following manner:

3269.
JOHN SMITH,
CORPORAL,
CO. B, 10TH OHIO VOL.;
DIED 25TH NOVEMBER, 1863.
CHATTANOOGA, TENN.

This patriotic work has been fully completed, at a heavy aggregate cost, but which the grateful nation has gladly appropriated. The lands on which the cemeteries are located have been purchased, and the jurisdiction ceded to the national government by the states in which the cemeteries are located. Immense iron siege-guns placed erect upon granite pedestals form appropriate and enduring monuments in most of the cemeteries, and in each a flag-staff has been erected. Congress passed a law (June 1, 1872) allowing all soldiers and sailors honorably discharged from the service of the United States who might die in a destitute condition, burial in the national cemeteries. "Rolls of Honor," containing the name, rank, company, regiment, and date and place of death of every known soldier who died in defence of the Union, have been published by the quartermaster-general in twenty-seven thin volumes.

National Congress, FIRST MEETING OF THE. March 4, 1789, was appointed as the time, and

the City Hall in New York, renovated and called "Federal Hall," was designated as the place for the meeting of the First Congress under the new Constitution. There was great tardiness in assembling. Only eight senators and thirteen representatives appeared on the appointed day. On the 11th of March a circular letter was sent to the absentees, urging their prompt attendance; but it was the 30th before a quorum (thirty members) of the House was present. Frederick A. Muhlenberg, of Pennsylvania, was chosen Speaker of the House, and John Langdon, of New Hampshire, was made (April 6) President of the Senate, "for the sole purpose of opening and counting the votes for President and Vice-President of the United States." Washington was chosen President by a unanimous vote (sixty-nine), and John Adams was elected Vice-President by a majority. He journeyed to New York when notified of his election, and was inaugurated April 21, 1789. Washington was inaugurated April 30. (See *Washington's Inauguration*.)

National Constitution, THE. Sagacious men perceived the utter inefficiency of the Articles of Confederation as a Constitution of a national government. So early as 1780, while their ratification by the states was pending, Alexander Hamilton, then only twenty-three years of age, in a long letter to James Duane, in Congress, dated "At the Liberty Pole," Sept. 3, gave an outline sketch of a national constitution, and suggested the calling of a convention to frame such a system of government. During the following year he published in the *New York Packet* (then published at Fishkill, Dutchess Co., N. Y.) a series of papers under the title of *The Constitutionalist*, which were devoted chiefly to the discussion of the defects of the Articles of Confederation. In the summer of 1782, he succeeded in having the subject brought before the Legislature of New York, then in session at Poughkeepsie, on the Hudson, and that body, by a resolution drawn by Hamilton and presented by his father-in-law, General Schnyler, recommended (July 21, 1782) the assembling of a national convention to revise the Articles, "reserving the right of the respective legislatures to ratify their determinations." In the spring of 1783, Hamilton, in Congress, expressed an earnest desire for such a convention. Pelatiah Webster and Thomas Paine wrote in favor of it the same year, and in 1784 Noah Webster wrote a pamphlet on the subject which he carried in person to General Washington. In that pamphlet Webster proposed "a new system of government which should act, *not on the states, but directly on individuals*, and vest in Congress full power to carry its laws into effect." The plan deeply impressed the mind of Washington. Events in North Carolina and Massachusetts (see *Frankland*, and *Shays's Rebellion*) made many leading men anxious about the future. They saw the weakness of the existing form of government. In the autumn of 1785, Washington, in a letter to James Warren, deplored that weakness, and the "illiberality, jealousy, and local policy of the states," that was likely to "sink the new

nation in the eyes of Europe into contempt." Finally, after many grave discussions at Mount Vernon, Washington, acting upon the suggestions of Hamilton made five years before, proposed a convention of the several states to agree upon a plan of unity in a commercial arrangement, over which, by the existing Constitution, Congress had no control. Coming from such an exalted source, the suggestion was acted upon. A convention of delegates from the several states was called at Annapolis, Md. Only five states (New York, New Jersey, Pennsylvania, Delaware, and Virginia) sent deputies. These met Sept. 11, 1786. There being only a minority of the states present, they deferred action, at the same time recommending another convention. On Feb. 21, 1787, the Congress, by resolution, strongly urged the several legislatures to send deputies to a convention to meet in Philadelphia in May following, "for the sole and express purpose of revising the Articles of Confederation." Delegates were appointed by all the states excepting Rhode Island. The convention assembled at the appointed time (May 14), but only one half the states were then represented. The remainder did not all arrive before May 24. Washington, who was a delegate from Virginia, was chosen president of the convention, and William Jackson, one of his most intimate friends, was made secretary. Edmund Randolph, of Virginia, opened the proceedings by a carefully prepared speech, in which the defects of the existing Constitution were pointed out. At its conclusion he offered fifteen resolutions, in which were embodied the leading principles whereon to construct a new form of government. In these was the suggestion that "a national government ought to be established, consisting of a supreme legislature, executive, and judiciary." Upon this broad idea the convention proceeded, and had not gone far when they perceived that the Articles of Confederation were too radically defective to form a basis for a stable government. Therefore they did not attempt to amend them, but proceeded to form an entirely new Constitution. For many weeks debates went on, when (Sept. 10, 1787) all plans and amendments adopted by the convention were referred to a committee for revision and arrangement. It consisted of James Madison, Alexander Hamilton, Thomas Johnson, Rufus King, and Gouverneur Morris. The latter put the document into proper literary form. It was signed by nearly all the members of the convention on the 17th. The convention ordered these proceedings to be laid before Congress, and recommended that body to submit the instrument to the *people* (not the *states*) and ask them, the *source of all sovereignty*, to ratify or reject it. It was done. The Constitution was violently assailed, especially by the extreme supporters of the doctrine of state sovereignty. The consent of the people of nine states was necessary to secure its ratification. The New Hampshire convention completed the work by voting for its ratification, June 21, 1788. All the rest had ratified it, excepting Rhode Island, before the close of that year; North Carolina having voted for it Nov.

21. Rhode Island held back until May 29, 1790, the government, under the new Constitution, having gone into operation on March 4, 1789.

National Currency. On the 3d of June, 1864, Congress provided for a separate bureau in the Treasury Department, the chief officer of which is called the comptroller of the currency, whose office is under the general direction of the Secretary of the Treasury. It provided that associations for carrying on the business of banking might be formed, consisting of not less than five persons; that no association should be organized under the act with a less capital than \$100,000, nor, in a city the population of which exceeded 50,000, with a less capital than \$200,000; but that banks with a capital of not less than \$50,000 might, with the approval of the Secretary of the Treasury, be established in any place the population of which did not exceed 6000. It also provided that such associations should have existence for twenty years, and might exercise the general powers of banking companies; that the capital should be divided into shares of \$100 each; that stockholders should be liable to the extent of the stock for the debts and contracts of the bank; that every association, preliminary to the commencement of banking business, should transfer bonds of the United States to an amount not less than \$30,000, and not less than one third of the capital stock paid in; that upon the proper examination being made into the affairs of the proposed institution, it should be entitled to receive from the comptroller of the currency circulating notes equal in amount to twenty per cent. of the current market value of the bonds transferred, but not exceeding ninety per cent. of the par value of such bonds. It was also provided that notes to an amount not exceeding in value \$300,000,000 should be issued; that these notes should be received at par in all parts of the United States in payment of taxes, excises, public lands, and all other dues to the United States except for duties on imports, and also for all salaries and other debts and demands owing by the United States to individuals, corporations, and associations within the United States, except interest on the public debt, and in redemption of the national currency; that the rate of interest to be charged should be that allowed by the state or territory where the bank should be located, and that any state bank might become a national bank under the act. By an act passed in March, 1867, it was provided that temporary loan-certificates, bearing three per cent. interest, might be issued to an amount not exceeding \$50,000,000, and that such certificates might constitute for any national bank a part of the reserve provided for by law, provided that not less than three fifths of the reserve of each bank should consist of lawful money of the United States. In January, 1868, an additional amount of \$25,000,000 of temporary loan-certificates was authorized, and in July, 1870, provision made for issuing \$54,000,000 additional currency to national banks. By a law which taxed all banks chartered by states ten per cent. on all circulation paid out by them, Congress effectually drove their notes

from circulation. This national paper-currency is at par in every part of the United States, and affords the soundest paper-currency ever contrived. In 1875 Congress passed an act making banking free under the national system, without any restrictions as to the amount of circulating notes that may be issued to any part of the country, and the privileges attached to the national banks are open to individuals elsewhere.

National Government, SEAT OF THE. By act of Congress approved July 16, 1790, the seat of the national government was to be located on the Potomac River. The commissioners appointed to locate it were Thomas Johnson, David Stuart, and Daniel Carroll, of Maryland, and they gave the name of Washington to the new city laid out. The public offices were removed to Washington from Philadelphia in June, 1800, and the first meeting of Congress took place at Washington in November of the same year. The act assuming jurisdiction was approved by President Adams Feb. 27, 1801. The Monahoc and Monacon Indians once occupied the site of the city, and it was called Conococheagne, meaning "Roaring Waters," from the number of brooks in the vicinity and the falls in the Potomac near. The site of the Capitol was once owned by a man named Pope, who gave it the name of Rome, and the eastern branch of the Potomac, that flows near, he called the Tiber. The eminence on which the Capitol stands might have been properly called, in that connection, the Capitoline Hill. The city was incorporated May 3, 1802. (See *National Capital*.)

National Troops at Annapolis. General B. F. Butler was in Philadelphia on April 19, 1861, when he first heard of the assault on Massachusetts troops in Baltimore. He had orders to go to Washington through Baltimore. It was evident that he could not do so without trouble, and he took counsel with General Robert Patterson, the commander of the "Department of Washington." He also consulted Commodore Dupont, commander of the navy-yard there, and it was agreed that the troops under General Butler should go from Perryville, on the Susquehanna, to Annapolis, by water, and thence across Maryland, seizing and holding Annapolis Junction by the way. Butler laid before his officers a plan which contemplated seizing and holding Annapolis as a means of communication, and to make a forced march with a part of his troops from that port to Washington. He wrote to the Governor of Massachusetts to send the Boston Light Artillery to Annapolis, and the next morning he proceeded with his troops to Perryville, embarked on the powerful steam ferry-boat *Maryland*, and at a little past midnight reached Annapolis. The town and Naval Academy were in the hands of the Secessionists, and were all lighted up in expectation of the arrival of a body of insurgents, by water, from Baltimore, to assist them in seizing the venerable and venerated frigate *Constitution*, lying there, and adding her to the Confederate navy. The arrival of these troops was just in time to save

her. Many of Butler's troops were seamen at home, and these assisted in getting the *Constitution* to a place of safety beyond the bar. Governor Hicks was at Annapolis, and advised Butler not to land Northern troops. "They are not Northern troops," said Butler. "They are a part of the whole militia of the United States, obeying the call of the President." This was the root of the matter—the idea of nationality as opposed to state supremacy. He called on the governor and the mayor of Annapolis. To their remonstrances against his landing and marching through Maryland, Butler replied that the orders and demands of his government were imperative, and that he should land and march on the capital as speedily as possible. He assured them that peaceable citizens should be unmolested and the laws of Maryland be respected. On the 22d the New York Seventh Regiment, Colonel Lefferts, arrived at Annapolis on a steamer. All the troops were landed and quartered at the Naval Academy. The Secessionists, meanwhile, had torn up the railway, taken the locomotives to pieces, and hidden them. Terrible stories reached Butler of a great force of insurgents at Annapolis Junction. He did not believe them, and moved on, after taking formal military possession of Annapolis and the railway to Annapolis Junction. Two Massachusetts companies seized the railway station, in which they found a disabled locomotive concealed. "Does any one know anything about this machine?" inquired Butler. "Our shop made that engine, General," said Charles Homans, of the Beverly Light Guard. "I guess I can put her in order and run her." "Do it," said the General; and it was soon done, for that regiment was full of engineers and mechanics. It was a remarkable regiment. Theodore Winthrop said that if the words were given, "Poets, to the front!" or "Painters, present arms!" or "Sculptors, charge bayonets!" there would be ample responses. The hidden rails were hunted up and found in thickets, ravines, and bottoms of streams, and the road was soon in such a condition that the troops moved on, on the morning of the 24th, at the rate of about one mile an hour, laying the track anew and building bridges. Skirmishers went ahead and scouts on the flanks. The distance to the Junction from Annapolis was twenty miles. They saw none of the terrible Marylanders they had been warned against. The troops reached Annapolis Junction on the morning of the 25th, when the Seventh Regiment went on to Washington and the Massachusetts regiment remained to hold the railroads. Other troops arrived at Annapolis, and General Scott ordered Butler to remain there, hold the town and road, and superintend the forwarding of troops to Washington. The "Department of Annapolis" was created, which embraced the country twenty miles on each side of the railway to within four miles of the capital. The Seventh Regiment were the first troops that reached Washington after the tragedy at Baltimore a week before.

National Troops at Chattanooga. After the battle of Chickamauga (which see) and the con-

centration of the National troops at Chattanooga, Bragg took measures to starve the Union forces. He seized Lookout Mountain and Missionaries' Ridge, and gained possession of the left bank of the Tennessee River, by which he cut off communication by water between the Union army and its supplies at Bridgeport and Stevenson. Rosecrans was therefore compelled to transport them in wagons from their depots, through the rugged mountains on the right bank of the river, by way of the Sequatchie valley, fifty or sixty miles, and then across the Tennessee at Chattanooga, over pontoon bridges. For a while the Army of the Cumberland was on very short allowance, and not less than ten thousand horses and mules were starved or worked to death. Grant, when he took command, telegraphed to Thomas, "Hold Chattanooga, at all hazards," and Thomas had replied, "I will hold the town until we starve." The danger was imminent. Bragg's cavalry had crossed the Tennessee and were raiding on the line of the transportation trains, destroying supplies. (See *Wheeler's Raid*.) In these movements there were some stirring encounters. Vigorous measures were soon taken for the relief of the confined army, and it was speedily effected.

Nationalities of the English-American Colonies. A great majority of the immigrants who settled the English domain in America were of Teutonic origin. The English, Lowland Scotch, Dutch, and Swedes were decidedly of German blood. The Irish and French were few at first. Denmark and the Baltic region contributed a considerable number, and natives from Africa were soon scattered profusely among the white population of all the colonies. They were people of varied and opposite tastes, habits, and theological views, but, as a rule, they commingled without asperity, and when the time came for a political union no serious antagonisms were apparent. Churchmen and Dissenters, Roman Catholics, Puritans, and Friends finally settled down quietly together and labored, with a generous spirit and unsuspicious of each other, for the public good. The Puritans of New England, the Friends or Quakers of Pennsylvania, the Roman Catholics of Maryland, and the Churchmen of Virginia, though often narrow in their theological views, manifested a common love for liberty, and acted upon the just rule that the majority should govern.

Native American Party. In 1844 the great influx of foreigners into the city of New York for several years preceding, and the facility with which our naturalization laws permitted foreigners to become voters, had enabled the adopted citizens to hold the balance of power between the two great parties, Whigs and Democrats, in the city elections. The consequence was that when either party gained a victory the adopted citizens claimed, as was alleged, an unreasonable share of the spoils, and the amount of the patronage controlled by the mayor and Common Council of New York was very great. The native citizens became alarmed, and it was resolved to endeavor to make the naturalization

laws more stringent. A large number of citizens, including many of the most respectable in character and wealth, united in forming a "Native American Party." They nominated James Harper (the head of the publishing house of Harper & Brothers) for mayor, and he was elected by a majority of 4316, with a greater portion of the aldermen. The Native American party immediately extended its influence, and for some years held a conspicuous place in the politics of the Republic.

Naturalization Act, FIRST. On March 22, 1790, a bill was passed providing for a uniform rule of naturalization. It authorized all courts of record to entertain the applications of "alien free white persons" who had resided within the United States for two years, and, on proof of good character and their taking an oath or affirmation to support the Constitution, to admit such persons as citizens. It also provided that no persons who had been disfranchised by any state under laws passed during the Revolution was to be readmitted as a citizen, except by a legislative act of the state to which he had formerly belonged. The power of admitting new citizens is still retained by all courts of record, but in other respects the law has been modified.

Naturalization Law, NEW. The Reign of Terror in France had caused the emigration to America of a large number of French citizens, many of them nobles, who had been banished from their country. Many of the discontented Irish sought refuge in the United States. British agents at that time carried on a large portion of the trade of the Southern States, and Madison had proposed measures to exclude foreign residents in America from an equal participation with citizens in commercial privileges. The fear of foreign democrats by the Federalists and the fear of foreign aristocrats by the Republicans made both parties in agreement in framing a new naturalization law, early in 1795, making the attainment of citizenship by an alien more difficult. The new act required the preliminary residence of the alien, before naturalization, of five years; also a three years' previous declaration of intention to become a citizen, to be made in a court of record; also, one year's residence in the state where the naturalization should be had. The new citizen was called upon to renounce, forever, all allegiance and fidelity to any foreign prince or state; and if he had borne any title of nobility, he must make an express renunciation of it. The last provision elicited warm debate in Congress. (See *Titles of Nobility*.)

Naturalized Citizens Protected. The government of the United States makes no distinction between its citizens, whether native or naturalized, in furnishing protection to them. A notable illustration of this was given in the case of Martin Koszta, a Hungarian exile, who had been naturalized in the United States. While he was engaged in business in Smyrna, Asia Minor, he was seized by order of the Austrian consul-general, and placed on board a vessel bound for Trieste, as a refugee. The *St. Louis*

(Captain Ingraham), a naval vessel of the United States, was then lying in the harbor of Smyrna. Hearing of the arrest, Captain Ingraham claimed Koszta as an American citizen. On the refusal of the Austrian authorities to release the prisoner, Ingraham cleared his vessel for action (July, 1853) and threatened to fire upon the brig if Koszta was not delivered within a given time. The Austrians yielded to the argument of forty well-shotted guns, and the prisoner was placed in the custody of the French consul to await the action of the respective governments. Ingraham's conduct was applauded by his countrymen, and Congress voted him a sword. This protection of an humble adopted citizen of the United States in a foreign land increased the respect for our government and flag abroad. The pride of the Austrian government was severely wounded. It issued a protest against the proceedings of Ingraham, and sent it to all the European courts. The Austrian minister at Washington demanded an apology, or other redress, from the United States government, and threatened it with the displeasure of his royal master. No serious difficulty ensued. Koszta soon returned to the United States.

Navajos. This family really forms a part of the Apaches, but is more civilized than the rest of the tribe. They occupy the table-lands and mountain districts on the San Juan and Little Colorado rivers, and cultivate the soil extensively. With their more warlike kindred, the Apaches, they have carried on hostilities with the Mexicans from a very early period. Attempts to subjugate them had failed, and treaties were broken by them as soon as made until 1863, when Colonel Carson conquered them and compelled them to remove some distance from their mountain fastnesses. There, in a sterile and unhealthful country, they were kept until 1869, when they were allowed, seven thousand in number, to return to their old domain, where they have stayed quietly on a reservation. In 1872 the Navajos on that reservation numbered over nine thousand, with their outlying bands. They receive from the United States government, in annuities, \$91,000. They cultivate the soil rudely, make the cloth they use, and dress decently, covering their whole bodies.

Naval Academy at Annapolis, THE, was established in 1845 by Hon. George Bancroft, then Secretary of the Navy, for the purpose of giving a thorough education to prospective officers of various grades in the United States navy. There is a naval observatory connected with the academy, well supplied with instruments, a carefully selected library of about fifteen thousand volumes, and a large naval hospital. Two ships of war are attached to the institution, used during the summer months as practice-ships and for sea excursions. During the Civil War the academy was removed to Newport, R. I., but was brought back soon after the close of the conflict.

II.—11

Naval Battle on the Mississippi. The gunboats of Commodore Farragut and the mortar-fleet of Commodore Porter attacked Fort Jackson, sixty miles below New Orleans, on April 18, 1862. (See *New Orleans, Capture of.*) Fort Jackson opened the conflict by a shot, when a bombardment was commenced by twenty mortar-vessels. Porter, on the *Harriet Lane*, directed the firing. This conflict was continued several days, assisted by the gunboats, when, perceiving little chance for reducing the forts, Farragut prepared to run by them. In the intense darkness of the night of the 20th five of the gunboats ran up and destroyed the boom below the forts. The Nationals were discovered, and a heavy fire from the fort was opened upon them; and two hours later a blazing fire-raft came roaring down the river, but did no damage. Night after night these fire-rafts were sent down. During the bombardment one thousand shells had fallen within the fort. At sunset on the 23d Farragut was prepared for the perilous feat of running past the forts. The mortar-boats, keeping their position, were to cover the advance of the fleet. At two o'clock in the morning (April 24) the fleet moved. Farragut, with his wooden flag-ship *Hartford* and

THE HARTFORD.

the large ships *Richmond* and *Brooklyn*, that formed the first division, was to keep near the right bank and fight Fort Jackson; while Captain Theodorus Bailey, with the second division, composed of eight gunboats, was to keep close to the left bank and fight Fort St. Philip. To Captain Bell, with six gunboats, was assigned the duty of attacking the Confederate fleet above the forts. Keeping in the channel, he was to push on to his assigned work without regard to the forts. These were silent until the *Cayuga*, Captain Bailey's ship, passed the boom, when heavy guns were brought to bear upon her. She did not reply until she was close to Fort St. Philip, when she gave it tremendous broadsides of grape and canister as she passed by. Four other gunboats were close in her wake and imitated her example, and the whole of Bailey's division passed the forts almost unharmed. The *Hartford* and her consorts had a tremendous

struggle with Fort Jackson. The *Brooklyn* had become entangled with a sunken hulk, and just as she had become free she was furiously attacked by the "ram" *Manassas* (see *Southwest Pass*), but without being much injured. She had just escaped the "ram," when a large Confederate steamer assailed her. She gave it a broadside, which set it on fire, and its swift destruction ensued. Then she brought her guns to bear upon Fort St. Philip and silenced that work. Meanwhile the *Hartford* was battling with Fort Jackson and encountering a fire-raft that set her ablaze, but the flames were soon extinguished. Captain Bell made his way up the channel. Three of his vessels had passed the forts, when a fourth was disabled by a storm of shot, one of which pierced her boiler, and she drifted down the river. Another vessel recoiled, and yet another, entangled among obstructions, could go no farther. Before the fleet had fairly passed the forts the Confederate gunboats and rams, commanded by Captain Mitchell, had attacked the National vessels. The scene was then awfully grand. The noise of twenty mortars and two hundred and sixty great guns, afloat and ashore, was terrific. Added to these were blazing fire-rafts, lighting up the scene with their lurid blaze. Upon the *Cayuga* (Captain Bailey) and the *Varuna* (Captain Boggs) the chief wrath of the Confederates seemed to be directed. These commanders performed wonders of valor. Bailey's vessel escaped up the river, after having been struck forty-two times. The *Varuna* had rushed into the midst of the Confederate fleet to assist the *Cayuga*, and delivered her broadsides right and left with destructive effect. She was finally attacked by a "ram," which she drove ashore in flames, when Boggs, finding his own vessel sinking, let go her anchor and tied her bow up to the shore, at the same time firing upon an antagonist. This was kept up until the water was over the gun-trucks, when Boggs got his crew on shore. The *Varuna* had driven four Confederate gunboats ashore in flames. Thus ended one of the most desperate conflicts of the war. Within the space of an hour and a half after the National vessels left their anchorage the forts were passed, and eleven of the Confederate vessels—nearly the whole of their fleet—were destroyed. The National loss was thirty killed and one hundred and twenty-five wounded. All of Farragut's vessels—twelve in number—joined the *Cayuga* at quarantine above the forts, when the dead were carried ashore and buried. The forts were surrendered, and the Lower Mississippi was opened as far as New Orleans. In this desperate engagement the "ram" *Manassas* had taken a conspicuous part in the flotilla fight above the forts. She was a peculiar-shaped

iron-clad vessel, with a powerful iron beak; but in the engagement under consideration she was so dreadfully pounded and shattered by the shot of the National gunboats that she was at length seen adrift, in a helpless condition, going towards Porter's mortar-fleet. Some of

THE MANASSAS.

these vessels opened fire upon her; but it was soon perceived that she was harmless. Her pipes were all twisted and riddled by shot, and her hull was well battered and pierced. Smoke was issuing from every opening, for she was on fire. At length, giving a plunge like some huge monster, she went hissing to the bottom of the Mississippi.

Naval Battles on Lake Champlain (1776). After the Americans left Canada in sad plight in June, 1776, Carleton, the Governor of Canada and general of the forces there, appeared at the foot of Lake Champlain with a well-appointed

THE ROYAL SAVAGE.*

* This engraving was made from a drawing, in water-colors, of the *Royal Savage*, found by the writer among the papers of General Schuyler, and gave the first positive information as to the design and appearance of the "Union Flag" (which see) displayed by the Americans at Cambridge on Jan. 1, 1776. The drawing exhibited, in proper colors, the thirteen stripes,

force of thirteen thousand men. Only on the bosom of the lake could they advance, for there was no road on either shore. To prevent this invasion, it was important that the Americans should hold command of its waters. A flotilla of small armed vessels was constructed at Crown Point, and Benedict Arnold was placed in command of them as commodore. A schooner called the *Royal Savage* was his flag-ship. Carleton, meanwhile, had used great diligence in fitting out an armed flotilla at St. John for the recovery of Crown Point and Ticonderoga. Towards the close of August, Arnold went down the lake with his fleet and watched the foe until early in October, when he fell back to Valcour Island and formed his flotilla for action without skill. Carleton advanced, with Edward Pringle as commodore, and, on the morning of Oct. 11, gained an advantageous position near Arnold's vessels. A very severe battle ensued, in which the *Royal Savage* was first crippled and afterwards destroyed. Arnold behaved with the greatest bravery during a fight of four or five hours, until it was closed by the falling of night. In the darkness Arnold escaped with

ginia (1781). Admiral Rodney supposed part of the French fleet under De Grasse had left the West Indies for America, but did not suppose the whole fleet would take that direction. He thought it only necessary to reinforce Admiral Graves, so he sent Admiral Hood with fourteen ships-of-the-line for the purpose. He reached the Chesapeake (Aug. 25, 1781) before De Grasse. Not finding Graves there, he proceeded to New York, where news had just arrived that the French squadron at Newport had gone to sea, plainly with intent to join the fleet of De Grasse. In the hope of cutting off one or the other of the French fleets before the junction could be effected, Graves sailed with the united British fleets—nineteen ships-of-the-line—and was astonished, when he arrived at the capes of Virginia, to find De Grasse anchored within. De Grasse, also surprised at this sudden appearance of a heavy British fleet, ordered his ships to slip their cables and put to sea. For five days the contending vessels manœuvred in sight of each other. De Grasse avoided a close contact, his object being to cover the arrival of the squadron from Newport. So a distant cannonade was kept

up. De Barras entered the Chesapeake. Graves, finding his vessels badly shattered, returned to New York to refit, leaving the French in undisturbed possession of the bay. French transports were sent to Annapolis to bring to the James River the allied armies.

Naval Operations between Vicksburg and Port Hudson. The Mis-

issippi River was well blockaded at Vicksburg and Port Hudson. Between these points Confederate transports were supplying the troops at both places. It was determined to destroy them; and for this purpose the "ram" *Queen of the West* ran by the batteries at Vicksburg before daylight (Feb. 2, 1863), destroyed some vessels near Natchez, ran a few miles up the Red River, and, returning, repassed the Vicksburg batteries. On Feb. 10 she started on another raid down the river, accompanied by a gunboat and coal-barge. They passed the batteries at Vicksburg, went up the Red River to the Atchafalaya, captured a train of army-wagons and a quantity of stores on that stream, and also a small steamer (the *Era*) laden with corn and Texan soldiers. Captain Ellet compelled the pilot of the *Era* to serve the *Queen of the West* in the same capacity, when he purposely ran her ashore near Fort Taylor, where heavy guns soon disabled her. Captain Ellet and his crew abandoned her, and retreated on floating bales of cotton. The accompanying gunboat—*De Soto*—picked them up, when the same pilot ran her ashore, and the vessel and coal-barge were scuttled and sunk. The little *Era* was now Ellet's last refuge. Casting her corn overboard (her Texan soldiers had been paroled), he

SCENE OF ARNOLD'S NAVAL BATTLE.*

his vessels from surrounding dangers and pushed up the lake, but was overtaken on the 13th. One of the vessels (the *Washington*) was run on shore and burned, while Arnold, in the schooner *Congress*, with four gondolas, kept up a running fight for five hours, suffering great loss. When the *Congress* was almost a wreck, Arnold ran the vessels into a creek about ten miles from Crown Point, on the eastern shore, and burned them. Then he and his little force made their way through the woods to a place opposite Crown Point, just avoiding an Indian ambush, and escaped to the port whence he started in safety. At Crown Point he found two schooners, two galleys, one sloop, and one gondola—all that remained of his proud little fleet. In the two actions the Americans lost about ninety men; the British not half that number. General Carleton took possession of Crown Point on the 14th of October, but abandoned it in twenty days and returned to Canada.

Naval Engagement off the Capes of Vir-

alternate red and white, with the British union (the crosses of St. George and St. Andrew) on a blue field in the dexter corner.

* This scene is between Port Kent and Plattsburg, on Lake Champlain, western shore. On the left is seen a point of the mainland; on the right a part of Valcour Island. Between these Arnold formed his little fleet for action.

went as lightly and rapidly as possible down to the Mississippi, when the same Confederate pilot ran her ashore, while four armed boats were close in chase. The *Era* was extricated, and, going slowly up the Mississippi, met the powerful National iron-clad *Indianola* coming down in a fog. She rescued the *Era* from her pursuers (among which was the powerful "ram" *Webb*, which had come out of the Red River), and she reached a point below Vicksburg in safety. The *Indianola* blockaded the mouth of the Red River a few days, and then ascending the Mississippi to enter the Big Black River, she was assailed near Grand Gulf, at nine o'clock in the evening (February, 1863), by powerful Confederate gunboats (among them the *Webb* and the captured *Queen of the West*), and was compelled to surrender. The Confederates now believed they had nothing to fear between Vicksburg and Port Hudson, when they were alarmed and disconcerted by a trick. Admiral Porter fitted up a worthless flat-boat in imitation of a "ram," with smoke-stacks made of pork-barrels, and set it afloat one night without a man on board. When the Confederates discovered it they believed it to be a terrible iron-clad monster. As it passed sullenly by it drew a tremendous fire from the batteries at Vicksburg. It seemed to defy shot and shell. Word was quickly sent to the gunboats below. The *Queen of the West* fled in great haste. The *Indianola* was destroyed to prevent her being captured by the awful "ram," and her great guns went to the bottom of the river.

Naval Operations on Lake Champlain (1813). When war was declared the whole American naval force on Lake Champlain consisted of only two boats that lay in a harbor on the Vermont shore. The British had two or three gunboats, or armed galleys, on the Richelieu, or Sorel, River, the outlet of Lake Champlain. Some small vessels were hastily fitted up and armed, and Lieutenant Thomas McDonough was sent to the lake to superintend the construction of some naval vessels there. In the spring of 1813 he put two vessels afloat—the sloop-of-war *Growler* and *Eagle*. Early in June, 1813, some small American vessels were attacked near Rouse's Point by British gunboats. McDonough sent the *Growler* and *Eagle*, manned by one hundred and twelve men, under Lieutenant Joseph Smith, to look after the matter. They went down the Sorel, chased three British gunboats some distance down the river, and were, in turn, pursued by three armed row-galleys, which opened upon the flying sloops with long 24-pounders. At the same time a land force, sent out on each side of the river, poured volleys of musketry upon the American vessels, which were answered by grape and canister. For four hours a running fight was kept up, when a heavy shot tore off a plank from the *Eagle* below water, and she sank immediately. The *Growler* was disabled and run ashore, and the people of both vessels were made prisoners. The loss of the Americans in killed and wounded was twenty; that of the British almost one hundred. The captured sloops were refitted,

and named, respectively, *Finch* and *Chubb*. They were engaged in the battle off Plattsburg the next year, when McDonough recaptured them. For a while the British were masters of Lake Champlain. This loss stimulated McDonough to greater exertions. By Aug. 6 he had fitted out and armed three sloops and six gunboats. At the close of July a British armament, under Colonel J. Murray, attacked defenceless Plattsburg. It was composed of soldiers, sailors, and marines, conveyed in two sloops-of-war, three gunboats, and forty-seven long-boats. They landed on Saturday afternoon, and continued a work of destruction until ten o'clock the next day. General Hampton, who was then at Burlington, only twenty miles distant, with four thousand troops, made no attempt to oppose the invaders. (See *Army of the North*.) The block-house, arsenal, armory, and hospital at Plattsburg were destroyed; also private store-houses. The value of public property wasted was \$25,000, and of private merchandise, furniture, etc., several thousand dollars. Many then went on a plundering raid, destroying transport vessels and property on shore. Such was the condition of naval affairs on Lake Champlain at the close of the summer of 1813.

Naval Warfare with France (1798-99). In July, 1798, the American Congress declared the treaties made between the United States and France (Feb. 6, 1778) at an end, and authorized American vessels of war to capture French cruisers. A marine corps was organized, and thirty cruisers were provided for. The frigates *United States*, *Constitution*, and *Constellation*, already built, were soon made ready for sea under such commanders as Dale, Barry, Decatur the elder, Truxton, Nicholson, and Phillips. Decatur soon captured a French corsair (April, 1798). So many American armed vessels in West India waters, in the summer and autumn of 1798, astonished the British and French authorities there. At the close of that year the American navy consisted of twenty-three vessels, with a total of four hundred and forty-six guns. It was much strengthened during the year 1799 by the launching and putting into commission several new ships, and victories over the French on the ocean were gained. In February, 1799, Commodore Truxton, in the *Constellation*, captured the French frigate *L'Insurgente*; and in February, 1800, he gained a victory over the French frigate *La Vengeance*. The convention at Paris brought about peace between the two nations, and the navy of the United States was called to another field of action.

Navigation Act (1816). As most of the nations of Europe, since the war (1812-15), had adopted a very discriminating policy in favor of their own shipping, of the effects of which the American shipping interest loudly complained, Congress passed an act (March 1, 1816), copied from the famous English navigation act, which retaliated. Importations by foreign ships were to be limited to the produce of their respective countries. This provision was not to apply except to nations having a similar

regulation. The coasting trade, hitherto open to foreign vessels, was now restricted to those owned and built by Americans. To promote the increase of American seamen, all coasting and fishing vessels were required to have crews three fourths of whom were American; and all registered vessels, crews of which two fifths were Americans, under penalty of an additional tonnage duty, and, in case of fishing-vessels, forfeiture of the fishing bounties.

Navigation Acts. Soon after tobacco began to be imported from Virginia into England it was loaded with heavy duties by the king and vexed by royal proclamations. In consequence of this the Virginia Company sent all their tobacco to Holland, when the British government, feeling a diminution in the revenues, issued an order of the King and Council commanding that "no tobacco or other productions of the colonies should thenceforth be carried into any foreign ports until they were first landed in England and the customs paid." This was the commencement of a system of commercial monopoly to which the colonists were subjected, and which was afterwards enforced by various acts of Parliament until the Revolution of 1775-83. In 1651 the republican Parliament passed an act which prohibited the ships of all foreign nations whatever from trading with the plantations in America. It was not designed to trammel the commerce of the colonies, but to secure to the English merchant a monopoly of the trade with the colonies. In 1660, after the restoration of monarchy, the Parliament passed an act which renounced the provisions of the act of 1651, and added others which sacrificed the natural rights of the colonists to English interests. It enacted that no sugars, tobacco, cotton-wool, ginger, indigo, cotton, fustic, dye-woods of the growth of English territories in America, Asia, or Africa, should be transported thence to any other country than those belonging to the crown of England, under the penalty of forfeiture; and all vessels sailing to the colonies were to give bonds to bring said commodities to England. In 1663 another act to still further isolate the colonies was passed, by which the most valuable colonial staples—mentioned by name, and hence known as "enumerated articles"—were required to be shipped exclusively to England; to which country the colonists were also restricted for their supply of foreign goods. This act bore more heavily upon the Southern colonies than upon New England, for none of the "enumerated articles" were produced in the latter region. The preamble to this act avowed its purpose to be to keep the English-American colonies "in a firmer dependence" upon England, "rendering them more beneficial and advantageous" unto it; also to increase the shipping and manufacturing interests of England, and to "keep the plantation trade" to the English. The governors of the colonies were required to take an oath to enforce the navigation laws. These navigation laws were regarded by the colonists as oppressive, and by some as a violation of their charter rights. In Massachusetts they were disregarded

for a long time; in fact, it did not seem to apply to New England. This was complained of, and in 1677 Edward Randolph was sent to Boston to inquire concerning the matter. (See *Randolph, Edward*.) He reported that commerce there was free, no attention being given to the navigation laws; also that the government of Massachusetts "would make the world believe they were a free state." The king and ministry expressed their high displeasure at the conduct of that commonwealth; to which the General Court replied that the acts had never received the assent of the colony, and therefore were not obligatory; that they regarded the navigation acts as invasions of the rights, liberties, and property of his majesty's subjects in the colony, as they were not "represented in Parliament." This was the first enunciation of the idea formulated in the expression "Taxation without representation is tyranny." They, however, declared their loyalty to the king, and passed a local law for enforcing the observance of the navigation acts, which, they said, were "a great damage to his majesty's plantations." In 1696 an act was passed giving extensive and arbitrary power to custom-house officers; and at about the same time a Board of Trade and Plantations was established. (See *Board of Trade and Plantations*.) The royal colonial governors were required to take an oath that they would enforce these laws. In 1704 an act was secretly passed which placed rice among the "enumerated articles," and kept it there until 1730—an act specially grievous to the South Carolinians. In 1733 heavy duties were laid upon rum, sugar, and molasses imported into the colonies from foreign countries. This act sacrificed the interests of the Northern colonies for the benefit of the sugar planters, and it could not be enforced. The continuance of this act and attempts to enforce it, and other oppressive measures of like character, with restrictive laws concerning colonial manufactures, were among the causes which brought about the old war for independence. (See *Colonial Manufactures, Restrictions upon*.)

Navy, Continental, ORIGIN OF THE. Early in the autumn of 1775, Washington called the attention of the Continental Congress to the importance of fitting out naval vessels for the protection of the coast. Before any definite action had been taken, Washington had fitted out five or six armed vessels at Boston to "pick up" some of the British store-ships and transports. On Oct. 13, the Congress authorized the fitting-out of a swift-sailing vessel to carry ten carriage-guns and a proportionate number of swivels, with eighty men, for a cruise of three months. On the same day appeared the germ of our Navy Department in a committee appointed to direct marine affairs. On the 30th of the same month it was resolved to fit out two more vessels, one of twenty and the other of thirty-six guns; and about the middle of December the Congress issued an order for the construction of thirteen more armed vessels—five of thirty-two guns, five of twenty-eight guns, and three of thirteen guns—to be ready for sea by the 1st of March

following. The committee to whom the construction was referred reported that the average cost of the ships would be about \$60,000 each, and that materials for the same and for their equipment might all be obtained in the colonies, excepting cannons and gunpowder. The marine committee was increased in number, so as to consist of one member from each colony. This committee had very little executive power, but had general control of all naval operations under the direction of Congress. In November, 1776, Congress fixed the relative rank of officers in the army and navy as follows: an admiral was equal in rank to a general, a vice-admiral to a lieutenant-general, a commodore to a brigadier-general, the captain of a ship of forty guns and upwards to a colonel, the captain of a ship of ten to twenty guns to a major, and a lieutenant in the navy was equal to a captain in the army. Esek Hopkins, of Rhode Island, was commissioned the first commodore, and made commander-in-chief of the Continental Navy.

Navy Department, THE CONTINENTAL. On the 13th of October, 1775, Silas Deane, John Langdon, and Christopher Gadsden, were appointed a committee to direct naval affairs. Stephen Hopkins, Joseph Hewes, Richard Henry Lee, and John Adams, were added (Oct. 30) to this committee. The committee was at first styled the "Marine Committee," and on Dec. 13 it was so modelled as to include one member from each colony represented in the Congress. They had power to appoint all officers below the rank of third lieutenant, and had the control, under the immediate sanction of the Congress, of all naval operations. Their lack of professional knowledge caused many and vexatious mistakes, and the Congress finally resolved to select three persons well skilled in marine affairs to execute the business intrusted to the general committee. The experts constituted what was called "The Continental Navy Board, or Board of Assistants of the Marine Committee," which remained in active operation until the autumn of 1779, when a "Board of Admiralty" was established, composed of three commissioners not members of the Congress, and two members of that body. This board was subject in all cases to the control of the Congress. There was a secretary who performed a greater share of the actual business of the board. The headquarters of this Navy Department were at Philadelphia, then the seat of the national government. In 1781 another change took place, when General Alexander McDougall, of New York, was appointed "Secretary of the Marine," or Secretary of the Navy, under the old Confederation. A few months afterwards, Robert Morris, the distinguished financier of the Revolution, was appointed a general "Agent of Marine," and an admiralty seal was adopted, composed of an escutcheon with a chevron of stripes alternate red and white, an anchor below, and a ship under full sail as a crest.

Navy, INCREASE OF THE (1813). In January, 1813, an act was passed authorizing the building of four 74-gun ships and six first-class frigates.

A subsequent act (March 3) authorized the construction of six sloops-of-war, and as many ships on the lakes as the President might direct. Another act promised any person who, by torpedoes or other like contrivances, should burn, sink, or destroy any British armed vessels, half their value in money. So much enthusiasm had been created by the naval victories in 1812, that in several of the states acts were passed to build ships-of-war and present them to the government. The latter projects, however, failed.

Navy Island and the Caroline. When the revolt broke out in Canada in 1837, a party of sympathizing Americans took possession of Navy Island, belonging to Canada, situated in the Niagara River about two miles above the great falls. They mustered about seven hundred men, well provisioned, and provided with twenty pieces of cannon. They had a small steamboat named the *Caroline* to ply between the island and Schlosser, on the American side. On a dark night in December (1837) a party of Canadian royalists crossed the river, cut the *Caroline* loose from her moorings, and set her on fire. She went down the current and over the great cataract in full blaze. It is supposed some persons were on board of her.

Navy of the United States. The Continental Congress created a small navy. (See *Continental Navy*.) After the war there seemed to be little use for a navy, and it was neglected. This indifference was continued until 1793, when depredations upon American commerce by Algerine corsairs became more alarming than ever. (See *Algiers, Tribute to*.) In his message of December, 1793, Washington said in reference to a navy, "If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our prosperity, it must be known that we are at all times ready for war." Acting upon this hint, Congress, in the spring of 1794, appropriated (March 11) about \$700,000 for creating a small navy. The President was authorized to procure, by purchase or otherwise, six frigates; but it was provided that work on them should cease in the event of a peace with Algiers being secured. He commissioned captains, superintendents, naval-constructors, and navy-agents, six of each, and ordered the construction of six frigates. The treaty providing for the payment of tribute to Algiers was made late in 1795, when work on the vessels was suspended; but the folly of the suspension was soon made manifest when officers of the British cruisers boarded our merchant-vessels and impressed seamen into the British service under the pretext that they were deserters. (See *Impressment*.) The French, too, were becoming aggressive on the high seas. They depredated upon American commerce under the sanction of a barbarous decree of the Directory, which was almost tantamount to a declaration of war, issued in May, 1797. It authorized the capture of American vessels under certain conditions, and declared that any American found on board a hostile ship, though placed there without his consent (by impressment), should be hanged as

a pirate. In this state of our foreign relations, Congress directed three of the six frigates ordered in 1794 to be completed, launched, and put into commission; and before the close of the year the frigates *Constitution*, 44 guns, *Constellation*, 38 guns, and *United States*, 44 guns, were ready for sea. The *Constitution*, which won many a victory, is yet (1880) afloat. In 1798 ample provision was made by sea and land for war with France, which seemed impending. A Navy Department was created, and in April (1798), Benjamin Stodert, of Maryland, was appointed Secretary of the Navy.

Navy on Lake Ontario. The United States government early perceived the importance of having control of lakes Ontario and Erie when war with Great Britain began. Events in the early part of 1812 at the eastern end of Lake Ontario (see *Sackett's Harbor*), and the fact that the British were building war-vessels at Kingston, made it important that an American squadron should appear on those waters very speedily. The only hope of creating a squadron in time to secure the supremacy of the lake to the Americans was in their ability to convert merchant-vessels afloat into warriors. Several of these were afloat on the lake. To destroy them was a prime object of the British; to save them was a prime object of the Americans. Dearborn's armistice allowed the escape of some of them confined on the St. Lawrence, and at the close of August (1812), Isaac Chauncey, one of the best practical seamen in the navy, was commissioned commander-in-chief of the navy on lakes Ontario and Erie. Henry Eckford, a naturalized Scotchman, and an eminent ship-builder, with a competent number of men, hastened to Sackett's Harbor to prepare a squadron. With great facility one was prepared, and on Nov. 8 Chauncey appeared on Lake Ontario with a little squadron consisting of the armed schooners *Conquest*, *Growler*, *Pert*, *Scourge*, *Governor Tompkins*, and *Hamilton*. These were originally the merchant-schooners *Genesee Packet*, *Experiment*, *Collector*, *Lord Nelson*, *Charles* and *Anne*, and *Diana*. Their armament consisted chiefly of long guns mounted on circles, with a few lighter ones that could be of very little service. Already two schooners, the *Oneida* and *Julia*, were in the service. The keel of the frigate *Madison*, 24 guns, was laid before Chauncey's arrival, and when finished she mounted forty guns. There was an average of only five guns to each vessel of the remainder of the Lake Ontario squadron.

Navy quickly created (1861). The little navy of the United States at the beginning of March was scattered and inefficient, and only one vessel (the *Brooklyn*) was available for use on the Atlantic coast. (See *Navy, The*, in 1861.) The Secretary of the Navy and Assistant-secretary Fox put forth all their energies in the creation of a navy to meet the exigencies of the times. At the beginning of July, four months after Lincoln's administration came into power, there were forty-three armed vessels engaged in the blockade of the Southern ports, and in defence of the coast on the eastern side of the

continent. These were divided into two squadrons, known respectively as the Atlantic and Gulf squadrons. The former, under the command of Flag-officer Silas H. Stringham, consisted of twenty-two vessels and an aggregate of 296 guns and 3300 men; the latter, commanded by Flag-officer W. Mervine, consisted of twenty-one vessels, with an aggregate of 232 guns and 3500 men. Before the close of the year 1861, the Secretary purchased and put into commission no less than 137 vessels, and had contracted for the building of a large number of steamships of a substantial class, suitable for performing continuous duty off the coasts in all weathers. The Secretary recommended the appointment of a competent board to inquire into and report on the subject of iron-clad vessels. Calls for recruits for the navy were promptly complied with, and for the want of them no vessel was ever detained more than two or three days. Since March 1, 259 officers had resigned or been dismissed, but their places were soon all filled; for many who had retired to civil pursuits now came forward and offered their services to their country and were recommissioned.

Navy, THE (1861). At the beginning of Lincoln's administration, the little navy of the United States had been placed far beyond the reach of the government for immediate use. The total number of vessels of all classes belonging to the navy was ninety, carrying, or designed to carry, 2415 guns. Of this number only forty-two were in commission. Twenty-eight ships, having in the aggregate 874 guns, were lying in ports dismantled, and none of them could be made ready for sea in less than several weeks' time; some of them would require at least six months. The most of them in commission had been sent to distant seas, and the entire available force for the defence of the whole Atlantic coast of the Republic was the ship *Brooklyn*, of 25 guns, and the store-ship *Relief*, of 2 guns. The *Brooklyn* drew too much water to enter Charleston harbor with safety when the war had been commenced, and the *Relief* had been ordered to Africa with stores for a squadron there. Many of the officers of the navy were born in slave-labor states, and sixty of them, including eleven at the Naval Academy, Annapolis, had resigned their commissions and deserted their flag. Such was the utterly powerless condition of the navy to assist in preserving the life of the Republic when Isaac Toucey, of Connecticut, resigned the office of Secretary of the Navy to Gideon Welles, of the same state, on March 4, 1861.

Navy, United States, during the Civil War. The services of the navy during the Civil War, on account of their peculiarity, attracted less attention than those of the army, and were not appreciated by the people. They were often subservient to the army in its operations near rivers and bayous. On the ocean the services of the navy were chiefly required in blockading ports, or in bombarding coast defences. The Confederates had no navy proper, only flotillas of gunboats and "rams" on rivers and in har-

bors, and not a ship on the ocean excepting a few roving piratical vessels depredating upon American commerce. Therefore there were few occasions for purely naval battles. But in the sphere in which the United States Navy was called upon to act, they performed services of incalculable value, and that arm of the united service deserves equal honor and gratitude with the army. The service during the war was more exhausting and really wonderful in operations and results than that of any other navy in the world. The Navy Department displayed great energy. The navy was reduced to the smallest proportions during fifty years of peace, and kept in existence only for the protection of the continually expanding commerce of the Republic. When the Civil War began, its men numbered only 7600, and of its officers, 322, natives of slave-labor states, soon deserted their flag and gave their strength to the enemies of the Republic. Yet, before an adequate naval force could be organized and vessels prepared, the blockade of several Southern ports was ordered and was maintained. Merchant-vessels were converted into warriors, and volunteers from that service filled the vacant offices. Of these, about 7600 were received and commissioned, and the rank and file in the service, aggregating about 7500 men when the war opened, numbered 51,500 when it closed. At the beginning, there were 3844 artisans and laborers in the navy; at the end, there were 16,880, exclusive of about an equal number employed in private ship-yards under contract. During the four years, 208 war-vessels were constructed and fitted out, and 418 vessels were purchased and converted into war-ships. Of these 613 were steamers, the whole costing nearly \$19,000,000.

Navy-yard near Norfolk, DESTRUCTION AT THE. This naval station of the United States was at Gosport, opposite Norfolk, Va., on the bank of a deep and sluggish stream flowing out of the Great Dismal Swamp. The station was one of the oldest and most extensive belonging to the government, and covered an area three fourths of a mile in length and one fourth of a

the property there was between \$9,000,000 and \$10,000,000. Besides this, several war-vessels were afloat there. The late administration, to avoid irritating the Virginia politicians, had left all of this public property to exposure or destruction. Even the new administration (Mr. Lincoln's) was very circumspect. When directing (April 4, 1861) Commodore McCauley to "put the shipping and public property in condition to be moved and placed beyond danger should it become necessary," he was warned to "take no steps that would give needless alarm." Meanwhile, the Virginia Secessionists had proposed to seize or destroy all this property. So early as the night of April 16, two light-boats of eighty tons each were sunk in the channel of the Elizabeth River, below Norfolk, to prevent the government vessels leaving the stream. The government, alarmed, sent Captain Hiram Paulding from Washington with instructions for McCauley to lose no time in "arming the *Merimac*, and in getting the *Plymouth* and *Dolphin* beyond danger; to have the *Germantown* in condition to be towed out, and to put the more valuable property, ordnance and stores, on ship-board, so that they could at any moment be moved beyond danger." He was also instructed to defend the property under his charge "at any hazard, repelling by force, if necessary, any and all attempts to seize it, whether by mob violence, organized effort, or any assumed authority." Paulding caused the frigate *Cumberland* to be placed, with a full crew and armament on board, so as to command the entire navy-yard, and then returned to Washington. McCauley, apparently unsuspecting of treachery around him, neglected to carry out the instructions sent him until it was too late. His southern-born officers deceived him by protestations of loyalty. "You have no Pensacola officers here," they said to McCauley. (See *Navy-yard near Pensacola*.) "We will never desert you; we will stand by you until the last, even unto death." On the day after the passage of the Virginia Ordinance of Secession, they deserted their flag and joined the insurgents. On the evening of April 18, General

VIEW OF THE NAVY-YARD AFTER THE FIRE.

mile in width. In the river the largest vessels-of-war might float, and everything for building and finishing such vessels was seen there in greatest perfection. The quantities of arms and munitions laid up were enormous. There were at least 2000 pieces of heavy cannon fit for service, 300 of which were new Dahlgren guns. It was estimated that the aggregate value of

Taliaferro, commander of the forces in southeastern Virginia, appeared at Norfolk with his staff, and prepared to seize the navy-yard and the ships-of-war. The disloyal officers had corrupted the workmen in the navy-yard, and these were also ready to join the insurgents. The military companies of Norfolk and Portsmouth were paraded under arms. Several companies

of riflemen came from Petersburg, in number about 600, and a corps came from Richmond, bringing with them fourteen pieces of heavy rifled cannon, and plenty of ammunition. With these troops Taliaferro felt certain of success. McCauley now felt equally certain that he could not withstand so large an insurgent force, and to quiet the people of Norfolk, who were greatly excited by a rumor that the guns of the vessels were to be opened on the town, he sent word that he should make no movement except in self-defence. On the return of his flag from Norfolk, McCauley gave orders for scuttling all the vessels to prevent their falling into the hands of the insurgents. This was done at four o'clock in the afternoon. The *Cumberland* only was spared. Word had reached Washington of the remissness of McCauley, and Paulding was despatched in the *Pawnee* with 100 marines to relieve the commodore. At Fortress Monroe he took on board 350 Massachusetts volunteers just arrived, but when he reached Norfolk the scuttling of the vessels was completed. They might all have been saved. Paulding saw the fatal error. He saw that more than scuttling must be performed to render the ships useless to the insurgents. He also perceived that with his small land force he could not defend the navy-yard; so, using the discretionary power given him, he proceeded to burn the slowly sinking ships, and to commit to the flames all the buildings and other inflammable property in the navy-yard. He sent 100 men under Lieutenant J. H. Russell with sledge-hammers to knock off the trunnions of the cannons. The Dahlgren guns resisted the hammers, but those of a large number of the old-pattern guns were destroyed. Many were spiked, but so indifferently that they were soon repaired by the insurgents. All the men were taken on board the *Pawnee* and *Cumberland*, excepting those who were to commit the work of destruction. Before dawn on the morning of April 21 the conflagration was started, but the destruction was not made complete. The vessels, with the men, immediately withdrew, when the insurgents took possession and saved all the buildings, provisions, and stores in the yard, except the immense ship-houses, the barracks, and rigging, sail, and ordnance lofts. A vast number of the cannons were uninjured, and played a conspicuous part in the war on the side of the Confederates. The money value of the property destroyed was estimated at \$7,000,000. Two of the sunken vessels, the *Merrimac* and *Plymouth*, which were not consumed, were afterwards raised by the Confederates and converted into powerful iron-clad vessels-of-war. Norfolk, and Portsmouth opposite, and old Fort Norfolk, on the river-bank below, were taken possession of by the insurgents. The possession of these places and of Harper's Ferry were important acquisitions for the Confederates, preliminary to an attempt to seize Washington. (See *Harper's Ferry, Surrender of*.) To the treachery of southern naval officers, and the neglect of Commodore McCauley, may be attributed the loss of the navy-yard at Gosport.

Navy-yard near Pensacola, SURRENDER OF

THE. The United States had a navy-yard at the little village of Warrington, five miles from the entrance to Pensacola Bay. It was under the charge of Commodore Armstrong, of the United States Navy. He was surrounded by disloyal men, and when, on the morning of Jan. 10 (when Fort Pickens was threatened), about five hundred Florida and Alabama troops, and a few from Mississippi, commanded by Colonel Lomax, appeared at the navy-yard and demanded its surrender, Armstrong found himself powerless. Of the sixty officers and men under his command, he afterwards said more than three fourths were disloyal, and some were actively so. Commander Farrand was actually among the insurgents, who demanded the surrender to the governor of Florida. The disloyal men would have revolted if the commodore had made resistance. Lieutenant Renshaw, the flag-officer, one of the leaders among the disloyal men, immediately ordered the national standard to be lowered. It fell to the ground, and was greeted with derisive laughter. The command of the navy-yard was then given to Captain V. N. Randolph, who had deserted his flag; and the post, with ordnance and stores valued at \$156,000, passed into the hands of the authorities of Florida, Jan. 10, 1861.

Nebraska was made a territory May 30, 1854 (see *Kansas and Nebraska*), embracing 351,558 square miles. A portion was set off to Colorado in February, 1861, and another portion to Dakota in March. In March, 1863, Nebraska was further shorn by taking off the Territory of Idaho. In 1860 the people voted against the proposition to form a state government. In April, 1864, Con-

STATE SEAL OF NEBRASKA.

gress authorized the people to organize a state government, but the continuance of war and the prevalence of Indian hostilities prevented action in the matter until early in 1866, when the territorial legislature framed a state constitution, which was ratified in June. A bill to admit Nebraska as a state passed Congress soon afterwards, but President Johnson withheld his signature. A similar bill was passed in January, 1867, but was vetoed by the President. It was passed over his veto by a vote of thirty to nine in the Senate and of one hundred and twenty to forty-four in the House, and Nebraska was

admitted a state of the Union March 1, 1867. Lincoln was chosen as the seat of government soon afterwards. The climate of Nebraska is dry and exhilarating. The temperature in winter is 22° and in summer about 70°. Its surface is chiefly prairie and the state is well watered.

Negley, JAMES S., was born in Alleghany County, Penn., Dec. 26, 1826. He served in the war against Mexico, and when the Civil War broke out he commanded a brigade of state militia. He assisted in organizing and disciplining volunteers, and commanded a brigade of them under General Patterson on the Upper Potomac. Made brigadier-general of volunteers in October, 1861, he served under General Mitchel in the West, and afterwards commanded a division of the Army of the Ohio. For his services in the battle of Stone's River he was made major-general, and was distinguished in the battle of Chickamauga. He was a member of Congress from Pittsburgh from 1869 to 1871.

Negotiation and Conciliation. James Duane's proposition to open negotiations for the accommodation of the dispute between Great Britain and her colonies (see *Fortifications, First, ordered by Congress*) was considered by Congress at the same time when a proposition for a similar purpose, which had come from Lord North, was before that body. The timid portion of Congress prevailed, and it was resolved to address another petition to his majesty, but at the same time to put the colonies into a state of defence. Duane's motion was carried, but against a most determined and unyielding opposition; but it rather retarded the prospect of a peaceful solution. It had no practical significance, unless it was intended to accept the proposition of Lord North as the basis for an agreement. To this the majority would never consent, for it involved a consent to sacrifice the charter of Massachusetts. The wavering of Congress at that time led the people to neglect the steady system of resistance on which they had entered, and to wait for an accommodation, while the king gained a respite which he employed to his advantage in subduing the colonies. The influence of Duane's proposition was pernicious.

Negro Fort in Florida. Colonel Nichols, commander of the British force which Jackson drove away from Pensacola (which see), built a fort on the Appalachicola River, which he gave, with its cannons and magazine, at the close of the war, to his Indian and negro allies. Loud complaints were made by the Georgians that this fort was an asylum for runaway slaves. In the early fall of 1816 measures were taken to abate the nuisance. A body of Creeks, under their chief, McIntosh (which see), marched to attack the fort. Colonel Clinch descended from Camp Crawford, on the river above, with regulars and artillery, to co-operate with the Creeks. While Clinch was preparing to erect batteries, two gunboats arrived from New Orleans, one of which, hurling a red-hot shot, blew up the magazine. In the explosion three hundred and fifty Indian and negro men, women, and children perished. The fort was immedi-

ately taken possession of, and the black commander and the Indian chief were put to death in cold blood. Clinch returned in triumph, with a number of negroes in chains as runaways. Such was the prelude to the first Seminole war (which see).

Negro Plots in New York. The citizens of New York were disturbed by apprehensions of a conspiracy of their negro slaves, in 1712, to burn the city and destroy the inhabitants. The population then was about six thousand, composed largely of slaves. Nineteen of those suspected of the crime suffered. A more disastrous alarm about a plot of the negroes for destroying the city occurred in the spring and summer of 1741, when the population was about ten thousand, one fifth of whom were negro slaves. The most prominent merchants of the city were engaged in the slave-trade. Conscious of the natural aspirations of the human soul for personal freedom, very stringent rules had been adopted for the subordination of the slaves, and every transgression was severely punished. Every act of insubordination made the community tremble with fear of possible consequences, and this feeling of insecurity needed only a slight provocation to ripen into a general panic. A trifling robbery occurred in March, 1741, in the house of a merchant, which was traced to some negroes. Nine fires occurred in different parts of the city soon afterwards, and though most of them were merely the burning of chimneys, they produced terror. A general alarm was instantly created in the public mind. Numerous arrests were made and a searching investigation was instituted by the magistrates, but no trace of incendiarism could be found. Three heavy rewards were offered by the city authorities for the arrest and conviction of the perpetrators, and a full pardon to such of them as should reveal a knowledge of their crime and of their associates. Here was a chance for the wicked. An indentured servant-woman (Mary Burton) purchased her liberty and secured a reward of \$500 by pretending to give information of a plot, formed by a low tavern-keeper and her master and three negroes, to burn the city and murder the white people. This story was confirmed by an Irish prostitute, convicted of a robbery, who, to recommend herself to mercy, turned informer. Many other arrests were now made among the slaves and free negroes. The Supreme Court of the province was specially convened for the investigation of the matter, and a grand jury, composed of some of the principal inhabitants of the city, held a solemn inquest. Other informers besides Mary Burton speedily appeared, and fresh victims were seized. The panic and fury among the population was fearful, and the authorities were stimulated thereby to hurried inquiries, unjust convictions, and the infliction of awful punishments on the innocent. The eight lawyers who then composed the bar of New York all assisted, by turns, in the prosecution. The negroes had no counsel, and were convicted and executed on insufficient evidence. The lawyers vied with each other in abusing the poor, terrified victims, and Chief-justice De Lancey, in

passing sentence, vied with the lawyers in this abuse. Many confessed to save their lives, and then accused others. John Ury, a schoolmaster, and reputed Roman Catholic priest, was denounced by Mary Burton, and, notwithstanding his solemn protestations of innocence and the absence of competent testimony to convict him, he was hanged. His arrest was the signal for the arrest of other white people, and the reign of terror was fearfully intensified; but, when (as in the case of the Salem witchcraft excitement), Mary Burton accused prominent persons known to be innocent, the delusion instantly abated, the prisons were cleared of victims, and the public mind was calmed. From the 11th of May until the 29th of August, one hundred and fifty-four negroes were committed to prison, fourteen of whom were burned at the stake, eighteen hanged, and seventy-one transported. During the same period twenty-four white people were imprisoned, four of whom were hanged. There was no more foundation for this insane panic about a negro plot and its fearful consequences than there was for the witchcraft delusion and its terrible results. (See *Salem Witchcraft*.)

Negro Refugees (1783). During the invasions of Virginia and the Carolinas a considerable number of slaves had joined the British army, under promises of protection. In the final arrangements, under the treaty of peace, before the evacuation of New York by the British troops, Sir Guy Carleton, who was in chief command of the latter, and charged with the details in the execution of the treaty regarding England, in honor bound still to protect these slaves, refused to give them up, and they were sent to Nova Scotia in the first vessels that carried away loyalists to the same province from New York. (See *American Loyalists*.) From that province many of these freedmen emigrated to Sierra Leone, Africa, where their descendants are now among the wealthiest and most enlightened population of that African colony.

Negro Slavery in Connecticut. In 1650 a new code of laws, much of it copied from that of Massachusetts, was adopted by the General Court. In making provision for guarding against depredations by Indians, it was enacted that "if satisfaction for injuries is refused or neglected, the Indians themselves may be seized, and, because it may be chargeable keeping them in prison, they may be delivered to the injured party, either to serve or to be shipped out and exchanged for negroes, as the case will justly bear." This is the first law adopted in Connecticut recognizing the right of holding negro slaves and enslaving the Indians. Provision was also made for selling debtors among the white people to compel them to do service until the legal claim of the creditor was satisfied.

Negro Soldiers, AN UNPATRIOTIC ACTION. When young John Laurens, then in the camp of Washington, heard of the British invasion of his state, early in 1779, he felt anxious to fly to its defence. He proposed to gather a regiment of negroes. Alexander Hamilton recommended

the measure to the President of Congress. He was favorable to the plan of emancipation undertaken in Rhode Island, by allowing every able-bodied slave who should enlist for the war his personal freedom. He argued that they would make good soldiers; that their natural faculties were as good as those of white people; that giving them freedom with their muskets would insure their fidelity, animate their courage, and have a good influence on those who should remain, by opening a door for their emancipation. Two days afterwards the elder Laurens wrote to Washington on the subject, saying: "If we had arms for three thousand such black men as I could enlist in Carolina, I should have no doubt of success in driving the British out of Georgia and subduing East Florida before the end of July." Washington, guided by prudence and common-sense, replied that the policy was a questionable one, "for, should we begin to form battalions of them [negroes], I have not the smallest doubt, if the war is to be prosecuted, of their [the British] following us in it, and justifying the measure upon our own ground. The contest, then, must be, who can arm fastest? And where are our arms?" Colonel Huger, of South Carolina, proposed that the two southernmost of the thirteen states should detach the most vigorous and enterprising negroes from the rest by arming three thousand of them under white officers. He explained that his state was weak, because many of its citizens must remain at home to prevent revolt among the slaves, or their desertion to the enemy. Congress recommended the measure of arming the negroes. These appeals for help against the invaders met no other response. The Carolinian planters were irritated by the proposition to emancipate and arm their slaves, and the Executive Council was induced (as Prevost and a British army were then besieging Charleston) to ask of the invading general his terms for a capitulation. Prevost offered peace and protection to those who would accept them; to others, to be prisoners of war. The Executive Council debated the surrender of the town, and, in defiance of remonstrances from Moultrie, young Laurens (who was in Charleston), and others, they proposed "a neutrality during the war between Great Britain and America, the question whether the state shall belong to Great Britain or remain one of the United States to be determined by the treaty of peace between the two powers." Laurens was requested to carry this proposition to Prevost, but he scornfully refused, and another took it. Prevost refused to treat, and demanded the surrender of the troops as prisoners of war. "Then we will fight it out," exclaimed Moultrie, and left the tent of the governor and council. Gadsden followed him out and said, "Act according to your judgment, and we will support you." The British fell back towards Georgia that night.

Negro Suffrage in the District of Columbia. In December, 1866, Congress, by a large majority of both houses, passed a bill for granting the elective franchise in the District of Co-

lumbia (which is under the immediate jurisdiction of Congress) to all persons, "without any distinction on account of color or race." President Johnson vetoed the bill (Jan. 7, 1867), but it became a law, nevertheless. This was the beginning of the extension of the elective franchise to the colored people of the Republic.

Negro Troops in the Civil War. During the intense excitement following the attack on Fort Sumter (April, 1861), a few colored men in New York, inspired by military movements around them, met in a hired room, and began to drill, thinking their services might be wanted. They were threatened by sympathizers with the insurgents, and the superintendent of the police deemed it prudent to order the colored men to desist. More than a year later, General Hunter (see *Hunter's Emancipation Proclamation*) directed the organization of colored troops in his Department of the South. It raised a storm of indignation in Congress, and that body, by resolution, inquired whether these were military organizations of fugitive slaves; and if so, whether they were authorized by the government. General Hunter answered that there was no regiment of "fugitive" slaves, but there was "a fine regiment of men whose late masters are fugitive rebels—men who everywhere fly before the appearance of the National flag, leaving their servants behind them to shift as best they can for themselves." A few weeks later the Secretary of War directed (Aug. 25, 1862) the military governors of the coast islands of South Carolina to "arm, uniform, equip, and receive into the service of the United States such number of volunteers of African descent, not exceeding five thousand," as he might deem expedient to guard that region from harm "by the public enemy." Just before, General Phelps recommended to General Butler the arming of negroes; and not long afterwards the former, impressed with the perils of his isolated situation in New Orleans, called for volunteers from the free colored men of that city. Not long afterwards three regiments of colored troops were organized there. Another year passed by, and yet there were very few colored troops in the service. There was universal prejudice against them. When a draft for soldiers appeared inevitable, that prejudice gave way; and when Lee invaded Pennsylvania (June, 1863), the government authorized the enlistment of colored troops in the free-labor states. Congress authorized (July 16, 1863) the President to accept them as volunteers, and prescribed the enrolment of the militia, which should in all cases "include all able-bodied citizens," without distinction of color. Yet so strong remained the prejudice against the enlistment of negroes that in May, 1863, Colonel Shaw's Massachusetts regiment (see *Siege of Charleston*) was warned that it could not be protected from insult in the city of New York if it should attempt to pass through it, and it sailed from Boston for Port Royal. A few months later a regiment of colored troops, bearing a flag wrought by women of the city of New York, marched through its streets for the battle-field, cheered by thousands of citizens. From

that time colored troops were freely enlisted everywhere. Adjutant-general Thomas went to the Mississippi valley (March, 1863) for the express purpose of promoting such enlistments, and was successful.

Negroes Recognized as Property. On the demand of Henry Laurens, of South Carolina, who entered into the negotiations for a preliminary treaty of peace, at a late hour, a clause in the treaty (1782) was interlined, prohibiting, in the British evacuation, the "carrying away any negroes or other property of the inhabitants." So this treaty of peace, in which no word had, excepting indirectly, indicated the existence of slavery in the United States, made known to the world that men could be held as property.

Nelson, THOMAS, was born in York County, Va., Dec. 26, 1733; died there, Jan. 4, 1789. He was educated at Cambridge, Eng., and, returning home when not twenty-one years of age, was elected to the House of Burgesses. He married, and settled at Yorktown. He was a member of the popular convention at Williamsburg in August, 1774; also in 1775. He was conspicuous in the Virginia Convention which, in May, 1776, framed a state constitution, and was then a member of the Continental Congress. He voted for and signed the Declaration of Independence, and in May, 1777, resigned his seat. In August following he was appointed the commander of the state forces, and, raising a troop of cavalry, went to Philadelphia with them to assist in opposing Howe's expedition up the Chesapeake. Having responded to the appeal of Congress, and finding the danger not so imminent as was supposed, he disbanded his troops, and resumed his duties in the Legislature. In Congress again in 1779, he was compelled soon to resign on account of ill-health. The marauding expedition of Matthews, in May, 1779, caused him to organize the militia to repel it; and a call for a loan of \$2,000,000 having been made by the state, Nelson raised a larger portion of it on his own personal security. He also advanced the money to pay the arrears of two Virginia regiments, who would not march to the

THE NELSON MANSION.

South until they were paid. These patriotic sacrifices so impaired his ample fortune that he suffered pecuniary embarrassments in the later

years of his life. A part of the year 1781 he was governor of the state. It was while Cornwallis was ravaging the commonwealth. Commanding the militia at the siege of Yorktown, he directed the artillery to bombard his own fine stone mansion, standing within the British lines, the supposed headquarters of Cornwallis. After the surrender, General Nelson passed the rest of his days in retirement, with an impaired constitution. He died so poor that his remaining possessions were sold to pay his debts. The statue of Nelson is one of the six composing a part of the Washington monument at Richmond. The remains of Thomas Nelson were interred in the old family cemetery at Yorktown, where, until 1860, some of the old monuments were

THE NELSON TOMBS AT YORKTOWN.

well preserved. Among them was that over the grave of the first immigrant of the family (the one nearest in the picture), who was known as "Scotch Tom." The second one covers the grave of William Nelson, President of the King's Council in Virginia, and in a vault, near the fragment of a brick wall seen beyond, rest the remains of the signer of the Declaration of Independence.

Nelson, WILLIAM, was born at Maysville, Ky., in 1825; died at Louisville, Ky., Sept. 29, 1862, from a wound received during a quarrel with General Jefferson C. Davis. He entered the United States Navy in 1840, was at the siege of Vera Cruz in 1847, and afterwards served in the Mediterranean. He was ordered into the military service in Kentucky by the government, with the rank of brigadier-general. He was successful in raising troops, did good service in eastern Kentucky, commanded a division of Buell's army in the battle of Shiloh, and after being wounded in a struggle at Richmond, Ky., he was put in command at Louisville, when it was threatened by Bragg's army. In July, 1862, he was made major-general of volunteers.

Neutral Ground, THE. This region was about thirty miles in extent along the eastern shore of the Hudson River, in Westchester County, stretching northward from Spytten Duyvel Creek and the Harlem River. It included nearly all of that county. It was a populous and highly cultivated region, lying between the American and British lines. Being within neither, it was called "Neutral Ground." The inhabitants suffered dreadfully, being with-

out military protection, from the gangs of thieves and plunderers of both parties. (See *Cow-boys and Skinners*.)

Neutral Nation, or Neuters. In the territory on both sides of the Niagara River, between the Hurons on the west and the Iroquois on the east, was a tribe related to both, who remained neutral in the wars between their opposing kindred, and so obtained the name of Attioudironks, or Neuters. The Franciscan missionaries visited them in 1629, and afterwards the Jesuits attempted to plant missions among them, but failed. These Indians informed the Franciscans, or Récollets, of oil-springs in their country, which have become famous in their products in our day. In 1649, after the Iroquois had conquered the Hurons, they attacked the Neuters, who killed many of them, and incorporated the remainder among the Five Nations. (See *Iroquois Confederacy*.)

Neutrality Law (1816). It had been proposed to Spain to accept, on the part of the United States, in satisfaction of the claims against her, a cession of Florida; and, that all controversies between the two governments might be settled at once, to make the Colorado of Texas the western boundary of the United States in Spanish territory. The Spanish minister at Washington demanded, as preliminary to such an arrangement, the restoration to Spain of West Florida, and the exclusion of the flags of insurrectionary Spanish provinces of South America, they being used by privateersmen. An act was accordingly passed in March, 1816, and penalties provided for a violation of it. This act secured peace between the two countries.

Neutrality, WASHINGTON'S PROCLAMATION OF. As soon as the news of the execution of Louis XVI., at Paris (January, 1793), reached England and the Continental powers, they coalesced against France, and war between them and the Revolutionists was announced. When the news of this event and the conduct of Genet (which see) reached Washington, at Mount Vernon, his mind was filled with anxiety. By the treaty of commerce, French privateers were entitled to shelter in American ports—a shelter not to be extended to the enemies of France. By the treaty of alliance, the United States were bound, in express terms, to guarantee the French possessions in America. War between England and the United States was threatened in the aspect of events. Washington hastened to Philadelphia, to consult with his cabinet. The questions were put—Whether a proclamation to prevent citizens of the United States interfering in the impending war should be issued? Should it contain a declaration of neutrality, or what? Should a minister from the French Republic be received? If so, should the reception be absolute or qualified? Were the United States bound to consider the treaties with France as applying to the present state of the parties, or might they be renounced or suspended? Suppose the treaties binding, what was the effect of the guarantee? Did it apply in the case of an offensive

war? Was the present war offensive or defensive on the part of France? Did the treaty with France require the exclusion of English ships of war, other than privateers, from the ports of the United States? Was it advisable to call an extra session of Congress? After careful discussion, it was unanimously concluded that a proclamation of neutrality should be issued, that a new French minister should be received, and that a special session of Congress was not expedient. There were some differences of opinion upon other points under discussion. A proclamation of neutrality was put forth April 22, 1793. It announced the disposition of the United States to pursue a friendly and impartial conduct towards all of the belligerent powers; it exhorted and warned citizens of the United States to avoid all acts contrary to this disposition; declared the resolution of the government not only not to interfere on behalf of those who might expose themselves to punishment or forfeiture under the law of nations by aiding or abetting either of the belligerents, but to cause all such acts, done within the jurisdiction of the United States, to be prosecuted in the proper courts.

Neutrals, RIGHTS OF, ATTACKED. When the Berlin Decree (see *Orders and Decrees*) was promulgated, John Armstrong, American minister at Paris, inquired of the French Minister of Marine how it was to be interpreted concerning American vessels, and was answered that American vessels bound to and from a British port would not be molested; and such was the fact. For nearly a year the French cruisers did not interfere with American vessels; but after the peace of Tilsit (July 7, 1807) Napoleon employed the released French army in enforcing his "Continental System." According to a new interpretation of the Berlin Decree, given by Regnier, French Minister of Justice, American vessels, laden with merchandise derived from England and her colonies, by whomsoever owned, were liable to seizure by French cruisers. This announced intention of forcing the United States into at least a passive co-operation with Bonaparte's schemes against British commerce was speedily carried into execution by the confiscation of the cargo of the American ship *Horizon*, which had accidentally been stranded on the coast of France in November, 1807. The ground of condemnation was, that the cargo consisted of merchandise of British origin. This served as a precedent for the confiscation of a large amount of American property on the sea. Already Great Britain had exhibited her intended policy towards neutrals. When she heard of the secret provisions of the treaty of Tilsit (July, 1807), in anticipation of the supposed designs of France, she sent a formidable naval force to Copenhagen, and demanded (Sept. 2) the surrender of the Danish fleet, which being refused, it was seized by force, and the vessels taken to England. Her policy was further foreshadowed by an Order in Council (Nov. 11, 1807) prohibiting any neutral trade with France or her allies—in other words, with the whole of Europe, Sweden excepted—unless through Great Britain. A color-

able pretext for these orders was the Berlin Decree.

Nevada formed a part of the Mexican cession to the United States by the treaty of Guadalupe-Hidalgo (which see). The Territory of Nevada was created by act of Congress, March 2, 1861, from a portion of Utah. By act of July 14, 1862, a further portion of Utah was added.

STATE SEAL OF NEVADA.

A state constitution was framed by a convention, and Nevada was admitted as a state of the Union Oct. 31, 1864. Nevada had few inhabitants until after 1859, in the summer of which year silver was found in the Washoe district, when settlers began to pour in. Virginia City

sprang up as if by magic, and in 1864 it was the second city west of the Rocky Mountains. Gold had been discovered in 1849, by Mormon settlers there, but ten years later not more than 1000 inhabitants were within the territory. But within two years after the discovery of silver the number of inhabitants had risen (1861) to 16,000. The population in 1870 was 43,000. The number of tribal Indians in the state, in 1874, was between 4000 and 5000.

New Albion. In 1634 a patent, under the great seal of Ireland, was granted (June 21) by the Earl of Strafford (then lord-lieutenant) to Edward Plowden, of a province which included the whole of New Jersey, with all the adjacent islands, which was named New Albion. Nothing came of it. This grant shows that the Dutch title to New Netherland was not recognized by the English.

New Amstel. In 1656 the Dutch West India Company transferred to the city of Amsterdam all the Dutch territory on the South (Delaware) River, from the west side of Christian Kill to the mouth of the river, for the sum of 700,000 guilders. It was named Nieuwe-Amstel, after one of the suburbs belonging to the city between the Amstel River and the Huerlem Sea. The burgomasters of Amsterdam appointed six commissioners to manage the colony, who were to "sit and hold their meetings at the West India House on Tuesdays and Thursdays." The city offered a free passage to emigrants, lands for residences, provisions and clothing for a year, and a proper person for a schoolmaster, who should also read the Scriptures in public, and set the Psalms. The municipal government was the same as in Amsterdam. The colonists were not to be taxed for ten years, and regulations were made in respect to trade. The States-General ratified all the arrangements, on condition that when there should be two hundred inhabitants in the colony a church should be organized and a clergyman established there. There was a garrison of sixty soldiers sent out, under Captain Martin Crygier. Fort Kasimer was transferred to the new corporation, and in

April, 1657, nearly two hundred emigrants sailed for New Amstel. A government was formally organized on April 21, 1657. Shipwrecked Englishmen from Virginia, whom the Dutch had rescued from the Indians, became residents of New Amstel, and prosperity marked the settlement. In 1658 there was a "goodly town of about one hundred houses," and the population exceeded six hundred. The people, however, soon began to be discontented, and many deserted the colony. Rumors came that Maryland was about to claim the territory, and there was much uneasiness and alarm. These rumors were followed by an agent of the Maryland government, who demanded that the Dutch should either take an oath of allegiance to Lord Baltimore or leave. (See *Boundary between New Netherland and Maryland*.) Discouragements and disasters followed, and the City Council of Amsterdam proposed to retransfer New Amstel to the Dutch West India Company. In 1659 the colony was overwhelmed with debt, its soldiers had all left but five, and the inhabited part of the colony did not extend beyond two Dutch miles from Fort Kasimer. In 1664 it, with all New Netherland, was surrendered to the English, who plundered the people of their crops, live-stock, stores, and provisions. Some of the inhabitants were seized as prisoners of war, and sold into bondage in Virginia.

New Amsterdam. The village that grew around the trading-post on Manhattan Island was called Manhattan until the arrival of Governor Stuyvesant, in 1647, when it was called New Amsterdam. Fort Amsterdam, a large work "with four angles," and faced with solid stone, had been built by Governor Minuits on the southern point of the island. The village grew apace. Its ways were crooked, its houses straggling,

A DUTCH HOUSE IN NEW AMSTERDAM.

and its whole aspect was unattractive until, under the new administration, improvements were begun, when it contained about eight hundred people. They were under the immediate government of the Director-general, and there was much restiveness under the rigorous rule of Stuyvesant, who opposed every concession to the popular will. They asked for a municipal government, but one was not granted until 1652, and in 1653 a city government was organized, much after the model of old Amsterdam, but with less political freedom. The soul of Stuyvesant was troubled by this "imprudent intrust-

ing of power with the people." The burghers wished more power, but it could not then be obtained. A city seal and a "silver signet" for New Amsterdam, with a painted coat-of-arms, were sent to them from Holland. The Church grew, and as there were freedom and toleration there in a degree, the population increased, and the Dutch were soon largely mixed with other nationalities. When a stranger came, they did not ask him what was his creed or nation, but only, Do you want a lot and to become a citizen? For the Hollanders had more enlarged views of the rights of conscience than any other people at that time. New, like old, Amsterdam became quite a cosmopolitan town. Of the latter, Andrew Marvell quaintly wrote:

"Hence Amsterdam, Turk, Christian, pagan, Jew,
Staple of sects and mint of schism grew;
That bank of conscience where not one so strange
Opinion but finds credit and exchange;
In vain for Catholics ourselves we bear—
The Universal Church is only there."

When New Amsterdam was surrendered to the English (1664) it contained more than three hundred houses and about fifteen hundred souls.

New Amsterdam, INDIAN INVASION OF. On the return of Governor Stuyvesant from his expedition against the Swedes on the Delaware (see *New Sweden*), he found the people of his capital on Manhattan in the wildest confusion. Van Dyck, a former civil officer, detected a squaw stealing peaches from his garden and killed her. The fury of her tribe was kindled, and the long peace of ten years with the barbarians was suddenly broken. Before daybreak one morning (Sept. 15, 1655) almost two thousand, chiefly of the River Indians, appeared before New Amsterdam in an immense flotilla of canoes. They landed and distributed themselves through the town, and, under the pretence of looking for Northern Indians, broke into several dwellings in search of Van Dyck. The people immediately assembled at the fort, and summoned the leaders of the invasion before them. The barbarians agreed to leave the city before sunset. They broke their promise, and in the evening shot Van Dyck. The inhabitants flew to arms, and drove the Indians to their canoes. They crossed the Hudson and ravaged New Jersey and also Staten Island. Within three days one hundred white people were killed, and one hundred and fifty were made captives.

New Apportionment. After the completion and arrangement of the census reports of population in 1870, a new apportionment of representation was made, establishing the ratio of 137,800, and giving a House of Representatives of 283 members.

Newark (Canada), DESTRUCTION OF. When General McClure, early in December, 1813, resolved to abandon Fort George, the question presented itself to his mind, "Shall I leave the foe comfortable quarters, and thus endanger Fort Niagara?" Unfortunately, his judgment answered "No;" and, after attempting to blow up Fort George while its little garrison was crossing the river to Fort Niagara, he set fire to

the beautiful village of Newark, near by. The weather was intensely cold. The inhabitants had been given only a few hours' warning, and, with little food and clothing, a large number of helpless women and children were driven from their homes by the flames into the wintry air and deep snow, homeless wanderers. It was a wanton and cruel act. Only one house out of one hundred and fifty in the village was left standing. When the British arrived at Fort George they resolved on swift retaliation, and very soon six villages and many isolated houses along the New York side of the Niagara River, together with some vessels, were burned, and scores of innocent persons were massacred. This was the fearful cost of the destruction of Newark.

Newark, N. J. The purchase of the site of Newark and the adjoining villages of Bloomfield, Belleville, Caldwell, and Orange was made in 1666 by a party from Milford, Conn., for which they gave the Indians 50 double hands of powder, 100 bars of lead, 20 axes, 20 coats, 10 guns, 20 pistols, 10 kettles, 10 swords, 4 blankets, 4 barrels of beer, 2 pairs of breeches, 50 knives, 20 hoes, 850 fathoms of wampum, 2 anklers of whiskey (or something equivalent), and 3 troopers' coats. Others joined the first settlers, in the autumn, from Guilford and Branford. Self-government and independence of the proprietors seems to have been secured to the new colony, as well as religious freedom guaranteed. The colonists agreed that no one should be admitted to the rights of freemen in the colony except he belonged to the Congregational Church. Abraham Pierson was chosen minister of the first church, and the settlement was called Newark, says Whitehead, in compliment to him, he having come from a place of that name in England.

Newbern, or New Berne (N. C.), CAPTURE OF. After the capture of Roanoke Island (which see), the National forces made other important movements on the coast of North Carolina. Goldsborough having been ordered to Fortress Monroe, the fleet was left in command of Commodore Rowan. General Burnside, assisted by Generals Reno, Foster, and Parke, at the head of 15,000 troops, proceeded against Newbern, on the Neuse River. They appeared with the fleet in that stream, about eighteen miles below the city, on the evening of March 12, 1862, and early the next morning the troops were landed and marched against the defences of the town. The Confederates, under General Branch, were inferior in numbers, but were strongly intrenched. The march of the Nationals was made in a drenching rain, the troops dragging heavy cannons after them through the wet clay, into which men sometimes sank knee-deep. At sunset the head of the Nationals was halted and bivouacked within a mile and a half of the Confederate works, and during the night the main body came up. Meanwhile the gunboats had moved up the river abreast the army, Rowan's flag-ship *Delaware* leading. The Confederate forces consisted of eight regiments of infan-

try and 500 cavalry, with three batteries of field-artillery of six guns each. These occupied a line of intrenchments extending more than a mile, supported by an immense line of rifle-pits and detached works. On the river-bank, four miles below Newbern, was Fort Thompson, armed with thirteen heavy guns. The Nationals made the attack at eight o'clock on the morning of the 14th. Foster's brigade bore the brunt of the battle for about four hours. General Parke supported him until it was evident that Foster could sustain himself, when the former, with nearly his whole brigade, went to the support of General Reno in a flank movement. After the Fourth Rhode Island Battery had captured a Confederate one and dispersed the garrison, Reno, who had been losing heavily in front of another battery, called up his reserves of Pennsylvanians, under Colonel Hartranft, and ordered them to charge the work. It was speedily done, and the battery was captured with the assistance of New York, New Jersey, and Massachusetts troops. Pressed on all sides, the Confederates now fled, leaving everything behind, and were pursued by Foster to the verge of the Trent. The Confederates burned the railroad and turnpike bridges over that stream behind them (the former by sending a blazing raft against it) and escaped. The gunboats had compelled the evacuation of Fort Thompson. Large numbers of the inhabitants of Newbern fled from the town. Foster's troops took possession of the place, and the general was appointed military governor of Newbern. The Nationals lost 100 killed and 498 wounded. The Confederate loss was much less in killed and wounded, but 200 of them were made prisoners. They reported 64 killed, 101 wounded, and 413 missing.

New Brunswick (N. J.), SKIRMISH AT. In June, 1777, Sir William Howe tried to outgeneral Washington in New Jersey, but failed, and was compelled to retreat. Washington held Howe firmly in check at and near New Brunswick, on the Raritan; and on June 20 the former, with his army at Middlebrook, learned that his antagonist was preparing to fall back to Amboy. Hoping to cut off his rear-guard, Washington ordered (June 21) Maxwell to lie between New Brunswick and Amboy, and Sullivan to join Greene near the former place, while the main body should rest within supporting distance. These orders failed of execution. On the morning of the 22d the column of Germans, under De Heister, began its march towards Amboy. The corps of Cornwallis moved more slowly, for it had to cross the Raritan over a narrow bridge, near the end of which stood Howe, on high ground, watching the movements. Greene had a battery of three guns on a hill, but too far distant to be effective. When more than one half of Cornwallis's column had passed the bridge, his pickets were fiercely attacked by Morgan with his riflemen, and were driven back upon the main column. Howe instantly put himself at the head of the two nearest regiments to meet the attack, when a sharp skirmish for half an hour occurred. The Brit-

ish artillery, having been brought to bear on Morgan's corps, swept the woods with grape-shot and caused the riflemen to retreat. Between fifty and one hundred of the British were killed or wounded. The rest of their march to Amboy was unobstructed.

Newburgh Addresses, THE. The Continental army was cantoned in huts near Newburgh in the winter and spring of 1783, while negotiations for peace were in progress. Washington's headquarters were in the "Hasbrouck House" (yet well preserved in 1880), at Newburgh. In the latter part of the winter the

was called to the matter on the day the addresses were circulated, and he determined to guide and control the movement. He referred to it in general orders the next morning; expressed his disapprobation of the whole proceedings as disorderly; and requested the general and field officers, with one officer from every company in the army, to meet at "New Building" (the Temple) on March 15, and requested General Gates, the senior officer, to preside. On the appearance of the order, the writer of the anonymous address issued another, more subdued in tone, in which he tried to give the impression that

Washington approved the scheme, the time of meeting being changed. The meeting was fully attended, and deep solemnity pervaded the assembly when Washington stepped upon the platform to read an address which he had prepared for the occasion. As he put on his spectacles, he said, "You see, gentlemen, that I have not only grown gray, but blind, in your service." This simple remark, under the circumstances, had a powerful effect upon the assemblage. His address was compact, patriotic, clear in expression

WASHINGTON'S HEADQUARTERS AT NEWBURGH.

discontent in the army on account of the arrears in their pay, which had existed a long time, was more formidable than ever. In December previous the officers had sent a memorial to the Congress, by the hands of General McDougall, the head of a committee, asking for a satisfactory adjustment of all things which caused such just and wide-spread discontent. Congress was almost powerless to move satisfactorily in the matter. On the 11th of March (1783) a well-written address was circulated through the American camp, which, in effect, advised the army to take matters into their own hands, and to make demonstrations that should arouse the fears of the people and of the Congress, and thereby obtain justice for themselves. The address was anonymous, but circumstances created a suspicion that General Gates and some other officers were the instigators of the scheme. With

and meaning, mild yet severe in its rebuke, and withal vitally important in its relations to the well-being of the infant republic as well as the army. When it was concluded, Washington retired and left the officers to discuss the subject unrestrained by his presence. Their conference was brief. They passed resolutions, by unanimous vote, thanking the commander-in-chief for the wise course he had pursued; expressing their undiminished attachment to their country; their unshaken confidence in the good faith of Congress; and their determination to bear with patience their grievances until, in due time, they should be redressed. The proceedings were signed by General Gates, as president of the meeting, and three days afterwards Washington, in general orders, expressed his entire satisfaction. The author of the "Newburgh Addresses" was Major Armstrong, one of Gates's military family, then only twenty-five years of age, who afterwards held important civil offices. (See *Armstrong, John*.)

New Connecticut. Sixteen of the newly formed townships on the eastern side of the Connecticut River, wishing to escape the heavy burden of taxes imposed by the war, applied to isolated and independent Vermont to be received as a part of that state. (See *Vermont as a Sovereign State*.) They were adopted (1779), under the pretence that, by Mason's patent of New Hampshire, that state extended only sixty miles inland, and that those towns were west of that limit. As Vermont yet hoped to be admitted to the Union, and the Continental Congress, disapproving of the proceeding, sent a committee to inquire into the matter, the con-

THE TEMPLE.

this address was privately circulated a notification of a meeting of officers at a large building called "The Temple." Washington's attention

nection with the New Hampshire towns was very soon dissolved. An ineffectual attempt was then made (June, 1779) by the towns on both sides of the river to constitute themselves into a state, with the title of "New Connecticut." New Hampshire retaliated by renewing her old claim to the territory of Vermont as the New Hampshire Grants (which see). Very soon Vermont began to act on the offensive. The towns on the east bank of the river that were to form a part of New Connecticut were again received as a part of Vermont, and along with them all the new townships of New York east of the Hudson and north of the Massachusetts line.

New England. Sir Humphrey Gilbert (1583) and Bartholomew Gosnold (1602) visited the New England coast, and the latter planted a temporary colony there. (See *Gilbert, Sir Humphrey*, and *Gosnold, Bartholomew*.) The account given by Gosnold excited desires on the part of friends of Sir Walter Raleigh to make new efforts to found settlements in America, especially in the northeastern parts. Richard Hakluyt, who was learned in naval and commercial science (see *Hakluyt, Richard*), Martin Pring, and Bartholomew Gosnold, all friends of Raleigh, induced merchants of Bristol to fit out two ships in the spring of 1603 to visit the coasts discovered by Gosnold. Early in April (a fortnight after the death of Queen Elizabeth), the *Speedwell*, of 50 tons, and the *Discoverer*, 26 tons, sailed from Milford Haven under the command of Pring, who commanded the larger vessel in person. William Browne was master of the *Discoverer*, accompanied by Robert Galternus as supercargo or general agent of the expedition. They entered Penobscot Bay early in June, and went up the Penobscot River some distance; then, sailing along the coast, they entered the mouths of the Saco and other principal streams of Maine; and finally, sailing southward, they landed on a large island abounding with grapes, which they named Martin's (corrupted to Martha's) Vineyard. Returning to England at the end of six months, Pring confirmed Gosnold's account of the country. This led to other expeditions; and in 1605 the Earl of Southampton and Lord Arundel fitted out a vessel and placed it under the command of George Weymouth, another friend of Raleigh, who had explored the coasts of Labrador in search of a northwest passage to India. He sailed from England in March, 1605, taking the shorter passage pursued by Gosnold; but storms delayed him so that it was six weeks before he saw the American coast at Nantucket. Turning northward, he sailed up a large river forty miles and set up crosses. He then entered Penobscot Bay, where he opened traffic with the natives. At length Weymouth thought he observed signs of treachery on the part of the Indians, and he determined to resent the affront. He invited some of the leading barbarians to a feast on board his vessel, but only three of the cautious natives appeared. These he made drunk, and confined them in his vessel. Then he went on shore with a box of trinkets and tried in vain to induce some of them to go to

the vessel; so Weymouth and his men seized two of them, and, after great exertion, they were taken to the ship, with two handsome birch-bark canoes. "It was as much as five or six of us could do to get them into the boat," wrote Weymouth, "for they were strong, and so naked that our best hold was by the hair of their heads." Then the anchor was raised, the vessel sailed to England, and three of the captives were given to Sir Ferdinando Gorges, then Governor of Plymouth. This outrage left on the shores of New England the seeds of much future trouble with the natives. By these voyages and explorations all doubts about the commercial value of every part of North America were definitely settled, and led to the almost immediate execution of a vast plan for colonizing the shores of the Western Continent by obtaining from King James I. a patent for a domain extending from north latitude 34° to 45°. This territory was divided, and two companies were formed to settle it—one called the "London Company," and the other the "Plymouth Company." (See *London Company* and *Plymouth Company*.) The latter company, destined to settle the northern portion, possessing much narrower resources than the other, its efforts were proportionably more feeble and inadequate. Some visits to and slight explorations of the region were made during six or seven years by the Plymouth Company after obtaining their charter, but discouragements ensued. At length the restless Captain Smith, who did not remain long idle after his return from Virginia in 1609, induced four London merchants to join him in fitting out two ships for the purpose of discovery and traffic in northern Virginia, the domain of the Plymouth Company. With these ships Smith left the Downs at the beginning of March, 1614, Captain Thomas Hunt commanding one of the vessels, and he the other. They first landed on Mohegan Island, twenty miles south of the mouth of the Penobscot River, where they sought whales, but found none. Leaving most of the crew to pursue ordinary fishing, Smith had seven small boats built, in which he and eight men ranged the coast from Penobscot eastward and westward. They went as far south as Cape Cod, bartering with the natives for beaver and other furs. They went up the several rivers some distance in the interior, and after an absence of seven months the expedition returned to England. From his observations of the coasts, islands, and headlands, Captain Smith constructed a map, which he laid before Prince Charles (afterwards Charles I.), a young man of considerable literary ability and artistic taste. Sir Francis Drake had given the name of New Albion (New England) to the region of the continent which he had discovered on the Pacific coast, and the region now discovered by Smith on the Atlantic coast, opposite Drake's New Albion, was, out of respect to that great navigator, called "New England," or New Albion. It has been so called ever since. It includes the country from twenty miles east of the Hudson River and the eastern shores of Lake Champlain to the eastern boundary of the

United States, and includes the states of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, and Vermont. Smith named the promontory at the north entrance to Massachusetts Bay Tragabigzanda, in compliment to a Turkish lady to whom he had been a slave in Constantinople. Prince Charles, however, in filial regard for his mother (Anne of Denmark), named it Cape Anne. Smith gave his name to a cluster of islands, which were afterwards named Isles of Shoals. These and other places, changed from names given by Smith, still retain their new names. The crime of Weymouth was repeated on this expedition. Captain Smith left Hunt, an avaricious and profligate man, to finish the lading of his vessel with fish, and instructed him to take the cargo to Malaga, Spain, for a market. Hunt sailed along the New England coast, and at Cape Cod he enticed a chief named Squanto and twenty-six of his tribe on board his vessel and treacherously carried them to Spain, where all but two of them were sold for slaves. Some benevolent friars took them to be educated for missionaries among the Indians, but only two (one of them Squanto) returned to America. The natives on the New England coast were greatly exasperated; and when, the same year, another English vessel came to these shores to traffic, bringing with them the two kidnapped natives, the latter united with their countrymen in a measure of revenge. In twenty canoes the Indians attacked the Englishmen with arrows, wounding the master of the ship and several others of the company, and the adventurers hastened back to England. The natives of New England long remembered these outrages. (See *Plymouth Company*.)

New England Alarmed by the French. When the French took possession of Acadia they rifled the trading-house at Penobscot belonging to Plymouth (1633). Word soon came that the French had bought Alexander's plantation (see *Alexander, Sir William*) in Nova Scotia; that Cardinal Richelieu had sent over soldiers and Jesuits; and that preparations were making in the East by the French to take possession of all New England. The authorities at Boston and Plymouth were alarmed, and took measures to meet the supposed danger. The alarm was groundless. The French, intent only upon trade, did not mean to harm the English; yet the spoliation of the trading-house was suspicious. (See *French, First Collision of, with New-Englanders*.)

New England an Island. A dozen years after Henry Hudson had satisfied his Dutch employers that the river which bears his name was not a strait or arm of the sea, the impression prevailed in England among educated people that it really was so, and that, in consequence, New England was an island. The Rev. Robert Cushman, who preached the first sermon in New England (December, 1621) by a regularly ordained minister, in his *Epistle Dedicatory*, says of New England: "So far as we can yet find, it is an island, and near about the quantity of England, being cut out from the mainland in America, as England is from the main of Eu-

rope, by a great arm of the sea, which entereth in 40° [New York Bay] and goeth out either into the South Sea [Pacific Ocean] or else into the Bay of Canada [Gulf of St. Lawrence]."

New England Army. After the affair at Lexington and Concord, in which only Massachusetts militiamen were engaged, an appeal was made for help to the other New England colonies. The Assembly of Rhode Island voted an army of observation, of 1500 men; the Connecticut Assembly voted to raise six regiments, of 1000 men each, four of them to serve with the army before Boston. Stark, of New Hampshire, had hastened towards Boston with volunteers; and a special convention of delegates of that province thought it best not to anticipate the action of the Provincial Congress, which would convene on May 17, by taking steps to organize an army. The several towns were requested to forward supplies to the volunteers who had followed Stark. Meanwhile, the Massachusetts Provincial Congress directed enlistments among the New Hampshire soldiers in camp. As the new regiments began to be formed, the volunteers returned home. The little New England army before Boston amounted to only about 3000 men for some time.

New England Confederacy. (See *United Colonies of New England*.)

New England Convention. In January, 1777, a convention of representatives of the New England states assembled at Providence, R. I., to consult about the defence of that state, when a scheme was agreed upon for regulating by law the price of labor, produce, manufactured articles, and imported goods, with a view of checking the already rapidly depreciating Continental paper-money. This scheme, though opposed by the merchants, was enacted into a law by the New England legislatures. This measure was such a conspicuous failure that another convention recommended a repeal of all acts regulating prices.

New England Divines Invited to the Westminster Assembly. An assembly of divines was called at Westminster by the British Parliament in 1641, and urgent letters were sent to Messrs. Cotton, of Boston; Hooker, of Hartford; and Davenport, of New Haven, to represent the New England churches in that assembly. They declined the invitation, for they had word concerning a breach between Parliament and the king, and letters from England advised them to wait. It was at the beginning of the Civil War in England. Besides, Mr. Hooker was then framing a system of Church government for the Congregational churches of New England, let the determination at Westminster be what it might.

New England, Division of. The Council of New England, before making a final surrender of their charter (see *Plymouth Company*), divided their territory in America into twelve provinces, assigning them to eight of the principal members, and the king was asked to grant a proprietary charter to each, like that

given to Lord Baltimore. Gorges had two provinces, including his share of the grant of Lacoia, which extended from the Kennebec to the Piscataqua. The Earl of Stirling (see *Alexander, Sir William*) had for his share the district from Pemaquid Point to the St. Croix (which the French claimed), Nantucket, Martha's Vineyard, and a part of Long Island. Mason retained New Hampshire. The district west of Narraganset Bay was assigned to the Marquis of Hamilton. The other provinces were never claimed under this division.

New England Indians. These bands of the Algonquin family inhabited the country from the Connecticut River to the Saco in Maine. The principal tribes were the Narragansets, in Rhode Island; the Pokanokets, or Wampanoags, on the eastern shore of Narraganset Bay and in a portion of Massachusetts; the Nipmucks, in the centre of Massachusetts; the Massachusetts, in the vicinity of Boston and the shore southward; and the Pawtuckets, in the northeastern part of Massachusetts, embracing the Pennacooks, of New Hampshire. These were all divided into smaller bands, with petty chiefs. The New England Indians were all warlike, and were continually fighting the Five Nations, or the Hudson River Mohegans, until the Dutch effected a pacification among them in 1673. Two years afterwards, Metacombet, commonly known as "King Philip," chief of the Wampanoags, aroused most of the New England tribes to war against the English colonists. The fierce war that ensued ended in the subjugation of the Indians and the death of Philip in 1676, when the power of the New England Indians was completely broken. Some joined the more eastern tribes, and others took refuge in Canada. The latter, in revenge, joined others in desolating the New England frontiers. The conquest of Canada put a stop to these distressing incursions. When the English came, in 1620, the New England Indians numbered about 10,000; now scarcely a representative exists on the earth, and the dialects of all, excepting that of the Narragansets, are forgotten.

New England Restraining Bill. As an offset to the American Association, Lord North brought forward a bill (Feb. 3, 1775) for cutting off the trade of New England elsewhere than to Great Britain, Ireland, and the British West Indies, and suspending the prosecution by those colonies of the Newfoundland fishery, a principal branch of their trade and industry at that time. The bill became a law by a large majority vote. It had just passed when news of the general support of the American Association reached London, and a similar restraining act was passed, extending to all the other colonies, excepting New York, North Carolina, and Georgia, the first and last having refused to adopt the Association.

New England States, POSITION OF (1861). The events of secession in the Southern States startled the people of the North from their dream of security. They had so often heard of dissolving the government from the lips of poli-

ticians of the slave-labor states that they imagined the turmoil at the South at the time of Mr. Lincoln's election would end, as such exhibitions had done before, with words, and not acts. But when events in Charleston harbor late in 1860, and insurrectionary movements in other slave-labor states, occurred, they saw that "the South" was in terrible earnest, and began to prepare for the defence of the imperilled Union. The governor of Maine (Israel Washburne, Jr.), in his message at the opening of the Legislature, ably reviewed the slavery question, counselled conciliatory measures, and recommended the repeal of any laws that were unconstitutional. "Allow no stain," he said, "on the faith and devotion of the state to the Constitution and the rights of the states." He stigmatized secession as a crime without the shadow of a right, and that the demands for concession made by the politicians of the slave-labor states were incompatible with the safety of the Constitution. He declared that the laws must be executed, pledged the state to a support of the Union, and was sustained by the action of the Legislature, which, on Jan. 16 (1861), declared, by a large majority, the attachment of the people of Maine to the Union and loyalty to the government. That body requested the governor to assure the President that "the entire resources of the state, in men and money," were pledged "to the support of the Constitution and Union." Willing to make concessions for the sake of peace, the Senate afterwards passed a bill repealing the Personal Liberty Act.—Massachusetts was an early and conspicuous actor in the drama of the Civil War. In many respects, in nature and society, that state was the opposite of South Carolina. It was regarded by the people of the slave-labor states as the constant generator of abolitionism. Its governor (John A. Andrew) at that time was an earnest co-worker with the Massachusetts representatives in the national Senate, Wilson and Sumner, in the cause of final emancipation for the slaves; and the immense celebration in Boston, in December, 1860, of the anniversary of the death of John Brown (see *John Brown's Raid*), gave intensity to the disgust and hatred felt by "the South" towards the people of Massachusetts. The retiring governor of Massachusetts (N. P. Banks) declared in his valedictory address that the North would never submit to the revolutionary acts in the Southern States. His successor (Andrew) was equally outspoken. He sent agents to other New England States to propose a military combination to support the national government, first, in defending Washington city from seizure, and afterwards in defending the laws. The volunteer companies in the state, with an aggregate membership of about 5000, began drilling, and the governor made satisfactory arrangements with General Scott for Massachusetts troops to start for the capital at a moment's notice. It was the blood of Massachusetts soldiers that was first spilled in the late Civil War (see *Mob in Baltimore*, 1861).—Rhode Island, the smallest state in the Union, was alive with patriotic zeal when the Union

was attacked. Her manufacturing interests were intimately connected with the slave-labor states; yet no considerations of self-interest could allure her people from the love of the Union and allegiance to the national government. Her Legislature made honorable concessions for the sake of peace. At the close of January, 1861, it repealed the Personal Liberty Act. The spirit of the enemies of the government was unknown. They sneered at this act as "the pusillanimity of Yankee cowards." It was the first and the last olive-branch offered by Rhode Island; after that her men and money were freely lavished for the protection of the Republic from violent hands. Her governor led her men, sword in hand. Nothing was done in the remaining New England states, in relation to secession, until after the blow was struck at Sumter, when their people arose almost as an individual to defend the government.

New England Theology and Ecclesiasticism. Before the War of 1812-15, the Congregational clergy of New England still adhered to the old colonial notion of having provision made by law for the public support of religious institutions. The Congregational clergy formed a powerful element in the state. They had been the standard-bearers of that section of the Federal party who had most violently opposed the war. Their pulpits rang with denunciations of the administration and the Democratic leaders. This Church establishment was really a strong if not a main pillar of support for the New England Federal party. But a great revulsion of feeling took place; and in all the states where no Church establishments existed by the support of legal provisions, great efforts were made to build up a voluntary system of religious institutions. In consequence of this effort there was a rapid increase in the numbers and influence of Baptists, Methodists, and Presbyterians. Their churches multiplied; and, in a degree, they united into aggregate associations. Great religious excitement prevailed in all parts of the country, after the close of the war, characterized by the features of the revival under the preaching of Whitefield forty or fifty years before. These new sectaries held that a change of heart and an internal consciousness of a call were sufficient, without human learning, to qualify a man for the Gospel ministry and a teacher of morals. These notions found much resistance among the New England clergy, who insisted that the ministry should be educated; and they repudiated the idea of placing the most learned and most ignorant on a level as spiritual teachers and leaders. The Whitefieldian revival had left two elements within the New England Church establishment, which, though radically opposed, adhered by the force of mutual interest and forbearance. These were the "Latitudinarians" (which see) and "Evangelicals." The former maintained their predominance in the churches, and thought religion of consequence, principally, as affording security for government and property, and a basis for morals. They revered the Bible, but insisted upon interpreting it by the lights of reason and science. These Latitudina-

rians were pushing a portion of the Congregational churches of New England towards a repudiation of the five distinguishing points of Calvinistic theology, denying most vehemently the fundamental doctrine of total depravity. In the evangelical section of the Congregational churches in New England this heresy produced alarm. The headquarters of the evangelical party was Yale College, Timothy Dwight, the president, and grandson of the great theologian Jonathan Edwards, being one of its most conspicuous leaders. They gradually obtained control of the Connecticut and New Hampshire churches; but in Massachusetts they were less successful. Harvard College was in the hands of the Latitudinarians, who possessed, also, all the current Congregational churches of Boston, besides many others in different parts of the state. Andover Theological Seminary was established (1808) as the source and seat of a purer theology, to counteract the influence of Harvard. Evangelical ministers were sent from Connecticut to convert backsliding Bostonians. They were zealous but not very successful in their missionary work. This evangelical party had been characterized by a growing austerity, a denunciation of everything in the shape of amusements, public or private, a particular zeal for the observance of the Sabbath, and a marked tendency towards a return to the rigid system of morals and theology of the early Puritans in New England. In 1815 the "Evangelicals" presented numerous petitions to Congress and the State Legislatures, praying for a law to stop the carriage of the mail on Sunday; and many annoying attempts were made to enforce the old and obsolete New England laws against travelling on Sunday. These movements had a political effect. The "Liberals," or Latitudinarians, of New Hampshire saw no other means of protection against the reign of Puritanical legislation than to join the Democrats in overthrowing an establishment with which they no longer sympathized. Even the most liberal of the clergy were very chary of open opposition to these new theological rigors; but the body of the intelligent and educated laymen, among whom latitudinarian ideas were completely predominant, was as little disposed to go back to Puritan austerities as to Puritan theology. The Supreme Court of Massachusetts put a stop to the efforts of the zealous people who clamored for legislation in favor of a rigorous observance of the Sabbath, by deciding that an arrest on Sunday, for the violation of the Sunday law, was as much a violation of that law by the arresting officer as travelling on Sunday. Finally, the evangelical Congregationalists in Massachusetts, finding it impossible to dislodge the Latitudinarians, imbibed the spirit of the Baptists, Methodists, and other sects, and set up opposition conventicles under the very eaves of the old parish churches. Thus, when they could no longer control the old theological and ecclesiastical establishment in New England, they took steps to destroy it altogether, even expressing a doubt of its justice and utility.

New-Englanders in North Carolina. At

about 1660, some adventurers from New England planted a little colony near the mouth of the Cape Fear River. Wishing to retain them there, and also to attract others, the proprietors of Carolina offered a hundred acres of land for each free settler or man-servant, and fifty acres for each woman-servant or slave, at a quit-rent of half a penny an acre. They were also offered liberty of conscience, and the right to nominate thirteen persons, out of whom the proprietaries were to select a governor and six councillors; the authority to make laws to be vested in an assembly composed of the governor, the council, and a body of delegates to be elected for that purpose by the settlers. When these settlers proposed to send children of the Indians to New England to be educated, the barbarians suspected them of a design to sell them into slavery; and they became so hostile that most of the adventurers, discouraged, returned home. (See *North Carolina*.)

New-Englanders on the Delaware. In 1640, a New England captain purchased some land on the Delaware River of the Indians. Early the next spring colonists from New England, led by Robert Cogswell, sailed from the Connecticut for the Delaware in search of a warmer climate and more fertile soil. They lay for a few days at Manhattan, when they were warned not to encroach upon New Netherland territory. The English, according to De Vries, "claimed everything;" and these New-Englanders went on and had no trouble in finding Indians to sell them "unoccupied lands." Indeed, the Indians were ready to sell the same lands to as many people as possible. At the middle of the summer they had planted corn and built trading-posts on Salem Creek, New Jersey, and near the mouth of the Schuylkill in Pennsylvania. Both settlements prospered, and the New Haven colony (see *New Haven*) took them under their protection. They came to grief in the spring of 1642. The intrusion of the New-Englanders was as distasteful to the Swedes on the Delaware as to the Dutch; and when the Dutch commissioner at Fort Nassau (see *Wallons*) was instructed by Governor Kieft to expel them, the Swedes assisted the Dutch with energy. The New-Englanders yielded without resistance. They were carried prisoners to Manhattan, and thence sent home to Connecticut. In 1644 a vessel was fitted out by a Boston company, and ascended the Delaware in search of the great interior lakes of which rumors had reached Massachusetts, and whence they supposed much of the supply of bear-skins was derived. The vessel was closely followed by two pinnaces, one Dutch and the other Swedish. The New-Englanders were forbidden to trade with the Indians, and the vessel was not allowed to pass the Swedish fort. Thus excluded from the Delaware, the New-Englanders approached the Hudson River, by establishing a trading-post on the Housatonic, nearly one hundred miles from the Sound.

New-Englanders push Westward. Expansion and aggression were two conspicuous char-

acteristics of the New England colonists. The Plymouth people early sought to plant outlying settlements on the Eastern coasts; and after the beautiful country along Long Island Sound, west of the Pequod (Thames) River, was revealed to the New-Englanders, where they chased the flying Pequods (see *Pequod War*), they planted a settlement at New Haven, and, pushing westward, crowded the Dutch not only on the mainland, but on Long Island. In 1639, Lewis Gardiner purchased an island still known as Gardiner's Island, at the east end of Long Island; and James Farrett, sent out by the Earl of Stirling (see *Alexander, Sir William*), took possession of Shelter Island, near by, at the same time claiming the whole of Long Island. In 1640 a company from Lynn, Massachusetts, led by Captain Daniel Howe, attempted a settlement at Cow Neck, in North Hempstead, Long Island, when they tore down the arms of the Prince of Orange which they found upon a tree, and carved in place of the shield a grinning face. Howe and his companions were driven off by the Dutch, and settled on the eastern extremity of Long Island. Some New Haven people took possession of Southold, on the Sound; and only a few years later, Hempstead, Jamaica, Flushing, Southampton, East Hampton, Brookhaven, Huntington, and Oyster Bay were settled by the English, and some of them were united to Connecticut, politically, until after the surrender of New Netherland to the English in 1664, when all Long Island came under the jurisdiction of New York.

Newfoundland, COLONY SENT TO. On April 27, 1610, a patent was granted to the Earl of Northampton, Lord Chief Baron Taulud, Sir Francis Bacon, then solicitor-general, and other gentlemen of distinction, and some Bristol merchants, for a part of the Island of Newfoundland. There were forty-four persons named in the charter, and the company was named "The Treasurer and Company of Adventurers and Planters of the Cities of London and Bristol for the Colony and Plantation in Newfoundland." John Guy, of Bristol, was soon sent out with a colony of thirty-nine persons to Newfoundland, and began a settlement at Conception Bay. The domain lay between north latitude 46° and 52°, together with the seas and islands lying within ten leagues of the coast.

Newfoundland, FRENCH AT. In 1504 some adventurous French fishermen of Normandy and other coast provinces of France prosecuted their vocation off the shores of Newfoundland, in the first French vessels that ever appeared there.

Newfoundland taken Possession of by the English. Sir Humphrey Gilbert arrived at St. John's harbor, Newfoundland, Aug. 3, 1583, where he found thirty-six vessels belonging to various nations. Pitching his tent on shore in sight of all the vessels, he summoned the merchants and masters to assemble on the shore. He had brought two hundred and sixty men from England, in two ships and three barks, to make a settlement on that island. Being assembled, Gilbert read his commission (which was inter-

puted to the foreigners), when a twig and piece of turf was presented to him. Then he made proclamation that, by virtue of his commission from Queen Elizabeth, he took possession of the harbor of St. John, and two hundred leagues around it each way, for the crown of England. He asserted eminent domain, and that all who should come there should be subject to the laws of England. When the reading of the proclamation was finished, obedience was promised by the general voice. Near the spot a pillar was erected, on which the arms of England, engraved in lead, were affixed. This formal possession was taken in consequence of the discovery of the island by Cabot in 1498.

New Generals on the Northern Frontier (1814). Wilkinson and Harrison having thrown up their commands in disgust, Hampton retired in disgrace, Dearborn stationed at Boston, Lewis at New York, and Bloomfield at Philadelphia, and Winchester, Chandler, and Winder being still in the hands of the enemy, made it necessary to supply their places. Generals Izard and Brown were promoted to major-generals, and Macomb, Thos. A. Smith, Bissell, Scott, Gaines, and Ripley were commissioned brigadiers. All of them were officers of the old army, excepting Brown and Ripley.

New Hampshire, COLONY OF, one of the New England States, was for many years a dependent of Massachusetts. Its short line of sea-coast was probably first discovered by Martin Pring in 1603. It was visited by Captain John Smith in 1614. (See *New England*.) The enterprising Sir Ferdinando Gorges, who had been engaged in colonizing projects many years as one of the most active members of the Plymouth Company, projected a settlement farther eastward than any yet established, and for that purpose he became associated with John Mason, a merchant (afterwards a naval commander, and Secretary of the Plymouth Council of New England), and others. (See *Plymouth Company*.) Mason was a "man of action," and well acquainted with all matters pertaining to settlements. He and Gorges obtained a grant of land (Aug. 10, 1622) extending from the Merrimac to the Kennebec, and inland to the St. Lawrence. (See *Gorges, Sir Ferdinando*.) They named the territory the Province of Laconia; and to forestall the French settlements in the east, and secure the country to the Protestants, Gorges secured a grant from Sir William Alexander of the whole mainland eastward of the St. Croix River, excepting a small part of Acadia. (See *Alexander, Sir William*.) Mason had already obtained a grant of land (March 2, 1621) extending from Salem to the mouth of the Merrimac, which he called Mariana; and the same year a colony of fishermen seated themselves at Little Harbor, on the Piscataqua, just below the site of Portsmouth. Other fishermen settled on the site of Dover (1623), and there were soon several fishing-stations, but no permanent settlement until 1629, when Mason built a house near the mouth of the Piscataqua, and called the place Portsmouth. He and Gorges had agreed to divide their domain at the Piscat-

aqua, and Mason, obtaining a patent for his portion of the territory, named it New Hampshire. He had been governor of Portsmouth, in Hampshire, England, and these names were given in commemoration of the fact. In the same year (1629), Rev. Mr. Wheelwright, brother of the notable Anne Hutchinson, purchased from the Indians the Wilderness, the Merrimac, and the Piscataqua, and founded Exeter. (See *Hutchinson, Anne*.) Mason died in 1633, and his domain passed into the hands of his retainers in payment for past services. The scattered settlements in New Hampshire finally coalesced with the Massachusetts Colony (1641), and the former colony remained a dependent of the latter until 1680, when New Hampshire became a separate royal province, ruled by a governor and council, and a House of Representatives elected by the people. The settlements in New Hampshire gradually extended westward, and until 1764 it was supposed the territory now Vermont was included in that of New Hampshire, and grants of land were made there by the authorities of the latter province. (See *New Hampshire Grants*.) The people of New Hampshire engaged earnestly in the disputes between Great Britain and her American colonies, and they were the first to form an independent state government (Jan. 5, 1776). It was temporary, intended to last only during the war; a permanent state government was not established until June 4, 1784. During the old war for independence, the people of New Hampshire took an active part. Their men were engaged in many important battles, from that of Bunker's Hill to that at Yorktown; and were particularly distinguished for their bravery in the battles at Bennington, Bemis's Heights, Saratoga, and Monmouth. The first seal of New Hampshire as an independent state is represent-

FIRST SEAL OF NEW HAMPSHIRE.

ed in the engraving. The tree and fish indicate the productions of the state.

New Hampshire Army. On May 17, 1775, the Provincial Congress of New Hampshire appointed a treasurer, issued bills of credit, and voted to raise three regiments, the troops then in the camp before Boston to constitute two of them. Nathaniel Folsom was appointed brigadier; Stark, Read, and Poor, were commissioned colonels. (See *New England Army*.)

New Hampshire Grants. Shortly after the treaty of Aix-la-Chapelle (1748), settlements in New Hampshire began to extend westward of the Connecticut River. The territory of New Hampshire had been reckoned to extend, according to the terms of Mason's grant, only "sixty miles in the interior;" the commission of Benning Wentworth, then (1741-67) governor of

Indian War. Afterwards, violent disputes with New York about these grants ensued. (See *Vermont*.)

New Hampshire Sanctions Independence.

On June 15, 1776, the Council and Assembly of New Hampshire, in reply to a letter from their representatives in Congress, unanimously voted in favor of "declaring the thirteen united colonies a free and independent state," and solemnly pledged their faith and honor to support the measure with their lives and fortunes.

BENNING WENTWORTH.

New Hampshire, included all the territory "to the boundaries of his majesty's other provinces," and in 1752 he began to issue grants of lands to settlers west of the Connecticut, in what is now the State of Vermont. New York, by virtue of the duke's patent in 1664, claimed the Connecticut River as its eastern boundary. A mild dispute then arose. New York had relinquished its claim so far east as against Connecticut, and against Massachusetts it was not then seriously insisted upon. Arguing that his province ought to have an extent equal to the western boundary of Massachusetts, Governor Wentworth granted fifteen townships adjoining the recent Massachusetts settlements on the Hoosick. The township was called Bennington, in compliment to the governor. Emigrants from Connecticut and Massachusetts began to settle on the domain, when they were checked by the French and

New Hampshire, STATE GOVERNMENT FORMED IN. Impelled by an idea that separation from Great Britain might take place, the Provincial Congress asked advice of the Continental Congress concerning the organization of a stable government for the province. They were advised to call a "full and free representation of the people," and organize a form of government according to the dictates of their best judgment. It was done. The Provincial Congress assumed the character of a House of Representatives, and proceeded to elect a council composed of twelve members. This council chose its own president, and the two houses performed the functions of supreme executive while in session, but in the interim that authority was exercised by a Committee of Safety. The Assembly constituted a Supreme Court. Meshech Weare was chosen president of the council and chief-justice. This arrangement was declared to be temporary, to cease if reconciliation with Great Britain should be effected.

New Hampshire, STATE OF.

In 1776 this state made a public declaration of independence, and established a temporary government to last during the war. On June 12, 1781, a convention framed a state constitution, which, after numerous alterations, went into force June 2, 1784. The people had been very patriotic and active during the Revolution, and furnished their full proportion of troops. The constitution provided that once in seven years it should be submitted to a vote of the people on proposed amendments. This was done in September, 1791, and the constitution then adopted continues to be the supreme law of the land in that state. A convention sitting in Concord from Nov. 6, 1850, to April 17, 1851, considered numerous proposed amendments, but only one was adopted—namely, removing the property qualification of representatives. The aggregate number of troops furnished by New Hampshire for the National army during the Civil War was 34,605, of whom 5518

perished in battle, and 11,039 were disabled by wounds and sickness.

STATE SEAL OF NEW HAMPSHIRE.

New Haven Colony. After the destruction of the Pequods in the summer of 1637, and peace was restored to the region of the Connecticut, there was a strong desire among the inhabitants of Massachusetts to emigrate thither. Rev. John Davenport, Theophilus Eaton, Edward Hopkins, and others of less note, had arrived at Boston. They heard from those who had pursued the Pequods, of the beautiful country stretching along Long Island Sound (see *Pequod War*), and in the autumn (1637) Mr. Eaton and a small party visited the region. They arrived at a beautiful bay, and on the banks of a small stream that entered it they built a log hut, where some of the party wintered. The place had been called by Block, the Dutch discoverer of it (see *New Netherland*), Roodenberg—"Red Hills"—in allusion to the red cliffs a little inland. In the spring of 1638, Mr. Davenport and some of his friends sailed for the spot where Eaton had built his hut. They named the beautiful spot New Haven. Under a wide-spreading oak Mr. Davenport preached on the ensuing Sabbath. They purchased land of the Indians, and proceeded to plant the seeds of a new state by framing articles of association which they called a "Plantation Covenant." In it they resolved "that, as in matters that concern the gathering and ordering of a church, so likewise in all public offices which concern civil order, as choice of magistrates and officers, making and repealing of laws, dividing allotments of inheritance, and all things of like nature," they would "be ordered by the rules which the Scriptures held forth." So they began their independent settlement without reference to any government or country on the earth. The place where the hut was built was on the present corner of Church and George streets, New Haven, and their first temple of worship—the wide-spreading tree—stood at the intersection of George and College streets. This little community meditated and prayed for light concerning the best social and political organization for the government of the colony. When, in the summer of 1639, it was found that they were "nearly of one mind," they assembled in a barn to settle upon a plan of government "according to the

Word of God;" Mr. Davenport prayed and preached earnestly, and proposed for their adoption four fundamental articles—namely, 1. That the Scriptures contain a perfect rule for the government of men in the family, in the church, and in the commonwealth; 2. That they would be ordered by the rules which the Scriptures hold forth; 3. That their purpose was to be admitted into Church-fellowship according to Christ, as soon as God should fit them thereunto; and, 4. That they held themselves bound to establish such civil order, according to God, as would be likely to secure the greatest good to themselves and their posterity. These articles were unanimously adopted, and a plan was arranged to put a government into practical operation. It was agreed that Church-membership should be granted to free burgesses or freemen endowed with political franchises, and that they only should choose magistrates and transact civil business of every kind; that twelve or more men should be chosen from the company and tried for their fitness, and these twelve should choose seven of their number as the seven pillars of the Church. The twelve men were chosen, and after due deliberation they selected seven "pillars." Finally these "pillars" proceeded to organize a church. Their assistants, nine in number, were regarded as "free burgesses," and the sixteen chose Theophilus Eaton magistrate for one year. Four other persons were chosen deputies, and these constituted the Legislature and executive department of the government of "Quinnipiack," so called from the Indian name of the stream that ran through the settlement. It was a sort of theocracy. They gave no pledge of allegiance to king or Parliament, nor any other authority on the face of the earth, excepting the civil government they had established. They resolved to have an annual General Court, and appointed a secretary and sheriff, and the teachings of the Bible were their guide in all things. They built a meeting-house, regulated the price of labor and commodities, and provided against attacks from the Indians. It was ordained that no person should settle among them without the consent of the community. In 1640 they called the settlement New Haven. This colony flourished in simplicity by itself until 1662, when it was annexed by charter to the colony in the valley, under the general title of Connecticut. (See *Connecticut, Charter of*.) There the foundations of the state were finally laid. (See *Connecticut, State of*.)

New Haven Colony, DISSATISFACTION IN. The colonies of New Haven and Connecticut (which see) were consolidated by the charter of 1662. Some of the weaker towns in the New Haven Colony submitted cheerfully, and those nearest New Netherland rejoiced in the promise of greater protection. But the town of New Haven—the seat of the independent colonial government—strongly protested against this disregard of her rights, and her Legislature called it "the great sin of Connecticut." Charges of treachery and bad faith were made against Connecticut, and there was much bitterness of feeling until matters were adjusted in the course of two or three years.

New Haven, PURCHASE OF LANDS AT. The persons who settled in the vicinity of New Haven with Rev. Mr. Davenport purchased of Mompaguin, the sachem of Quinnipiack, an extensive tract of land where the new settlement was begun around the harbor of New Haven, in consideration of being protected by the English from hostile Indians; also agreeing that his people should have sufficient land to plant on the east side of the harbor, and be furnished with twelve coats of English cloth, twelve spoons, twelve hatchets, twelve hoes, two dozen knives, twelve porringers, and four cases of French knives and scissors. There they laid out town-lots on the plan of a large city, and called it New Haven. In December, the same year, they bought another large tract from another sachem, north of the first, ten miles in length north and south, and thirteen miles in breadth, for which the English gave thirteen coats, and allowed the Indians land enough to plant and liberty to hunt within the lands.

New Jersey, COLONY OF. This was one of the thirteen original colonies. Its territory was claimed to be a part of New Netherland. A few Dutch traders from New Amsterdam seem to have settled at Bergen about 1620, and in 1623 a company led by Captain Jacobus May built Fort Nassau, at the mouth of the Timmer Kill, near Gloucester. There four young married couples, with a few others, began a settlement the same year. (See *Walloons*.) In 1634, Sir Edward Plowden obtained a grant of land on the New Jersey side of the Delaware from the English monarch, and called it New Albion, and four years later some Swedes and Finns bought land from the Indians in the vicinity and began some settlements. These and the Dutch drove off the English, and in 1665 Stuyvesant dispossessed the Swedes. (See *New Sweden*.) After the grant of New Netherland (1664) to the Duke of York by his brother, Charles II., the former sent Colonel Richard Nicolls with a land and naval force to take possession of the domain. Nicolls was made the first English governor of the territory now named New York, and he proceeded to give patents for lands to emigrants from Long Island and New England, four families of whom at once seated themselves at Elizabethtown. But while Nicolls with the armament was still on the ocean, the duke granted that portion of his territory lying between the Hudson and Delaware rivers to two of his favorites, Lord Berkeley, brother of the governor of Virginia (see *Berkeley, Sir William*), and Sir George Carteret, who, as governor of the island of Jersey, had defended it against the parliamentary troops. Settlements under Nicolls's grants had already been begun at Newark, Middletown, and Shrewsbury, when news of the grant reached New York. Nicolls was amazed at the folly of the duke in parting with such a splendid domain, which lay between the two great rivers and extended north from Cape May to latitude 40° 40'. The tract was named New Jersey in compliment to Carteret. The new proprietors formed a constitution for the colonists. Philip Carteret, cousin of Sir George, was sent over as governor of New Jersey,

and emigrants began to flock in, for the terms to settlers were generous. (See *New Jersey, First Constitution of*.) The governor gave the hamlet of four houses where he fixed his seat of government the name of Elizabethtown, in compliment to the wife of Sir George, and there he built a house for himself. A conflict soon arose between the settlers who had patents from Nicolls and the new proprietors, and for some years there were frequent quarrels. Other settlers were rapidly coming in, and in 1668 the first Legislative Assembly met at Elizabethtown, and was largely made up of representatives of New England Puritanism. In the year 1670 a specified quitrent of a half-penny for each acre of land was demanded of the tillers. The people murmured. Some of them had bought of the Indians before the proprietary government was established, and they refused to pay any rent. The whole people combined to resist the demand. There was actual rebellion; and in May, 1672, the people sent deputies to a popular assembly at Elizabethtown who deposed Philip Carteret and chose for governor James Carteret, a dissolute and weak illegitimate son of Sir George. The proprietors were preparing to subdue the people when the whole original territory of New Netherland fell into the hands of the Dutch again (1673). When it was restored, the duke obtained a new charter, and the territory was placed under the rule of Edmund Andros as governor. Lord Berkeley sold out his interest in the province to two English Friends or Quakers (Fenwick and Byllinge). This was the western portion of the province, and thither Fenwick went with emigrants, mostly Quakers, who settled on a spot not far from the Delaware and called it Salem. William Penn and others afterwards purchased this domain, and in 1676 it was separated from the rest of the province, when the whole was known as East and West Jersey, Carteret retaining the eastern portion. Meanwhile, a large immigration of Quakers from England had occurred, and these settled below the Raritan, under a liberal government. Andros required them to acknowledge his authority as the representative of the duke, but they refused, because the territory had passed out of the possession of James. The case was referred to Sir William Jones, the eminent jurist and Oriental scholar, who decided in favor of the colonists. The first popular assembly in West Jersey met at Salem in November, 1681, and adopted a code of laws for the government of the people. Late in 1679 Carteret had died; and in 1682 William Penn and others bought from his heirs East Jersey, and appointed Robert Barclay governor. He was a young Scotch Quaker and one of the purchasers, who afterwards became one of the most eminent writers of that denomination. Quakers from England and Scotland and others from Long Island flocked into East Jersey, but they were compelled to endure the tyranny of Andros until James was driven from his throne and the viceroy from America, when East and West Jersey were left without a regular civil government, and so remained several years. Finally, wearied with contentions and subjected to loss-

es, the proprietors surrendered the domain of the Jerseys to the crown (1702), and the disolute Sir Edward Hyde (Lord Cornbury), governor of New York, ruled over the province. Politically, the people were made slaves. It remained a dependency of New York until 1738, when it was made an independent colony, and so remained until the old war for independence. Lewis Morris, who was the Chief-justice of New Jersey, was commissioned its governor, and was the first who ruled over the free colony. (See *Morris, Lewis*.) William Franklin, son of Dr. Benjamin Franklin, was the last of the royal governors of New Jersey. (See *Franklin, William*.) A conditional state constitution was adopted in the Provincial Congress at Burlington, July 2, 1776, and a state government was organized with William Livingston as governor.

New Jersey Assembly. This body yet (December, 1775) retained its old colonial existence, and had granted the usual annual support to the royal governor, Franklin, who was a warm loyalist. On Dec. 5, they resolved themselves into a committee of the whole to consider the draft of a separate address to the king. This proposition alarmed Congress, for it tended to divide and insulate the colonies, and Dickinson, Jay, and Wythe were sent to Burlington to dissuade them. They were admitted to the floor of the Assembly and permitted to address the members, and so effective were their arguments that their advice was taken by a majority of the House.

New Jersey, FRIENDS, OR QUAKERS, IN. Fenwick, one of the purchasers of West Jersey, had made the first settlement of members of his sect at Salem. Liberal offers were made to Friends in England if they would settle in New Jersey, where they would be free from persecution, and in 1677 several hundred came over. In March a company of two hundred and thirty came in the ship *Kent*. Before they sailed King Charles gave them his blessing. The *Kent* reached New York in August, with commissioners to manage public affairs in New Jersey. The arrival was reported to Andros, who was governor of New York, and claimed political jurisdiction over the Jerseys. Fenwick, who denied the jurisdiction of the Duke of York in the collection of customs duties, was then in custody at New York, but was allowed to depart with the other Friends, on his own recognizance to answer in the autumn. On Aug. 16 the *Kent* arrived at New Castle, but it was three months before a permanent place was settled upon. That place was on the Delaware River, and was first named Beverly. Afterwards it was called Bridlington, after a parish in Yorkshire, England, whence many of the emigrants had come. The name was corrupted to Burlington, which it still bears. There the passengers of the *Kent* settled, and were soon joined by many others. The village prospered, and other settlements were made in its vicinity. Nearly all the settlers in West Jersey were members of the Society of Friends, or Quakers. One of the earliest erected buildings for the public worship of Friends in New Jersey was at Crosswicks, about half-way between Al-

lertown and the Delaware River. Before the Revolution they built a spacious meeting-house there of imported brick, which was standing in 1876.

FRIENDS' MEETING-HOUSE AT CROSSWICKS.

New Jersey, POSITION OF, IN 1861. On Jan. 8, 1861, the Legislature of New Jersey met at Trenton. The governor (C. S. Olden), in his message, favored the compromise measures then before Congress; or, in the event of their not being adopted, he recommended a convention of all the states to agree upon some plan of pacification. A majority of the Committee on National Affairs reported a series of resolutions on the 15th as "the sentiment of the people of the state," the vital point of which was the endorsement of the Crittenden Compromise (which see). These resolutions were adopted on the 31st, the Democratic members voting in the affirmative. The Republican members adopted a series of resolutions totally dissenting from the declaration of the majority that their endorsement of the Crittenden Compromise was "the sentiment of the people of the state." They declared the willingness of the people to aid the government in the execution of all the laws of Congress; affirmed their adhesion to the doctrine of popular sovereignty, with a qualification; asserted the nationality of the government as against state supremacy; declared it to be the duty of the national government to maintain its authority everywhere within the limits of the Republic; and pledged the faith and power of New Jersey in aid of that government to any extent required. This pledge the people of the state nobly redeemed.

New Jersey Regained by the Americans (1777). After the battle of Princeton and the retreat of the British to New Brunswick, detachments of American militia were very active in the Jerseys. Four days after that event nearly fifty Waldeckers (Germans) were killed, wounded, or made prisoners at Springfield. General Maxwell surprised Elizabethtown and took nearly one hundred prisoners. General Dickinson, with four hundred New Jersey militia and fifty Pennsylvania riflemen, crossed Millstone River near Somerset Court-house (June 20, 1777), and attacked a large British foraging party, nine of whom were taken prisoners; the rest escaped, but forty wagons, with much booty, fell into the general's hands. About a month later, Colonel Nelson, of New Brunswick, with a detachment of one hundred and fifty militiamen, sur-

prised and captured at Lawrence's Neck a major and fifty-nine privates of a Tory corps in the pay of the British.

New Jersey, REVOLUTION IN. When, in 1670, quit-rents were demanded of the people of New Jersey, discontent instantly appeared, and disputes about land-titles suddenly produced much excitement. Some of the settlers had bought of the Indians, some derived their titles from original Dutch owners, others received grants from the English governor, Nicolls, and some from Berkeley and Carteret, the proprietors. Those who settled there before the domain came under the jurisdiction of the English united in resisting the claim for quit-rent by the proprietary government. The people were on the verge of open insurrection, and only needed a leader, when James, the second son of Sir George Carteret, arrived in New Jersey. He was on his way to South Carolina. He was ambitious, but dissolute and unscrupulous, and was ready to undertake anything that promised him fame and emolument. He put himself at the head of the malcontents who opposed his cousin Philip, the governor, who held a commission from Sir George. The insurgents called an assembly at Elizabethtown in the spring of 1672, formally deposed Philip Carteret, and elected James their governor. Philip, in the early summer, sailed for England and laid the matter before his superiors. He knew the administration of his cousin would be a chastisement of the people, as it proved to be, for he was utterly incompetent, and his conduct disgusted them. Before orders came from England the insurgents were ready to submit to Philip Carteret's deputy, Captain Berry (May, 1673), and James Carteret immediately sailed for Virginia. Philip Carteret returned next year as governor, made liberal concessions to the people in the name of Sir George, and was quietly accepted by the people.

New Jersey State Legislature. The first state Legislature of New Jersey under its new constitution assembled at Princeton late in August, 1776, and chose William Livingston governor. Like the New York convention, the Legislature was, on account of military movements, compelled to meet at different places—at Burlington, Pittstown, and Haddonfield. At the latter place it was dissolved, leaving behind it only a small remnant of the Legislature first assembled. It was soon afterwards re-established.

New Jersey, STATE OF. The last royal governor of New Jersey was William Franklin (which see), a son of Dr. Franklin. A state constitution was adopted in 1776, and the first Legislature met at Princeton in August and chose William Livingston governor. The national Constitution was adopted by unanimous vote in December, 1787, and the state capital was established at Trenton in 1790. The present (1880) constitution of New Jersey was ratified Aug. 13, 1844. Several amendments were approved by the Legislature in 1874. During the late Civil War New Jersey furnished the na-

tional army with 79,511 troops. In 1870 the Legislature refused to ratify the Fifteenth Amendment to the national Constitution on the ground

STATE SEAL OF NEW JERSEY.

that the right to regulate suffrage is vested in the respective states.

New Lights. Whitefield appeared as a remarkable evangelist and revivalist in New England (1740) just after a religious reaction had begun in favor of the old, rigid dogmas of the

sole right of the sanctified to enjoy the privileges of church membership and of salvation by faith alone. Whitefield held similar views. The reactionists were led by Jonathan Edwards, the eminent metaphysician. A wonderful and widespread "revival" ensued, in which many extravagances appeared—outcries, contortions of the face and limbs, etc.—which many regarded as the visible evidences of the workings of divine grace. The revivalists, like most earnest reformers, were aggressive and censorious, lashing without mercy men in high places in the Church. They preached and exhorted wherever they pleased, without the leave of ministers of the parishes, and some of the latter were alarmed at this invasion of their vested rights. The Congregational establishment of New England was shaken by a violent internal controversy between the revivalists, who were called "New Lights," and the friends of the old order of things. There was wide-spread disorder, uncharitableness, and indecorum resulting from the labors of the "New Lights," and some of the leading clergymen condemned the movement in unsparing terms; while fifty-nine ministers in Massachusetts alone expressed their satisfaction at "the happy and remarkable revival of religion in many parts of the land through an uncommon divine influence." The controversy raged with special violence in Connecticut, and a law was enacted in 1742 to restrain the revivalists, which provided that any settled minister in that colony who should preach in any parish without express invitation should lose all legal right to recover his salary in his own parish; and if any came from other colonies they were to be arrested as "vagrants." After a violent controversy of nine or ten years the law was omitted in a new edition of the laws of Connecticut, though not repealed. This was the beginning of organized revivals of religion, which have prevailed ever since. Among its fruits were vigorous attempts at the conversion of the Indians. David Brainerd, one of the "New Lights," expelled from Yale College for having spoken of a tutor as "destitute of religion," devoted himself to this service, first among the Indians on the frontiers of Massachusetts and New York, and then among the Delawares of New Jersey. Edwards, who had been dismissed from his church at Northampton, became

preacher to the Indians at Stockbridge; and Eleazar Wheelock, a "New Light" minister at Lebanon, Conn., established in that town an Indian missionary school. (See *Dartmouth College*.) This great revival had a powerful effect on the political aspect of the colonies by the almost total abandonment of the theocratic idea of a Christian commonwealth, in which every other interest must be made subservient to unity of faith and worship, the state being held responsible to God for the salvation of the souls intrusted to its charge. The revivalists put forth the notion of individual salvation, leaving politics to worldly men or the providence of God, and making prominent the idea not to save the commonwealth, but themselves. It was a quiet but effectual separation of Church and State. Thenceforth theology held very little prominence in the jurisprudence of the colonies.

New London Blockaded (1813). Sir Thomas Hardy, with a small squadron, blockaded the harbor of New London, near the mouth of the Thames, in June, 1813. It continued full twenty months, and was raised only by the proclamation of peace early in 1815. The more aged inhabitants, who remembered Arnold's incendiary visit in 1781, apprehended a repetition of the tragedies of that terrible day; but Sir Thomas was a humane man, and never permitted any unnecessary execution of the atrocious orders of his superiors to ravage the New England coasts. His successor, Admiral Hotham, was like him; and so much was the latter respected, that, when peace came and the village of New London was illuminated and a ball held

ent, and the guests were received by Commodore Decatur, whose vessels had been blockaded in the Thames.

THE OLD COURT-HOUSE, NEW LONDON.

New London Destroyed (1781). On Sept. 6, 1781, Benedict Arnold, the traitor, with Colonel Eyre, of the British army, led a motley force of British and German regulars and American Tories to destroy New London, Conn. The object of this raid on the New England coasts was to call back the troops under Washington, then on their campaign against Cornwallis in Virginia. The invaders landed below New London, and, first applying the torch to stores on the wharves, finally laid almost the whole town in ashes, with several vessels. Fifteen vessels, with ef-

NEW LONDON IN 1813.

in the court-house, the admiral came on shore from his ship *Superb*, mingled freely with the people, and had a sort of public reception at the ball. Several other British officers were pres-

ents of the fleeing inhabitants, escaped up the river. The property destroyed was valued at \$486,000. It is said that Arnold stood in the belfry of a church almost in sight of his birth-

place and saw the burning of the town with the coolness of a Nero. After the war, a committee was appointed by the Legislature of Connecticut to make an estimate of the value of property destroyed by the British on the coasts of that state; and in 1793 the General Assembly granted 500,000 acres of land lying within the Western Reserves (which see) in Ohio for the benefit of the sufferers by these conflagrations. The region was called the Fire Lands (which see).

New Madrid, SIEGE OF. New Madrid, on the Missouri side of the Mississippi, and Island Number Ten, about ten miles above it, almost a thousand miles above New Orleans by the river channel, constituted the key to the navigation of the lower Mississippi, and consequently were of great importance to the large commercial city towards its mouth. To this place General Polk transferred what he could of munitions of war when he evacuated Columbus (which see). General Jeff. M. Thompson was in command at Fort Madrid of a considerable force and a strong fortification called Fort Thompson. When the garrison there was reinforced from Columbus, it was put under the command of General McCown. Against this post General Halleck despatched General John Pope and a considerable body of troops, chiefly from Ohio and Illinois. He departed from St. Louis (Feb. 22, 1862) on transports, and landed first at Commerce, Mo., and marched thence to New Madrid, encountering a small force under General Thompson on the way, and capturing from him three pieces of artillery. He reached the vicinity of New Madrid on March 3, found the post strongly garrisoned, and a flotilla under Captain J. S. Hollis in the river. He encamped out of reach of the great guns, and sent to Cairo for heavy cannons. When these arrived there were 9000 infantry, besides artillery, within the works at New Madrid, and three gunboats added to the flotilla. On the morning after the arrival of his four siege-guns Pope had them in position, and opened fire on the works and the flotilla. These were vigorously replied to, and a fierce artillery duel was kept up throughout the day, the Nationals at the same time extending their trenches so as to reach the river bank that night. At the same time General Paine was assailing the Confederates on their right flank. Their pickets were driven in, and that night the insurgent forces at New Madrid, on land and water, were in a perilous position. Their commanders perceived this, and at about midnight, during a furious thunder-storm, they stealthily evacuated the post and fled to Island Number Ten, leaving everything behind them. Their suppers and lighted candles were in their tents. The original inhabitants had also fled, and the houses had evidently been plundered by the Confederate occupants. The loss of the Confederates in this siege is not known; that of the Nationals was fifty-one killed and wounded.

New Mexico was among the earlier of the interior portions of North America visited by the Spaniards. Those adventurous spirits explored portions of it about a hundred years be-

fore the Pilgrims landed on the shores of New England. Alvar Nuñez (Cabeça de Vaca, which see), with the remnant of Narvaez's expedition (which see), penetrated New Mexico before 1537, and made a report of the country to the viceroy of Mexico. In 1539 Marco de Niza visited the country, and so did Coronado (which see) the next year, and a glowing account of it was given by Castaneda, the historian of the expedition. Others followed, and about 1581 Augustin Ruys, a Franciscan missionary, entered the country and was killed by the natives. Don Antonio Espejo, with a force, went there soon afterwards (1595-99) to protect missions, and the viceroy of Mexico sent his representative to take formal possession of the country in the name of Spain, and to establish missions, settlements, and forts there. The pueblo, or village, Indians were readily made converts by the missionaries. Many successful stations were established, and mines were opened and worked, but the enslavement of the Indians by the Spaniards caused discontent and insecurity. Finally the Indians drove out their oppressors (1680), and recovered the whole country as far south as El Paso del Norte. The Spaniards regained possession of the country in 1698, and the province remained a part of Mexico until 1846, when its capital (Santa Fé) was captured by United States troops under General Kearney, who soon conquered the whole territory. In 1848 New Mexico was ceded to the United States by treaty; and by act of Congress, Sept. 9, 1850, a territorial government was organized there. The region south of the Gila was obtained by purchase in 1853, and was annexed to New Mexico by Congress, Aug. 4, 1854. The territory then contained the whole of Arizona and a portion of Colorado and Nevada (which see). Attempts have been made to create New Mexico a state, but without success. Its capital is Santa Fé, on the Santa Fé River, about twenty miles above its confluence with the Rio Grande.

New Mexico, CONQUEST OF. General Stephen W. Kearney, of New Jersey, was in command of the Army of the West in the spring of 1846. He received instructions to conquer New Mexico and California. He left Fort Leavenworth, on the Missouri River, with 1600 men in June, and on the 18th of August, after a march of about 900 miles, he arrived at Santa Fé, the capital of New Mexico. He had traversed great plains and rugged mountain passes without opposition; and as he approached Santa Fé the Mexican governor and 4000 soldiers fled, leaving the 6000 inhabitants of the city to quietly surrender it to the invaders. Kearney then took formal possession of the state, appointed Charles Bent provisional governor, and pushed on towards California. He very soon met a messenger from Commodore Stockton and Captain Fremont, informing him that the conquest of California was already completed, when he sent the main body of his troops back to Santa Fé. In February, 1848, New Mexico was ceded to the United States by the treaty of Guadalupe-Hidalgo, and in 1850 a territorial government for it was organized. See *Mexico, War with*.

New Mexico, EARLY EXPLORATION OF. Almost forty years after the expedition of Coronado, Augustin Ruyz, a Franciscan friar, impelled by the missionary spirit which marked the Spanish ecclesiastics, undertook an exploration of the wilderness north of Mexico. (See *Coronado*.) He set out for Santa Barbara (1580-81) with two or three companions, went north until he struck the Rio Grande, and ascended it to its upper waters, explored by Coronado. Ruyz was followed next year (1581-82) by Antonio Espejo, a Spaniard, with a body of soldiers and Indians. He completed the exploration begun by Ruyz, and named the country New Mexico. The town of Santa Fé was soon after built, and is, next to St. Augustine, the oldest borough in the United States.

New Mexico, WAR IN. Late in 1861, General E. R. S. Canby was appointed to the command of the military department of New Mexico. Civil war was then kindling in that region. An attempt was made to attach that territory to the Confederacy by the method employed by Twiggs in Texas. (See *Twiggs*.) Disloyal officers (W. H. Loring, of North Carolina, and G. B. Crittenden, of Kentucky) had been sent thither by Secretary Floyd to corrupt the patriotism of the soldiers a year before the insurrection broke out. These leaders failed to corrupt a single one of the twelve hundred soldiers, and, incurring their hot displeasure, were compelled to flee from their righteous wrath towards Texas. On the border of that state they found the commander of Fort Fillmore ready to co-operate with them. These men led out the unsuspecting troops, and betrayed them into the power of Texan insurgents. Otero, the representative of New Mexico in Congress, was in active sympathy with the Secessionists, and the Confederate cause seemed to be assured in that quarter, when Canby appeared and raised the standard of the Union. Around it the loyal people of the territory gathered; and his regular troops, New Mexican levies, and volunteers gave him sufficient force to meet any insurgents which might be sent against him. He fought them at Valverde, and was discomfited; but there were soon such accessions to his ranks that he drove the insurgents over the mountains into Texas.

New Netherland, CONQUEST OF, BY THE ENGLISH. Late in August, 1664, a land and naval armament, commanded by Colonel Richard Nicolls, anchored in New Utrecht Bay, just inside of Coney Island. There Nicolls was joined by Governor Winthrop, of Connecticut, several magistrates of that colony, and two leading men from Boston. Governor Stuyvesant was at Fort Orange (Albany) when news of this armament reached him. He hastened back to New Amsterdam, and on Saturday, the 30th of August, Nicolls sent to the governor a summons to surrender the fort and city. He also sent a proclamation to the citizens, promising perfect security of person and property to all who should quietly submit to English rule. Stuyvesant assembled his council and the magistrates at the fort for

consultation. The people, smarting under Stuyvesant's iron rule, panted for English liberty, and were lukewarm, to say the least. The council and magistrates favored submission without resistance. The governor, true to his superiors and his convictions of duty, would not listen to such a proposition, nor allow the people to see Nicolls's proclamation. The Sabbath passed without an answer to the summons. The people were anxious and impatient. On Monday the magistrates explained to them the situation of affairs. They demanded a sight of the proclamation; it was refused. They were on the verge of open insurrection, when Governor Winthrop, with whom Stuyvesant was on friendly terms, came from Nicolls with a letter demanding a surrender. The two governors met at the gate of the fort. On reading the letter, Stuyvesant promptly refused. He read the letter to his council and the assembled magistrates. "Read it to the people and get their mind," they said. The governor stoutly refused; his council and the magistrates as stoutly insisted that he should do so, when the enraged governor, who had fairly earned the title of "Peter the Headstrong," in a towering passion, tore the letter in pieces. Hearing of this, a large number of the people hastened to the State-house, and sent in a deputation to demand the letter. Stuyvesant stormed. The deputies were inflexible, and a fair copy was made from the pieces and read to the inhabitants. The population of New Amsterdam did not exceed fifteen hundred souls, and not more than two hundred were capable of bearing arms. Nicolls sent another message to the governor, saying, "I shall come for your answer to-morrow with ships and soldiers." Stuyvesant was unmoved. And when men, women, and children, and even his beloved son, Balthazar, entreated him to surrender, that the lives and property of the citizens might be spared, he said, "I had much rather be carried out dead." At length, when magistrates, clergy, and the principal citizens entreated him, the proud soldier consented to capitulate. On Monday morning, Sept. 8 (N. S.), he led his troops from the fort to a ship on which they were embarked for Holland; and an hour afterwards the royal flag of England was floating over Fort Amsterdam, the name of which was changed to Fort James, in honor of the Duke of York. The remainder of New Netherland soon passed into the possession of the English. (See *New York*.)

New Netherland Created. To the Binnenhof, at the Hague, repaired deputies from the Amsterdam company of merchants and traders to have an audience with the States-General of Holland, to solicit a charter for the region in America which the discoveries of Henry Hudson had revealed to the world. That was in 1614. They sent twelve "high and mighty lords," among them the noble John of Barneveld. The deputies spread a map before them, told them of the adventures of their agents in the region of the Hudson River, the heavy expenses they had incurred, and the risks they ran without some legal power to act in defence. Their prayer

was heard, and a charter, bearing date Oct. 11, 1614, was granted, in which the country was named New Netherland. This was before the incorporation of the Dutch West India Company (which see). In 1623, New Netherland was made a province or county of Holland, and the States-General granted it the armorial distinction of a count. The seal of New Netherland

SEAL OF NEW NETHERLAND.

bore as a device a shield with the figure of a beaver in the centre of it, surmounted by the coronet of a count, and encircled by the words "SIGILLUM NOVI BELGII."

New Orleans. Governor Bienville prepared to found a town on the lower Mississippi in 1718, and sent a party of convicts to clear up a swamp on the site of the great city of New Orleans. When Charlevoix visited the spot in 1722, the germ of the city consisted of a large wooden warehouse, a shed for a church, two or three ordinary houses, and a quantity of huts built with-

ernment from Biloxi (see *Iberville, Pierre le Moyne*) to New Orleans. Law's settlers in Arkansas (see *Crozat and Louisiana*), finding themselves abandoned, went down to New Orleans and received allotments on both sides of the river, settled on cottage farms, and raised vegetables for the supply of the town and soldiers. Thus the rich tract near New Orleans was known as the "German Coast."

New Orleans, BATTLES NEAR (1814-15). The battle at Villeré's plantation (Dec. 23, 1814) dispirited the British invaders, and in this condition Lieutenant-general Edward Pakenham, the "hero of Salamanca," and one of Wellington's veteran officers, found them on his arrival on Christmas-day, with reinforcements, to take chief command. He was delighted to find under his command some of the best of Wellington's troops that fought on the Spanish Peninsula. He immediately prepared to effect the capture of New Orleans and the subjugation of Louisiana without delay. While Jackson was casting up intrenchments along the line of Rodriguez's Canal, from the Mississippi back to an impassable swamp two miles away, the British were as busy too. They worked day and night in the erection of a heavy battery that should command the armed schooner *Carolina*, and on the morning of Dec. 27 they opened a heavy fire upon her from several 12- and 18-pounders. They also hurled hot shot at her, which set her on fire, when her crew abandoned her, and she blew up. The schooner *Louisiana*, Lieutenant Thompson, had come down from the city to aid her, and was in great peril. She was the only armed vessel belonging to the Americans in the vicinity of New Orleans. By great exertions she was placed at a safe distance from the fire of the British. Pakenham now issued

CHALMETTE'S PLANTATION.

out order. But Bienville believed that it would one day become, "perhaps, too, at no distant day, an opulent city, the metropolis of a great and rich colony," and removed the seat of gov-

orders for his whole army, 8000 strong, to move forward and storm the American intrenchments. It was arranged in two columns—one commanded by General Keane; the other by Gen-

eral Gibbs, a good soldier, who came with Pakenham, and was his second in command. Towards evening (Dec. 27) they moved forward, and encamped on the plantations of Bienville and Chalmette, within a few hundred yards of Jackson's intrenchments. Then they began the construction of batteries near the river, but were continually annoyed by Hinds's troopers and other active Americans by quick and sharp attacks on their flank and rear. Jackson was aware of the arrival of Pakenham, and expected vigorous warfare from him. He prepared accordingly. His headquarters were at the château of M. Macarté, a wealthy creole, from the balcony

while, when they fell back, running pell-mell to the shelter of the canal, where they stood waist-deep in mud and water. Their batteries were half destroyed and abandoned, and the shattered column was thoroughly repulsed and demoralized. Meanwhile, the other column, under Gibbs, was actively engaged on the British right. They were pressing General Carroll and his Tennesseans near the swamp very severely, when Gibbs, seeing the heavy pressure on Keane's column, ordered his troops to their assistance. When it gave way, Pakenham ordered a general retreat, and he retired to his headquarters at Villeré's, deeply mortified at this

repulse by a handful of backwoodsmen, as he regarded Jackson's army. In this engagement, preliminary to the great battle which soon afterwards ensued, the Americans lost nine killed and eight wounded. The British lost about one hundred and fifty. Pakenham called a council of war, when it was resolved to bring forward heavy siege-guns from the fleet before making another attempt to carry Jackson's lines, for the experience of the 28th had given Pakenham a test of the temper of his opponents. At the same time Jackson was busy in strengthening his position at Rodriguez's Canal, over which not a British soldier had yet passed,

MACARTÉ'S, JACKSON'S HEADQUARTERS.

ny of which, with his field-glass, he could survey the whole of the operations of his own and the British army. From that mansion (standing in 1876) he sent numerous and important orders on that night. He had caused Chalmette's buildings to be blown up on the approach of the invaders, that the sweep of his own artillery might not be impeded, and he had called to the line some Louisiana militia from the rear. He had also planted some heavy guns, and before the dawn of the 28th he had 4000 men and twenty pieces of artillery to receive Pakenham, while the *Louisiana* was prepared to greet him with her heavy cannon. As soon as a light fog had disappeared on the morning of the 28th, the British approached in two columns. Just then a band of rough men — Baratarians — came down from the city, and were placed by Jackson in command of one of the 24-pounders. As a solid column under General Keane drew near, they were met by a terrible fire of musketry, but they bravely advanced until checked by the sudden opening of Jackson's heavy guns and the batteries of the *Louisiana*. At the same time the British rocketeers were busy, but they did very little damage. Keane's troops endured the tempest that was thinning their ranks for a

excepting as a prisoner. He placed two 12-pounders in battery on his left, near the swamp, in charge of General Garrigue Flauzac, a French volunteer, and also a 6- and an 18-pounder, under Colouel Perry. His intrenchments were extended into the swamp to prevent a flank movement. On the opposite side of the Mississippi there was a similar structure; and Commander Patterson, pleased with the effects of the guns of the *Louisiana* from the same side, established a battery back of the levee, which he armed with heavy guns from the schooner. This battery commanded the front of Jackson's lines by an enfilading fire, and soon compelled the British to fall back from Chalmette's. The Tennessee riflemen were conspicuously active in annoying the British sentinels by "hunts," as they called little expeditions. The British contented themselves with casting up a strong redoubt near the swamp, from which they opened a vigorous fire on Jackson's left (Dec. 31). That night the whole British army moved forward to within a few hundred yards of the American lines, and began throwing up intrenchments on which to place heavy siege-guns, which had arrived. By daylight they had erected three half-moon batteries within six hundred yards of the

American breastworks, right, centre, and left. Upon these they had mounted thirty pieces of heavy ordnance, manned by picked gunners from the fleet. The works were hidden by a thick fog on the morning of Jan. 1 (1815). When it lifted, the British opened a brisk fire, not doubting that in a few minutes the contemptible defences of the Americans would be scattered to the winds. The army was arrayed in battle order to rush forward and capture the works and their defenders. Every moment the cannonade and bombardment became heavier, and

under Adair. Pakenham now conceived the hazardous plan of carrying Jackson's lines by storm on both sides of the river. Those on the right bank were under the command of General Morgan. Jackson penetrated Pakenham's design on the 6th, and he disposed his forces accordingly. The New Orleans troops and a few others were placed on the right of the intrenchments, and fully two thirds of the whole line was covered by the commands of Coffee and Carroll. The latter was reinforced on the 7th by one thousand Kentuckians, under General

Adair, and fifty marines. Coffee, with five hundred men, held the extreme left of the line, where his men were compelled to sleep on floating logs lashed to the trees. Jackson's whole force on the New Orleans side of the river was about five thousand in number. Of these only twenty-two hundred were at the line, and only eight hundred of them were regulars, the rest mostly raw recruits commanded by young officers. His army was formed in two divisions—one, on the right, commanded by Colonel Ross; and the other, on the left, by Generals Carroll and Coffee. Another intrenchment had been thrown up a mile and a half in the rear of the front,

REMAINS OF RODRIGUEZ'S CANAL IN 1861. (See p. 985.)

the rocketeers sent showers of fiery missiles upon the Americans. Meanwhile, Jackson had opened his heavy guns on his assailants. His cannonade was led off by the imperturbable Humphrey on the left, followed by the Baratarians and the veteran Garrigue. The American artillery thundered all along the line. Pakenham was amazed. He could not conceive where the Americans got their guns and gunners. The conflict became terrible. Patterson fought the batteries on the levee from the opposite side of the river; and an attempt to turn the American left at the swamp was successfully met by Coffee and his riflemen, and the assailants made to fly in terror. Towards noon the fire of the British slackened. Their half-moon batteries were crushed, the batteries on the levee were demolished, and the invaders ran helter-skelter to the ditch for protection. Under cover of the ensuing night, they crawled back to their camp, dragging with them a part of their cannon over the oozy ground. It was a bitter New-year's-day for the British army. They had been without food or sleep for sixty hours. There was joy in the American camp. It was increased when General John Adair announced that more than two thousand drafted men from Kentucky, under Major-general John Thomas, were near. They arrived at New Orleans on the morning of the 4th, and seven hundred of them were sent to the front

behind which the weaker of his forces were stationed. Jackson also established a third line at the lower edge of the city. General Morgan, on the opposite side of the river, had eight hundred men, all militia and indifferently armed. On the night of the 7th, Pakenham sent Lieutenant-colonel Thornton with a detachment to attack Morgan, and at dawn the British, under Pakenham, were seen advancing to attack Jackson's lines. The heavy guns of one of Jackson's batteries were opened upon it, and so a terrible battle was begun. The British line, stretching across the plain of Chalmette, was broken into companies, but steadily advanced, terribly smitten by a storm that came from the American batteries, which made fearful lanes through their ranks with round and grape shot. The right of the British, under Gibbs, had obliques towards the swamp, and was thrown into some confusion by the guns of the Americans. This was heightened by the fact that there had been neglect in bringing forward fascines and scaling-ladders. His troops poured forward in solid column, covered in front by blazing rockets. Whole platoons were prostrated, when others instantly filled their places; and so, without pause or recoil, they pushed towards the weaker left of Jackson's line. By this time all of the American batteries, including Patterson's across the river, were in full

play. Yet steadily on marched Wellington's veterans, stepping firmly over the dead bodies of slain comrades, until they had reached a point within two hundred yards of the American line, behind which, concealed from the view of the invaders, lay the Tennessee and Kentucky sharpshooters, four ranks deep. Suddenly the clear voice of General Carroll rang out the word, "Fire!" His Tennesseans instantly arose, and, taking sure aim, laid scores of the British soldiery on the ground by a terrific storm of bullets. That storm did not cease for a moment, for when the Tennesseans had fired they fell back, and the Kentuckians took their places, and so the four ranks in turn participated in the conflict. At the same time, round, grape, and chain shot went crashing through the British line from the several batteries, and it began to waver, when a detachment brought up the fascines and scaling-ladders, and revived the hopes of the British. Pakenham was at the head of his troops. Addressing a few stirring words to the men he was leading forward, his bridle-arm was made powerless by a bullet, and his horse was shot dead under him. He instantly mounted another. Several of his officers fell one after another, and the line broke up into detachments, a greater part of them falling back to the shelter of the protecting swamp. They were rallied, and rushed forward to carry the works in front of Carroll and Coffee. At that moment, Keane, on the left, wheeled his column and pushed to the aid of the right, terribly enfiladed by the American batteries as they strode across the plain. Their presence encouraged the broken column on the right, and all rushed into the heart of the tempest from Carroll's rifles, Gibbs on the right and Paken-

that scattered dead men all around him. One of the balls passed through the general's thigh, killing his horse under him. Pakenham was caught in the arms of his faithful aid, Captain McDougall, who performed the same service for General Ross a few months before. (See *North Point, Battle of*.) He was conveyed to the rear in a dying condition, and expired in the arms of McDougall under a live-oak tree. General Gibbs was also mortally wounded, and died the next day. Keane, shot in the neck, was compelled to leave the field, and the command devolved on Major Wilkinson, the officer of highest grade in the saddle. His discomfited troops fell back, and the whole army fled in disorder. While these events were occurring on the right, nearly 1000 men under the active Colonel Rennie had pushed rapidly forward near the river in two columns, and, driving in the American pickets, took possession of the unfinished redoubt on Jackson's extreme right. They did not hold it long. Patterson's battery greatly annoyed Rennie's column on its march. As he scaled the parapet of the redoubt, and had just exclaimed, "Hurrah, boys, the day is ours!" he fell dead, pierced by a bullet from Beule's rifles. When this column fell back in disorder, General Lambert, in command of the reserves, appeared just in time to cover the retreat of the battered and flying regiments, but not to retrieve the misfortunes of the day. From the first flight of British rockets in the morning to the close of the battle, the New Orleans Band, stationed near the centre of the American line, played incessantly, cheering the troops with martial music. No music but the bugle inspired the British columns. Across the Mississippi, Thornton had captured the American intrenchments after the

VILLERÉ'S MANSION. (See p. 988.)

ham on their left. In a few minutes the right arm of the latter was disabled by a bullet. Very soon, while shouting buzzas to his troops, there came a terrible storm of round and grape shot

cannons had been spiked and rolled into the river; also Patterson's battery, the commander and his men, after spiking the guns, escaping on board the *Louisiana*. Then Thornton recrossed

the river and joined the retiring army. In this terrible battle the British lost 2600 men, killed, wounded, and made prisoners; while the Americans, sheltered by their breastworks, lost only eight killed and thirteen wounded. The history of human warfare presents no parallel to this disparity in loss. On the western side of the river the British had 100 killed and wounded; the Americans six. The next morning (Jan. 9, 1815) detachments from both armies were engaged in burying the dead on the plain. The Kentuckians carried to the British detachment the bodies of their slain comrades on the scaling-ladders they had brought. The bodies of the dead British officers were buried on Villere's plantation, not far from his mansion, and those of Pakenham and several others were placed in casks of rum and sent to England. On Jan. 18 a general exchange of prisoners took place, and under cover of the next night General Lambert withdrew all the British from the Mississippi, and they soon made their way in open boats across Lake Borgne to their fleet, sixty miles distant, between Cat and Ship islands. Louisiana was saved. The news of the victory created intense joy throughout the country. State Legislatures and other bodies thanked Jackson and his brave men. A small medal was struck in commemoration of the event and circulated among the people. Congress voted the thanks of the nation to Jackson, and ordered a commemorative gold medal to be given to him.

New Orleans, CAPTURE OF (1862). The national government resolved to repossess itself of Mobile, New Orleans, Baton Rouge, and Galveston, and to attempt to acquire control of the Lower Mississippi and Texas. The Department of the Gulf was created, which included all these points, and General B. F. Butler was placed in command of it. It was proposed to send a competent land and naval force first to capture New Orleans. General McClellan did not think the plan feasible, for it would take 50,000 men, and he was unwilling to spare a man from his army of more than 200,000 men lying around Washington. President Lincoln approved the project, and Mr. Stanton said to General Butler, "The man who takes New Orleans shall be made a lieutenant-general." Butler called for troops. New England was alive with enthusiasm, and furnished them, in addition to her thousands in the Army of the Potomac. He sailed from Fortress Monroe (Feb. 25, 1862) with his wife, his staff, and 1400 New England troops. Storms and delays made the passage long, and it was thirty days before he landed on dreary Ship Island (his place of destination), off the coast of Mississippi, where there was an unfinished fort, but not a house. The insurgents of that region had taken possession of that island and the fort in considerable force. During their occupation of it for about four months, they made it strong and available for defence. They constructed eleven bomb-proof casemates, a magazine, and barracks, mounted twenty heavy Dahlgren guns, and named it Fort Twiggs. When a rumor that a strong naval force was approaching reached the island, the Confederate garrison abandoned the

fort, burned the barracks, and with their cannon fled to the main. On the following day, a small force was landed from the national gunboat *Massachusetts*, and took possession of the place. They strengthened the fort by building two more casemates, adding Dahlgren and rifled cannon, and piling around its outer walls tiers of sand-bags six feet in depth. They gave to the fort the name of their vessel, and it became Fort Massachusetts. When General Butler arrived, there was no house on the island, and it was with much difficulty that a decent place of shelter was prepared for his wife and his military family. General Phelps was there with New England troops, so also was Commodore Farragut with a naval force, and Commodore D. D. Porter with a fleet of bomb-vessels to co-operate with the land force. At a short bend in the Mississippi River, sixty miles below New Orleans, were forts Jackson and St. Philip. These, with some fortifications above and obstructions in the river below, seemed to the Confederates to make the stream absolutely impassable by vessels. These defences and 10,000 troops in New Orleans under General Mansfield Lovell, seemed to make that city perfectly secure from invasion from below. One of the New Orleans journals said, in a boastful manner, "Our only fear is that the Northern invaders may not appear. We have made such extensive preparations to receive them, that it were vexatious if their invincible armada escapes the fate we have in store for it." On April 28 the fleets of Farragut and Porter were within the Mississippi River, the former in chief command of the naval forces; and General Butler, with about 9000 troops, was at the Southwest Pass. The fleets comprised forty-seven armed vessels, and these, with the transports, went up the river, Porter's mortar-boats leading. When they approached the forts their hulls were besmeared with mud, and the rigging was covered with branches of trees. So disguised, they were enabled to take a position near the forts unsuspected. The Mississippi was full to the brim, and a boom and other obstructions near Fort Jackson had been swept away by the flood. On April 18 a battle between Fort Jackson and Porter's mortar-boats was begun. The gunboats supported the mortar-boats. They could not much affect the forts, and on the night of the 23d the fleet started to run by them, the mortar-boats leading. The perilous passage of the forts was begun at two o'clock in the morning. The night was intensely dark, and in the gloom a tremendous battle was waged. The National naval force was met by a Confederate one. In that struggle the Nationals were victorious. While the battle was raging near the forts, General Butler landed his troops, and in small boats passed through narrow and shallow bayous in the rear of Fort St. Philip. The alarmed garrison surrendered to Butler without resistance, declaring they had been pressed into the service and would fight no more. When the forts were surrendered and the Confederate gunboats subdued, Farragut rendezvoused at Quarantine, and then with nine vessels he went up to New Orleans. There a fearful panic prevailed, for the

people had heard of the disasters below. Drums were beating, soldiers were hurrying to and fro, cotton was carried to the levee to be burned; specie to the amount of \$4,000,000 had been carried away from the banks, and citizens, with millions of property, had fled from the city. When Farragut approached (April 25, 1862) General Lovell and his troops fled; the torch was applied to the cotton on the levee, and 15,000

getic measures, in defiance of the Legislature, that the city was saved from capture and pillage. This act gave great offence to the civil power. (See *Jackson, General, fined for Contempt of Court.*) A rumor was set afloat that Jackson, rather than surrender the city to the British, intended to lay it in ashes and retire up the river. This rumor caused movements on the part of the Legislature and some of the

leading citizens that made Jackson believe that body might intend, to save the city, to offer a premature capitulation. Jackson directed Claiborne, in such case, to arrest the members of the Legislature. The governor misinterpreted the order, and, without waiting to know whether suspicions of its intentions were well founded, he placed a military guard at the door of the legislative hall and broke up the session. Jackson had authorized a search of all the houses and stores in the city for arms, and, to prevent any skulking

THE LEVEE AT NEW ORLEANS.

bales, a dozen large ships and as many fine steamers, with unfinished gunboats and other large vessels, were destroyed in the conflagration. The citizens were held in duress by Farragut's guns until the arrival of Butler on May 1, when the latter landed with his troops, took formal possession of the defenceless town, and made his headquarters at the St. Charles Hotel. The loss of New Orleans was a terrible blow to the Confederates.

New Orleans, EXPOSED CONDITION OF (1814). When the British had captured the American flotilla on Lake Borgne (which see) there seemed to be no obstacle to the seizure of the city of New Orleans. Troops for its defence were few, and arms fewer still. Some months before, Jackson had called for a supply of arms for the southwest from the arsenal at Pittsburgh, but, from an unwillingness to pay the freight demanded by the only steamboat then navigating the Ohio and Mississippi rivers, these means of defence had been shipped in keel-boats, and did not arrive until after the fate of the city had been decided. Jackson put forth amazing energy. He called for Tennessee and Kentucky volunteers, and urged the Legislature of Louisiana to work energetically with him. That body seemed unwilling or unable to comprehend the gravity of the situation, while the governor (Claiborne) was all alive with patriotic zeal. Even the muskets on hand in the city would have been useless but for a timely supply of flints furnished by Lafitte (which see), the Baratarian pirate. The Legislature passed an act suspending for four months the payment of all bills and notes; but they hesitated to suspend the *habeas corpus* act; when Jackson, under whose command Governor Claiborne had placed himself, took the responsibility of declaring martial law, and also took such ener-

getic measures, in defiance of the Legislature, that the city was saved from capture and pillage.

New Orleans Secured for Spain. (See *First Republican Government in America.*) The Spanish cabinet agreed that Louisiana must be retained as a part of the Spanish dominions, and as a granary for Havana and Porto Rico. It was also agreed that Louisiana a republic would soon rival Spain in wealth and property; be independent of European powers; contrast strongly with other Spanish provinces; cause the inhabitants of the vast Mexican domain to consider their total want of commerce, the extortions of their governors, and the few offices they were permitted to fill; and thus still more hatred of Spanish rule would be engendered and the Mexicans encouraged to throw it off. In view of the apparent danger of trouble with, if not absolute loss of, her colonies by Spain, the minister (D'Aranda) advised the king to reduce the colony of Louisiana to submission. The king accepted the advice, and, with foolish pride, said, "The world must see that I, unaided, can crush the audacity of sedition." He despatched an officer (Alexander O'Reilly) in great haste to Cuba, with orders to extirpate republicanism at New Orleans. At the close of July, 1769, O'Reilly appeared at the Balize with a strong force. With pretensions of friendship, promises that the people of New Orleans would not be harmed were made and received with faith. On the 8th of August the Spanish squadron, of twenty-four vessels, bearing three thousand troops, anchored in front of New Orleans, and the place was taken possession of in the name of the Spanish monarch. With feigned kindness of intentions, the treacherous O'Reilly invited the people's representatives and many of the leading inhabitants to his house (Aug. 21), and the former were invited to pass into

his private apartments, where they were arrested. "You are charged with being the chiefs of this revolt," said O'Reilly; "I arrest you in the name of his Catholic Majesty." Provisional decrees settled the government, and on the 26th the inhabitants were compelled to take the oath of allegiance to the King of Spain. Twelve of the representatives were selected as victims. They were among the richest and most influential citizens of Louisiana. Their estates were confiscated for the benefit of the officers who tried them. Six of them were sentenced for six or ten years, or for life, and five of them—Lafrenière, his young son-in-law Noyan, Caresse, Marquis, and Joseph Milhet—were sentenced to be hanged, but, for want of such an executioner, were shot on Oct. 25, 1769. Villeré, one of the twelve, did not survive the day of his arrest, and his name was declared infamous. "The insult done to the king's dignity and authority in the province is repaired," reported O'Reilly; "the example now given can never be effaced." So perished the first republic established in America.

New Orleans Transferred. There was much discussion, even before the ratification of the treaty for the purchase of Louisiana, concerning its boundaries. The terms of the treaty were indefinite about the boundary, declaring the territory to be "the same extent that it now has in the hands of Spain, and that it had when France possessed it." Its eastern boundary, along the Gulf region, was so indefinite that to take possession of what seemed to be right by the United States might lead to war with Spain. Jefferson was content, at first, to accept the formal delivery of the island of New Orleans, which was made by Citizen Lausât (Dec. 20, 1803), who had, as commissioner of France, received possession a few days before from the Spanish authorities, leaving the left bank of the lakes (Borgne and Pontchartrain) and the river above in the hands of the Spaniards.

New Pension Bill. In 1872 Congress passed a new pension bill, giving eight dollars a month to all surviving officers, enlisted and drafted men, and volunteers in the wars of the Revolution and of 1812–15, or their surviving widows. There were then only two surviving soldiers of the Revolution. (See *Cook, Lemuel, and Hutchings, William.*) The pensions, added to those of the war for the Union, made the amount of money annually distributed in pensions by our government at the beginning of 1875 about \$30,000,000 annually.

New Plymouth, CHARTER FOR. When, in 1627, the term of partnership between the Pilgrims and the London merchants had expired, the latter, numbering not more than three hundred at New Plymouth, applied to the Council of New England for a charter. It was granted (July 13, 1630), in which the boundaries of the colony were defined, on the land side, as composed of two lines—one drawn northerly from the mouth of Narraganset River, the other westerly from Cohasset rivulet—to meet at "the

utmost limits of a country or place called Pocanoket." (See *Massasoit.*) A grant on the Kennebec, where some of the Pilgrims had been seated, was included in the charter. The patent gave a title to the soil, but the functions of government could only be exercised, according to English legal opinions, under a charter from

OLD COLONY SEAL

the crown. Efforts were made to obtain such a charter, but without success. The colonists, however, gradually assumed all the prerogatives of government—even the power of capital punishment. Eight capital offences were enumerated in the first Plymouth code, including treason or rebellion against the colony and "solemn compaction or conversing with the devil." Trial by jury was introduced, but punishments for minor offences remained discretionary. For eighteen years all laws were enacted in a general assembly of all the colonists. The governor, who was simply president of a council, was chosen annually. There were finally seven councillors, called assistants; and so little was public office coveted that it was necessary to indict a fine upon such as, being chosen, declined to serve as governor or assistant. The constitution of the church was equally democratic. For the first eight years there was no pastor. (See *Brewster, William.*) Lyford, a minister, was sent over by the London partners to be a pastor; but they refused, and expelled him. (See *Lyford and Oldham, Conspiracy of.*) Brewster and others were exhorters; and on Sunday afternoons a question was propounded, to which all present might speak. No minister stayed long at Plymouth after they adopted the plan of having a pastor.

Newport (R. I.), CAPTURE OF (1776). Early in December, 1776, a British fleet, with six thousand troops on board, appeared off Newport. The few troops stationed there evacuated the town without attempting to defend it. Commodore Hopkins had several Continental vessels lying there, with a number of privateers. With these he escaped up the bay, and was effectually blockaded at Providence. When Washington heard of this invasion he sent Generals Arnold and Spencer for the defence of Rhode Island. This possession of Newport, the second town in size and importance in New

England, produced general alarm and great annoyance to the inhabitants east of the Hudson.

Newport, CHRISTOPHER, an English navigator, who commanded the first successful expedition for the settlement of Virginia. He had been engaged in an expedition against the Spaniards in the West Indies not long before. He made several voyages to Virginia with emigrants and supplies. Before he returned to England for the last time he joined with Ratcliffe (which see) in an attempt to depose Captain Smith (which see) from the presidency of the colony. He was defeated, and he acknowledged his error. Newport's manuscript work, called "Discoveries in America," was not published until 1860, by E. Everett Hale, in *Archæologia Americana*.

Newport, FRENCH FLEET AND ARMY BLOCKADED AT (1780). Washington had hoped the French army, which arrived at Newport July 10, would march to the Hudson River, and, with their assistance, expected to drive the British from the city of New York. But it was compelled to stand on the defensive there. Six British ships-of-the-line, which had followed the French fleet across the Atlantic, soon afterwards arrived at New York. Having there a naval superiority, Sir Henry Clinton embarked (July 27) six thousand men for the purpose of assailing the French, without waiting for them to attack. The French, perceiving this, cast up fortifications and prepared for a vigorous defence. The militia of Connecticut and Massachusetts marched to their assistance, and Washington crossed the Hudson into Westchester County and threatened New York. As Clinton and Admiral Arbuthnot could not agree upon a plan of operations, the troops were disembarked; but the fleet proceeded to blockade the French ships in Newport harbor. The French army felt compelled to stay for the protection of the vessels. News presently came that the second division of French forces was blockaded at Brest by another British fleet. So the French, instead of being an assistance to the Americans at that time, became a burden, for three thousand five hundred American militia were kept under arms at Newport to protect the French ships. Thus a third time an attempt at French co-operation proved a failure.

Newport-Newce, a strategic point on the James River, not far from Hampton Roads. It is a compound word, derived, it is believed, from the names of Captain Newport (who commanded the first vessel that conveyed English emigrants to Virginia) and Sir William Newce, who, at the time George Sandys was appointed treasurer of the colony, received the appointment of Marshal of Virginia. Captain Smith wrote his name *Nuse*.

New Smyrna, GREEK COLONY AT. In 1767 Dr. Trumbull, of Charleston, S. C., went to the place known as New Smyrna, in Florida, with about fifteen hundred persons—Greeks, Italians, and Minorcans—whom he had persuaded to follow him to better their fortunes. He established them on a tract of sixty thousand

acres, and began the cultivation of indigo. Trumbull reduced these poor people to slavery, and treated them most cruelly. The English governor of the territory was his partner in the enterprise. He kept the colonists in subjection by troops. Nine years this slavery lasted, when, in 1776, the petitions of the people were heard and heeded by a new governor just arrived, and they were released from the tyranny of Trumbull. Nearly two thirds of the colonists had then perished. Most of the survivors went to St. Augustine, where their descendants now constitute a considerable portion of the native population.

New Somerset. The provinces held by Gorges after the division of the New England territory he named New Somerset. He sent out his nephew, William Gorges, as deputy-governor of the domain, which extended from the Piscataqua to the Kennebec. He assumed rule over the fishing hamlets there, and held a general court at Saco. (See *Maine, Colonial*.)

Newspaper Press (1861). After the attack on Fort Sumter and the call of President Lincoln for troops, the newspaper press, North and South, indulged in the most foolish boastings. "The nations of Europe," said the *New York Tribune*, "may rest assured that Jeff. Davis & Co. will be swinging from the battlements at Washington at least by the 4th of July. We spit upon a later or longer deferred justice." "Let us make quick work," said the *New York Times*. "The rebellion, as some people designate it, is an embryo tadpole. Let us not fall into the delusion, noted by Hallam, of mistaking a 'local commotion' for a revolution. A strong, active 'pull together' will do the work thoroughly in thirty days." The *Philadelphia Press* said: "No man of sense can for a moment doubt that this 'much ado about nothing' will end in a mouth." It declared that the Northern people were simply "invincible. The rebels—a mere band of ragamuffins—will fly like chaff before the wind on our approach." The *Chicago Tribune* said: "Let the East get out of the way. This is a war of the West. We can fight the battle, and successfully, within two or three months, at the farthest. Illinois can whip the South by herself. We insist on the matter being turned over to us." The *Cincinnati Commercial* said: "The rebellion will be crushed out before the assembling of Congress." The Southern press, richer in vituperative language, was full of boasting and abuse. A single specimen will suffice. The *Mobile Advertiser*, one of the ablest and most respectable of the Southern journals, used the following language, after President Lincoln's call for troops and the riot in Baltimore (which see): "The Northern 'soldiers' are men who prefer enlisting to starvation; scurvy fellows from the back slums of cities, whom Falstaff would not have marched through Coventry with. But these are not soldiers—least of all to meet the hot-blooded, thoroughbred, impetuous men of the South. Trencher soldiers, who enlisted to war upon their rations, not on men. They are such as marched through Baltimore [the Massa-

ohnsetts Sixth, admirably clothed, equipped, and disciplined, and composed of some of the best young men of New England], squalid, wretched, ragged, and half-naked, as the newspapers of that city report them. Fellows who do not know the breech of a musket from its muzzle, and had rather filch a handkerchief than fight an enemy in manly combat. White slaves, peddling wretches, small-change knaves and vagrants, the dregs and offscourings of the populace. These are the levied 'forces' whom Lincoln suddenly arrays as candidates for the honor of being slaughtered by gentlemen—such as Mobile sends to battle. Let them come South, and we will put our negroes to the dirty work of killing them. But they will not come South. Not a wretch of them will live on this side of the border longer than it will take us to reach the ground and drive them off." To show contempt for the national government, the *Mobile Advertiser*, on the day after the call of the President for troops, contained the following advertisement: "SEVENTY-FIVE THOUSAND COFFINS WANTED. Proposals will be received to supply the Confederacy with seventy-five thousand black coffins. No proposals will be entertained coming north of Mason and Dixon's line. Direct to JEFF. DAVIS, Montgomery, Ala." These were foolish and fatal boastings. Neither the "North" nor the "South" seemed to comprehend the gravity of the occasion.

Newspapers in America first appeared at the beginning of the eighteenth century. The first one published in this country was called *Public Occurrences*, and was issued at Boston in September, 1690. It lived only one day. It was so radically democratic and outspoken that it was smothered by the magistrates on the day of its birth. The first permanent newspaper was the *Boston News-Letter*, issued in April, 1704. The dates of the first issuing of newspapers in the original thirteen states are as follows: In Massachusetts, 1704; Pennsylvania, 1719; New York, 1725; Maryland, 1728; South Carolina, 1732 (the first newspaper issued south of the Potomac); Rhode Island, 1732; Virginia, 1736; Connecticut, 1755; North Carolina, 1755; New Hampshire, 1756; Delaware, 1761. The first daily newspaper was the *Pennsylvania Packet, or General Advertiser*, first published daily by John Dunlap, in 1784, and then changed, in name, to the *Daily Advertiser*. The number of newspapers in the colonies at the breaking-out of the war for independence in 1775 was only thirty-seven, whose total weekly circulation did not exceed 4000 copies; in 1875 there were 6793, and their total annual issues numbered about 2,000,000,000 copies. Of these, 724 were dailies and 5869 were weeklies. About one seventh of the daily papers issue semi-weekly or tri-weekly editions. In 1833 the first of the cheap or "penny" papers was issued in New York by Benjamin H. Day, yet (1880) living, called the *Sun*, and immediately acquired an enormous circulation. It was at first less than a foot square.

Newspapers in the United States (1798). At the time of the passage of the Alien and Sedition

laws (which see) there were about two hundred newspapers published in the United States. Of these, about one hundred and seventy-five were supporters of the national administration; the remainder were chiefly under the control of aliens. Although there were eight daily papers in Philadelphia and five or six in New York, it was seldom that any one had an editor distinct from the printer and publisher. One of the first papers established on that plan in New York was the *Minerva*, a daily paper, set up in 1794, of which the name had lately been changed to the *Commercial Advertiser*. It was the ablest paper in the country on the Federal side, and was edited by Noah Webster, afterwards the lexicographer. Out of New England the publishers of newspapers were principally foreigners. They were wielding a powerful influence by being vehicles for communication with the people by such men as Hamilton, Jay, Madison, King, Ames, Cabot, and many others; and, in the half-century between 1765 and 1815, this peculiar literature of America is to be found in its newspapers, sometimes coarse and vulgar, but always vigorous. From 1790 to 1800 the political newspapers (and they were nearly all so) teemed with scandalous personal attacks. Chief-justice McKean, in his charge in a libel case in which Cobbett was concerned (see *Porcupine's Works*), said, in 1797: "Every one who has in him the sentiments of either a Christian or a gentleman cannot but be highly offended at the evenommed scurrility that has raged in pamphlets and newspapers printed in Philadelphia for several years past, inasmuch that libelling has become a national crime, and distinguishes us not only from all the states around us, but from the whole civilized world. Our satire has been nothing but ribaldry and Billingsgate; the contest has been, who could call names in the greatest variety of phrases; who could mangle the greatest number of characters, or who could excel in the magnitude of their lies. Hence the honor of families has been stained; the highest posts rendered cheap and vile in the sight of the people, and the greatest services and virtue blasted."

New Sweden. Gustavus Adolphus, King of Sweden, inspired by William Usselinx, the projector of the Dutch West India Company, formed a project for planting a Swedish colony in America. The plan was confirmed by the diet, and at Nuremberg the king, in the midst of a stirring campaign, by proclamation (Oct. 16, 1632), recommended the enterprise to his countrymen. Eighteen days later he was killed, at Lützen, and his crown descended to his daughter Christina, a child six years old. Axel (Count Oxenstiern) became regent of Sweden, and favored the colonization scheme. A charter was confirmed by the diet in 1634, and three years afterwards the scheme was carried out. After his recall from New Netherland, Governor Minuit visited Stockholm and offered the benefit of his experience in America to the Swedes; and towards the close of 1637 he sailed from Gottenburg, with a commission signed by the Swedish authorities, to plant a new colony on the west side of Delaware Bay, where there was then no

European colony. Minuit sailed in a ship of war with fifty emigrants (some of them bandits to be employed as galley-slaves in erecting fortifications), supplied with a Lutheran clergyman, provisions, ammunition, and goods for traffic with the natives. The expedition touched at Jamestown in the early spring (1638) for wood and water, and reached Delaware Bay early in April. Going up the bay, Minuit landed and procured from an Indian sachem a deed, written in Low Dutch, for a region which the Swedish governor declared extended from Cape Henlopen to the falls of the Delaware at Treuton and an indefinite distance inland. Hearing of this arrival, the Dutch inquired what it meant. Minuit answered that he was planting a colony, and should build a fort and trading-house, having as good a right to do so as the Dutch West India Company. Kieft protested and threatened, as it was claimed that the Delaware, or South, River was in New Netherland. But Minuit persisted, built a fort on the site of Wilmington, and, in compliment to the young queen, called it Fort Christina. Trade with the natives flourished. Hollanders joined them in 1640, and the new settlement gave the company much uneasiness. Minuit died at Fort Christina in 1641, and the Swedish government proceeded to place their colony on the Delaware on a permanent footing. The settlement was called "New Sweden," and in 1643 John Printz, a brave soldier, arrived as governor. He resided on Tinicum Island, twelve miles below Philadelphia, and a new fort was built. The Swedes became lively rivals of the Dutch for the fur-trade, and Printz tried to inflame the Indians with hostility to the Hollanders. When Stuyvesant came to New Netherland the Swedes were more circumspect. He visited Printz, demanded the title of the Swedes to land there, and, summoning the chiefs of the Indian tribes to a council at Fort Nassau, learned from them that the Swedes had usurped nearly all the land they claimed. Near the site of New Castle, Stuyvesant proceeded to build a fort (Kasimer), unmindful of the protests of Printz, who, finding his situation unpleasant, returned to Sweden in 1653. He was succeeded by John Claudius Risingh, a warlike magistrate, with some soldiers under the bold Sven Schute. These soon captured Fort Kasimer (1654), and called it Fort Trinity, as the surrender occurred on Trinity Sunday. Stuyvesant was enraged, but pent his wrath until September of the following year, when, with seven vessels and over six hundred soldiers, he sailed for the Delaware, accompanied by some of the civil officers and the pastor of the church. Stuyvesant, on landing between forts Kasimer and Christina, sent an ensign, with a drum, to demand the surrender of the former. Sven Schute complied, and, in the presence of Stuyvesant and his suite, he drank the health of the governor in a glass of Rhenish wine. It was a bloodless victory; and before the end of September (1655) the conquest of New Sweden was completed. Stuyvesant wisely made friends of the conquered people, and they became loyal citizens of New Netherland. (See *Maine, Colonial.*)

New Territory, A. During the second session of the First National Congress, North Carolina ceded its western lands to the United States. It was approved by Congress, and the region south of the Ohio was formed (1790) into a territorial government, with the same powers and privileges as had been granted to the territory north of that river, but without restrictions concerning slavery. (See *Northwestern Territory.*)

Newton, JOHN, was born in Virginia, in 1820. He graduated at West Point in 1842, entering the engineer corps. From 1843 to 1846 he was assistant professor of engineering there. He had been in various engineering services when the Civil War broke out. Then (September, 1861) he was made brigadier-general of volunteers, and commanded a brigade in the Peninsula campaign in 1862. He behaved gallantly at South Mountain and Antietam, and commanded a division in the battle at Fredericksburg, late in the year, and at Gettysburg in 1863. He afterwards commanded the First Corps until near the close of the year. Newton was in command of the Fourth Corps as major-general of volunteers in the Atlanta campaign, in 1864, and afterwards commanded the District of Key West and Tortugas until January, 1865. In March, 1867, he was breveted major-general of the United States Army for "meritorious services during the Rebellion." In 1876 he was successfully engaged in removing the dangerous rocks at Hell Gate, East River.

New York, AN ATTACK UPON, FRUSTRATED (1781). Before the arrival of the French army on the Hudson, Washington had contemplated an attack on the British on the north part of New York Island. He had received intimations from the Count de Grasse, in the West Indies, that he might be expected soon on the American coast with a powerful fleet. Washington and Rochambeau both wrote letters to the admiral, pressing him to bring additional troops with him. The expectation of this fleet and the approach of the French army made Washington feel strong enough to attempt the enterprise. Before he was ready to execute it, a reinforcement of three thousand Hessian troops joined Clinton in New York (Aug. 11), and the proposed expedition was abandoned.

New York and the Continental Congress. On Jan. 26, 1775, Abraham Tenbroeck moved, in the New York Assembly, to take into consideration the proceedings of the First Continental Congress. He was ably seconded by Philip Schuyler and a greater portion of those who were of Dutch descent, as well as George Clinton. The motion was lost by a majority of one. Toryism was then rife in that Assembly. They refused to vote thanks to the New York delegates in the Congress, or to print the letters of the Committee of Correspondence. They expressed no favor for the American Association; and when, on Feb. 23, it was moved to send delegates to the Second Continental Congress, the motion was defeated by a vote of nine to seventeen. The Assembly was false to its constituents,

for a majority of the province was, in heart, with Massachusetts.

New York Bills of Credit. At the beginning of autumn, 1775, the New York Provincial Congress issued bills of credit to the amount of \$112,000, and adjourned for a month, leaving public affairs in the hands of a Committee of Safety.

New York, CAPTURE OF, BY THE BRITISH (1776). General Howe selected the 13th of September, 1776, for the landing of his army on New York Island from Long Island. It was the anniversary of the capture of Quebec, in 1759, in which Howe participated. The watchword was

KIP'S HOUSE.

"Quebec!" the countersign was "Wolfe!" In the afternoon four armed ships, keeping up an incessant fire on the American batteries, passed them into the East River, and anchored, but no landing was attempted that day. On the next day, about sunset, six British vessels ran up the East River, and on the 15th three others entered the Hudson, and anchored off Bloomingdale. This put a stop to the removal of American stores to

instrument appeared so objectionable "that nothing but the fullest confidence of obtaining a revision of them by a General Convention and an invincible reluctance to separate from their sister states could have prevailed on a sufficient number to ratify, without stipulation for previous amendments." They recommended to the states to make application to the First National Congress, to meet in March, 1789, to authorize a new Constitutional Convention. This proposition was responded to by Pennsylvania, Virginia, North Carolina, and Rhode Island. A series of amendments to the Constitution had been proposed. The friends of that instrument looked upon the New York circular with alarm, and while they were willing to consider amendments, they strenuously opposed a convention, and the matter was, after much discussion, dropped.

New York City, GREAT FIRE IN. On Dec. 16, 1835, a fire broke out which swept the First Ward, east of Broadway and below Wall Street, destroying 529 buildings, most of them valuable stores; also the Merchants' Exchange and the South Dutch Church. The property destroyed was valued at more than \$20,000,000.

New York City taken by the British (1776). Washington's army had escaped capture on Long Island, but had to contend, in the city of New York, with deadlier foes, in the form of city temptations, sectional jealousies, insubordination, disrespect for superiors, drunkenness, and licentiousness, the fatal elements of dissolution. The British were evidently preparing to crush this weak army. Their ships occupied the bay and both rivers, and there

FORT GEORGE, FROM THE WATER FRONT OF THE PRESENT CASTLE GARDEN.

Dobbs's Ferry by the Americans. On that day the British landed on the shores of Kip's Bay (near the present Thirty-fourth Street), under cover of a cannonade from the ships of war. They took post near the centre of the island, and came very near cutting off the rear-guard of the American army, on its way to Harlem Heights, whither the troops under Washington had withdrawn.

New York Circular Letter, THE. The Convention of the State of New York, held at Poughkeepsie, adopted the national Constitution by a bare majority, and it addressed a circular letter to all the other ratifying states, in which they declared that several of the articles in that in-

were swarms of loyalists in New York and in Westchester County. At a council of war (Sept. 12, 1776) it was resolved to send the military stores to Dobbs's Ferry, on the Hudson, and to retreat to and fortify Harlem Heights, on the northern part of Manhattan Island. The sick

were taken over to New Jersey. The main body of the army, accompanied by a host of Whigs, left the city (Sept. 14) and moved towards Fort Washington, leaving a rear-guard of four thousand men, under General Putnam. On the 16th they were on Harlem Heights, and Washington made his headquarters at the house of Colonel Roger Morris, his companion-in-arms in the battle on the Monongahela. On the 15th the British and Germans crossed the East River at Kip's Bay (foot of Thirty-fourth Street), under cover of a cannonade from their ships. The American guard fled at the first fire, and two brigades that were to support them ran away in a panic. But the British were kept back long enough to allow Putnam, with his rear-guard, to escape along a road near the Hudson River, and gain Harlem Heights. This was done chiefly by the adroit management of Mrs. Murray, a Quakeress, living on the Inceberg (now Murray Hill), who entertained the British officers with wines and other refreshments, and vivacious conversation. Putnam, on hearing of the landing at Kip's Bay, had struck his flag at Fort George, foot of Broadway, and made his way to Harlem Heights, sheltered from observation by intervening woods. Lord Dunmore, who was with the British fleet, went ashore and unfurled the British standard over the fort. On the same day (Sept. 15, 1776) British troops, under General Robertson, took possession of the city of New York, and held it seven years, two months, and ten days. Howe made his headquarters at

BECKMAN'S MANSION.

the Beekman mansion at Turtle Bay (about Forty-fifth Street and East River).

NEW YORK, COLONY OF. The bay of New York and its great tributary from the north, with the Island of Manhattan, upon which New York city now stands, were discovered by Henry Hudson, in the early autumn of 1609. (See *Hudson, Henry*.) The Indians called the river Mahicannick, or "River of the Mountains." The Dutch called it *Manritius*, in compliment to Prince Maurice, and the English gave it the name of *Hudson's River*, and sometimes *North River*, to distinguish it from the Delaware, known as *South River*. The country drained by *Hudson's River*, with the adjacent undefined territory, was claimed by the Dutch. The year after the discovery, a ship, with part of the crew of the *Half Moon*, was laden with cheap trinkets and other things suitable for traffic with the Indians, sailed from the Texel (1610), and en-

tered the month of the *Mauritius*. The adventurers established a trading-post at Manhattan, where they trafficked in peltries and furs brought by the Indians, from distant regions sometimes. Among the bold navigators who came to Manhattan at that time was Adrian Block, in command of the *Tigress*. He had gathered a cargo of skins, and was about to depart late in 1613, when fire consumed his ship and cargo. He and his crew built log-cabins at the lower end of Manhattan, and there constructed a rude ship during the winter, which they called *Oonrust*—"nurest"—and this was the beginning of the great commercial mart, the city of New York. In the spring of 1614 Block sailed through the dangerous strait at Hell Gate, passed through the East River and Long Island Sound, discovering the Housatonic, Connecticut, and Thames rivers, and that the long strip of land on the south was an island (Long Island); saw and named Block Island, entered Narraganset Bay and the harbor of Boston, and, returning to Amsterdam, made such a favorable report of the country that commercial enterprise was so greatly stimulated that, in 1614, the States-General of Holland granted special privileges for traffic with the natives by Hollanders. A company was formed, and with a map of the Hudson's River region, constructed, probably, under the supervision of Block, they sent deputies to the Hague—the seat of government—to obtain a charter. It was obtained on Oct. 11, 1614, to continue four years. The territory included in this charter of privileges—between the parallels of latitude 40° and 45° north, as "lying between Virginia and New France"—was called *New Netherland*. At the expiration of the charter, the privilege of a renewal was denied, for a more extended and important charter was under contemplation. In the year 1602 Dutch merchants in the India trade had formed an association with a capital of \$1,000,000, under the corporate title of "*Dutch East India Company*." Their trading privileges extended over all the Indian and Southern oceans between Africa and America. In 1607 they asked for a charter for a *Dutch West India Company*, to trade along the coast of Africa from the tropics to the Cape of Good Hope, and from Newfoundland to Cape Horn along the continent of America. It was not then granted, for political reasons, but after the discovery of New Netherland the decision was reconsidered, and on June 3, 1620, the States-General chartered the *Dutch West India Company*, making it not only a great commercial monopoly, but giving it almost regal powers to colonize, govern, and defend, not only the little domain on the Hudson, but the whole unoccupied Atlantic coast of America and the western coasts of Africa. (See *Dutch West India Company*.) Meanwhile the Dutch had explored Delaware Bay and River, probably as far as Trenton, and had endeavored to obtain a four years' charter of trading privileges in that region, but it was regarded as a part of the English province of Virginia. At the same time the traders on Hudson's River had been very enterprising. They built a fort on an island just below the

site of Albany, enlarged their storehouse at Manhattan, went over the pine barrens from the Hudson into the Mohawk valley, and became acquainted with the nations of the Iroquois Confederacy, and made a treaty with them. The Plymouth Company complained that they were intruders on their domain. (See *Plymouth Company*.) King James growled, and Captain Dermer gave them a word of warning. (See *Dermer, Thomas*.) The Dutch West India Company was organized in 1622. Its chief objects were traffic and humbling Spain and Portugal, not colonization. But the attention of the company was soon called to the necessity of founding a permanent colony in New Netherland, in accordance with the English policy, which declared that the rights of eminent domain could only be secured by actual permanent occupation. King James reminded the States-General that Hollanders were unlawfully seated on English territory, but the Hollanders paid no more attention to his worst threats than to take measures for founding an agricultural colony. At that time Holland was the asylum for the oppressed for conscience' sake from all lands. There was a class of refugees there called Walloons, natives of the southern Belgic provinces, whose inhabitants, about forty years before, being chiefly Roman Catholics, had refused to join those of the northern provinces in a confederacy. The Protestants of these provinces (now Belgium) were made to feel the lash of Spanish persecution, and thousands of them fled to Holland. These were the Walloons, who spoke the French language. They were a hardy, industrious race, and introduced many of the useful arts into their adopted country. Some of them wished to emigrate to Virginia, but the terms of the London Company were not liberal, and they accepted proposals from the Dutch West India Company to emigrate to New Netherland. A ship of that name, of 260 tons burden, laden with thirty families (one hundred and ten men, women, and children), mostly Walloons, with agricultural implements, live-stock of every kind, and a sufficient quantity of household furniture, sailed from the Texel early in March, 1623, with Cornelius Jacobus May, of Hoorn, as commander, who was also to remain as first director, or governor, of the colony. They took the tedious southern route, and did not reach Manhattan until the beginning of May, where they found a French vessel at the mouth of the Hudson, whose commander had been trying to set up the arms of France on the shore, and to take possession of the country in the name of the French monarch. The yacht *Mackereel* had just come down the river. With two cannons taken from the little fort at the southern end of the island, the Frenchman was compelled to desist. His vessel was convoyed to sea, when it went round to the Delaware, and there her commander attempted the same kind of proclamation of sovereignty. He was treated by the Dutch settlers there as at Manhattan, when he sailed for France. This ridiculous performance was the last attempt of the French to assert jurisdiction south of north latitude 45° until a long time afterwards. (See *Céloron's*

Expedition.) These emigrants were soon scattered to different points to form settlements—some to Long Island, some to the Connecticut River, others to the present Ulster County, and others founded Albany, where the company had just built a fortification, and called it Fort Orange. Four young couples, married on ship-board, went to the Delaware, and began a settlement on the east side of the river (now Gloucester), four miles below Philadelphia, where they built a small fortification, and called it Fort Nassau. Eight seamen, who went with them, remained and formed a part of the colony. The company, encouraged by successful trading, nurtured the colony. In 1626 they sent over Peter Minuit as governor, who bought Manhattan Island of the natives, containing, it was estimated, twenty-two thousand acres. At its southern end he built a fortification, calling it Fort Amsterdam, and the village that grew up near it was afterwards named New Amsterdam. The States-General constituted it a county of Holland, and its seal had a shield enclosed in a chain, denoting union, and bore an escutcheon on which was the figure of a beaver. The crest was the coronet of a count. So it was that, within fifteen years after the discoveries of Hudson, the foundations of this great commonwealth were firmly laid by industrious and virtuous families, most of them voluntary exiles from their native lands, to avoid persecution on account of theological dogmas. These were followed by others, equally good and industrious. In 1629 the company gave to the settlers a charter of "privileges and exemptions," which encouraged the emigration of thrifty farmers from the father-land. As much land was offered to such emigrants as they could cultivate, with "free liberty of hunting and fowling," under the directions of the governor. They also offered to every person who should "discover any shore, bay, or other fit place for erecting fisheries or the making of salt-ponds," an absolute property in the same. As the rural population of Holland were not generally rich enough to avail themselves of these privileges, grants of extensive domains, with manorial privileges, were offered to wealthy persons who should induce a certain number of settlers to people and cultivate these lands. (See *Patroons*.) Under this arrangement some of the most valuable part of the lands of the company passed into the possession of a few persons, and an aristocratic element was introduced. The colony was flourishing when Governor Minuit returned to Amsterdam, in 1632, and was succeeded next year by Walter Van Twiller, who had married a niece of Killian Van Rensselaer, a rich pearl-merchant, and who became a patroon. Van Twiller was stupid, but shrewd, and the colony prospered in spite of him. At the end of four years he was succeeded by William Kieft, a spiteful, rapacious, and energetic man, whom De Vries numbered among great rascals. His administration was a stormy one. He exasperated the surrounding Indian tribes by his cruelties, and so disgusted the colonists by his conduct that, at their request, he was recalled,

and sailed for Enrope, with ill-gotten wealth, in the spring of 1647, and perished by shipwreck on the shores of Wales. (See *Kieft, William*.) Peter Stuyvesant succeeded Kieft. He was a brave soldier, who had lost a leg in battle, and came to New Netherland from Curaçoa, where he had been governor. He was then forty-four years of age, energetic, just, and so self-willed that Washington Irving called him "Peter the Headstrong." He conciliated the Indian tribes, and systematically administered the affairs of the colony. He came in collision with the Swedes on the Delaware and the English on the Connecticut River. (See *Swedes on the Delaware*.) During his administration he subdued the Swedes (1655), and annexed the territory to New Netherland. (See *New Sweden*.) Finally serious political troubles overtook the colony. From the beginning of the settlement the English claimed New Netherland as a part of Virginia, resting their claim upon the discovery of Cabot. (See *Cabot, John and Sebastian*.) In 1622 the English minister at the Hague demanded the abandonment of the Dutch settlements on the Hudson. Five years afterwards Governor Bradford, of Plymouth, gave notice to Governor Minuit that the patent of New England covered the domain of New Netherland. (See *Dutch at Plymouth*.) In the spring of 1664 Charles II. granted to his brother James, Duke of York, all New Netherland, including the region of country between the Hudson and Delaware rivers; and in August the same year an English fleet appeared before New Amsterdam and demanded its surrender. (See *New Amsterdam*.) Governor Stuyvesant resisted for a while, but was compelled to comply, and the whole territory claimed by the Dutch passed into the possession of the English on the 8th of September, 1664.

of short duration, for, by treaty, it was re-surrendered to the English early in 1674. A new grant was made to the Duke of York in June the same year, which included all the domain west of the Connecticut to the eastern shore of the Delaware; also Long Island and a territory in Maine. (See *Pemaquid*.) At the treaty of peace between England and Holland, the Dutch were allowed to retain the colony of Surinam, in Guiana, England retaining New York. Edward Andros was appointed governor, and a formal surrender of the province occurred in October. In 1683 Thomas Dongan became governor, and, under instructions from the Duke of York, he called an Assembly of representatives chosen by the people, and a Charter of Liberties was given to the colonists. This was the foundation of representative government in New York; but James the king did not fulfil the promises of James the duke, and the privileges he had promised were denied. (See *Dongan, Thomas*.) When James was driven from the throne, and Nicholson, the lieutenant-governor, afraid of the people, fled, Jacob Leisler, a merchant of republican tendencies, administered the government for some time in the name of the new sovereigns, William and Mary. When Sloughter, the royal governor, came, the enemies of Leisler procured his execution by hanging. (See *Leisler, Jacob*.) During these political troubles western New York, then inhabited by the Seneca Indians, was invaded by the French, under De Nonville, Governor of Canada. (See *De Nonville's Expedition*.) Two years later (1689) the Five Nations retaliated by invading Canada. The retribution was terrible. More than one thousand French settlers were slain, and the whole province was threatened with destruction. The French then attacked the English. A party of Canadians and Indians

NEW YORK IN 1664.

(See *Stuyvesant*.) To New Amsterdam and New Netherland was then given the name of New York, in compliment to the proprietor. The former was retaken by the Dutch on the 9th of August, 1673, and the name of the city was changed to New Orange. Anthony Colve became governor. But the Dutch possession was

burned Schenectady (Feb. 9) in 1690, and murdered nearly all of the inhabitants. (See *Schenectady*.) The French invaded the Mohawk country in 1693, but the greater part of them perished before they reached Canada. Count Frontenac, Governor of Canada, prepared to attack the Five Nations with all his power, when the

governor of New York (Earl of Bellomont), declared that the English would make common cause with the Iroquois Confederacy. The colony was largely involved in debt by military movements during Queen Anne's War, in which the English and French were engaged from 1702 to 1713. The vicinity of Lake Champlain afterwards became a theatre of hostile events. In 1731 the French built Fort Frederick at Crown Point, for a defence at the natural pass between the Hudson and St. Lawrence; and in 1745 a party of French and Indians invaded the upper valley of the Hudson and destroyed Saratoga. Finally, in 1754, the English and French began their final struggle for supremacy in America, in which the Indians bore a conspicuous part. (See *French and Indian War*.) Meanwhile the colony had been the theatre of warm political strife between the adherents of royalty and democracy. The death of Leisler had created intense popular feeling against royal rule by deputies, and there was continual contention between the popular assembly and the royal governor. (See *Leisler, Jacob*.) There was a struggle for the freedom of the press, in which the people triumphed. (See *Zenger's Trial*.) A colonial convention was held at Albany in 1754, to devise a plan of union (see *Albany, Fourth Colonial Convention at*), and during the French and Indian War many of its most stirring events occurred in the province of New York. That war ended by treaty in 1763, and not long afterwards began the struggle of the English-American colonies against the oppressions of Great Britain. New York took a leading part in that struggle, and in the war for independence that ensued. In March, 1777, a state constitution was framed, after mature deliberation, in a plain house built of blue limestone, on

"THE CONSTITUTION HOUSE," KINGSTON.

the southwest corner of Maiden Lane and Fair Street, in which the convention of the province held its sessions. It was one of the few houses which escaped the conflagration kindled by the British in the autumn of the same year. (See *Kingston, Burning of*.)

New York Evacuated by Loyalists. The only place on the seaboard of the Republic occupied by British troops on the 1st of Novem-

ber, 1783, was the city of New York and its immediate vicinity. Sir Guy Carleton was ordered to evacuate that city. Delays in providing transportation for the loyalists to Nova Scotia postponed the evacuation until Nov. 25. (See *Evacuation of New York*.) There were more than a thousand of these unfortunate refugees who fled to a distant land to escape the righteous indignation of their countrymen. It was a sad sight. Many of them were families of wealth and social distinction, who had been the most bitter enemies of the patriots struggling for freedom. Now adverse circumstances impelled them to reap, in sorrow, the harvest of their unkind seed-sowing. They now had to encounter privations and distress they knew not of, leaving their estates behind to suffer confiscation. But there was one seemingly bitter Tory, more obnoxious to the Whigs than any one in the city, who was allowed to remain. He was James Rivington (which see), the "king's printer," who, in his newspaper, had abused the patriots for years without stint. Why this indulgence? It was clearly revealed afterwards, that while professing the warmest friendship for the British, he had secretly furnished Washington with important information concerning military affairs in the city. The indulgence was his reward for valuable services.

New York Excited. When Hardy's squadron appeared on the New England coast, in the summer of 1814, and a powerful British force appeared in Chesapeake Bay, the inhabitants of New York expected to be attacked, and were as much excited as were those of Boston. (See *Blockade, Actual and Proclaimed*.) The mayor of the city (De Witt Clinton) issued a stirring address to the people, setting forth reasons why New York would probably be attacked, and recommended the militia to be in readiness for duty. He also called upon the citizens to offer their personal services and means to aid in the completion of the fortifications around the city. A large meeting of citizens was held in City Hall Park on Aug. 9, when a committee of defence was chosen from the Common Council, with ample power to direct the efforts of the inhabitants in the business of securing protection. Men in every class of society worked daily in constructing fortifications at Harlem and Brooklyn. Members of various churches and of social and benevolent organizations went out in groups, as such, to the patriotic task; so, also, did different craftsmen under their respective banners, such as were described, as follows, by Samuel Woodworth:

"Plumbers, founders, dyers, tanners, shavers,
Sweep, clerks and criers, jewellers, engravers,
Clothiers, drapers, players, cartmen, hatters, tailors,
Gaugers, scalers, wig makers, carpenters, and sailors."

The zeal of the people was intense; and the city of New York was soon well defended by fortifications and numerous militia. Woodworth wrote a stirring poem, which was everywhere sung. The following is the concluding stanza:

"Better not invade; recollect the spirit
Which our dads displayed and their sons inherit.
If you still advance, friendly caution slighting,
You may get, by chance, a bellyful of fighting.
"Chock's.—Pickaxe, shovel, spade, crow-bar, hoe, and barrow;
Better not invade; Yankees have the marrow."

The fortifications thrown up around New York were constructed under the skilful superintendence of General Joseph Swift (which see).

New York, FIRST ASSEMBLY OF. Thomas Dongan was sent by the Duke of York to be governor of New York in 1683, with instructions to call a popular assembly. This order was in response to a petition of the council, the Court of Assizes, and the corporation of the city of New York, to allow the people to have a share in the government. The Assembly convened on the 17th of October, 1683. It was composed of ten councillors and seventeen deputies elected by the freeholders, who, with the governor, constituted the legislative and executive power of the province. They passed a tax-bill, and adopted a declaration of rights, in which they claimed, among other things, that no tax ought to be assessed except by consent of the Assembly. The colony was, at that session, divided into twelve counties—namely, New York, Richmond, King's, Queen's, Suffolk, Orange, Ulster, Albany, Dutchess, Westchester, Duke's, and Cornwall. The last two were soon detached from the province, the former now in Massachusetts, the latter in Maine. (See *New York, Political Division of*.)

New York first Proposes a General Congress. The Sons of Liberty in New York—called by the loyalists the "Presbyterian Junto"—roused by the injustice of the Boston Port Bill (which see), by their representative committee, in May, 1774, proposed a General Congress of delegates from the several colonies. They forwarded their proposal to Boston, exhorting Massachusetts to stand firm. They also sent the recommendation to the Philadelphia committee, and through them to all the southern colonies. All New England received the same. This was the inception of the first Continental Congress.

New York Petition (1775). While the British Parliament, for a sinister purpose, was exempting New York from the operations of the Mutiny Act (which see), the Assembly of that province were preparing a petition to the king, wherein they enumerated grievances, and declared themselves interested in the welfare of the other colonies; deplored the distress inflicted on Massachusetts by the Boston Port Bill; and remonstrated against that measure. "We claim," they said, "but a restoration of those rights which we enjoyed, by general consent, before the close of the last war [French and Indian]; we desire no more than a continuance of that ancient government to which we are entitled by the principles of the British Constitution, and by which alone can be secured to us the rights of Englishmen." Edmund Burke, the agent of the colony, presented this petition to Parliament, and highly eulogized the province of New York for its loyalty. He moved to have the petition brought up in Parliament, but the proposition was rejected.

New York Plan of Accommodation. Standing face to face with civil war and all its horrors, and still feeling a lingering affection for Great Britain, the New York Provincial Congress, in June, 1775, proposed a plan of concilia-

tion with Great Britain, which they urged their representatives in the Continental Congress to press with zeal. "Use every effort," they said, "for compromising this unhappy quarrel, so that, if our well-meant endeavors should fail of effect, we may stand unrepachable by our own consciences in the last solemn appeal to the God of battles." They proposed a repeal of the obnoxious acts of Parliament; the undisturbed exercise, by the colonies, of the power of internal legislation and taxation, and the free enjoyment of the rights of conscience; conceded to Great Britain the power to regulate the trade of the whole empire; and promised, on proper requisitions, assistance in the general defence, either from the colonies severally, or through a Continental Congress under a president appointed by the crown.

New York, POLITICAL DIVISION OF. In 1691 the province of New York was re-divided into ten counties—namely, New York, Westchester, Ulster, Albany, Dutchess, Orange, Richmond, King's, Queen's, and Suffolk. Cornwall County, in Maine, and Duke's County, in Massachusetts, forming a part of the domain of New York, were transferred to those colonies under its new charter.

New York, POSITION OF, ON INDEPENDENCE. The conservatism of New York disappeared when it was evident that the door of reconciliation had been closed by the king. On May 24, the convention referred the vote of the Continental Congress of the 15th, on the establishment of independent state governments, to a committee composed of John Morin Scott, Haring, Reusen, Lewis, Jay, Cnyler, and Broome. They reported in favor of the recommendation of the Congress. On the 31st, provision was made for the election of new deputies, with ample power to institute a government which should continue in force until a future peace with Great Britain. Early in June the Provincial Congress had to pass upon the subject of independence. Those who had hitherto hesitated, with a hope of conciliation, now fell into line with the radicals, and on the 11th the Provincial Congress, on motion of John Jay, called upon the freeholders and electors of the colony to confer on the deputies to be chosen full powers for administering government, framing a constitution, and deciding the important question of independence. The newly instructed Congress was to meet at White Plains on July 9 (1776). Meanwhile the Continental Congress, by the vote of eleven colonies, had adopted (July 2) a resolution for independence, and a declaration of the causes for the measure on July 4. The new Congress of New York assembled at White Plains on the 9th, with Nathaniel Woodhull as President; and on the afternoon of that day, when thirty-five delegates were present, John Jay made a report in favor of independence. The convention approved it by a unanimous vote, and directed the Declaration adopted at Philadelphia to be published with beat of drum at White Plains, and in every district of the colony. They empowered their delegates in Congress to join heartily with the others in moving on the car of revolution, and called

themselves the representatives of the State of New York. So the vote of the thirteen colonies on the subject of independence was made complete, and New York never swerved from the path of patriotic duty then entered upon.

New York Proposes Union. In December, 1769, the New York Assembly, under a pretext of enacting laws for the regulation of trade with the Indians, and with the concurrence of the lieutenant-governor (Colden), invited each province to elect representatives to a body which should exercise legislative power for them all. This was a long stride towards the American Union. Virginia chose representatives for the Congress, but the British ministry, who saw in the movement a prophecy of independence, defeated the scheme.

New York, RECONQUEST OF, BY THE DUTCH. In 1673, the English and Dutch were again at war. A Dutch squadron, after capturing many English trading vessels returning from Virginia, appeared before New York. The governor, Francis Lovelace, was absent in Connecticut, and Colonel John Manning was in command of Fort Amsterdam, which the English had named Fort James. English despotism had weakened the allegiance of the inhabitants of the city, who were mostly Dutch, and who found that their expectations of enjoying "English liberty" were not gratified. When they demanded of the governor more liberty and less taxation, he had unwisely declared, in a passion, that they should have "liberty for no thought but how to pay their taxes." This was resented; and when the Dutch squadron came (July 30, 1673), nearly all the Hollanders in the city regarded their countrymen as liberators. The city was virtually reconquered when the summons to surrender

returned the fire, and shot the enemy's flag-ship "through and through." Then 600 soldiers landed on the shores of the Hudson above the town, where they were joined by 400 Dutch citizens in arms, who encouraged them to storm the fort. They were marching down Broadway for that purpose, when they were met by a messenger from Manning with a proposition to surrender it if his troops might be allowed to march out with the honors of war. The proposition was accepted. The English garrison marched out and the Dutch troops marched in. The flag of the Dutch Republic waved over Fort James, which was now named Fort William Hendrick, and the city was called New Orange, both in honor of William, Prince of Orange, the chief magistrate of Holland. The province was again called New Netherland. (See *New York, Colony of*). Colonel Manning was suspected and even accused of treachery, but he seems to have been more unfortunate than sinful in his defence of the fort.

New York Restraining Act. The Provincial Assembly of New York stendly refused compliance with the demands of the "Mutiny Act" and the "Quarantine Act" (which see), and early in 1767 Parliament passed an act "prohibiting the governor, Council, and Assembly of New York passing any legislative act for any purpose whatsoever." Partial concessions were made; but a new Assembly, convened in February, 1768, composed of less pliable materials, would not recede from its position of independence, though the province was made to feel the full weight of the royal displeasure. In May, 1769, the Assembly yielded, and made an appropriation for the support of the troops.

New York State Convention, SITTINGS OF

STATE HOUSE IN NEW YORK.

was made. When Manning beat the drums for volunteers to defend the town, few came, and those not as friends, for they spiked the cannons in front of the State-house. Manning sent an express for Lovelace; and when the Dutch ships came up and fired broadsides upon the fort, he

THE. The seizure of New York Island, the military operations in lower Westchester, and the activity of the numerous Tories in New York and New Jersey, who threatened to rise in arms and openly join the British, kept the New York State Convention in a state of continual aux-

ity, and sometimes of alarm. They were frequently compelled to change the place of sitting, and for some months the sessions were held, at different times, at Harlem, Kingsbridge, Philipse Manor, White Plains, Croton River, Fishkill, and Kingston. The convention appointed a committee, with John Jay as chairman, for "inquiring into, detecting, and defeating conspiracies." Many arrests of Tories were made, who were sent into Connecticut for safe keeping. The jails and some churches were crowded with prisoners for a while, who were generally released on their parole.

New York, THE STATE OF, was organized in the summer of 1777, a constitution having been adopted in March by the Provincial Congress, sitting at Kingston. In October following, a British marauding force went up the Hudson and burned that place. (See *Kingston, Burning of*.) The records were removed first to the interior of Ulster County, and thence to Poughkeepsie, at which latter place the legislators reassembled early in 1778. That place was the state capital

until 1784, when it was removed to the city of New York. In 1797 Albany was made the permanent state capital. The state constitution was revised in 1801, 1821, 1846, and an unsuccessful attempt at revision was made in 1867-69. During the War of

STATE SEAL OF NEW YORK.

1812-15, the frontiers of New York were almost continually scenes of hostilities. New York was the pioneer in establishing canal navigation. In 1796 the "Western Inland Lock Navigation Company" was incorporated, and improved the bateau-navigation of the Mohawk River, connecting its waters with Oneida Lake by a canal, so that boats laden with merchandise could pass from the ocean to that lake, and then by its outlet and Oswego River to Lake Ontario. In 1800 Gouverneur Morris conceived a plan for connecting Lake Erie with the ocean by means of a canal, and the great Erie Canal that accomplished it was completed in 1825. In 1853-54 the constitution was amended, so as to enable the state to borrow \$9,000,000 to facilitate the completion of its other canals. In November, 1874, several amendments proposed by the Legislature were ratified by a vote of the people. These removed the property qualifications of colored voters; restricted the power of the Legislature to pass private or local bills; made changes in the executive departments; prescribed an oath of office in relation to bribery; established safeguards against official corruption; and removed restrictions imposed upon the Legislature in regard to selling or leasing certain of the state canals. During the late Civil War, the State of New York furnished to the National army 455,568 troops. Of that number the city of New York furnished 267,551. In 1869 the Legislature ratified the Fifteenth

Amendment to the national Constitution. In 1870 this action was annulled by a resolution, and the latter was rescinded in 1872. Slavery, which had been much restricted by the first constitution, was abolished in 1817, but a few aged persons continued in nominal slavery several years later.

New York, THE STATE OF, ORGANIZED. On the 1st of August, 1776, the new Provincial Convention, sitting at White Plains, Westchester Co., appointed a committee to draw up and report a constitution for the state. John Jay was the chairman of this committee. The convention was made migratory by the stirring events in the ensuing autumn and winter, and it sat, after leaving White Plains, at Fishkill, Dutchess Co., and at Kingston, Ulster Co. At the latter place the committee reported a draft of a constitution, written by Mr. Jay. It was under consideration in the convention more than a month, and was finally adopted April 20, 1777. Under it a state government was established by an ordinance passed in May, and the first session of the Legislature was held in July. Meanwhile, elections were held in all the counties excepting New York, King's, Queen's, and Suffolk, then held by the British troops. Brigadier-general George Clinton was elected governor, and Pierre Van Cortlandt, President of the Senate, became lieutenant-governor. John Jay was made chief-justice, Robert R. Livingston, chancellor, and Philip Livingston, James Duane, Francis Lewis, and Gouverneur Morris, delegates to the Continental Congress. By the provisions of the constitution, the governor was to be elected by the people for the term of three years, the legislative department, vested in a Senate and Assembly, deriving their powers from the same source; all inferior offices to be filled by the governor and a council of four senators, one from each district; and to a council of revision, similarly constituted, was assigned the power to pass upon the validity and constitutionality of legislative acts.

New York State, POSITION OF (1861). At the beginning of January, 1861, the Legislature of New York assembled, when the governor (Edwin D. Morgan), in a conciliatory message, offered concessions to the complaining politicians of the South. The Legislature was less yielding, and, on the 11th of January, 1861, a preamble and resolutions were adopted, which spoke out plainly the sentiments of the patriotic people of the state. The preamble spoke of the "insurgent state of South Carolina," and its act of war in firing upon the *Star of the West*; the seizure of forts and arsenals elsewhere, and the treasonable words of the representatives of Southern States in Congress. The first resolution declared that the people of New York were firmly attached to the Union, and the Legislature tendered to the President, through the governor, whatever aid in men and money might be required to enable him to enforce the laws. They directed the governor to send a copy of these resolutions to the governors of all the states. They produced much irritation in

the slave-labor states, and, at the same time, profoundly impressed the thinking people there with a distrust of the assurance of their politicians that secession would be peaceful and that there would be no war. (See *Georgia Ordinance of Secession*.) At that time the population of New York State was nearly four millions.

New York, UNFORTUNATE POSITION OF (1775). On the 15th of May, 1775, the city and county of New York asked the Continental Congress how to conduct themselves with regard to royal regiments which were known to have been ordered to that place. The Congress instructed them not to oppose the landing of troops, but not to suffer them to erect fortifications; to act on the defensive, but to repel force by force, if it should be necessary, for the protection of the inhabitants. Indeed, they had no means for preventing their landing. But this advice of the Continental Congress produced embarrassments, for it virtually recognized the royal authority of every kind in the Province of New York; and when its Provincial Congress met it could only conform to the advice. All parties seemed to tacitly agree to a truce in the use of force. There was respect shown towards the crown officers of every kind, and everything that could possibly be done, with honor, was done to avoid collision and make reconciliation possible. The British ship of war *Asia* was allowed supplies of provisions. The Provincial Congress disapproved the act of the people in seizing the king's arms; offered protection to Guy Johnson, the Indian agent, if he would promise neutrality on the part of the Indians; and, while they sent to the patriots of Massachusetts the expression of their warmest wishes for the cause of liberty in America, they labored hard for the restoration of harmony between the colonies and Great Britain. This timid or temporizing policy was the fruit of a large infusion of the Tory element that marked the aristocratic portion of the inhabitants of New York. In playing the rôle of peace-maker they committed an almost fatal mistake. Edmund Burke, who had been the agent for New York in England, expressed his surprise at "the scrupulous timidity which could suffer the king's forces to possess themselves of the most important port in America."

New York Unrepresented in the Federal Convention. In the Federal Convention at Philadelphia (see *National Constitution*), in 1787, Alexander Hamilton, after submitting his plan of government (which see), in writing, withdrew from the convention for six weeks. His colleagues from New York (Robert Yates and John Lansing, Jr.) were such strong "State Rights" men that, when it was agreed to have a proportionate representation in the House of Representatives, they left the convention in disgust and went home. (See *State Rights Party*.)

Nez Percés (Pierced Noses). This family of the Sahaptin nation (see *Sahaptin*) derived their name, given by the Canadians, it is said, from a practice of piercing their noses for the intro-

duction of a shell ornament. This may have been an early custom of the tribe, but they do not practise it now. Lewis and Clarke passed through their country in their explorations early in this century (see *Lewis and Clarke Expedition*), and made a treaty of peace, which they kept inviolate for full fifty years. They had a fine grazing country on the Clearwater and Lewis rivers, in the territories of Idaho and Washington, and their number was estimated at eight thousand. In 1836 missions and schools were established among them by the American Board of Missions, and efforts were made to induce them to till the ground and have an organized government. They were then about four thousand strong. But they preferred to live in the heathen state, and, so late as 1857, they had only fifty acres under cultivation. The mission was suspended in 1847, after the murder of the Rev. Mr. Whitman by a band of another tribe of Sahaptins. In the Indian war in Oregon, in 1855, the Nez Percés were friends of the white people, and saved the lives of Governor Stevens and others. A treaty had been made the year before for ceding their lands and placing them on a reservation, but a part of the tribe would not consent, and remained in their own beautiful country. By the terms of this treaty (1854) a part of the Nez Percés went on their reservation; the others hunted buffaloes and fought Sioux. Finally, those on the reservation were disturbed by gold-seekers. The advent of these men was followed by the introduction of intoxicating liquors, and a general demoralization ensued. They have two reservations—one (the Lapwai) is a fertile region in the northwestern part of Idaho, and the Kamiah, in northeastern Oregon. There were fifteen hundred and fifty on these reservations in 1874. There were, also, nine hundred Nez Percés in the Wallowa valley, who would not give up their lands. Upon these white settlers intruded, and answers to their remonstrances were gatherings of United States troops to drive them into enforced exile. Finally, in 1877, their chief, Joseph, bearing oppression as long as possible and seeing the crisis before him, broke the long-observed treaty of peace and made war. The struggle was brief. Joseph and his band were defeated; and this always friendly tribe of Indians became the bitter enemies of the white people.

Niagara, FORT, CAPTURE OF (1759). Accompanied by Sir William Johnson as his second in command, General John Prideaux collected his forces (chiefly provincial) at Oswego, for an attack on Fort Niagara, at the mouth of the Niagara River. The influence of Sir William made the Six Nations disregard their late treaty of neutrality with the French (see *Oswego*), and a considerable number joined Prideaux's forces. Sailing from Oswego, the troops reached their destination, and landed, without opposition, on the 7th of July, and immediately began a siege. On the 19th Prideaux was killed by the bursting of a cannon, and the command devolved on Johnson. The garrison, expecting reinforcements from the southern and western French forts, held out for three weeks, when the expect-

ed succor appeared (July 24)—twelve hundred French regulars and an equal number of Indians. Prepared for their reception, Johnson totally routed this relieving force. A large portion of them were made prisoners, and the next day (July 25) the fort and its dependencies, with the garrison of seven hundred men, were surrendered to the English. This connecting-link of the French military posts between Canada and Louisiana was thus effectually broken, and was never reunited. The encumbrance of prisoners and lack of transportation prevented Johnson from joining Amherst at Montreal, and, after garrisoning Fort Niagara, he returned home.

Niagara, FORT, EXPEDITION AGAINST (1755). The plan of the campaign of 1755 (see *French and Indian War*) contemplated an expedition against forts Niagara and Frontenac, to be led in person by General Shirley. With his own and Pepperell's regiments, lately enlisted in New England, and some irregulars and Indians drawn from New York, Shirley marched from Albany to Oswego, on the southern shore of Lake Ontario, where he intended to embark for Niagara. It was a tedious march, and he did not reach Oswego until Aug. 21. The troops were then disabled by sickness and discouraged by the news of Braddock's defeat. Shirley's force was twenty-five hundred in number on the 1st of September. He began the erection of two strong forts at Oswego, one on each side of the river. The prevalence of storms, sickness in his camp, and the desertion of a greater part of his Indian allies, caused him to relinquish the design against Niagara; so, leaving a sufficient number of men at Oswego to complete and garrison the forts, he marched the remainder back to Albany, where they arrived Oct. 24.

Niagara Frontier, EVENTS ON THE (1814). On the retirement of General Wilkinson, General Brown, who had been promoted to a major-general, became commander-in-chief of the Northern Department. He had left French Mills (Feb. 15), on the Salmon River, where the army had wintered, with most of the troops there (2000 in number), and on reaching Sackett's Harbor received an order from the Secretary of War to march with them to the Niagara frontier, to which line Generals Scott and Ripley had already gone. The object was to recover Fort Niagara, restrain British enterprises westward, and, if possible, to invade Canada. Brown, however, did not go to that frontier until many weeks afterwards, owing to menaces of the British on the northern border. It was during Brown's suspense that Oswego was attacked and captured. (See *Oswego, Attack upon*.) General Scott had finally led the army to the Niagara and made his headquarters at Buffalo, at which place General Brown appeared at the close of June, 1814. On the morning of July 3, Generals Scott and Ripley crossed the Niagara River with a considerable force and captured Fort Erie, nearly opposite Black Rock. The garrison withdrew to the intrenched camp of General Riall at Chippewa, a few miles below. The Americans pressed for-

ward, and in the open fields near Chippewa they fought Riall's army (July 5), and drove the British in haste to Burlington Heights. (See *Chippewa, Battle of*.) Lieutenant-general Drummond then gathered all available troops and advanced to the Niagara River. He met the Americans near the great cataract of the Niagara, and there, on the evening of a sultry day (July 25, 1814), one of the most sanguinary battles of the war was fought, beginning at sunset and ending at midnight. (See *Lundy's Lane, Battle at*.) The Americans were left in quiet possession of the field. Brown and Scott were both wounded, and the command devolved on General Ripley, who withdrew to Fort Erie. Drummond again advanced with 5000 men, and appeared before Fort Erie on Aug. 4 and prepared for a siege. There was almost incessant cannonading from the 7th to the 14th. On the 15th Drummond attempted to carry the place by assault, but was repulsed with heavy loss. (See *Siege of Fort Erie*.) Nearly a month elapsed without much being done, when General Brown, who had resumed the chief command, ordered a sortie from the fort. It was successful (Sept. 17). The Americans pressed the besiegers back towards Chippewa. (See *Sortie at Fort Erie*.) Informed that General Izard was approaching with reinforcements for Brown, Drummond retired to Fort George. The Americans abandoned and destroyed Fort Erie Nov. 5, crossed the river, and went into winter-quarters at Black Rock, Buffalo, and Batavia.

Niça, MARCO DE. When Coronado (which see) was sent northward from Mexico to search for mules, he sent Father Niça in advance with a negro companion. The latter was one of the four men of Narvaez's expedition into Florida who made a perilous journey across the continent. Niça returned to Coronado and announced that he had discovered from a mountain-top seven cities, and that he visited one which was called Cibola. It was garnished with gold and pearls. There, he alleged, his negro companion, whom he had sent before, was murdered by the jealous inhabitants. Coronado, in further explorations, found well-built houses in groups—pueblos—"three or four lofty high, with good lodgings and fair chambers, and ladders instead of stairs." He said seven cities were within four leagues of each other, and formed the kingdom of Cibola; but he did not find gold and turquoises. The narrative of Niça was much of it pure fiction. Remains of these pueblos are found in the region traversed by Niça and Coronado.

Nicaragua, INVASION OF. Baffled in an attempt to revolutionize or seize Cuba, ambitious and unpatriotic American politicians turned their attention to Mexico and Central America, coveting regions within the Golden Circle (which see). Their operations first assumed the innocent form of an armed emigration—armed merely for their own protection—and their first theatre was a region on the great isthmus inhabited chiefly by a race of degraded natives. It belonged to the State of Nicaragua, and was known as the Mosquito Coast. It promised to be a territory of great commercial importance. Under

the specious pretext that the British were likely to possess it, and appealing to the "Monroe Doctrine" (which see) for justification, armed citizens of the United States emigrated to that region. Already the great guns of the American navy had been heard there as heralds of coming power. (See *Greytown, Attack upon*.) The first formidable "emigration" took place in the autumn or early winter of 1854. It was alleged that the native king of the Mosquito country bordering on the Caribbean Sea had granted to two British subjects a large tract of the territory, the British having for some time been trying to get a foothold there, and having induced the half-barbarian chief to assume independence of Nicaragua. By a pretended arrangement with the British settlers there, Colonel H. L. Kinney led a band of armed emigrants and proceeded to settle on the territory. The governor of Nicaragua protested against this invasion by citizens of the United States. The Nicaraguan minister at Washington called the attention of the United States government to the subject (Jan. 16, 1855), and especially to the fact of the British claim to political jurisdiction there, and urged that the United States, while asserting the Monroe Doctrine as a correct political dogma, should not sanction the act complained of, as it was done under guarantees of British protection. The United States government so mildly interfered (as a matter of policy) that the "emigration" movement was allowed to go on and assume more formidable proportions and aspects. An agent of the conspirators against the peace and rights of a neighbor of the United States named William Walker, who had already with a few followers invaded the Mexican state of Sonora from California and been repulsed, now appeared on the scene in connection with Kinney, who invited him to assist in "improving the lands and developing the mineral resources" of his grant on Lake Nicaragua. For that purpose, ostensibly, Walker left San Francisco with three hundred men, and arrived on the coast of Nicaragua on June 27, 1855. On the following day he cast off all disguise and attempted to capture the town of Rivas, under an impression that a revolutionary faction there would join him in his scheme of conquest. He was mistaken. He had been joined on his march by one hundred and fifty Central Americans under General Castellon, but when these saw the Nicaraguan forces coming against them, they deserted Walker. The latter and his followers fled to the coast and escaped in a schooner. Walker reappeared with armed followers on the coast of Nicaragua in August following, and on Sept. 5 the "emigrants" in the Mosquito country, assuming independence, organized civil government there by the election of Kinney as chief magistrate with a council of five assistants. At that time Nicaragua was convulsed by revolution, and the government was weak. Walker, taking advantage of this state of things, had two days before vanquished in battle four hundred government troops on Virgin Bay. He captured Granada, the capital of the state, on Oct. 12, and placed General Rivas, a Nicaraguan,

in the presidential chair. Treating Kinney with contempt, Walker drove him from the Mosquito country, and attempted to strengthen his military power by "emigration" from the United States. A British consul recognized the new government of Nicaragua, and the American minister there (John H. Wheeler) gave countenance to the usurpation. These movements in Nicaragua created alarm among the other governments on the isthmus, and in the winter of 1856 they formed an alliance. Early in March, Costa Rica made a formal declaration of war against the usurpers of Nicaragua, and on the 10th of the same month, Walker, who was the real head of the state, made a corresponding declaration against Costa Rica. He shamelessly declared that he was there by the invitation of the liberal party in Nicaragua. War began on March 20, when the Costa Ricans marched into Nicaragua. Walker gained a victory in a sanguinary battle (April 11, 1856), and became extremely arrogant. He levied a forced loan on the people in support of his power. Rivas, becoming disgusted with this "gray-eyed man of destiny," as his admirers called him, left the presidency and proclaimed against Walker. Walker became his successor in office (June 24), and was inaugurated President of Nicaragua on July 12. So the first grand act of a conspiracy against the life of a weak neighbor was accomplished. The government at Washington hastened to acknowledge the independence of the new nation, and Walker's ambassador, in the person of Vijil, a Roman Catholic priest, was cordially received by President Pierce and his cabinet. So strengthened, Walker ruled with a high hand, and by his interference with trade offended commercial nations. The other Central American states combined against him, and on May 20, 1857, he was compelled to surrender two hundred men, the remnant of his army, to Rivas; but by the interference of Commodore Davis, of the United States Navy, then on the coast, Walker and a few of his followers were borne away unhurt. But this restless adventurer fitted out another expedition at New Orleans, landed on the Nicaraguan coast (Nov. 25, 1857), and was seized by Commodore Paulding, United States Navy (Dec. 3), with two hundred and thirty of his followers, and taken to New York as prisoners. James Buchanan was then President of the United States. He *privately* commended Paulding's act, but for "prudential reasons," he said, he publicly condemned the commodore in a special message to Congress (Jan. 7, 1858) for thus "violating the sovereignty of a foreign country!" Buchanan set Walker and his followers free, and they traversed the then slave-labor states, preaching a new crusade against Central America, and collecting funds for a new invasion. Walker sailed from Mobile on a third expedition, but was arrested off the mouth of the Mississippi River, but only for having left port without a clearance! He was tried at New Orleans by the United States Court and acquitted, when he hastened to Central America, and after making much mischief there, was captured and shot at Truxillo.

Nicholas, ROBERT CARTER, was born in Virginia in 1715; died at Hanover, Va., in 1780. He was educated at the College of William and Mary, and while quite young represented James City in the House of Burgesses, in which he continued until the House of Delegates was organized in 1777. In 1779 he was appointed Judge of the High Court of Chancery. All through the controversy with Great Britain Nicholas had worked shoulder to shoulder with Peyton Randolph, Bland, and other patriots, but voted against Patrick Henry's resolutions (which see) against the Stamp Act in 1765. He was treasurer of the colony (1766-77), and in 1773 was a member of the Virginia Committee of Correspondence.

Nicholas, WILSON CARY, son of Robert Carter Nicholas, was born at Hanover, Va.; died at Milton, Va., Oct. 10, 1820. He was educated at the College of William and Mary. He served as an officer in the war for independence, and was commander of Washington's Life-guard at the time of its disbandment in 1783. He was United States Senator from 1799 to 1804; a member of Congress from 1807 to 1809; collector of the ports of Norfolk and Portsmouth from 1804 to 1807; and governor of Virginia from 1814 to 1817.

Nicholson, JAMES, was born at Chestertown, Md., in 1737; died in New York, Sept. 2, 1804. He went to sea early, and was at the capture of Havana by the English in 1762. He entered the Continental navy in 1775, and in March, 1776, was in command of the *Defence*, with which he re-captured several vessels which the British had taken. In January, 1777, he succeeded Esek Hopkins as senior commander in the navy. He served a short time in the army, when he could not get to sea, and was in the battle at Trenton. On June 9, 1780, in command of the *Trumbull*, he had a severe action with the *Wyatt*, losing thirty men, with no decisive results. Off the capes of the Delaware, in August, 1781, his vessel was dismantled by two British cruisers, and he was compelled to surrender. After the war Captain Nicholson resided in New York, where, in 1801, he was commissioner of loans. Albert Gallatin (which see) married one of his daughters, William Few (which see), of Georgia, another, and John Montgomery a third.

Nicholson, SAMUEL, was born in Maryland in 1743; died at Charlestown, Mass., Dec. 29, 1811. He was a lieutenant under John Paul Jones in the famous battle of the *Bonhomme Richard* with the *Scrapis*, and was made captain immediately afterwards. He cruised in the *Deane*, 32, successfully. After the reorganization of the navy in 1794 he was appointed captain, and was the first commander of the *Constitution* frigate.

Nicholson, SIR FRANCIS, a colonial governor, died in London, March 5, 1728. He was lieutenant-governor of New York under Andron, and acting governor from 1687 to 1689. From 1694 to 1699 he was governor of Maryland; from 1690 to 1692, and from 1699 to 1705, he was governor of Virginia. In 1710 he was commander of the

forces that captured Port Royal, Nova Scotia. Then he went to England, taking with him five Iroquois chiefs (who were presented to Queen Anne), to urge another attempt to conquer Canada. He commanded an unsuccessful expedition to that end the next year. From 1712 to 1717 he was governor of Nova Scotia, and in 1720 was knighted. From 1721 to 1725 he was governor of South Carolina, and on his return to England in the latter year he was made lieutenant-general.

Nicolla, RICHARD, Deputy-governor of New York and New Jersey from 1664 to 1667. He was one of the royal commissioners (which see) to inquire into the state of the English-American colonies, and to seize the province of New Netherland. (See *New Netherland, Conquest of*.) Nicolls conducted the administration of affairs in New York with prudence and moderation, and was succeeded in 1667 by Colonel Lovelace. He resigned the government of New Jersey to Carteret in 1666.

Niles, HEZEKIAH, was born in Chester County, Penn., Oct. 10, 1777; died at Wilmington, Del., April 2, 1839. He learned the trade of a printer, became a master workman in Wilmington, and for six years edited a daily paper in Baltimore. In 1811 he founded that useful periodical called *Niles's Register*, a weekly journal published in Baltimore. He was its editor until 1836. He republished the *Register* in thirty-two volumes, extending from 1812 to 1827, and it was continued by his son until 1849, making seventy-six volumes. He compiled a useful publication entitled *Principles and Acts of the Revolution*.

Ninegret, a chief of the Narragansets, and uncle of Miantonomoh. He aided the English in the Pequot War (1637), and because he visited the Dutch governor at Manhattan (see *Dutch and Indian Plot*), he was suspected of conspiring against the English. Ninegret waged war with the Long Island Indians in 1653, and, refusing to obey a summons to appear at Hartford, war was declared against him in 1654; but he avoided a collision with the English. Keeping aloof from King Philip's War, he escaped the ruin that fell upon other tribes.

Ninegret, WAR WITH. Because of a supposed plot between Ninegret, the Niantic sachem, and the Dutch, the commissioners or Congress of the New England Confederation deemed it advisable to make war upon him. They voted two hundred and fifty foot-soldiers (1653). The commissioners of Massachusetts did not agree with the others in the measure. Ninegret prosecuted a war with the Long Island Indians, who had placed themselves under the protection of the English. In September, 1654, the commissioners sent a message to Ninegret, demanding his appearance at Hartford, where they were convened, and the payment of tribute long due for the Pequods under him. He refused to appear, and sent them a haughty answer. They therefore determined again to make war on him. They raised two hundred and seventy infantry and forty horsemen. Major Simon Willard was

appointed commander-in-chief of these forces, with instructions to proceed directly to Ninegret's quarters and demand of him the Pequods who had been put under him and the tribute still due; also a cessation of war upon the Long Island Indians. On the approach of the troops, Ninegret fled to a distant swamp and was not pursued.

Ninety-six, SIEGE OF FORT. This fort, on the site of the village of Cambridge, in Abbeville District, S. C., was so named because it was ninety-six miles from the frontier fort, Prince George, on the Keowee River, one hundred and forty-seven miles northwest from Charleston. On May 22, 1781, General Greene commenced the siege of this fort. It was garrisoned by American loyalists, commanded by Lieutenant-colonel Cruger. Greene had less than one thousand regulars and a few raw militia. The fort was too strong to be captured by assault, and regular approaches by parallels were made under the direction of Kosciuszko. The work of the siege was interrupted by an occasional sortie for about a month, when Greene, hearing of the approach of Rawdon with a strong force to relieve Cruger, made an unsuccessful effort (June 18) to take the place by storm. On the following evening Greene raised the siege and retreated beyond the Saluda River. Rawdon pursued them a short distance, when he wheeled and marched to Orangeburg. Soon afterwards Ninety-six was abandoned, and the garrison joined Rawdon's troops on their march to Orangeburg, followed by a train of frightened Tory families. Greene also followed, but soon retired to the high hills of Sautee (which see) to refresh his troops.

"Ninety-two" and "Forty-five." John Wilkes, an able political writer, edited and published in London a newspaper called *The North Briton*. In number forty-five (1763) he made a severe attack upon the government, for which he was prosecuted and committed to the Tower, but was acquitted and awarded \$5000 damages for the imprisonment. He was regarded as the great champion of the people, and considered a martyr to their cause. This blow at the freedom of speech caused violent political excitement, and "Forty-five" the number of *The North Briton* in which the attack appeared, became the war-cry of the Democratic party in England. After ninety-two members of the Massachusetts Assembly refused to rescind the famous circular letter in 1774 (see *Circular Letter of Massachusetts*), "Ninety-two" became a political catch-word in the colonies. When the Americans in London heard of the action of the Massachusetts Assembly, their favorite toast became "May the unrescinding ninety-two be forever united in idea with the glorious Forty-five." "These numbers were combined in an endless variety in the colonies," says Frothingham. "Ninety-two patriots at a festival would drink forty-five toasts. The representatives would have forty-five or ninety-two votes. The ball would have ninety-two jigs and forty-five minuets. The Daughters of Liberty would, at a quilting-party, have their garment of forty-five pieces

of calico of one color and ninety-two of another. Ninety-two Sons of Liberty would raise a flag-staff forty-five feet high. At the dedication of a Liberty-tree in Charleston forty-five lights hung on its branches, forty-five of the company bore torches in the procession, and they joined in the march in honor of the Massachusetts ninety-two. At the festival forty-five candles lighted the table, and ninety-two glasses were used in drinking toasts; and the president gave as a sentiment, 'May the ensuing members of the Assembly be unanimous, and never recede from the resolutions of the Massachusetts ninety-two.'

Nino, ALONZO, who served under Columbus on his third voyage, fitted out two ships, in company with Christopher Guerra, to make discoveries in the Western World. He was a merchant of Seville. They sailed to the coast of Para, in northern Brazil, but made no important discovery. They carried home with them such a quantity of gold and pearls that the desire for engaging in similar enterprises greatly excited their countrymen.

Nixon, JOHN, was born at Framingham, Mass., March 4, 1725; died at Middlebury, Vt., March 24, 1815. He was a soldier at the capture of Louisburg in 1745, serving in the army and navy seven years. He fought at Ticonderoga under Abercrombie, leading a company as captain. He led a company of minute-men (which see) at Lexington, and commanded a regiment at Bunker's Hill, receiving a wound from which he never fairly recovered. He was made a brigadier-general in 1776, and commanded a brigade in the battle of Stillwater, in which engagement a cannon-ball passed so near his head that it permanently impaired the sight of one eye and the hearing of one ear. He resigned Sept. 12, 1780. He lived within a few days of ninety years.

Noailles (Viscount de), LOUIS MARIE, was born April 17, 1756; died Jan. 9, 1804. He was a distinguished military officer under Rochambeau in the siege of Yorktown, Va., where he commanded a regiment. De Noailles was one of the commissioners to arrange articles of capitulation for the surrender of Cornwallis (which see). He was brother-in-law of Lafayette; and in 1789, with other nobles, laid aside his titles and sat with the Third Estate, or Commons, in the French Parliament. As the Revolution assumed the form of a huge tyranny, he left the army and came to the United States. Re-entering the French service in 1803, he was sent to Santo Domingo in that year, where he was mortally wounded in an action with an English vessel. During his absence in America his wife was guillotined.

Noddle's Island, SKIRMISH ON. Noddle's Island (now East Boston) and Hog Island abounded with hay, horned cattle, sheep, and horses belonging to the British. On the morning of May 27, 1775, about twenty-five men went to these islands and carried away or destroyed much of the stock. A party of marines was sent from the British squadron in the harbor on

a sloop and schooner to arrest them. The Americans retreated from Noddle's Island to Hog Island, and took from the latter three hundred sheep, besides cows and horses. Then they drew up in battle order on Chelsea Neck, and by nine o'clock in the evening they were reinforced with two 4-pounders, and were led by Dr. Joseph Warren, with General Putnam as chief commander. They kept up a cannonade on the schooner until eleven o'clock at night, when the British deserted her, and at dawn the Americans boarded her, carried off four 4-pounders and twelve swivels, and then set her on fire. In this skirmish the British lost twenty killed and fifty wounded; the Americans had four slightly wounded.

Non-conformists. This was a title of all those Protestants of England who refused to conform to the doctrines and ceremonials of the Established Church in that country. This name was first given to them in 1572. Ninety years afterwards (1662) about two thousand ministers of the Established Church, unwilling to subscribe to the Thirty-nine Articles of Faith, seceded, and were called Dissenters, a name used at the present time in speaking of all British Protestants who are not attached to the Church of England. The English-American colonies were first peopled chiefly by Non-conformists and Dissenters.

Non-importation Act (1806). An act of Congress became a law April 18, 1806, prohibiting the importation from Great Britain or her dependencies, or from any other country, of the following articles of British manufacture: all articles of which leather, silk, hemp, or flax, and tin and brass (except in sheets), were of chief value; woollen cloths, where the invoice prices should exceed five shillings sterling a yard; woollen hosiery of all kinds; window-glass, and all the manufactures of glass; silver and plated ware; paper of every description; nails and spikes; mats and clothing ready made; millinery of all kinds; playing-cards; beer, ale, and porter; and pictures and prints. To give time for intermediate negotiations, the commencement of the prohibition was postponed until the middle of November next ensuing. In December the act was further suspended until July following. (See *Impress, The*.)

Non-importation League (1765). The commerce between Great Britain and her American colonies had become very important, and any measure which might interrupt its course would be felt by a large and powerful class in England, whose influence would be felt in Parliament. Few dared to think of positive rebellion. A bright thought occurred to some one at a meeting of merchants in New York on Oct. 31, 1765, the day before the Stamp Act was to go into operation. It was proposed at that meeting that the merchants should enter into an agreement not to import from England certain enumerated articles after the 1st day of January next ensuing. At another meeting (Nov. 6) a committee of correspondence was appointed, who soon set the ball in motion. The merchants

of Philadelphia readily responded to the measure, and on Dec. 9 those of Boston entered into a similar agreement. These pledges were not confined to the merchants alone, but the people in general ceased using foreign luxuries; and at the same time, as a part of the same plan, a combination was entered into for the support of American manufactures, the wearing of American cloths, and the increase of sheep by ceasing to eat lamb or mutton. This was the beginning of that system of non-importation agreements resorted to by the Americans which hurled back upon England with great force the commercial miseries she had inflicted upon her colonies, and established there a large and powerful class who sympathized with the Americans. In the case in question, petitions for the repeal of the Stamp Act poured into the House of Commons from the merchants and traders of London, whose interests were severely smitten, so that Parliament felt compelled to listen; and a few months after the Non-importation League in New York was formed the obnoxious act was repealed.

Non-importation League in Virginia. When, in May, 1769, the House of Burgesses in Virginia passed a series of resolutions maintaining the right of the colonists to self-taxation, to petition and remonstrance, and to be tried in all cases by a jury of the vicinity (see *Parliament, American Affairs in*), Governor Lord Botetourt, as in duty bound, dissolved the House. The members met the next day in the Apollo Room of the Raleigh Tavern, in Williamsburg, formed themselves into a voluntary convention, with Peyton Randolph as chairman, drew up and signed an agreement against the importation of merchandise from Great Britain, and recommended such a course to the people, and then repaired to their several counties. All who participated affirmatively in the proceedings of the convention were re-elected to the next General Assembly.

Non-intercourse Act. While the Embargo Act (which see) was to be repealed, a substitute was given in the form of a Non-intercourse Act, which was passed in February, 1809. It did not satisfy everybody, but seemed the best attainable, and it received eighty-one votes against forty. The embargo remained in force until March 15, 1809, so far as related to all countries excepting France and Great Britain and its dependencies; and to them also after the end of the next session of Congress.

Non-intercourse with France. On June 12, 1798, Congress passed an act suspending all commercial intercourse with France and her dependencies. This widened the rupture between the two countries.

Nordhoff, CHARLES, an American author and journalist, was born in Westphalia, Prussia, Aug. 31, 1830, and came with his parents to the United States in 1835. He received a common-school education in Cincinnati, and at the age of thirteen years was apprenticed to a printer. He did not remain with him long, but at the age of fourteen made his way to Philadelphia, shipped in the United States Navy, and made a voyage around

the world. He remained on the sea—in the naval, merchant, and whaling service—about eleven years, when he found employment, first in a newspaper office in Philadelphia, and afterwards in Indianapolis. From 1857 to 1861 he was in the editorial employment of Harper & Brothers, and from 1861 to 1871 was connected with the *New York Evening Post*. He afterwards visited California and the Sandwich Islands, and has published several valuable books giving an account of his travels, especially in California. He has also published a notable work on *The Communistic Societies of the United States*, and also a useful little book entitled *Politics for Young Americans*. The two last-named works were published in 1874.

Norfolk (Va.), DESTRUCTION OF (1776). The repulse at the Great Bridge greatly exasperated Dunmore, who had remained in safety at Norfolk (see *Great Bridge, Battle at the*), while his motley forces (see *Dunmore's War on the Virginians*) were greatly dispirited. The Virginians were elated, and five days after the battle they entered Norfolk in triumph, where they were joined by a North Carolina regiment under Colonel Robert Howe. Dunmore had abandoned his intrenchments at Norfolk, after spiking his twenty pieces of cannon, and invited the loyalists of the city to take refuge with him on the fleet, for he had determined to destroy the town. The poor negroes whom he had coaxed into his service were left without protection, and many of them starved to death. Parties sent on shore to procure provisions were cut off, and famine menaced the fleet, for the multitude of mouths to be filled increased. The vessels were also annoyed by firing from the shore. A British frigate arriving at that juncture emboldened Dunmore, and he sent a flag to General Howe with a threat to burn the town if the firing did not cease and provisions were not sent to the fleet. A flat refusal was given. On the morning of Dec. 31 Dunmore gave notice that he should cannonade the town, so that women and children and loyalists might leave it. The cannonade was opened at four o'clock the next morning (Jan. 1, 1776), and marines and sailors were sent on shore to set fire to the city. The wind was blowing from the water, and the buildings being chiefly of wood, a greater portion of the most compact part of the town was laid in ashes. The conflagration raged about fifty hours, and hundreds of wretched people were left shelterless in the cold winter air. During the conflagration the cannonade was kept up, and parties of musketeers attacked shivering and starving groups of defenceless inhabitants. Strange to say, during the three days of horror not one of the patriot troops was killed, and only three or four women and children were slain in the streets. General Stevens, of the Virginia militia, remained on the spot until February, and, after all the families were removed, he burned the rest of the town that it might not afford shelter for the enemy. Thus a flourishing city was temporarily wiped out. Almost the only building that escaped the perils of that day of terror in Norfolk is ancient

St. Paul's Church, cruciform in shape and built of imported bricks. On the street front of the church, near the southwest corner, was left a

ST. PAUL'S CHURCH, NORFOLK.

large cavity made by a cannon-ball hurled from one of the ships during the attack.

Norfolk (Va.), EVACUATION OF (1862). General Wool, at Fortress Monroe, saw the eminent advantage of the James River as a highway for supplies for McClellan's army moving up the Peninsula, and urged the government to allow him to capture Norfolk, and so secure the free navigation of that stream. After the evacuation of Yorktown, President Lincoln and Secretary Stanton visited Fortress Monroe and granted Wool's request. Having made personal reconnaissance, he crossed Hampton Roads with a few regiments, landed in the rear of a Confederate force on the Norfolk side of the Elizabeth River, and moved towards the city. General Huger, of South Carolina, was in command there. He had already perceived his peril, with Burnside in his rear and McClellan on his flank, and immediately retreated, turning over Norfolk to the care of Mayor Lamb. Norfolk was formally surrendered, and General Viele was appointed military governor. The Confederates fled towards Richmond, first setting fire to a slow match attached to the Merrimac and other vessels at the navy-yard, which blew the monster ram into fragments. The Confederate gunboats on the James River fled to Richmond, closely pursued by a National flotilla under Commodore Rodgers. They were checked by strong fortifications at Drewry's Bluff, below Richmond.

Norridgewock, EXPEDITION TO. The Jesuit mission under the charge of Father Rale, or Rasles, at Norridgewock, on the upper Kennebec, had been an object of suspicion in Massachusetts for almost twenty years, for it was known that Rale had accompanied the French and Indians in their forays in the early part of Queen Anne's War. The Eastern Indians were in a very bad humor in 1720 on account of encroachments upon their lands, and there were signs of hostility on the part of the barbarians, which, it was believed, had been excited by the Jesuit missionary. Finally, Father Rale was formally accused of stimulating the Eastern Indians to make war, and in August, 1721, the governor and Council of Massachusetts agreed to send a secret expedition to Norridgewock to

seize him. The expedition moved in January, 1722, but did not succeed in capturing Father Rale. His papers, seized by the assailants, who pillaged the chapel and the missionary's house, confirmed the suspicion. The Indians retorted for this attack by burning Brunswick, a new village recently established on the Androscoggin. The tribes in Nova Scotia joined in the war that had been kindled, and seized seventeen fishing-vessels in the Gut of Canso (July, 1722) belonging to Massachusetts. Hostilities continued until 1724, when, in August of that year, an expedition surprised Norridgewock, and Rale and about thirty Indian couverts were slain, the chapel was burned, and the village broken up. (See *Eastern Indians, War with the.*)

North, FREDERICK, second Earl of Guilford, and eighth Baron North, was born April 13, 1733; died Aug. 5, 1792. Educated at Eton, and at Trinity College, Cambridge, he made a lengthened tour on the Continent. In 1754 Lord North entered Parliament for Baubury, which he represented almost thirty years. He entered the cabinet under Pitt, in 1759, as Commissioner of the Treasury. He warmly supported the Stamp Act (1764-65) and the right of Parliament to tax the colonies. In 1766 he

FREDERICK NORTH.

was appointed paymaster of the forces, and the next year was made Chancellor of the Exchequer, succeeding Charles Townshend as leader of the House of Commons. He became prime-minister in 1770, and he held that position during our war for independence. The events of his administration were very calamitous to his country. His efforts to coerce the colonists into submission to Parliament caused the dismemberment of the British empire and the loss of a vast domain. In 1783 he returned to office, after a brief absence, as joint Secretary of State in the famous "coalition" ministry, and at the close of that brief-lived administration he retired from public life. In 1790 he succeeded to the title of Earl of Guilford.

North, WILLIAM, was born at Fort Frederick, Pemaquid, Me., in 1755; died in New York, June

3, 1836. He entered the army of the Revolution in 1775; led a company in the battle of Monmouth, and, in 1779, became an aid to Baron de Steuben. He accompanied the baron into Virginia, and was at the surrender of Cornwallis. North was so beloved by Steuben that the latter willed him half his property. From July, 1798, to June, 1800, he was adjutant and inspector-general of the United States Army, with the rank of brigadier-general. He was a member and speaker of the New York Assembly; United States Senator in 1798; one of the first canal commissioners of New York; and, in 1812, declined the appointment of adjutant-general of the army.

North Carolina, BRITISH INVASION OF (1780). Regarding the subjugation of South Carolina as complete, Cornwallis commenced a march into North Carolina early in September, 1780. The main army was to advance by way of Charlotte, Salisbury, and Hillsborough, through the counties where Whigs most abounded. Tarleton was to move up the west bank of the Catawba River with the cavalry and light troops; while Ferguson, with a body of loyalist militia which he had volunteered to embody and organize, was to take a still more westerly route along the eastern foot of the mountain-ranges. Ferguson's corps was annihilated (Oct. 7) in an engagement at King's Mountain (which see); and this so discouraged the Tories and the backwoodsmen that they dispersed and returned home. Cornwallis had then reached Salisbury, in which district he found the Whigs numerous and intensely hostile. Having relied much on the support of Ferguson, he was amazed and puzzled when he heard of his death and defeat. Alarmed by demonstrations on his front and flanks, Cornwallis commenced a retrograde movement, and did not halt until he reached Wainsborough (Oct. 27, 1780), S. C., between the Broad and Catawba rivers. Here he remained until called to the pursuit of Greene a few weeks later.

North Carolina, CAPITAL OF. In 1791 the General Assembly of North Carolina passed an act for fixing the seat of the state government, and appropriating money for the erection of public buildings. A town was laid out in an elevated and healthful region, six miles west of the Neuse River, and named Raleigh, in honor of the English statesman who first attempted to plant a settlement on the shores of North Carolina.

North Carolina Coast, EVENTS ON THE (1862-63). General Burnside, when called to the Army of the Potomac, left General J. G. Foster in command of the National troops in eastern North Carolina. That region had barely sufficient National troops to hold the territory against the attempts of the Confederates to repossess it. These attempts were frequently made. The little garrison at the village of Washington, on the Pamlico River, were surprised by Confederate cavalry at early dawn on a foggy September morning (the 5th), who swept through the village almost unopposed. They

were supported by two Confederate gunboats on the river. The garrison, after a sharp street-fight for nearly three hours, expelled the assailants, killing 33 and wounding 100. The Nationals lost 8 killed and 36 wounded. Foster was reinforced later, and determined to strike some aggressive blows that might intimidate his antagonists. Early in November he made an incursion in the interior and liberated several hundred slaves. With a larger force he set out from New Berne (Dec. 11, 1862) to strike and break up the railway at Goldsborough that connected Richmond with the Carolinas, and form a junction with the National forces at Suffolk and Norfolk. His passage of a large creek was disputed by General Evans and 2000 Confederates, with three pieces of artillery. They were routed, and Foster passed on, skirmishing heavily. When near Kinston he encountered (Dec. 14) about 6000 Confederates, well posted, and, after a sharp fight, they were driven across the river, firing the bridge behind them. The flames were put out, and 400 of the fugitives were captured. Foster pushed on towards Goldsborough, and near that place was checked by a large Confederate force under General G. W. Smith. Foster destroyed the railroad bridge over the Neuse, six miles of the railway, and a half-finished iron-clad gunboat, returning to New Berne at the end of eight days with a loss of 507 men, of whom 90 were killed. The Confederate loss was near 900, full one half of whom were prisoners. In the winter of 1863 Foster sent out raiding expeditions, liberating many slaves. The raids aroused General D. H. Hill, who concentrated a considerable force. He attacked New Berne with twenty guns, but was repulsed, when he marched on Little Washington, and on March 30 (1863) began a siege of the place. He planted heavy cannons at commanding points and cut off the supplies of the garrison of 1200 men. General Spinola attempted to raise the siege, but failed. The transport *Es-cort*, bearing one of Spinola's regiments, accompanied by General Palmer and others, ran the gauntlet of batteries and sharpshooters and carried supplies and troops to the beleaguered garrison. At the middle of April, Hill, expecting an expedition against him, abandoned the siege and fled. In May an expedition, led by Colonel J. R. Jones, attacked the Confederates eight miles from Kinston, capturing their intrenchments, with 165 prisoners. They were afterwards attacked (May 23) by the Confederates, but repulsed their assaults. Colonel Jones was killed. Near the end of the month General E. A. Potter led a cavalry expedition, which destroyed much property at Tarborough and other places. The country was aroused by this raid, and Potter was compelled to fight very frequently with Confederates sent against him. Yet his loss during his entire raid did not exceed twenty-five men. Soon afterwards (July) Foster's department was enlarged, including lower Virginia, and, leaving General Palmer in command at New Berne, he made his headquarters at Fortress Monroe.

North Carolina Flag. The Secession Con-

vention of North Carolina adopted a flag for the new "sovereign state," composed of red, white, and blue colors, arranged as follows: The red formed a broad bar running parallel to the staff, on which was a single star and the dates "May 20, 1775," the alleged date of a declaration of independence (see *Mecklenburg Declaration of Independence*), and "May 20, 1861," the date of the Ordinance of Secession. The remainder of the flag was composed of a single white and blue horizontal bar.

North Carolina Grantees. (See *Grantees of North Carolina*.)

North Carolina Loyalists. The Tories were numerous in North Carolina, where there was a large Scotch population. The Whigs, however, were largely in the majority, and in 1780 they treated their Tory neighbors with unendurable severity. Cornwallis, in command of the British in South Carolina, had sent emissaries among them, who advised them to keep quiet until they had gathered their crops in autumn, when the British army would march to their assistance. They were impatient of the severities to which they were exposed, and flew to arms at once. Of two considerable parties that assembled, one was attacked and dispersed at Ramsour's Mills, on the south fork of the Catawba, on June 20, 1780, by five hundred North Carolina militia, under General Rutherford. The other party succeeded in reaching the British posts. These amounted to about eight hundred men.

North Carolina Ordinance of Secession. There were early movements but late effectual action in North Carolina in favor of secession. Her United States Senator (T. L. Clingman) and her governor (J. W. Ellis) made early efforts to arouse the people of that state to revolt; but the love for the Union was so strong among the people that they did not readily follow such leaders. The Legislature that met on Nov. 19 passed an act providing for a convention, but directing that "no ordinance of said convention dissolving the connection of the State of North Carolina with the Federal government, or connecting it with any other, shall have any force or validity until it shall have been submitted to and ratified by a majority of the qualified voters of the state," to whom it should be submitted at least a month after such submission should be advertised. Although there was no pretence of secession until full four months later, the governor seized the United States forts within its borders and the arsenal at Fayetteville, which Floyd had filled with arms. (See *Floyd's Disloyal Acts*.) These movements the people condemned. Finally the Legislature, influenced by the disunion politicians, authorized a convention, and ordered the election of delegates on the 13th of May, 1861. At the same time it gave the governor authority to raise 10,000 men, and the state treasurer the power to issue \$500,000 in bills of credit, in denominations as low as three cents. It defined the act of treason to be levying war against the state. The convention assembled May 20, and on the same day issued an Ordinance of Seces-

sion by a unanimous vote. On the same day the governor issued orders for the enrolment of 30,000 men, and within three weeks not less than 20,000 were under arms. The forts were again seized; also the United States Mint at Charlotte. The loyal "North State," placed between Virginia and South Carolina, could not withstand the pressure of the untiring disunionists of those two commonwealths.

North Carolina, POSITION OF (1861). Great efforts were made by the enemies of the Republic to force North Carolina into revolution. Her governor (Ellis) favored the movement, but the loyal people opposed it. The South Carolinians taunted them with cowardice; the Virginia Secessionists treated them with coldness; the Alabamians and Mississippians coaxed them by the lips of commissioners. These efforts were in vain. Thereupon the disloyal Secretary of the Interior, acting as commissioner for Mississippi, went back to Washington convinced that the radical Secessionists of North Carolina were but a handful. The Legislature, in authorizing a convention, directed the people, when they elected delegates for it, to vote on the question of "Convention" or "No Convention." Of 128 members of the convention elected (Jan. 28, 1861), 82 were Unionists. The people, however, had voted against a convention. The Legislature, which leaned towards secession, appointed delegates to the Peace Congress (which see), and also appointed commissioners to represent the state in the proposed general convention at Montgomery, Ala., but with instructions to act only as "mediators to endeavor to bring about a reconciliation." They declared, by resolution (Feb. 4, 1861), that if peace negotiations should fail, North Carolina would go with the slave-labor states. They also provided for arming 10,000 volunteers and the reorganization of the militia of the state. Further than this the legislative branch of the government refused to go; and the people, determined to avoid war if possible, kept on in the usual way until the clash of arms at Fort Sumter and the call of the President for 75,000 armed men to suppress the insurrection filled the people of that staid state with excitement and alarm. Taking advantage of this state of public feeling, the enemies of the Union succeeded in having an Ordinance of Secession passed. (See *North Carolina Ordinance of Secession*.)

North Carolina Sanctions Independence (1776). The appearance of Clinton on the coast of North Carolina, and the conduct of Governor Martin, had aroused the feeling of resistance to British rule among the people to a great pitch; and when the Provincial Congress met at Halifax on April 4, 1776, a select committee was appointed, with Cornelius Harnett at its head, to consider the usurpations and violences of the British government. On the 12th, after listening to the report of this committee, they unanimously "empowered their delegates in the Continental Congress to concur with the delegates of the other colonies in declaring independence and forming foreign alliances." This was the

first sanction of independence officially given by any colony.

North Carolina, STATE OF. In December, 1776, the province of North Carolina adopted a state constitution, and elected Richard Caswell governor. The national Constitution was adopted in 1789. In 1784 the state ceded to the United States the territory now embraced in the State of Tennessee. The popular sentiment in North Carolina was with the Union at the breaking-out of the Civil War, and in February, 1861, the people voted, by a small majority, not to call a state convention to consider the

STATE SEAL OF NORTH CAROLINA.

question of secession. But after the attack on Fort Sumter the governor raised troops, and seized forts and other national property, including the mint at Charlotte and the arsenal at Fayetteville. (See *North Carolina Ordinance of Secession*.) Early in 1865 Fort Fisher was captured, and General Sherman made his victorious march through the State of North Carolina, which ended in the surrender of Johnston's Confederate army in May. W. W. Holden was appointed (May 29, 1865) provisional governor of the state, and a convention of delegates, assembled at Raleigh, adopted resolutions (Oct. 2) declaring the Ordinance of Secession null, abolishing slavery, and repudiating the state debt created in aid of the great insurrection. A new Legislature was elected, which ratified the amendment to the national Constitution abolishing slavery. The new government of North Carolina did not meet the approval of Congress; nor were the representatives of the state admitted to that body. In 1867 a military government for North Carolina was instituted, and measures were taken for a reorganization of the state government. In the election that followed colored people voted for the first time, when sixty thousand of their votes were given. In January, 1868, a convention adopted a new constitution for the state, which was ratified by the people in April. It was approved by Congress, and North Carolina was declared (June, 1868) to be entitled to representation in that body. On July 11, 1868, the President proclaimed that North Carolina had resumed its place in the Union. The Fifteenth Amendment to the national Constitution was ratified March 4, 1869, by a large majority. During that year and the next the peace of the state was much disturbed by the outrages committed by a lawless body of men called the "Ku-Klux Klan." They were masked outlaws. Governor Holden declared martial law in two counties; and for this act articles of impeachment were preferred against him, and he was convicted and removed from office.

North Carolina, THE COLONY OF, was one of

the original thirteen states of the Union. Its coasts were discovered, it is supposed, by Cabot (1498) and Verazzani (1524), and later by the people sent out by Walter Raleigh. The first attempt at settlement in that region was made by one hundred and eight persons under Ralph Lane, who landed on Roanoke Island in 1585. It was unsuccessful. (See *Virginia*.) Other colonies were sent out by Raleigh, and the last one was never heard of afterwards. No other attempts to settle there were made until after the middle of the 17th century. So early as 1609 some colonists from Jamestown seated themselves on the Nausemond, near the Dismal Swamp; and in 1622 Porey, Secretary of the Virginia colony, penetrated the country with a few friends to the tide-waters of the Chowan. (See *Porey*.) In 1630 Sir Robert Heath, the Attorney-general of Charles I., obtained from that monarch a patent for a domain south of Virginia six degrees of latitude in width, but it was declared void in 1663. Ten years before, a few Presbyterians from Jamestown, under Roger Green, suffering persecution there, settled on the Chowan, near the site of Edenton. Other non-conformists followed. The New England hive of colonists had begun to swarm, and some Puritans appeared in a vessel in the Cape Fear River (1661) and bought lands of the Indians. They were planting the fruitful seeds of a colony, when news reached them that Charles II. had given the whole region to eight of his courtiers (see *Grantees of North Carolina*) and called it "Carolina." Nearly all of the New-Englanders left. Governor Berkeley, of Virginia, was authorized to extend his authority over the few settlers on the Chowan. He organized a separate government instead, calling it "Albemarle County" colony, in compliment to one of the proprietors, and appointed William Drummoud, a Presbyterian from Scotland (settled in Virginia), governor. (See *Bacon's Rebellion*.) Two years later some emigrants came from Barbadoes, bought land of the Indians on the borders of the Cape Fear River, and near the site of Wilmington, founded a settlement, with Sir John Yeamans as governor. This settlement was also organized into a political community, and called the "Clarendon County" colony, in compliment to one of the proprietors. (See *Grantees of North Carolina*.) Yeamans's jurisdiction extended from the Cape Fear to the St. John's River, in Florida. This settlement became permanent, and so the foundations of the commonwealth of North Carolina were laid. In 1674 the population was about four thousand. Settlements had been begun farther south (see *South Carolina*), and the proprietors had gorgeous visions of a grand empire in America. The philosopher John Locke and the Earl of Shaftesbury prepared (1669) a scheme of government for the colony, which contemplated a feudal system wholly at variance with the feelings of the settlers, and it was never put into practical operation. (See *Fundamental Constitutions*.) Excessive taxation and other causes had made wide-spread discontent, and in 1677 the people of Albemarle County colony revolt-

ed, seized the governor and the public funds (Dec. 10), imprisoned him and six of his council, called an assembly, appointed a new governor and judges, and for two years conducted public affairs independent of foreign control. Then was enforced the political idea of Holland—"Taxation without representation is tyranny." In 1683 Seth Sothel appeared in North Carolina as governor. He ruled the colony six years, when his rapacity and corruption could no longer be endured, and they seized and banished him. Perfect quiet was not restored until the good Quaker John Archdale came as governor in 1695, when the colony started on a prosperous career. In 1705 Thomas Carey was appointed governor, but was afterwards removed, whereupon he incited a rebellion, and, at the head of an armed force, attacked Edenton, the capital. The insurrection was suppressed (1711) by regular troops from Virginia. The province had become involved in war with the Indians, led by the Tuscaroras (see *Iroquois Confederacy*), and in one night (Oct. 2, 1711) one hundred and thirty persons were massacred by the barbarians. Troops and friendly Indians from South Carolina came to the relief of the white people, and hostilities ceased; but the Indians, badly treated, made war again, and again help came from South Carolina. The war was ended when eight hundred Tuscaroras were captured (March, 1713), and the remainder joined their kindred, the Iroquois, in New York. In 1729 Carolina became a royal province, and was divided permanently into two parts, called, respectively, North and South Carolina. Settlements in the North State gradually increased, and when the disputes between Great Britain and the English-American colonies began the people were much agitated. In 1769 the Assembly of North Carolina denied the right of Parliament to tax the colonists without their consent. In the interior of the colony an insurrectionary movement began (see *Regulators*); and in 1774 North Carolina sent delegates to the First Continental Congress. Finally an association was formed in Mecklenburg County for its defence; and in May, 1775, they virtually declared themselves independent of Great Britain. (See *Mecklenburg Declaration of Independence*.) Alarmed at the state of affairs, the royal governor (Martin) abdicated, and took refuge on board a man-of-war in the Cape Fear River. A provincial convention assumed the government and organized a body of troops. (See *Moore's Creek Bridge, Battle at*.) A state constitution was adopted in a congress at Halifax (Dec. 18, 1776), and the government was administered by a Provincial Congress and a Committee of Safety until 1777, when Richard Caswell was chosen the first governor of the state.

North Point, BATTLE OF (1814). The humiliating events of the capture of Washington created intense excitement throughout the country, but were somewhat atoned for by the able defence of Baltimore, which soon afterwards occurred. While Washington was suffering, Baltimore was threatened. All the shores of Chesapeake Bay were menaced with plunder and devastation.

The British fleet finally sailed for the mouth of the Patapsco River, on the bank of which Baltimore stands, ten miles from the Chesapeake. At every light-house and signal-station on land alarm-guns were fired, and general consternation prevailed among the inhabitants. On Sunday, July 11, 1814, the British fleet appeared off Patapsco Bay with a large force of land-troops, under the command of the victorious General Ross. At sunrise the next morning he landed 9000 troops at North Point, twelve miles above Baltimore, and at the same time the British fleet entered the Patapsco to bombard Fort McHenry, which guarded the harbor of Baltimore, a city of 40,000 inhabitants at that time, and a place against which the British held a grudge, because of the numerous privateers, of the swift-sailing, clipper order, which had been sent out to depredate on British commerce afloat. The citizens of Baltimore had

stances might require. Some volunteers and militia were also sent to co-operate with Stricker. Feeling confident of success, Ross, accompanied by Admiral Cockburn, rode gayly in front of the troops as they moved towards Baltimore. They had marched about an hour, when they halted and spent another hour in resting and careless carousing at a tavern. From Colonel Sterett's regiment General Stricker had sent forward companies led by Captains Levering and Howard, 150 in number, and commanded by Major R. K. Heath. They were accompanied by Asquith's (and a few other) riflemen, seventy in number, a small piece of artillery, and some cavalry, under Lieutenant Stiles. They met the British advancing at a point about seven miles from Baltimore. Two of Asquith's rifle-men, concealed in a hollow, fired upon Ross and Cockburn as they were riding ahead of the troops, when the former fell from his horse, mortally wounded, and he died in the arms

JOHN STRICKER.

of his favorite aid, Duncan McDougall, before his bearers reached the boats. The command now devolved on Colonel A. A. Brooke. Under his direction the entire invading force pressed forward, and, at about two o'clock (Sept. 12, 1814), met the first line of General Stricker's main body, when a severe combat began. The battle raged for two hours, when the superior force of the British compelled the Americans to fall back towards Baltimore; and at Worthington's Mill, about half a mile in front of the intrenchments cast up by the citizens, they were joined by General Winder and his forces. The British halted and bivouacked for the night on the battle-field. Meanwhile, the British fleet had prepared to attack Fort McHenry, and, on the morning of the 13th, began a bombardment, which was kept up until the next morning. At the same time the land-force began to move on Baltimore. Their movements were very cautious, and, at evening, Colonel Brooke had an interview with Admiral Cochrane. It was decided that the movements of the British on land and water were failures,

wisely provided for the emergency. A large number of troops were gathered around the city. Fort McHenry was garrisoned by 1000 men, under Major George Armistead, and supported by batteries. The citizens had constructed a long line of fortifications on what is now Patterson Park. Intelligence of the landing of the British at North Point produced great alarm in Baltimore. A large number of families, with such property as they could carry with them, fled to the country, and inns, for a hundred miles north of the city, were filled with refugees. The veteran general Samuel Smith was in chief command of the military at Baltimore, then about 9000 strong. Gen. Winder had joined him (Sept. 10) with all the forces at his command. When news of the landing of the British came, General Smith sent General Stricker with 3200 men in that direction to watch the movements of the invaders and act as circum-

stances might require. At three o'clock on the morning of the 14th, in the midst of darkness and rain, the land-troops stole away to their ships, and, at an early hour, the bombardment of the fort ceased and the British ships withdrew. Baltimore was saved. The British had lost, in killed and wounded, 289 men; the Americans lost, in killed, wounded, and prisoners, 213. The grateful citizens of Baltimore devised a memorial of the salvation of their city and of the actors in it, as enduring as marble could make it. For them Maximilian Godefroy designed the beautiful structure which stands in Calvert Street, almost in the centre of the city, which contained in 1876 about 300,000 souls. It is in the form of a cenotaph, as seen in the engraving (page 1014), surmounted by a column representing the Roman fasces. The whole monument, including the exquisitely wrought fe-

male figure at the top, symbolizing the city of Baltimore, is almost fifty-three feet in height. It was erected in 1815, at a cost of \$60,000.

Northeastern Boundary. A dispute concerning the exact boundary between the United States and the British possessions on the east, as defined by the treaty of peace in 1783, was still unsettled at the close of President Jackson's administration, in 1837. In conformity with the treaty of Ghent (1814), the question concerning that boundary was, in 1829, sub-

caused great heat concerning the northeastern boundary. The people of Maine were much excited, and armed in defence of what they deemed their rights. In fact, there were preparations for war in both Maine and New Brunswick, and the peaceful relations between Great Britain and the United States were threatened with rupture. President Van Buren sent General Scott to that frontier in the winter of 1839, and, by his wise and conciliatory conduct, quiet was produced and bloodshed was prevented.

The whole dispute was finally settled by a treaty (Aug. 20, 1842) negotiated at Washington, D. C., by Daniel Webster, Secretary of State, and Lord Ashburton, acting for Great Britain, who had been sent as a special minister for that purpose. Besides settling the boundary question, the treaty provided for the final suppression of the slave-trade and for giving up criminal fugitives from justice in certain cases.

Northeastern Passage to India sought. The Dutch had large commercial interests in the East Indies. The Dutch East India Company was formed in 1602, and the establishment of similar companies to trade with the West Indies had been suggested by William Usselinx, of Antwerp. The Dutch had watched with interest the efforts of the English and others to find a northwest passage to India; but Linschooten, the eminent Dutch geographer, believed that a more feasible passage was to be found around the north of Europe. There was a general belief in Holland

BATTLE MONUMENT. (See p. 1013.)

mitted to the King of the Netherlands for arbitration. Instead of deciding the question submitted to him, he fixed a new boundary (January, 1837) not contemplated by either party. The American minister at the Hague immediately protested against the decision, but, as it gave territory in dispute to Great Britain, that government accepted the decision. The State of Maine, bordering on the British territory of New Brunswick, protested against the award. Collisions occurred, and the national government began negotiations with Maine with a view to an amicable settlement of the affair. An agent appointed by Maine recommended that state to cede to the United States her claim beyond the boundary-line recommended by the arbiter, for an ample indemnity. The subject passed through the various stages of discussion and negotiation, until the irritations caused by the sympathy of the Americans for the Canadians who had broken out into open rebellion against the British government

that there was an open polar sea, where perpetual summer reigned, and that a happy, cultivated people existed there. To find these people and this northeastern marine route to India William Barentz, a pilot of Amsterdam, sailed (June, 1594), with four vessels furnished by the government and several cities of the Netherlands, for the Arctic seas. Barentz's vessel became separated from the rest. He reached and explored Nova Zembla. The vessels all returned before the winter. Linschooten had accompanied one of the ships, and remained firm in his belief in the feasibility of a northeast passage. Another expedition sent in the summer of 1595 was an utter failure. A third, in 1596, under Barentz and others, penetrated the polar waters beyond the eightieth parallel, and discovered and landed upon Spitzbergen. Two of the vessels rounded Nova Zembla, where they were ice-bound until the next year, their crews suffering terribly. Barentz died in his boat in June, 1597, just at the beginning of the polar summer. His

companions escaped and returned. Nothing more was attempted in this direction until the Dutch sent Henry Hudson, in 1609, to search for a northeast passage to India. (See *Hudson, Henry*.) It remained for a Swedish explorer to make the passage in a steamship in 1879, passing from the Arctic seas into the Pacific Ocean, through Behring's Strait. (See *Arctic Discovery*.)

Northern and Southern Parties in the Continental Congress. The Southern members of the first Continental Congress (1774) were disturbed by the clause in the American Association, then adopted, by which they determined "wholly to discontinue the slave-trade;" and the paragraph in the Declaration of Independence in which Jefferson denounced the slave-trade and slavery was rejected by the Congress of 1776, in deference to the people of South Carolina and Georgia. A few days after the amended declaration was adopted, in the first debates on a plan for a confederation of the states, there appeared much antagonism of feeling between the representatives of the Northern and Southern States, founded partially upon climate, pursuits, and systems of labor, but more largely on the latter. When members from the North spoke freely of the evils of slavery, a member from South Carolina declared that "if property in slaves should be questioned, there must be an end to the confederation." So, in the convention that framed the national Constitution, that instrument could not have received the sanction of a majority of the convention had the immediate abolition of the slave-trade been insisted upon. Soon after the arrival of Gerard, the first French minister, at Philadelphia, he wrote (1778) to Vergennes: "The states of the South and of the North, under existing subjects of estrangement and division, are two distinct parties, which, at present, count but few deserters. The division is attributed to moral and philosophical causes."

Northern and Western Invasions. In the autumn of 1780 the northern and western portion of the State of New York suffered a serious invasion from British regulars, Canadians, Tories, and Indians. A British force under Major Carleton came up Lake Champlain in eight vessels, and landed (Oct. 10, 1780) at South Bay, near its head. Suddenly appearing before Fort Anne, the weak garrison gave it up, and it was burned. Carleton pushed on towards Fort George, and sent a marauding party to Fort Edward. Some of his party penetrated the forest from Crown Point, intending to destroy Schenectady, but proceeded no farther than Ballston, which they desolated. At the same time another expedition set out from Canada, and fell upon the upper settlements of the Connecticut valley. At that time the people of Vermont were coquetting with the British authorities (see *Coquetting with the British*) and were unmolested. Meanwhile, an invading force from Niagara, about one thousand strong, crossed over from Oneida Lake to the Susquehanna valley and invaded the Schoharie settlements, then defended by three forts designated as Upper, Middle, and Lower. Their object was the destruction of these settlements.

They began their horrid work (Oct. 17, 1780) around the Middle fort, and completed it in a few hours. They unsuccessfully attacked the other two, but desolated the country around. On hearing of this western invasion, Governor Clinton ordered General Robert Van Rensselaer to gather a force to check it. He left Schenectady on the 18th of October with a considerable force, sending couriers ahead to announce his coming, with orders to keep the invaders in check. In the meantime, not far from Palatine Bridge, Colonel John Brown had a severe skirmish (Oct. 19) with them, in which himself and thirty of his men were killed. The remainder fled to Fort Plain, at which place Van Rensselaer arrived about an hour after the conflict. Pursuing the invaders, who were plundering and burning, he overtook them at about sunset, when an irregular firing was begun and kept up until dark, with great loss to the marauders. The pursuit was continued the next day; but when Van Rensselaer reached Fort Herkimer, not far above Little Falls, on the Mohawk, he lost sight of the trail of the fugitives. Sir John Johnson, who was in command of these western invaders, having lost his baggage and artillery, had gone around to the south of Fort Herkimer and made a hurried march to Oswego. Governor Clinton had come up the valley and taken the chief command. He ordered a pursuit, but it was soon abandoned. In this invasion full 200 dwellings were burned and 250,000 bushels of wheat, a large quantity of other grain, with forage, and a vast amount of other property, were destroyed.

Northern Frontier, TROOPS ON THE (1812). The defeat of Hull had weakened the confidence of the government and the people in an easy conquest of Canada, and immediate steps were taken, when the armistice (which see) of Dearborn was ended, to place troops along the northern frontier sufficient to make successful invasion, or prevent one from the other side. Vermont and New York joined, in co-operation with the United States, in placing (September, 1812) 3000 regulars and 2000 militia on the borders of Lake Champlain, under Dearborn's immediate command. Another force of militia was stationed at different points along the south bank of the St. Lawrence, their left resting at Sackett's Harbor, at the eastern end of Lake Ontario. A third army was placed along the Niagara frontier, from Fort Niagara to Buffalo, then a small village. This latter force of about 6000 men, half regulars and volunteers and half militia, were under the immediate command of Major-general Stephen Van Rensselaer, a leading Federalist of New York.

Northern Georgia, OPERATIONS IN. After Bragg's failure at Missionaries' Ridge (which see) General Joseph E. Johnston was put in command of his army. When the latter heard of Sherman's raid (which see), and perceived that Polk could not resist him, he sent two divisions of Hardee's corps, under Generals Stewart and Anderson, to assist the prelate. Grant, in command at Chattanooga (February, 1864), sent General Palmer with a force to counteract this movement. Palmer moved with his corps

directly upon Dalton (Feb. 22), where Johnston was encamped. The Confederates were constantly pushed back, and there was almost continually heavy skirmishing. In the centre of Rocky Face valley, on a rocky eminence, the Confederates made a stand, but were soon driven from the crest by General Turchin, after a severe struggle. The Confederates rallied, and, returning with an overwhelming force, retook the hill. Palmer finding his adversaries gathering in force larger than his own, and learning that the object of his expedition had been accomplished, in the calling back of Hardee by Johnston, fell back and took post (March 10) at Ringgold. In this short campaign the Nationals lost 350 killed and wounded; the Confederates about 200.

Northmen in America. The Scandinavians—inhabitants of Denmark, Norway, and Sweden—were called Northmen. They were famous navigators, and, in the ninth century, discovered Iceland and Greenland. In the tenth century a colony led by Eric the Red was planted in the latter country (983). It is said that an adventurer named Bjarni discovered the mainland of North America in the tenth century (986). These people were chiefly from Norway, and kept up communication with the parent country. According to an Icelandic chronicle, Captain Lief, son of Eric the Red, sailed in a little Norwegian vessel (1001), with thirty-five men, to follow up the discovery of Bjarni, and was driven by gales to a rugged coast, supposed to have been Labrador. He explored the shores southward to a more genial climate and a well-wooded country, supposed to have been Nova Scotia, and then to another, still farther south, abounding in grapes, which he named Vineland, supposed to have been Massachusetts, in the vicinity of Boston. Lief and his crew built huts and wintered in Vineland, and returned to Greenland in the spring, his vessel loaded with timber. Thorwald, Lief's brother, went to Vineland with thirty men in 1002, and wintered there in the vicinity of Mount Hope Bay, R. I., it is supposed. The next year he sent some of his men to examine the coasts, with the intention of planting a colony. They were gone all summer, and it is believed they went as far south as Cape May. In 1004 Thorwald explored the coast eastward, and was killed in a skirmish with the natives (see *Skrælings*), and the following year his companions returned to Greenland. Thorstein, a younger son of Eric, sailed for Vineland with twenty-five companions and his young wife, Gudrida, whom he had married only a few weeks before. Adverse winds drove the little vessel on a desolate shore of Greenland, on the borders of Baffin's Bay, where the company remained till spring. There Thorstein died, and sadly his young wife took his body back to Eric's house. During the next summer Thorfinn Karlsefui, a rich Norwegian living in Iceland, went to Greenland, fell in love with the young widow, Gudrida, and, with his bride and one hundred and sixty persons (five of them young married women), sailed, in three ships, for Vineland, to plant a colony. They landed,

it is supposed, in Rhode Island. Thorfinn remained in Vineland about three years, where Gudrida gave birth to a son, whom they named Snorre, who became the progenitor of Albert Thorwaldsen, the great Danish sculptor. Returning to Iceland, Thorfinn died there, and his widow and her son went, in turn, on a pilgrimage to Rome. Icelandic manuscripts mention visits to Vineland in 1125, 1135, and 1147. About 1390 Nicolo Zeno, a Venetian, visited Greenland, and there met fishermen who had been on the coasts of America. (See *Zeno, Nicolo.*) A remarkable structure yet standing at Newport, R. I., is supposed by some to have been erected by the Northmen. (See *Old Tower at Newport.*) Bishop Thorlakk, of Iceland, a descendant of Gudrida, compiled a record of the voyages of the Northmen from the old chronicles.

Northwestern Territory, THE. The Congress was in session in New York city while the convention that framed the national Constitution was sitting in Philadelphia. That body performed an act at that session second only in importance to the crowning act of the convention at Philadelphia. On July 11, 1787, a committee, of which Nathan Dane, of Massachusetts, was chairman, reported "An Ordinance for the Government of the Territory of the United States northwest of the Ohio." This territory was limited to the ceded lands in that region. This report, embodied in a bill, contained a special proviso that the estates of all persons dying intestate in the territory should be equally divided among all the children or next of kin in equal degree, thus striking a fatal blow at the unjust law of primogeniture. It also provided and declared that "there shall be neither slavery nor involuntary servitude in the said territory, otherwise than in the punishment of crimes whereof the party shall have been fully convicted." This ordinance was adopted on the 13th, after adding a clause relative to the reclamation of fugitives from labor, similar to that which was incorporated in the national Constitution a few weeks later. This ordinance, and the fact that Indian titles to seventeen million acres of land in that region had lately been extinguished by treaty with several of the dusky tribes (the Six Nations, Wyandots, Delawares, and Shawnoese), caused a sudden and great influx of settlers into the country along the northern banks of the Ohio. The "Northwest Territory" so established included the present states of Ohio, Indiana, Illinois, Michigan, and Wisconsin. It is estimated that within a year following the organization of the territory full twenty thousand men, women, and children passed down the Ohio River to become settlers upon its banks.

Norton, JOHN, was born in Hertfordshire, England, May 6, 1606; died in Boston, Mass., April 5, 1663. Becoming a Puritan preacher, he came to New Plymouth in 1635, and went to Boston in 1636, while the Hutchinsonian controversy (which see) was running high. He soon became minister of the church at Ipswich. In 1648 he assisted in framing the Cambridge Platform (which see). He went with Simon

Bradstreet to Charles II., after his restoration, to get a confirmation of the Massachusetts charter. A requirement which the king insisted upon—namely, that justice should be administered in the royal name, and that all persons of good moral character should be admitted to the Lord's Supper, and their children to baptism—was very offensive to the colonists, who treated their agents who agreed to the requirement with such coldness that it hastened the death of Norton, it is said. The first Latin prose book written in the country was by Norton—an answer to questions relating to church government. He also wrote a treatise against the Quakers, entitled *The Heart of New England Rent by Blasphemies of the Present Generation*. Norton encouraged the persecution of the Quakers, who declared that "by the immediate power of the Lord" he "was smitten and died."

Notable Wedding. John H. Morgan, the noted guerilla chief, was married at Murfreesborough, Tenn., to the daughter of Charles Ready, a member of Congress in 1853. It occurred while President Jefferson Davis was visiting Bragg's army, then lying near Murfreesborough, before the great battle there at the close of the year. Davis and the principal army officers were at the wedding. Bishop Polk, of Louisiana, then a Confederate major-general, assumed the office of prelate in the Christian Church for the occasion and married them. The floor of the room was carpeted with National flags, which the company naturally took delight in dishonoring by dancing upon them.

Nott, ELIPHALET, D.D., LL.D., was born at Ashford, Conn., June 25, 1773; died at Schenectady, N. Y., June 29, 1856. Left an orphan while yet a boy, he lived with an uncle and taught school a few years. In 1795 he was licensed to preach, and began his ministry in Cherry Valley, N. Y. Afterwards he held a pastorate in Albany, N. Y.; and in 1804 he was elected President of Union College, Schenectady, which position he held until his death, a period of more than fifty years. Upwards of three thousand seven hundred students graduated under his presidency. At the celebration (1854) of the semi-centennial of his presidency between six and seven hundred of the alumni who had graduated under him were present. Dr. Nott gave much attention to physical science, especially to the laws of heat, and he invented a stove which was very popular for many years. He obtained about thirty patents for inventions in this department. Nott's was the first stove constructed for burning anthracite coal, and was extensively used.

Nott, SAMUEL, missionary, was born at Franklin, Conn., in 1788; died at Hartford, June 1, 1869. He was the last survivor of the first band of missionaries sent out to India by the American Board of Foreign Missions in 1812. (See *Mills, S. J.*) He was ordained just before his departure. He returned in 1816, and continued to preach and teach school nearly the whole remainder of his life.

Nova Scotia and Canada Restored to France. In 1632 Charles I. resigned to Louis XIII. of France all claims to New France, Acadia, and Canada, as the property of England. This restoration was fruitful of many ills to the English colonies and to England. Chalmers traces back to it the colonial disputes of later times and the American Revolution.

Nova Scotia for Independence. The inhabitants of Nova Scotia were more in favor of the struggling Americans than were those of Canada. A large portion of them seemed desirous of linking their fortunes with the cause of the "Bostonians," as the American patriots were called. They petitioned the Continental Congress on the subject of union, and opened communications with Washington; and Massachusetts was more than once asked to aid in revolutionizing that province. But its distance and weakness made such assistance impracticable.

Nova Scotia, FRENCH INVASION OF. (See *Acadia.*)

Nullification is a term used for the refusal of a state to permit an act of the national Congress to be executed within its limits—the practical application of the doctrine of state supremacy and sovereignty. The Kentucky resolutions of 1798 (see *Resolutions of 1798*) formulated this doctrine by saying that the Union was only a compact between sovereign states; that the government created by this compact was not made exclusive or final judge of the powers delegated to itself; but that, as in all other cases of compacts among parties having no common judge, each party has an equal right to judge for itself as well of infractions as of the mode and measure of redress. To this the Virginia resolutions of 1799 added, "a nullification by those sovereignties [the states] of all unauthorized acts done under color of that instrument [the national Constitution] is the rightful remedy." In the controversy over the American system (which see) in 1828 Virginia reasserted the right to construe the national Constitution for itself; and in 1832 South Carolina undertook to carry the doctrine into practical effect by an ordinance passed by a delegate convention chosen for the purpose, which declared the tariff acts of Congress to be null and void. The ordinance forbade the collection of duties within the state; required all persons holding office under the state to take an oath to support the ordinance on pain of vacating their office; pledged the people of the state to maintain the ordinance and not submit to force; and declared any acts of the general government to enforce the tariff, or to coerce the state, to be inconsistent with her longer continuance in the Union, and that she would proceed to organize a separate government forthwith. The State Legislature, which met immediately after the adjournment of this convention, passed laws in support of the ordinance. Military preparations were immediately made in South Carolina, and civil war seemed inevitable. President Jackson promptly met the crisis with his usual vigor. He issued a proclamation (Dec.

10, 1832) in which he denied the right of any state to nullify an act of the national government, and warned those engaged in the movement in South Carolina that the laws of the United States would be enforced by military power if necessary. This proclamation, written by Louis McLane (then Secretary of the Treasury), met the hearty response of every friend of the Union of whatever party. It was emphasized by ordering United States troops to Charleston and Augusta. Met by such boldness and determination on the part of the President, with such a loyal majority of the people of the Union behind him, the South Carolina nullifiers, though led by such able men as John C. Calhoun and Robert Y. Hayne, paused for a moment; but their zeal in the assertion of state supremacy did not for a moment abate. Every day the tempest-cloud of civil commotion grew darker and darker, until at length Henry Clay, the founder of the American system which had produced this uproar, presented a compromise bill (Feb. 12, 1833), which provided for a gradual reduction of the obnoxious duties during the succeeding ten years. This compromise measure was accepted by both parties. It became a law March 3, 1833, and the discord between the North and South ceased for a while. The doctrine of nullification appeared in a more aggravated form in that of secession in 1860-61.

Nullification, EARLY GERMS OF. The opponents of the national Constitution were generally the adherents of the doctrine of state supremacy, or state sovereignty, and they took every occasion to assert that sovereignty. They opposed laws made by the national government, and sometimes defied them. Negotiations were set on foot by the general government in the spring of 1793 with the Cherokee and Creek nations. In spite of the remonstrances of the Secretary of War, Governor Telfair, of Georgia, persisted in leading a body of militia against warriors of an unoffending Creek town, killing several of them and capturing women and children. Telfair declared that he would recognize no treaty made by the United States with the Creeks in which Georgia commissioners were not concerned. Similar defiance of national authority appeared in Massachusetts at about the same time. The Supreme Court of the United States decided that a state was liable to be sued by individuals who might be citizens of another state. A process of that sort was soon afterwards commenced in Massachusetts. As soon as the writ was served, Governor Hancock called the Legislature together, and that body resolved to take no notice of the suit—ignore the decision of the national judiciary. The Legislature of Georgia passed an act subjecting to death "without benefit of clergy" any United States marshal or other person who should presume to serve any process against that state at the suit of an individual.

Nullification of the Tea Tax. By smuggling, non-importation, and non-consumption agreements, the tax on tea, retained for the purpose of vindicating the authority of Parlia-

ment, was virtually nullified at the opening of 1773. Then a new thought upon taxation entered the brain of Lord North. The East India Company severely felt the effects of these causes, and requested the government to take off the duty of threepence a pound on their tea levied in America. Already seventeen million pounds had accumulated in their warehouses in England, and they offered to allow the government to retain sixpence upon the pound as an exportation tariff if they would take off the threepence duty. Here was an opportunity for conciliation; but the ministry, deluded by false views of national honor, would not accede to the proposition, but stupidly favored the East India Company, and utterly neglected the principles and feelings of the Americans. They proposed a bill for the exportation of tea to America on their own account, without paying export duty, and it passed May 10, 1773. Agents and consignees were appointed in the several colonies to receive the tea, and the ministry congratulated themselves with outwitting the patriots. This movement perfected the nullification of the tea tax, for universal opposition to its use was manifested.

Nuñez, ALVAR (Cabeça de Vaca), ADVENTURES OF. This remarkable explorer was a native of Spain, and died in 1564. He was chief officer of Narvaez in his explorations and attempted conquest of Florida. (See *Florida*.) In their flight from Florida, Nuñez was wrecked on a small island in the Gulf of Mexico, and, with the survivors, reached the main, which they penetrated to New Mexico, after suffering terrible hardships. Pushing westward, they reached the Pacific coast (1536), when only Nuñez and three others survived. An abridgment of a narrative of his adventures was published in *Hakluyt's Voyages*. (See *Cabeça de Vaca*.)

Nuñez, VASCO DE BALBOA, was born at Xeres de los Caballeros, Spain, in 1475; went to Santo Domingo in 1501; and thence to the Isthmus of Darien in 1510. Pope Alexander VI. gave to the Spanish crown, as God's vicegerent on the earth, all lands that lay three hundred leagues westward of the Azores—in fact all of America. Ferdinand of Spain divided Central America, whose shores Columbus had discovered (see *Columbus, Christopher*), into two provinces, over one of which he placed as governor Ojeda, the navigator, and over the other Diego de Nicnessa, with Bachelor Enciso as lieutenant. Nuñez, deeply in debt in Santo Domingo, escaped from his creditors by being carried in a provision-cask on board Enciso's ship. When she had weighed anchor Nuñez came from his cask. Enciso, angered by the deception, threatened him, but became reconciled. At Darien, where the seat of government was to be established, Nuñez, taking advantage of the discontent of the Spaniards, headed a revolt. When Nicnessa came, they defied him and sent him adrift in a crazy vessel; and Enciso, seeing no chance for subduing the insurgents, went back to Spain with loud complaints against Nuñez, and the Spanish government sent out Davila, with a

fleet and troops, as Governor of Darien. Meanwhile Nuñez had become a great discoverer. The cacique, or Indian ruler, of a neighboring district, named Caveta, had treated two Spaniards with great kindness, who requited his hospitality by advising Nuñez to attack and plunder him, for he had much gold. While the people of Caveta's village were slumbering, Nuñez and his followers entered it and carried off the cacique and his whole family and others, and, with considerable booty, returned to Darien. Caveta and Nuñez soon became friends. The former gave his young and beautiful daughter to the Spanish adventurer as his wife, and she acquired great influence over her husband. While visiting a powerful cacique, a friendly neighbor of Caveta, Nuñez was told that beyond the mountains was a mighty sea that could be seen from their summits, and that the rivers that flowed down the slopes of the mountains on the other side abounded with gold; also that along the coast of that sea was a country where gold

was as plentiful as iron. This story was confirmed by others, and finally Nuñez, with nearly two hundred men and a number of bloodhounds, set out for the tops of the mountains. On the 26th of November, 1513, Nuñez and his men were near the bold rocky summit of a mountain. The leader ascended it alone, when he beheld a mighty sea. It was the Pacific Ocean that laves many a league of the western coast of our Republic. On that summit he and his followers set up a huge cross, and then descended to the shore of the sea. Wading into its waters, Nuñez took formal possession of the great ocean in the name of his sovereign. After that he made voyages along its coast, and heard tidings of Peru, where the Incas, or rulers, drank out of golden vessels. After Davila came, Nuñez was falsely accused of traitorous intentions by his jealous successor and rival, and he was beheaded at Acla in 1517, in the forty-second year of his age. So perished the discoverer of the Pacific Ocean.

O.

Oak Woods, BATTLE OF. The siege of Richmond had gone on quietly until near the close of June, 1862, when General Heintzelman's corps, with a part of Keyes's and Sumner's, was ordered to move forward on the Williamsburg road, through a swampy wood, for the purpose of ascertaining the nature of the ground beyond, and to place Heintzelman and Sumner in a position to support a proposed attack upon the Confederates at a certain point by General Franklin. They met a Confederate force, and a fight ensued, in which the brigades of Sickles and Grover, of Hooker's division, bore the brunt. The Confederates were driven from their encampment, and the point aimed at was gained. The National loss was 516 men killed and wounded.

Oath at the Tomb of Calhoun. When the South Carolina Convention adopted the Ordinance of Secession (which see) on Dec. 20, 1860, the city of Charleston seemed delirious with joy. The bells of the churches rang out merry peals, and these were accompanied by the roar of cannons. A group of enthusiastic young men went to St. Philip's church-yard, and, forming a circle around the tomb of Calhoun, made a solemn vow to devote "their lives, their fortunes, and their sacred honor" to the "cause of South Carolina's independence."

Obdurate King, YIELDING OF AN. King George was greatly disturbed by the action of Parliament concerning the cessation of war in America. (See *Peace, Resolutions for.*) He said they had lost the feelings of Englishmen; and he took to heart what he called "the cruel usage of all the powers of Europe," who, excepting Spain, had expressed a desire for the freedom and independence of the United States. His ministry (North's) having resigned, he was compelled to accept a liberal one. Lord Shelburne brought about the call of Lord Rockingham

(whom the king disliked) to form a cabinet, and when his majesty finally yielded, he said, "Necessity made me yield to the advice of Lord Shelburne." And when, finally, he was compelled to acknowledge the independence of the United States, he said, "I feel sensibly this dismemberment of America from the empire, and I should be miserable indeed if I did not feel that no blame on that account can be laid at my door," when he had been the chief obstacle to reconciliation from the beginning of the quarrel. He had such a poor opinion of the Americans that he consoled himself for the dismemberment by saying, "It may not in the end be an evil that they will become aliens to the kingdom."

Oblong, THE. In 1731 the long-disputed boundary between New York and Connecticut seemed to be settled by mutual concessions. A tract of land lying within the claimed boundary of Connecticut, 580 rods in width, consisting of 61,440 acres, and called from its figure "The Oblong," was ceded to New York as an equivalent for lands near Long Island Sound surrendered to Connecticut. That tract is now included in the Connecticut towns of Greenwich, Stamford, New Canaan, and Darien. This agreement was subscribed by the respective commissioners at Dover, then the only village on the west side of the Oblong. The dividing line was not run regularly, and this gave rise to a vexatious controversy, which was settled in 1860.

O'Brien, JEREMIAH, of Irish descent, was an active patriot of the Revolution, and died at Machias, Me., Oct. 5, 1818, aged seventy-eight years. On hearing of the affair at Lexington (April, 1755), he and four brothers, and a few volunteers, captured a British armed schooner in Machias Bay, May 11, 1775. Jeremiah was the leader. It was the first naval victory, and the first blow struck on the water, after the war began. O'Brien soon afterwards made other

captures, and he was commissioned a captain in the Massachusetts navy. He commanded a privateer, but was captured, and suffered six months in the Jersey prison-ship (which see). He was also confined in Mill Prison, England, a year, when he escaped and returned home. At the time of his death O'Brien was collector of customs at Machias.

O'Callaghan, EDMUND BAILEY, M.D., LL.D., was born in Cork County, Ireland, in 1804. After residing two years in Paris, he went to Quebec in 1823, where he began the practice of medicine in 1827. For three years (1834-37) he edited the *Montreal Witness*, and was a member of the Parliament of Lower Canada in 1836. The next year he came to the United States, and was for many years (1848-70) keeper of the historical manuscripts in the office of the Secretary of State of New York. He translated the Dutch records obtained from Holland by Mr. Brodhead (which see), contained in several published volumes. He has written and edited very valuable works, such as the *Documentary History of New York*, four volumes; *Documents relating to the Colonial History of New York*, eleven volumes; *Journals of the Legislative Councils of New York*, two volumes; *Historical Manuscripts relating to the War of the Revolution*; *Laws and Ordinances of New Netherland (1638-74)*, two volumes. In 1845-48 he prepared and published, in two volumes, a *History of New Netherland*. At the time of his death, May 29, 1880, he was engaged in translating the Dutch records of the city of New York.

Occum, SAMSON, an Indian preacher, was born at Mohegan, New London Co., Conn., about 1723; died at New Stockbridge, N. Y., in July, 1792. He entered the Indian school of Mr. Wheelock at Lebanon when he was nineteen years of age, and remained there four years. Teaching school a while at Lebanon, he removed to Montauk, L. I., where he taught and preached. Sent to England (1766) as an agent for Wheelock's Indian school, he attracted great attention, for he was the first Indian preacher who had visited that country. Occum was employed in missionary labors among the Indians, and acquired much influence over them.

Offerings of a Grateful Congress. When news of the surrender of Cornwallis reached Congress, in session at Philadelphia, a committee—consisting of Messrs. Randolph, Boudinot, Varnum, and Carroll—was appointed, to whom the whole matter was referred. Ten days after the surrender the committee reported a series of resolutions, conveying thanks to all the officers and men of both nations (French and Americans) for their good conduct at Yorktown; promising the erection of a marble column at Yorktown (see *Column of Marble at Yorktown*); ordering the presentation of two stands of British colors captured at Yorktown to Washington; two field-pieces taken from the British to Rochambeau, and to ask the leave of his government to make a similar presentation to De Grasse. They also resolved to present a horse, "properly caparisoned," and an elegant sword,

to Lieutenant-colonel Tilghman, the bearer of Washington's despatches to Congress. On the same day the Congress returned thanks to General Greene for his conduct at the battle of Entaw Spring (which see), and to the Maryland, Virginia, and Delaware troops for their bravery in that battle; also thanks to other corps of the army, including the partisan troops of Marion and Sumter, and Lee's legion. They voted that a British standard should be presented to Major-general Greene "as an honorable testimony of his merit, and a golden medal emblematical of the battle and victory" at Entaw Spring. The British battle-flags presented to Washington (one of them a Hessian flag) were deposited in the museum at Alexandria by the late G. W. P. Custis, and were lost when that building was burned a few years ago. The British flag was not the royal standard of Great Britain; it was nearly square, being six feet in length and five feet four inches in width, and made of heavy twilled silk. The whole flag composed the British union—the crosses of St. George and St. Andrew—with a white centre, on which was neatly embroidered a crown, and beneath it the garter, with its motto, enclosing a full-blown rose. The other flag was taken from the Auspachers. (See *Forces at Yorktown*.) It was made of white damask silk, doubled, on which were devices embroidered with silk and gold thread. The lettering was all done with gold thread. On one side was an eagle, bearing in its talons an olive-branch, and over the whole, on a ribbon, the words "Pro principe et patria"—a strange motto for mercenaries to display. On the other side, in monogram, were the letters E. C. T. S. A. Under it were the initials M. Z. B. and the date, 1775. The flag was four feet square, with a heavy fringe.

Official Etiquette—WASHINGTON AND HANCOCK. In the autumn of 1789 President Washington made a tour through portions of the New England States. He arrived at Boston on Saturday, Oct. 24. Hancock, who was governor of Massachusetts, had invited the President to lodge at his house in Boston, which the latter declined. After Washington's arrival, Hancock sent him an invitation to come and dine with him and his family informally that day at the close of the public reception ceremonies. It was accepted by Washington, with a full persuasion that the governor would call upon him before the dinner-hour. But Hancock had conceived the proud notion that the governor of a state, within his own domain, was officially superior to the President of the United States when he came into it. He had laid his plans for asserting this superiority by having Washington visit him *first*, and to this end sent him the invitation to lodge and dine with him. At near the time for dinner, as the President did not appear, the governor evidently felt some misgivings, for he sent his secretary to the President with an excuse that he was too ill to call upon his excellency in person. The latter divined the nature of the "indisposition," and dined at his own lodgings at the "Widow Ingersoll's" with a single guest. That evening the governor, feel-

ing uneasy, sent his lieutenant and two of his council to express his regret that his illness had not allowed him to call upon the President. "I informed them expressly," says Washington in his diary, "that I should not see the governor except at my lodgings." That message took the conceit entirely out of Hancock, who was well enough the next day (Sunday) to call upon the President and repeat in person the insufficient excuse for his own folly.

Official Recognition of the "Confederate States of America." In the autumn of 1862 Pope Pius IX. addressed a letter to the archbishops of New York and New Orleans enjoining them to employ their prayers and influence for the restoration of peace. These letters were published, and Jefferson Davis, in his official capacity of "President of the Confederate States," addressed a letter to the Pope (Sept. 23, 1863) thanking him in his own name, and in that of the "Confederate States," for his "charity and love," and that they were and ever had been desirous that "the wicked war should cease." To this the Pope replied (Dec. 2) in a letter directed "To the Illustrious and Honorable Jefferson Davis, President of the Confederate States of America." The Pope was then the temporal sovereign of the Papal States. This was the only recognition from a foreign potentate which the "Confederate States" ever received.

Ogden, AARON, LL.D., was born at Elizabethtown, N. J., Dec. 3, 1756; died in Jersey City, April 19, 1839. He graduated at Princeton in 1773, taught school in his native village, and in the winter of 1775-76 assisted in capturing, near

AARON OGDEN.

Sandy Hook, a British vessel laden with munitions of war for the army in Boston. Early in 1777 he entered the army as captain under his brother Matthias, and fought at Brandywine. He was brigade-major under Lee at Monmouth, and assistant aide-de-camp to Lord Stirling; was aid to General Maxwell in Sullivan's expedition (which see); was at the battle of Springfield (June, 1780); and in 1781 was with Lafayette in Virginia. He led infantry to the storming of a redoubt at Yorktown, and received the commendation of Washington. After the war he practised law, and held civil offices of trust

in his state. He was United States Senator from 1801 to 1803, and governor of New Jersey from 1812 to 1813. In the War of 1812-15 he commanded the militia of New Jersey. At the time of his death he was President-general of the Society of the Cincinnati (which see).

Ogden, MATTHIAS, was born at Elizabethtown, N. J., in 1755; died there, March 31, 1791. He joined the army at Cambridge in 1775, accompanied Arnold in his expedition to Quebec (which see), and commanded the First New Jersey Regiment from 1776 until the close of the war, when he was breveted brigadier-general.

Ogdensburg, CAPTURE OF (1813). The British again attacked Ogdensburg in the winter of 1813. On Feb. 22 about 800 British soldiers under Colonel McDonell appeared on the ice in front of the town, approaching in two columns. It was early in the morning, and some of the inhabitants of the village were yet in bed. Colonel Forsyth and his riflemen were stationed at old Fort Presentation, at the mouth of the Oswegatchie, and against them the right column of the invaders, 300 strong, moved. Forsyth's men were partially sheltered by the ruins of the fort. Waiting until the column landed, the Americans attacked them with great energy with rifle-shot and cannon-balls from two small field-pieces. The invaders were repulsed with considerable loss, and fled in confusion over the frozen bosom of the St. Lawrence. Meanwhile the left column, 500 strong, had marched into the town and captured a 12 pounder cannon and its custodians without resistance. They then expected an easy conquest of the town, but were soon confronted by cannons under Captain Kellogg and Sheriff York. The gun of the former became disabled, and he and his men fled across the Oswegatchie and joined Forsyth, leaving the indomitable York to maintain the fight alone, until he and his band were made prisoners. The village was now in complete possession of the British, and McDonell proceeded to dislodge Forsyth and his party at the fort. He sent a message to that commander to surrender, saying, "If you surrender it shall be well; if not, every man shall be put to the bayonet." "Tell Colonel McDonell," said Forsyth to the messenger, "there must be more fighting done first." Then the two cannons near the ruins of the fort gave heavy discharges of grape and canister shot, which threw the invaders into confusion. It was only momentary. An overwhelming party of the British were preparing to make an assault, when Forsyth, seeing his peril, gave orders for a retreat to Black Lake, eight or nine miles distant. There he wrote to the War Department, giving an account of the affair, and saying, "If you can send me 300 men, all shall be retaken, and Prescott too, or I will lose my life in the attempt." The town, in possession of the enemy, was plundered by Indians and camp-followers of both sexes who came over from Canada, and by resident miscreants. Every house in the village but three was entered, and the public property carried over to Canada. Two armed schooners, fast in

the ice, were burned, and the barracks near the river were laid in ashes. Fifty-two prisoners were taken to Prescott. The Americans lost in the affair, besides the prisoners, five killed and fifteen wounded; the British loss was six killed and forty-eight wounded. They immediately evacuated the place, and the fugitive citizens returned. (See *Oswegatchie, Indian Mission at.*)

Ogdensburg, REPULSE OF THE BRITISH FROM (1812). Ogdensburg was a little village in 1812, at the mouth of the Oswegatchie River. The British village of Prescott was on the opposite side of the St. Lawrence. A threatened invasion of northern New York from that quarter caused General Jacob Brown to be sent to Ogdensburg to garrison old Fort Presentation, or Oswegatchie, at the mouth of the Oswegatchie River. Brown arrived on Oct. 1, and the next

day a British flotilla, composed of two gunboats and twenty-five bateaux, bearing about 750 armed men, left Prescott to attack Ogdensburg. At the latter place Brown had

very active, and he attained the rank of colonel in the British army. In 1722 he was elected to a seat in Parliament, which he held thirty-two years. In that body he made a successful ef-

JAMES EDWARD OGLETHORPE.

fort to relieve the distresses of prisoners for debt, who crowded the jails of England, and projected the plan of a colony in America to serve as an asylum for the persecuted Protestants in Germany and other Continental countries, and "for those persons at home who had become so desperate in circumstances that they could not rise and hope again without changing the scene and making trial of a different coun-

SITE OF FORT PRESENTATION.

about 1200 effective men, regulars and militia, stationed in the town, and a party of riflemen, under Captain Forsyth, were encamped near Fort Presentation, on the margin of the river. The latter were drawn up in battle order to dispute the landing of the invaders. Brown had two field-pieces, and when the British were nearly in mid-channel these were opened upon them with such effect that the enemy were made to retreat precipitately and in great confusion. This repulse gave Brown much credit, and he was soon regarded as one of the ablest men in the service.

Oglethorpe, JAMES EDWARD, was born in London, Dec. 21, 1688; died at Cranham Hall, Essex, England, June 30, 1785. Early in 1714 he was commissioned one of Queen Anne's guards, and was one of Prince Eugene's aids in the campaign against the Turks in 1716-17. At the siege and capture of Belgrade he was

try." Thomson, alluding to this project of transporting and expatriating the prisoners for debt to America, wrote this half-warning line, "O great design! if executed well." It was proposed to found the colony in the country between South Carolina and Florida. King George II. granted a charter for the purpose in June, 1732, which incorporated twenty-one trustees for founding the colony of "Georgia." (See *Georgia, Trustees' Government of.*) Oglethorpe accompanied the first company of emigrants thither, and early in 1733 founded the town of Savannah on Yamacraw Bluff. A satisfactory conference with the surrounding Indians, with Mary Musgrove as interpreter (see *Musgrove, Mary*), resulted in a treaty which secured sovereignty to the English over a large territory. Oglethorpe went to England in 1734, leaving the colony in care of others, and taking natives with him. (See *To-mo-chi-chi.*) He did not return to

Georgia until 1736, when he took with him several cannons and about one hundred and fifty Scotch Highlanders skilled in the military art. This was the first British army in Georgia. With him also came Rev. John Wesley and his brother Charles for the purpose of giving spiritual instruction to the colonists. The elements of prosperity were now with the colonists, who numbered more than five hundred souls; but the unwise restrictions of the trustees was a serious bar to advancement. Many Germans, also, now settled in Georgia, among them a band of Moravians; and the Wesleys were followed by George Whitefield, a zealous young clergyman burning with zeal for the good of men (see *Whitefield, George*), and who worked lovingly with the Moravians in Georgia. With his great guns and his Highlanders, Oglethorpe was prepared to defend his colony from intruders; and they soon proved to be useful, for the Spaniards at St. Augustine, jealous of the growth of the new colony, menaced them. With his martial Scotchmen, Oglethorpe went on an expedition among the islands off the coast of Georgia, and on St. Simon's he founded Frederica and built a fort. At Darien, where a few Scotch people had planted a settlement, he traced out a fortification. Then he went to Cumberland Island, and there marked out a fort that would command the mouth of the St. Mary's River. On a small island at the entrance of the St. John's River he planned a small military work, which he named Fort George. He also founded Augusta, far up the Savannah River, and built a stockade as a defence against hostile Indians. These hostile preparations caused the Spaniards at St. Augustine to threaten war. Creek tribes offered their aid to Oglethorpe, and the Spaniards made a treaty of peace with the English. It was disapproved in Spain, and Oglethorpe was notified that a commissioner from Cuba would meet him at Frederica. They met. The Spaniard demanded the evacuation of all Georgia and a portion of South Carolina by the English, claiming the territory to the latitude of Port Royal as Spanish possessions. Oglethorpe hastened to England to confer with the trustees and seek military strength. He returned in the autumn of 1733, a brigadier-general, authorized to raise troops in Georgia. He found the colonists languishing and discontented. Idleness prevailed, and they yearned for the privilege of employing slave-labor. (See *Georgia, Colony of*.) Late the next year war broke out between England and Spain. St. Augustine had been strengthened with troops, and Oglethorpe resolved to strike a blow before the Spaniards should be well prepared; so he led an unsuccessful expedition into Florida. (See *Florida, Invasion of*.) Two years later the Spaniards proceeded to retaliate, but were frustrated by a stratagem. (See *Georgia, Invasion of*.) Oglethorpe had successfully settled, colonized, and defended Georgia, spending a large amount of his own fortune in the enterprise, not for his own glory, but for a benevolent purpose. He returned to England in 1743, where, after performing good military service as major-

general against the "Young Pretender" (1745), and serving a few years longer in Parliament, he retired to his seat in Essex. When General Gage returned from America in 1775 Oglethorpe was offered the general command of the British troops in this country, though he was then about eighty years of age. He did not approve the doings of the ministry, and declined. He was among the first to offer congratulations to John Adams, because of American independence, when that gentleman went as minister to England in 1784.

O'Hara, CHARLES, of the British army, was a lieutenant of the Coldstream Guards in 1756, and, as Colonel of the Foot Guards, came to America in 1780 in command of them. He served under Cornwallis, and commanded the van in the famous pursuit of Greene in 1781. (See *Greene's Famous Retreat*.) He was badly wounded in the battle of Guilford (which see), and was commander of the British right, as brigadier-general, at the surrender at Yorktown, when he gave to General Lincoln the sword of Cornwallis, the latter too ill, it was alleged, to appear on the field. After serving as governor of several English colonies, he was Lieutenant-governor of Gibraltar in 1787, and governor in 1795. In 1797 he was made general. He died at Gibraltar, Feb. 21, 1802.

Ohio was first explored by La Salle about 1680, his object being trade and not settlement. Conflicting claims to territory in that region led to war. (See *French and Indian War*.) The French held possession of the region north of the Ohio River until the conquest of Canada (which see) in 1760 and the surrender of vast territory by the French to the English in 1763.

STATE SEAL OF OHIO.

After the Revolution disputes arose between several states as to their respective rights to the soil in that region. These were settled by the cession of the territory to the United States by the respective states, Virginia reserving 3,709,848 acres near the rapids of the Ohio, and Connecticut a tract of 3,666,921 acres near Lake Erie. (See *Western Reserve*.) In 1800 jurisdiction over these tracts was relinquished to the national government, the states retaining the right to the soil, while the Indian titles to

the rest of the state were bought up by the national government. In 1787 a government was established in that region (see *Northwestern Territory*), and the first permanent settlement in Ohio was made at Marietta in 1788. Ohio was soon afterwards organized into a separate territorial government. The settlers were annoyed by hostile Indians (see *St. Clair's Defeat*) until Wayne's victories in 1794 and the treaty at Greenville (which see) gave peace to that region. In 1799 the first territorial legislature assembled, and Ohio was admitted into the Union as a state April 30, 1802. From 1800 to 1810 the seat of government was at Chillicothe. For a while it was at Zanesville, then again at Chillicothe, and finally, in 1816, Columbus was made the permanent seat of the state government. Its people were active on the frontiers in the War of 1812. In March, 1851, a convention revised the constitution, and it was ratified in June; but a new constitution, framed by a convention in 1873, was rejected by the people at an election in 1874. Ohio furnished to the National army during the Civil War 317,133 soldiers. The first geological survey of Ohio was made in 1837-38. A more complete survey was begun in 1869 and completed in 1874.

Ohio Company. When, by treaty, the Indians had ceded the lands of the Northwestern Territory (which see), the thoughts of enterprising men turned in that direction as a promising field for settlements. On the night of the 9th of January, 1786, General Rufus Putnam and General Benjamin Tupper formed a plan for a company of soldiers of the Revolution to undertake the task of settlement on the Ohio River. The next day they issued a call for such persons who felt disposed to engage in the enterprise to meet at Boston on the 1st of March, by delegates chosen in the several counties in Massachusetts. They met, and formed "The Ohio Company." It was composed of men like Rufus Putnam, Abraham Whipple, J. M. Varnum, Samuel Holden Parsons, Benjamin Tupper, R. J. Meigs, whom Americans think of with gratitude. They purchased a large tract of land on the Ohio River; and on the 7th of April, 1788, the first detachment of settlers sent by the company, forty-eight in number—men, women, and children—seated themselves near the confluence of the Muskingum and Ohio rivers,

athwart the great war-path of the fierce northwestern tribes when they made their bloody incursions to the frontiers of Virginia and Pennsylvania. They named the settlement "Marietta," in honor of Marie Antoinette, Queen of France, the ally of the Americans. This was the seed from which sprang the great State of Ohio. It was composed of the choice materials of New England society. At one time—in the year 1789—there were no less than ten of the settlers there who had received a college education. During that year full twenty thousand settlers from the East were on lands on the banks of the Ohio. At the beginning of 1788 there was not a white family within the bounds of that commonwealth.

Ohio, FIRST FORT IN. In the autumn of 1785 United States troops began the erection of a fort on the right bank of the Muskingum, at its mouth. The commander of the troops was Major John Doughty, and he named it "Fort Harmar," in honor of his commander, Colonel Josiah Harmar. It was the first military post of the

FORT HARMAR.

kind built in Ohio. The outlines formed a regular pentagon, embracing three fourths of an acre. United States troops occupied Fort Harmar until 1790, when they left it to construct Fort Washington, on the site of Cincinnati. After the treaty of Greenville (which see) it was abandoned.

Ohio, FIRST PERMANENT SETTLEMENTS IN. In 1788 General Rufus Putnam, at the head of a colony from Massachusetts, founded a settlement at the mouth of the Muskingum River, and named it Marietta, in honor of Marie Antoinette, the queen of Louis XVI of France. A stockade fort was immediately built as a protection against hostile Indians, and named Campus Martius. In the autumn of the same year a party of settlers seated themselves upon Symmes's Purchase (which see) and founded

Columbus, near the mouth of the Little Miami. Fort Washington was soon afterwards built, a little below, on the site of Cincinnati.

Ohio Land Company. Soon after the treaty of Aix-la-Chapelle an association of London merchants and Virginia land-speculators, known as "The Ohio Land Company," obtained from the crown a grant of half a million acres of land on the east bank of the Ohio River, with the exclusive privilege of the Indian traffic. International, or at least intercolonial, disputes immediately occurred. The French claimed, by right of discovery, the whole region watered by the tributaries of the Mississippi River. The English set up a claim, in the name of the Six Nations, as under British protection, and which was recognized by the treaties of Utrecht (1713) and Aix-la-Chapelle (1748), to the region which they had formerly conquered, and which included the whole eastern portion of the Mississippi valley and the basin of the lower lakes, Erie and Ontario. These conflicting claims at once embarrassed the operations of the Ohio Land Company. It was provided by their charter that they were to pay no quit-rent for ten years; to colonize at least one hundred families within seven years; and, at their own cost, to build and garrison a fort. The government was anxious to carry out this scheme of colonization west of the Alleghany Mountains to counteract the evident designs of the French to occupy that country. The French took immediate measures to countervail the English movements. Galissonière, who had grand dreams of French empire in America, fitted out an expedition under Céloron de Bienville in 1749 to proclaim French dominion at various points along the Ohio. (See *Céloron's Expedition*.) The company took measures for defining and occupying their domain. Thomas Lee, two of the Washingtons, and other leading Virginia members ordered goods suitable for the Indian trade to be sent from London. The company sent an agent to explore the country and confer with the Indian tribes; and in June, 1752, a conference was held at Logstown, near the Ohio, and friendly relations were established between the English and the barbarians. But the Western tribes steadily refused to recognize the right of either the English or the French to lands westward of the Alleghany Mountains. A Delaware chief said to Gist, the agent of the company, "The French claim all the land on one side of the river, and the English claim all the land on the other side of the river: where is the Indian's land?" This significant question was answered by Gist, "Indians and white men are subjects of the British king, and all have an equal privilege in taking up and possessing the land." The company sent surveyors to make definite boundaries. English settlers and traders went into the country. The jealousy of the French was aroused. They seized and imprisoned some of the surveyors and traders and built forts. The French and Indian War that broke out soon afterwards put a stop to the operations of the company. (See *French and Indian War*.)

Ohio, POSITION OF, IN 1861. This state, then containing 2,300,000 inhabitants, had been first settled chiefly by New-Englanders, and was a part of the great Northwestern Territory (which see) by the ordinance of 1787. Its governor (William Dennison, Jr.) was an avowed opponent of the slave system. The Legislature of Ohio met on Jan. 7, 1861. In his message, the governor explained his refusal to surrender alleged fugitive slaves on the requisition of the authorities of Kentucky and Tennessee; denied the right of secession; affirmed the loyalty of his state; suggested the repeal of the Fugitive Slave Law as the most effectual way of procuring the repeal of the Personal Liberty Acts; and called for the repeal of the laws of the Southern States which interfered with the constitutional rights of the citizens of the free-labor states. "Determined to do no wrong," he said, "we will not contentedly submit to wrong." The Legislature denounced (Jan. 12) the secession movements; promised for the people of Ohio their firm support of the national government; and, on the 14th, pledged "the entire power and resources of the state for a strict maintenance of the Constitution and laws of the general government by whomsoever administered." These promises and pledges were fulfilled to the utmost.

Ohio Troops at Dayton (1812). The President called on R. J. Meigs, Governor of Ohio, for twelve hundred militia to be prepared to march to Detroit. Governor William Hull, of Michigan, was persuaded to accept the commission of brigadier-general and take command of them. Governor Meigs's call was generously responded to, and at the mouth of the Mad River, near Dayton, O., the full number had assembled at the close of April, 1812. They were organized into three regiments, and elected their field-officers before the arrival of Hull. The colonels of the respective regiments were Duncan McArthur, James Findlay, and Lewis Cass. The Fourth Regiment of regulars, stationed at Vincennes, under Lieutenant-colonel James Miller, had been ordered to join the militia at Dayton. The command of the troops was surrendered to Hull by Governor Meigs on May 25, 1812. They began their march northward June 1; and at Urbana they were joined by Miller's Fourth Regiment, which, under Colonel Boyd, had participated in the battle at Tippecanoe (which see). They encountered heavy rains and terrible fatigue all the way to Detroit, their destination. (See *Hull's Invasion of Canada*.)

Ojeda, ALONZO DE, was among the earliest discoverers in America after Columbus and Cabot. He was with Columbus in his first voyage. Aided by the Bishop of Badajoz, he obtained royal permission to go on a voyage of discovery, and the merchants of Seville fitted out four ships for him in which he sailed for St. Mary's on the 20th of May, 1499, accompanied by Amerigo Vesputius as geographer. Following the track of Columbus in his third voyage (see *Columbus, Christopher*), they reached the northeastern coasts of South America, and discovered mountains on the

continent. Coasting along the northern shores of the continent (naming the country Venezuela), Ojeda crossed the Caribbean Sea, visited Santo Domingo, and returned to Spain in September. In 1509 the Spanish monarch divided Central America into two provinces, and made Ojeda governor of one of them and Nicenessa of the other. Ojeda sailed from Santo Domingo late in the autumn, accompanied by Pizarro (see *Pizarro*) and some Spanish friars, whose chief business at the outset seems to have been the reading aloud to the natives in Latin a proclamation by the Spanish leader, prepared by eminent Spanish divines in accordance with a decree of the Pope of Rome (see *Pope's Gift*), declaring that God, who made them all, had given in charge of one man named St. Peter, who had his seat at Rome, all the nations on the earth, with all the lands and seas on the globe; that his successors, called popes, were endowed by God with the same rights; that one of them had given to the monarchs of Spain all the islands and continents in the Western Ocean, and that the natives of the land he was on were expected to yield implicit submission to the servants of the king and Ojeda, his representative. The proclamation threatened, in case of their refusal, to make war upon them, and subdue them "to the yoke and obedience of the Church and his majesty;" that he would make slaves of their wives and children, take all their possessions, and do them all the harm he could, protesting that they alone would be to blame for all deaths and disasters which might follow their disobedience. (See *Pope Alexander VI.*) This infamous proclamation, which justified murder and robbery under the sanction of the Church and State, indicated the spirit of most of the Spanish conquerors. The natives delayed, and slaughter began. Captives were carried to the ships as slaves. The outraged Indians gathered in bands and slew many of the Spanish soldiers with poisoned arrows. Ojeda took shelter from their fury among matted roots at the foot of a mountain, where his followers found him half dead. At that moment Nicenessa, governor of the other province, arrived, and with reinforcements they made a desolating war on the natives. This was the first attempt to take possession of the mainland in America. Ojeda soon retired with some of his followers to Santo Domingo. The vessel stranded on the southern shore of Cuba, then under native rule, and a refuge for fugitive natives from Santo Domingo. The pagans treated the suffering Christians kindly, and were rewarded with the fate of those of Hispaniola. (See *Santo Domingo*.) The pious Ojeda had told of the wealth of the Cubans, and avaricious adventurers soon made that paradise a pandemonium. He built a chapel there, and so Christianity was introduced into that island.

Old and New Tenor. Early in 1780 the issue of bills of credit by the Continental Congress was stopped, and the states were advised to repeal all laws making the old bills a legal tender. Congress offered to receive gold and silver at the rate of \$40 in paper for \$1 in coin in discharge of the unpaid state quotas. A scheme

was adopted that provided a moderate supply of funds to the treasury. The drawing in and cancelling of the outstanding bills of credit, together with their rapid depreciation, kept the currency in a state of complete derangement. As the bills came in from the states in payment of their monthly quotas, they were cancelled; but for every \$20 so cancelled, \$1 was to be issued as "new tenor," the old issues since 1775, amounting to about \$200,000,000, being called "old tenor." The new tenor bore interest at five per cent., and were to be redeemed in specie within six years, the new bills to be guaranteed by the Confederacy (see *Articles of Confederation*), but to be issued on the credit of the individual states in proportion to their payments of the old tenor. This process, if carried out, would substitute for the outstanding \$200,000,000 of old bills \$10,000,000 of new tenor, of which \$6,000,000 would go to the states paying in the bills, and \$4,000,000 to the federal treasury. Such was the death of the old Continental paper-money scheme. The new-tenor scheme was a failure. A poet of the day made "The Ghost of Continental Money" utter words of warning to the "Embargo" of the new scheme—"new tenor." It said:

"I have lived, to be sure, awhile to secure
The rights of a much injured nation;
But I got all my living by a course of deceiving,
That has sunk me in utter damnation.
* * * * *
You may strive and may tease, but never will please—
You never will suit and content all:
So stay where you are, or, alas! you will share
The fortune of old *Continental*."

Old Dominion. A title often given to the State of Virginia. The vast, undefined region named Virginia by Queen Elizabeth was regarded by her as a fourth kingdom of her realm. Spenser, Raleigh's firm friend, dedicated his *Faery Queene* (1590) to Elizabeth, "Queen of England, France, Ireland, and *Virginia*." When James VI. of Scotland came to the English throne (1603), Scotland was added, and Virginia was called, in compliment, the fifth kingdom. On the death of Charles I. on the scaffold (1649), his son Charles, heir to the throne, was in exile. Sir William Berkeley, a staunch royalist, was then governor of Virginia, and a majority of the colony were in sympathy with him. He proclaimed that son "Charles the Second, King of England, Scotland, Ireland, and *Virginia*;" and when in 1652 the Virginians heard that the Republican government of England was about to send a fleet to reduce them to submission (see *Berkeley, Sir William*), they sent a message to Breda, in Flanders, where Charles then resided, inviting him to come over and be king of Virginia. He was on the point of sailing for America when circumstances foreshadowed his restoration to the throne of his father. When that act was accomplished, the grateful monarch caused the arms of Virginia to be quartered with those of England, Scotland, and Ireland, as an independent member of the empire. From this circumstance Virginia received the title of The Dominion. Coins with such quarterings were struck as late as 1773, and the State of Virginia is often called *The Old Dominion*.

Old Ironsides. A name popularly applied to the United States frigate *Constitution*, built in the year 1797 and yet [1880] afloat. She was conspicuous in the bombardment of Tripoli in 1804, and particularly so during the War of 1812. In that war she was in three actions; was twice critically chased; captured five British vessels of war; was never dismasted; never got on shore, and scarcely ever suffered any of the usual disasters at sea. Her most eminent commander, Commodore Charles Stewart, received the popular title of "Old Ironsides."

Old Tower at Newport. This structure is of unhewn stone, laid in mortar composed of the sand and gravel of the soil around it and oyster-shell lime. It is a cylinder twenty-three feet in diameter and now twenty-four feet in height, resting upon arches supported by eight columns. It was originally covered with stucco within and without, and the writer was informed by the owner of the land many years ago (Governor Gibbs) that on digging to the foundation-stones of one of the supporting columns, they were found to be composed of hewn spheres. This structure is a hard nut for antiquaries and historians to crack. Some regard it as a Scandinavian structure of great antiquity, and others as a windmill built by some of the early colonists of Rhode Island. Governor Benedict Arnold speaks of it in his will (1677) as his "stone-built windmill." Peter Easton, another early settler, says in his diary for 1663: "This year we built our first windmill." Easton built it himself of wood, and for his enterprise he was rewarded by the colony with a strip of land on the ocean front, known as Easton's Beach. Such a novel structure as this tower, if built for a windmill, would have received more than a local notice. No chronicler of the day refers to it, nor is it mentioned as being there when the settlers first seated themselves on the island. It was a very inconvenient structure for a windmill, for it was evidently all left open below the arches, with a floor and three windows above them. The idea that it was originally built for a windmill is discarded by many intelligent persons who have examined it, and contemplate the condition of the early colonists of Rhode Island. When and by whom was it built? is a question

that will probably remain unanswered, satisfactorily, forever. (See *Northmen in America*.)

Oldest Existing Town in the Original States of the Union. Albany, the political capital of the State of New York, is the oldest existing town within the domain of the original thirteen states. It was first settled by Dutch traders in 1614. They built a trading-house on Castle Island, a little below the site of Albany, and eight years afterwards Fort Orange was built on that site. The settlement was called Fort Orange at first, then Beverswyck; and after the Province of New Netherland passed into the possession of

STONE TOWER AT NEWPORT.

the English it was called Albany, the second title of Duke James, afterwards James II. of England. Jamestown, which was the earliest English settlement (1607), perished in 1676 by the hand of Bacon (which see), and the only vestige of the village that remains is the ruin of a church-tower. Albany is yet full of the descendants of the early settlers there in the second decade of the 17th century.

Oldham, JOHN, came to New Plymouth from England in 1623, where, in connection with Lyford, he made much trouble. (See *Lyford and Oldham, Conspiracy of*.) He lived at Hull and

Cape Ann, a restless man; and in 1634 he represented Watertown in the General Court of Massachusetts. In 1633, with Samuel Hall and others, he penetrated the wilderness westward to the Connecticut River, to the site of (the present) Windsor, and this exploration led to the settlements in the Connecticut valley. Coming to Connecticut on board his vessel to trade with the Indians, he was murdered by them, and this event led to the Pequod War (which see).

Oligarchy in Virginia. At the beginning of the eighteenth century, an oligarchy had been almost imperceptibly formed in Virginia. At that time there were on each of the four rivers in Virginia "men in number from ten to thirty," who, by trade and industry, had acquired competent estates. They took care to supply the poorer sort with goods, and were sure to keep them always in their debt, and, consequently, dependent on them. Out of this small number were chosen the Council, Assembly, justices, and other officers of government. Parish affairs were in the hands of self-perpetuating vestries, which kept the ministers in check by hiring them yearly. The justices managed the business and finances of their respective counties. The twelve councillors possessed extensive authority. Their assent was necessary to all the governor's official acts, and they constituted one branch of the General Assembly. They exercised the principal judicial authority as judges of the General Court. They were at the head of the militia as lieutenants of volunteers; acted as collectors of export duties on tobacco and other provincial imports, and farmed the king's quit-rents much to their own advantage. A majority of these councillors united in a sort of family compact to engross the entire management of the province. So Virginia was ruled by an oligarchy composed of a few families.

Oliver, ANDREW, was born in Boston, March 28, 1706; died there, March 3, 1774. He graduated at Harvard in 1724. He was a representative in the General Court from 1743 to 1746; one of his majesty's Council from 1746 to 1765; and secretary of the province from 1756 to 1770, and succeeded Hutchinson (his brother-in-law) as lieutenant-governor. In 1765 he was hung in effigy because he was a stamp-distributor (which see), and his course in opposition to the patriotic party in Boston caused him to share the unpopularity of Hutchinson. His letters, with those of Hutchinson, were sent by Franklin to Boston, and created great commotion there. (See *Hutchinson's Letters*.)

Oliver, PETER, LL.D., was born March 6, 1713; died at Birmingham, England, Oct. 13, 1791. He was a brother of Andrew Oliver, and graduated at Harvard in 1730. After holding several offices, he was made judge of the Supreme Court of Massachusetts in 1756, and in 1771 chief-justice of that court. His course in Boston in opposition to the patriots made him very unpopular, and he was one of the crowd of loyalists who fled from that city with the British army in March, 1776. He went to England, where he lived on a pension

from the British crown. He was an able writer of both prose and poetry. Chief-justice Oliver, on receiving his appointment, refused to accept his salary from the colony, and was impeached by the Assembly and declared suspended until the issue of the impeachment was reached. The Assembly of Massachusetts had voted the five judges of the Superior Court ample salaries from the colonial treasury, and called upon them to refuse the corrupting pay from the crown. Only Oliver refused, and he shared the fate of Hutchinson.

Oliver, THOMAS, the last royal lieutenant-governor of Massachusetts, was born at Dorchester, Mass., Jan. 5, 1734; died at Bristol, England, Nov. 29, 1815. He graduated at Harvard in 1753. He succeeded Lieutenant-governor Andrew Oliver (of another family) in March, 1774, and in September following was compelled by the people of Boston to resign. He took refuge with the British troops in Boston, and fled with them to Halifax in 1776, and thence to England.

Olney, JEREMIAH, was born in 1750; died at Providence, R. I., Nov. 10, 1812. He was made lieutenant-colonel at the beginning of the war for independence (afterwards made colonel), and was often the chief officer of the Rhode Island forces. He fought conspicuously at Red Bank, Springfield, Monmouth, and Yorktown, and after the war he was collector of the port of Providence, and president of the Rhode Island Cincinnati.

Olney, STEPHEN, was born at North Providence, R. I., in October, 1755; died there, Nov. 23, 1832. He entered the army as a lieutenant in Captain Jeremiah Olney's company in 1775, and served with distinction in several of the principal battles of the war for independence. He served under Lafayette in Virginia, and was distinguished in the capture of a British redoubt at Yorktown during the siege (which see), where he was severely wounded by a bayonet-thrust. Colonel Olney held many town offices, and for twenty years represented his native town in the Assembly.

Olustee Station, BATTLE AT. Early in 1864 the government was informed that the citizens of Florida, tired of the war, desired a reunion with the National government. The President commissioned his private secretary (John Hay) a major, and sent him to Charleston to accompany a military expedition which General Gillmore was to send to Florida. Hay to act in a civil capacity if required. The expedition was commanded by General Truman Seymour, who left Hilton Head (Feb. 5, 1864) in transports with 6000 troops, and arrived at Jacksonville, Fla., on the 7th. Driving the Confederates from there, the Nationals pursued them into the interior. General Finnegan was in command of a considerable Confederate force in Florida, and stoutly opposed this invasion. At Olustee Station, on a railway that crossed the peninsula in the heart of a cypress swamp, the Nationals encountered Finnegan, strongly posted. A sharp battle occurred (Feb. 20), when Seymour was repulsed and retreated to Jacksonville. The estimated

loss to the Nationals in this expedition was about 2000 men; the Confederate loss, 1000 men and several guns. Seymour carried with him about 1000 of the wounded, and left 250 on the field, besides many dead and dying. The expedition returned to Hilton Head. Unionism in Florida seemed to be a myth. The Nationals destroyed stores valued at \$1,000,000. At about the same time Admiral Bailey destroyed the Confederate salt-works on the coast of Florida, valued at \$3,000,000.

Omahas, THE, are a tribe of Indians of the Dakota family. They are represented in Marquette's map in 1673. They were divided into clans, and cultivated corn and beans. One of their customs was to prohibit a man from speaking to his father-in-law and mother-in-law. They were reduced about the year 1800 by small-pox from a population capable of sending out seven hundred warriors to about three hundred. They then burned their villages and became wanderers. They were then, as now, relentlessly pursued by the Sioux. They had increased in number, when Lewis and Clarke found them on the Quicoure in 1805, to about six hundred. They have from time to time ceded lands to the United States, and since 1855 have been settled, and have devoted themselves exclusively to agriculture. Their condition has improved, and in 1873 they had a church, three schools, and numbered one thousand souls. They are on a reservation in the northeastern part of Nebraska, and their property is valued at \$75,000.

Omnibus Bill, THE (1850). The subject of the admission of California as a state of the Union (which see) had created so much sectional ill-feeling that danger to the integrity of the Union was apprehended. Mr. Clay, feeling this apprehension, offered a plan of compromise in the United States Senate (Jan. 29, 1850) in a series of resolutions, providing for the admission of California as a state; the organization of new territorial governments; fixing the boundary of Texas; declaring it to be inexpedient to abolish slavery in the District of Columbia while that institution existed in Maryland, without the consent of the people of the district, and without just compensation to the owners of slaves within the district; that more effectual laws should be made for the restitution of fugitive slaves; and that Congress has no power to prohibit or obstruct the trade in slaves between the several states. Clay spoke eloquently in favor of this plan. Mr. Webster approved it, and Senator Foote, of Mississippi, moved that the whole subject be referred to a committee of thirteen—six Southern members and six Northern members—they to choose the thirteenth. This resolution was adopted April 18; the committee was appointed, and Mr. Clay was made chairman of it. On May 8, Mr. Clay reported a plan of compromise in a series of bills substantially the same as that of Jan. 29. It was called an "Omnibus Bill." Long debates ensued, and on July 31 the whole batch was rejected except the proposition to establish a territory in the Mormon settlements in Deseret, called Utah. Then the com-

promise measures contained in the Omnibus Bill were taken up separately. In August a bill for the admission of California passed the Senate; also for providing a territorial government for New Mexico. In September a Fugitive Slave Bill passed the Senate; also a bill for the suppression of the slave-trade in the District of Columbia. All of these bills were adopted in the House of Representatives in September, and received the signature of President Fillmore.

"On to Richmond!" At the beginning of 1862 the loyal people became very impatient of the immobility of the immense Army of the Potomac, and from every quarter was heard the cry, "Push on to Richmond!" Edwin M. Stanton succeeded Mr. Cameron (Jan. 13, 1862) as Secretary of War, and the President issued a general order (Jan. 27), in which he directed a general forward movement against the insurgents of all the land and naval forces of the Republic on the 22d of February next ensuing. This order sent a thrill of joy through the heart of the loyal people, and it was heightened when an order directed McClellan to move against the inferior Confederate force at Manassas. McClellan remonstrated, and proposed to take his great army to Richmond by the circuitous route of Fortress Monroe and the Virginia peninsula. The President finally yielded, and the movement by the longer route was begun. After the Confederates had voluntarily evacuated Manassas, the army was first moved in that direction, not, as the commander-in-chief said, to pursue them and take Richmond, but to give his troops "a little active experience before beginning the campaign." The "promenade," as one of his French aids called it, disappointed the people, and the cry was resumed, "On to Richmond!" The Army of the Potomac did not begin its tardy march on to Richmond until April. The President, satisfied that General McClellan's official burdens were greater than he could profitably bear, kindly relieved him of the chief care of the armies, and gave him (March 11) the command of only the Department of the Potomac.

"On to Washington!" The seizure of the national capital, with the treasury and archives of the government, was a capital part of the plan of the Secessionists everywhere, and of the "government" at Montgomery. Alexander H. Stephens, the "Vice-President" of the Confederacy, was sent by Jefferson Davis to treat with Virginia for its annexation to the league, and at various points on his journey, whenever he made speeches to the people, the burden was, "On to Washington!" That cry was already resounding throughout the South. It was an echo of the prophecy of the Confederate Secretary of War. (See *Walker's Prophecy*.) "Nothing is more probable," said the *Richmond Enquirer*, on April 13, 1861, "than that President Davis will soon march an army through North Carolina and Virginia to Washington;" and it called upon Virginians who wished to "join the Southern Army" to organize at once. "The first fruits of Virginia secession," said the *New Orleans Picayune*, on the 18th, "will be the removal of Lin-

colu and his cabinet, and whatever he can carry away, to the safer neighborhood of Harrisburg or Cincinnati—perhaps to Buffalo or Cleveland." The *Vicksburg* (Mississippi) *Whig* of the 20th said: "Major Ben McCulloch has organized a force of 5000 men to seize the Federal capital the instant the first blood is spilled." On the evening of the same day, when news of bloodshed in Baltimore reached Montgomery (see *Riot in Baltimore*), bonfires were built in front of the Exchange Hotel, and from its balcony Roger A. Pryor, of Virginia, in a speech to the multitude, said that he was in "favor of an immediate march on Washington." At the departure of the Second Regiment of South Carolina Infantry for Richmond, the colonel, as he handed the flag just presented to it to the color-sergeant, said: "To your particular charge is committed this noble gift. Plant it where honor calls. If opportunity offers, let it be the first to kiss the breezes of heaven from the dome of the Capitol at Washington." The *Richmond Examiner* said, on April 23—the day when Stephens arrived in that city: "The capture of Washington city is perfectly within the power of Virginia and Maryland, if Virginia will only make the proper effort by her constituted authorities. There never was half the unanimity among the people before, nor a tithe of the zeal upon any subject that is now manifested to take Washington, and drive from it every Black Republican (which see) who is a dweller there. From the mountain-tops and valleys to the shores of the sea there is one wild shout of fierce resolve to capture Washington city, at all and every human hazard." On the same day Governor Ellis, of North Carolina, ordered a regiment of state troops to march for Washington; and the *Goldborough* (N. C.) *Tribune* of the 24th, speaking of the grand movement of Virginia and a rumored one in Maryland, said: "It makes good the words of Secretary Walker, of Montgomery, in regard to the Federal metropolis. (See *Walker's Prophecy*.) It transfers the lines of battle from the Potomac to the Pennsylvania border." The *Raleigh* (N. C.) *Standard* of the same date said: "Our streets are alive with soldiers" (North Carolina was then a professedly loyal state); and added, "Washington city will be too hot to hold Abraham Lincoln and his government. North Carolina has said it, and she will do all she can to make good her declaration." The *Eufaula* (Alabama) *Express* said, on the 25th: "Our policy at this time should be to seize the old Federal capital, and take old Lincoln and his cabinet prisoners of war." The *Milledgeville* (Ga.) *Southern Recorder* said: "The government of the Confederate States must possess the city of Washington. It is folly to think it can be used any longer as the headquarters of the Lincoln government, as no access can be had to it except by passing through Virginia and Maryland. The District of Columbia cannot remain under the jurisdiction of the United States Congress without humiliating Southern pride and disputing Southern rights. Both are essential to greatness of character, and both must co-operate in the destiny to be achieved."

A correspondent of the *Charleston Courier*, writing from Montgomery, said: "The desire for taking Washington, I believe, increases every hour; and all things, to my thinking, seem tending to this consummation. We are in lively hope that before three months roll by the [Confederate] government—Congress, departments, and all—will have removed to the present Federal capital." Hundreds of similar expressions were uttered by Southern politicians and Southern newspapers; and Alexander H. Stephens, the Vice-President of the Confederacy, brought his peculiar logic to bear upon the matter in a speech at Atlanta (Ga.), April 30, 1861, in the following manner: "A general opinion prevails that Washington city is soon to be attacked. On this subject I can only say, our object is peace. We wish no aggressions on any man's rights, and will make none. But if Maryland secedes, the District of Columbia will fall to her by reversionary right—the same as Sumter to South Carolina, Pulaski to Georgia, and Pickens to Florida. When we have the right, we will demand the surrender of Washington, just as we did in the other cases, and will enforce our demand at every hazard and at whatever cost." At the same time went forth from the free-labor states, "On to Washington!" for its preservation; and it was responded to effectually by hundreds of thousands of loyal citizens.

Oneida, THE. The first warlike measure of the Americans previous to the hostilities begun in 1812 was the construction, at Sackett's Harbor, at the eastern end of Lake Ontario, of the brig *Oneida*, 16 guns, by Christian Berg and Henry Eckford. She was launched in 1809, and was intended for a twofold purpose—namely, to enforce the revenue laws under the Embargo Act, and to be in readiness to defend American property afloat on Lake Ontario in case of war with Great Britain. Her first duty in that line was performed in 1812, when she was commanded by Lieutenant Melancthon T. Woolsey. The schooner *Lord Nelson*, laden with flour and merchandise, and owned by British subjects at Niagara, was found in American waters in May, 1812, on her way to Kingston, and was captured by the *Oneida* and condemned as lawful prize. About a month later (June 14, 1812) another British schooner, the *Ontario*, was captured at St. Vincent, but was soon discharged. At about the same time still another offending schooner, the *Niagara*, was seized and sold as a violator of the revenue laws. These events soon led to retaliation. (See *St. Lawrence*.)

Oneidas. This was the second of the five nations that composed the original Iroquois Confederacy. Their domain extended from a point east of Utica to Deep Spring, near Manlius, south of Syracuse, in Onondaga County, N. Y. Divided into three clans—the Wolf, Bear, and Turtle—their tribal totem was a stone in a forked stick, and their name meant "tribe of the granite rock." Tradition says that when the great confederacy was formed, Hiawatha (which see) said to them: "Ye, Oneidas, a people who recline your bodies against the 'Ever-

lasting Stone,' that cannot be moved, shall be the second nation, because you give wise counsel." Very soon after the settlement of Canada they became involved in wars with the French and their Huron and Montagnais allies. In 1653 they joined their neighbors, the Onondagas, in a treaty of peace with the French, and received missionaries from the latter. At that time they had been so reduced by war with southern tribes that they had only 150 warriors. In the general peace with the French, in 1700, they joined their sister nations; and when the old war for independence was kindling, they alone, of the then Six Nations (which see) in the great council, opposed an alliance with the English. They remained faithful to the English-American colonists to the end. In this attitude they were largely held by the influence of Samuel Kirkland, a Protestant missionary, and General Philip Schuyler. Because of this attitude they were subjected to great losses by the ravages of Tories and their neighbors, for which the United States compensated them by a treaty in 1794. They had previously ceded their lands to the State of New York, reserving a tract, now in Oneida County, where some of them still remain. They had been joined by the Stockbridge and Brotherton Indians. Some of them emigrated to Canada, and settled on the Thames; and in 1821 a large band purchased a tract on Green Bay, Wisconsin. They have all advanced in civilization and the mechanic arts, as well as in agriculture, and have schools and churches. There are only about 250 Oneidas left in the State of New York, on the reservation near "Oneida Castle." There are 1270 on a reservation of 65,000 acres in Wisconsin, where more than half their children are in schools; and a little over 600 are on the Thames, in the province of Ontario.

Onondagas. These were the third nation of the Iroquois Confederacy, and their name means "men of the great mountain." Tradition says that at the formation of the confederacy Hiawatha said to them: "You, Onondagas, who have your habitation at the 'Great Mountain,' and are overshadowed by its crags, shall be the third nation, because you are greatly gifted with speech, and are mighty in war." Their seat of government, or "castle," was in the hill country southward from Syracuse, where was the great council-fire of the Confederacy, or meeting-place of their Congress. The Atatarho, or great sachem of the tribe, was chosen to be the first President of the Confederacy. (See *Iroquois Confederacy*.) They were divided into fourteen clans, with a sachem for each clan, and their domain extended from Deep Spring, near Manlius, Onondaga Co., west to a line between Cross and Otter lakes. This nation carried on war with the Indians in Canada, and also with the French, after their advent on the St. Lawrence; and they were prominent in the destruction of the Hurons. In 1653 they made peace with the French, and received Jesuit missionaries among them. The peace was not lasting, and in 1662 a large force of Onondagas ravaged Montreal Island. They again made peace, and in 1668

the French mission was re-established. As the English extended their influence among the Five Nations, the Iroquois were won to their interest, and the Onondagas permitted them to erect a fort in their domain; but when, in 1696, Frontenac invaded their territory, the Onondagas destroyed the fort and their village, and returned to the forests. The French sent deputies to the Onondaga sachems, and then, in 1700, signed the general treaty of peace at Montreal. This was broken in 1709, when the Onondagas again made war on the French, and were alternately hostile and neutral towards them until the overthrow of the French power, in 1763. When the old war for independence was kindling, a general council of the Confederacy was held at Onondaga Castle. The Oneidas and Tuscaroras (see *Six Nations*) opposed an alliance with the English, and each nation was left to act as it pleased in the matter. By this decision the Confederacy was weakened, and finally, in 1777, the council-fire at Onondaga (as the Confederate government was familiarly called) was formally extinguished. The Onondagas joined the English, and the war left them helpless, and in 1778 they ceded all their lands to the State of New York, except a reservation set apart for their remnant, which they continue to hold. A part of them are Christians, and the remainder are pagans. Not less than 500 Onondagas in New York are on the reservation; the remainder are with the Senecas and Tuscaroras. For the past fifty years the population has neither increased nor diminished. There are about 400 Onondagas in Canada, making the total number of the once powerful nation a little more than 800. It is said that the Onondaga dialect is the purest one of the Iroquois.

Opechancanough, brother of Powhatan, was "King of Pamunkey" when the English first landed in Virginia. He was born about 1552, and died in 1644. He first became known to the English as the captor of John Smith in the forest. Opechancanough would have killed him immediately, but for Smith's presence of mind. He drew from his pocket a compass, and explained to the savage as well as he could its wonderful nature; told him of the form of the earth and the stars—how the sun chased the night around the earth continually. Opechancanough regarded him as a superior being, and women and children stared at him as he passed from village to village to the barbarian's capital, until he was placed in the custody of Powhatan. Opechancanough attended the marriage of his niece, Pocahontas, at Jamestown, but always disliked the English. After the death of his brother (1619) he was lord of the empire, and immediately formed plans for driving the English out of his country. Governor Sir Francis Wyatt brought the constitution (see *Virginia, Colony of*) with him, and there was evidence of prosperity and peace everywhere. But at that moment a fearful cloud of trouble was brooding. Opechancanough could command fifteen hundred warriors. He hated the English bitterly, and inspired his people with the same feeling, yet he feigned friendship for them until a plot

for their destruction was perfected. Believing the English intended to seize his domains, his patriotism impelled him to strike a blow. In an affray with a settler, an Indian leader was shot, and the wily emperor made it the occasion for inflaming the resentment of his people against the English. He visited the governor in war costume, bearing in his belt a glittering hatchet, and demanded some concessions for his incensed people. It was refused; and, forgetting himself for a moment, he snatched the hatchet from his belt, and struck its keen blade into a log of the cabin, uttering a curse upon the English. Instantly recovering himself, he smiled, and said: "Pardon me, governor; I was thinking of that wicked Englishman [Argall] who stole my niece [Pocahontas] and struck me with his sword. (See *Argall, Samuel*.) I love the English who are the friends of Powhatan. Sooner will the skies fall than that my bond of friendship with the English shall be dissolved." Sir Francis warned the people that treachery was abroad. They did not believe it. They so trusted the barbarians that they had taught them to hunt with fire-arms. A tempest suddenly burst upon them. On the 1st of April (March 22, O. S.), 1622, the Indians rushed from the forests upon all the remote settlements, at a preconcerted time, and in the space of an hour three hundred and fifty men, women, and children were slain. At Henrico, the devoted Thorpe (in charge of the lands of Henrico College [which see]), who had been like a father to the children and the sick of the savages, was slain. Six members of the Council and several of the wealthier inhabitants were made victims of the treachery. On the very morning of the massacre the savages ate at the tables of those whom they intended to murder at noon. The people of Jamestown were saved by Chanco, a Christian Indian, who gave them timely warning, and enabled them to prepare for the attack. Those on remote plantations who survived beat back the savages, and fled to Jamestown. In the course of a few days, eighty of the inhabited plantations were reduced to eight. A large part of the colony were saved, and these waged an exterminating war. They struck such fearful retaliating blows that the Indians were beaten back into the forest, and death and desolation were spread over the peninsula between the York and James rivers. The emperor fled to the land of the Pamunkeys, and by a show of cowardice lost much of his influence. The power of the Confederacy was broken. Before the war there were six thousand Indians within sixty miles of Jamestown; at its close there were, probably, not one thousand within the territory of eight thousand square miles. The colony, too, was sadly injured in number and strength. A deadly hostility between the races continued for more than twenty years. Opechancanough lived, and had been nursing his wrath all that time, prudence alone restraining him from war. His malice remained keen, and his thirst for vengeance was terrible. When, in 1643, Thomas Rolfe, son of his niece Pocahontas, came from England, and with Cleopatra, his mother's sis-

ter, visited the aged emperor, and told him of the civil war between the English factions, the old emperor concluded it was a favorable time for him to strike another blow for his country. He was then past ninety years of age, and feeble in body. He sent runners through his empire. A confederation of the tribes for the extermination of the English was formed, and the day fixed to begin the work in the interior and carry it on to the sea. Early in April, 1644, they began the horrid work. The old emperor was carried on a litter borne by his warriors. In the space of two days they slew more than three hundred of the settlers, sparing none who fell in their way. The region between the Pamunkey and York rivers was almost depopulated. Governor Berkeley met the savages with a competent armed force, and drove them back with great slaughter. Opechancanough was made a prisoner, and carried in triumph to Jamestown. He was so much exhausted that he could not raise his eyelids, and in that condition he was fatally wounded by a bullet from the gun of an English soldier who guarded him, and who had suffered great bereavements at the hands of the savages. The people, curious, gathered around the dying emperor. Hearing the hum of a multitude, he asked an attendant to raise his eyelids. When he saw the crowd he haughtily demanded a visit from the governor. Berkeley came, when the old man said, as fiery indignation gave strength to his voice, "Had it been my fortune to have taken Sir William Berkeley prisoner, I would not meanly have exposed him as a show to my people." He then stretched himself upon the earth, and died.

Open Debates in Massachusetts. In 1764 the House of Representatives of Massachusetts ordered that the debates at their sessions should be open to the public ear, and that a gallery should be built in their chamber for the accommodation of the public.

Operations in Western Virginia (1864). Arrangements had been made for the service of auxiliary or co-operating troops in western Virginia, before the Army of the Potomac started for Richmond in May, 1864. In that region Confederate cavalry, guerilla bands, and bushwhackers had been mischievously active for some time. Moseby was an active marauder there, and, so early as January (1864), General Fitzhugh Lee, with his mounted men, had made a fruitless raid on the Baltimore and Ohio railway west of Cumberland. A little later General Jubal A. Early, in command of the Confederates in the Shenandoah valley, sent a foraging expedition under Rosser in the same direction, who was more successful, capturing 1200 cattle and 500 sheep at one place, and a company of Union soldiers at another. General Averill struck him near Romney and drove him entirely out of the new commonwealth (see *West Virginia*), with a loss of his prisoners and a large proportion of his own men and horses. General Sigel was put at the head of a large force in the Shenandoah valley (April, 1864), who gave the command of the Kauawha valley to General Crook. On his

way up the valley from Staunton with 8000 men, Sigel was met at New Market by an equal force under Breckinridge. After much manœuvring and skirmishing, Breckinridge charged on Sigel, near New Market, and, after a sharp fight, drove him down the valley to the shelter of Cedar Creek, near Strasburg, with a loss of 700 men, six guns, 1000 small-arms, and a portion of his train. Sigel was immediately superseded by General Hunter, who was instructed to move swiftly on Staunton, destroy the railway between that place and Charlottesville, and then move on Lynchburg. Crook, meanwhile, had met General McCausland and fought and defeated him at Dublin Station, on the Virginia and Tennessee railway, and destroyed a few miles of that road. Crook lost 700 men, killed and wounded. Averill had, meanwhile, been unsuccessful in that region. Hunter advanced on Staunton, and, at Piedmont, not far from that place, he fought with Generals Jones and McCausland. (See *Piedmont, Battle of.*) At Staunton, Crook and Averill joined Hunter, when the National forces concentrated there, about 20,000 strong, moved towards Lynchburg by way of Lexington. That city was a focal point of a vast and fertile region, from which Lee drew supplies. Lee had given to Lynchburg such strength that when Hunter attacked it (June 18) he was unable to take it. Making a circuitous march, the Nationals entered the Kanawha valley, where they expected to find 1,500,000 rations, left by Crook and Averill under a guard. A guerilla band had swept away the rations and men, and the National army suffered dreadfully for want of food and forage.

Ord, EDWARD OTHO CRESAPS, was born in Alleghany County, Md., in 1818, and graduated at West Point in 1839, entering the Third Artillery. He was in the Seminole War (which see), and in 1845-46 was employed in coast-survey

EDWARD OTHO CRESAPS ORD.

duty, when he was sent to California. He took part in expeditions against the Indians, and, in September, 1861, was made brigadier-general of volunteers, commanding a brigade of the Pennsylvania Reserves (which see), near the Poto-

mac. In May, 1862, he was made major-general of volunteers, and ordered to the Army of the Mississippi, where he did good service while in command at Corinth. He commanded the Thirteenth Army Corps at the siege and capture of Jackson and Vicksburg. In the campaign against Richmond, in 1864, he commanded the Eighteenth Corps from July to September, when he was severely wounded in the assault on Fort Harrison (which see). He commanded the Department of Virginia from January to June, 1865, and was a participant in the capture of Lee's army in April. General Ord was breveted major-general in the United States Army, and commissioned a brigadier-general, July 26, 1866.

Order in Council, BRITISH (1793). On Nov. 6, 1793, a British Order in Council was issued, but was not made public until the end of the year, directing British cruisers to stop, detain, and bring in for legal adjudication all ships laden with goods the production of any French colony, or carrying provisions, or other supplies, for the use of such colony. The order, which was calculated to destroy all neutral trade with the French colonies, even that which had been allowed in times of peace, was issued simultaneously with the despatch of a great expedition for the conquest of the French West Indies. Martinique, Guadalupe, and St. Lucia all fell into the hands of the English. The news of the British order produced great excitement at Philadelphia, where Congress was in session, and public feeling against Great Britain ran high. It was manifested in and out of Congress by debates and discussions, and while these were in progress the feeling against the British was intensified by the publication in New York papers of what purported to be a speech of Lord Dorchester (Guy Carleton) to a certain Indian deputation from a late general council at the Maumee Rapids, in which he suggested the probability of a speedy rupture between the United States and Great Britain. The British order and Dorchester's speech caused resolutions to be introduced by Sedgwick (March 12, 1794) into the House of Representatives for raising fifteen regiments of 1000 men each, for two years, and the passage of a joint resolution (March 26) laying an embargo for thirty days, afterwards extended thirty days longer, having in view the obstructing of the supply of provisions to the British fleet and army in the West Indies. Sedgwick's resolutions were rejected, but a substitute was passed suggesting a draft of militia. It was proposed to detach from this body 80,000 minute-men, enlist a regiment of artillery, and raise a standing force of 25,000 men. While debates were going on, news came that a second Order in Council had been issued (Jan. 8, 1794), superseding that of Nov. 6, restricting the capture of French produce in neutral vessels to cases in which that produce belonged to Frenchmen, or the vessel was bound for France; also, that no confiscations were to take place under the first order. This allayed the bitterness of feeling in the United States against Great Britain.

"Orders" and "Decrees." In 1803 England joined the Continental powers against Napoleon. England, offended because of the seizure of Hanover by the Prussians, at the instigation of Napoleon, made the act a pretext, in 1806, for employing against France a measure calculated to starve the empire. By Orders in Council (May 16) the whole coast of Europe from the Elbe, in Germany, to Brest, in France, a distance of about eight hundred miles, was declared to be in a state of blockade, when, at the same time, the British navy could not spare vessels enough from other fields of service to enforce the blockade over a third of the prescribed coast. It was essentially a "paper blockade." The almost entire destruction of the French and Spanish fleets at Trafalgar, a few months before, had annihilated her rivals in the contest for the sovereignty of the seas, and she now resolved to control the trade of the world. Napoleon had dissolved the German empire, prostrated Prussia at his feet, and, from the "Imperial Camp at Berlin," he issued (Nov. 21, 1806) the famous decree in which he declared the British Islands in a state of blockade; forbade all correspondence or trade with England; defined all articles of English manufacture or produce as contraband, and the property of all British subjects as lawful prize of war. He had scarcely a ship afloat when he made this decree. This was the beginning of what was afterwards called "the Continental System," commenced avowedly as a retaliatory measure, and designed, primarily, to injure, and, if possible, to destroy, the property of England. By another Order in Council (January, 1807) Great Britain restrained neutrals from engaging in the coasting-trade between one hostile port and another, a commerce hitherto allowed, with some slight exceptions. This was but the extension to all hostile ports of the blockade of the coast from the Elbe to Brest established by a former order. On Nov. 17, 1807, another British Order in Council was issued, which prohibited all neutral trade with France or her allies, unless through Great Britain. In retaliation for these orders Napoleon promulgated, Dec. 17, 1807, from his "Palace at Milan," a decree which extended and made more vigorous that issued at Berlin. It declared every vessel which should submit to be searched by British cruisers, or should pay any tax, duty, or license-money to the British government, or should be found on the high seas or elsewhere bound to or from any British port, denationalized and forfeit. With their usual servility to the dictates of the conqueror, Spain and Holland issued similar decrees. So these two great powers—traditionary and implacable enemies for a thousand years—in their unscrupulous game for power, played with the commerce of the world as with a shuttlecock.

Ordinances of Secession were passed in eleven states of the Union in the following order: South Carolina, Dec. 20, 1860; Mississippi, Jan. 9, 1861; Florida, Jan. 10; Alabama, Jan. 11; Georgia, Jan. 19; Louisiana, Jan. 26; Texas, Feb. 1; Virginia, April 17; Arkansas, May 6; North

Carolina, May 20, and Tennessee, June 8. Not one of these ordinances was ever submitted to the people for their consideration. They were the work wholly of politicians in these several states.

Oregon. The history of this state properly begins with the discovery of the mouth of the Columbia River by Captain Gray, of Boston, in the ship *Columbia*, May 7, 1792, and who gave the name of his vessel to that river. His report caused President Jefferson to send the explorers, Lewis and Clarke (which see) across the continent to the Pacific (1804-6). In 1811 John J. Astor and others established a fur-trading post at the mouth of the Columbia River, and called it Astoria. In 1833 emigration to that region, over-

STATE SEAL OF OREGON.

land, began, and, in 1850, many thousands had reached Oregon; but very soon many of the settlers were drawn to California by the gold excitement there. To encourage emigration the Congress, in 1850, passed the "donation law," giving to every man who

should settle on land there before Dec. 1 of that year three hundred and twenty acres of land, and to his wife a like number of acres; also, to every man and his wife who should settle on such land between Dec. 1, 1850, and Dec. 1, 1853, one hundred and sixty acres of land each. Under this law eight thousand claims were registered in Oregon. In 1841 the first attempt to organize a government was made. In 1843 an executive and legislative committee was established; and in 1845 the legislative committee framed an organic law which the settlers approved, and this formed the basis of a provisional government until 1848, when Congress created the Territory of Oregon, which comprised all of the United States territory west of the summit of the Rocky Mountains and north of the forty-second parallel. The territorial government went into operation on March 3, 1849, with Joseph Lane as governor. In 1853 Washington Territory was organized, and took from Oregon all its domain north of the Columbia River. In 1857 a convention framed a state constitution for Oregon, which was ratified in November, that year, by the people. By act of Feb. 14, 1859, Oregon was admitted into the Union as a state, with its present limits. Many Indian wars have troubled Oregon, the last one of importance, the Modoc war, 1872-73. (See *Modocs, Troubles with the*.)

Oregon, BRITISH CLAIMS IN. The vast territory between the Rocky Mountains and the Pacific Ocean had been for some time the subject of serious dispute between the United States and Great Britain when James K. Polk became President, and it demanded his early attention. In 1792 Captain Gray, of Boston, in the ship *Co-*

Columbia, entered the mouth of the great river on the Pacific slope that bears that name; and the stream was explored by Lewis and Clarke (which see) in 1804-5. So early as 1811 John Jacob Astor established a fur-trading station at the mouth of the Columbia River. The British doctrine, always practised and enforced by them, that the entrance of a vessel of a civilized nation, for the first time, into the mouth of a river, gives title, by right of discovery, to the territory drained by that river and its tributaries, clearly gave to the Americans the domain to the latitude of 54° 40' north, for the discovery of the Columbia River by Captain Gray, in 1792, was not disputed. In 1818 it was mutually agreed that each nation should equally enjoy the privileges of all the bays and harbors on that coast for ten years. This agreement was renewed, in 1827, for an indefinite time, with the stipulation that either party might rescind it by giving the other party twelve months' notice. This notice was given by the United States in 1846, and also a proposition to adjust the question by making the boundary on the parallel of 49°. This was rejected by the British, who claimed the whole of Oregon. The President then directed the proposition of compromise to be withdrawn, and the title of the United States to the whole territory of 54° 40' north latitude to be asserted. The question at one time threatened war between the two nations, but it was finally settled by a treaty negotiated at Washington, June 15, 1846, by James Buchanan on the part of the United States and Mr. Pakenham for Great Britain, by which the boundary-line was fixed at 49° north latitude.

O'Rielly, HENRY, one of the most active and public-spirited citizens, was born in Carrickmacross, Province of Ulster, Ireland, Feb. 6, 1806. His father (a merchant) emigrated to America in 1816, and soon afterwards this son was apprenticed to the publisher of the *New York Columbian* (newspaper) to learn the art of printing. The *Columbian* was a staunch advocate of the Erie Canal, and a political supporter of De Witt Clinton as its able champion. The mind of the apprentice was thus early impressed with the importance of measures for the development of the vast resources of the United States—a subject which has inspired much of his activity and zeal in the promotion of public improvements. At the age of seventeen years he became assistant editor of the *New York Patriot*, the organ of the "People's party," which elected De Witt Clinton governor of the State of New York in 1824. When, in 1826, Luther Tucker & Co. established the *Rochester Daily Advertiser*—the first daily newspaper published between the Hudson River and the Pacific Ocean—youthful O'Rielly, then not twenty-one years of age, was chosen to be its editor. It was a period of great political and social excitement, especially in central New York (see *Anti-Masonic Party*), and, after four years of arduous labor, O'Rielly retired for rest. He resumed his editorial labors there in 1831, and became an active leader in all public enterprises. In 1834, as chairman of the Executive Committee of Rochester on

Canal Affairs, he wrote the first memorial presented to the Legislature and the Canal Board, in favor of rebuilding the failing structures of the Erie Canal. He then proposed a judicious plan for the enlargement of the canal, which, if it had been adopted, might have saved the state millions of dollars. He was a zealous advocate of such enlargement, and he was chairman of the first State Executive Committee appointed by the first Canal Enlargement Association in 1837. In that capacity he served many years with great efficiency. In 1838 he was appointed postmaster of Rochester. At the same time his never-weary pen prepared pamphlets and newspaper essays, filled with cogent arguments in favor of reform in the methods of popular education. In these efforts he was ably seconded by the venerable James Wadsworth, of Genesee; and their joint labors led to the legislation that fashioned the present common-school system of the State of New York. Mr. O'Rielly earnestly advocated the introduction of works on agriculture into the school-district libraries of the state, and his wise suggestions in his reports as secretary of the State Agricultural Society, almost forty years ago, have been practically carried out in the establishment of state agricultural colleges in every commonwealth in the Union. He was the originator of the "State Constitutional Association," which was the means of bringing about the reforms in the constitution of the State of New York in 1846. He was also the originator, at about the same time, of a project for the establishment of a private telegraph system for a range of about eight thousand miles in length, connecting all sections of the United States east of the Mississippi River. For this purpose he secured the right to the use of all the telegraph patents which had then been granted. In 1853 Mr. O'Rielly was engaged by the State of Iowa to improve the navigation of the Des Moines River, but circumstances caused a suspension of the work. A few years later the railroad interest in the State of New York took an attitude decidedly hostile to the great Erie Canal, a powerful commercial rival. That interest conspired to destroy its credit and to make the people believe that it was the source of burdensome taxation. The completion of its enlargement was opposed, and a scheme was devised for controlling legislation so as to deprive the people of this great property by its sale to the highest bidder. In the fall of 1859 Mr. O'Rielly sent forth a stirring address to the people of the state on the subject. They were aroused. The "Clinton League" was formed, with Mr. O'Rielly as chairman, and, by their untiring efforts, this scheme, which, if carried out, would have disgraced the commonwealth, was frustrated. When the late Civil War broke out he was one of the most active promoters of measures for the preservation of the Union, and was secretary of the "Society for Promoting the Enrollment of Colored Troops." He originated, in 1867, an organized movement for reforming and cheapening the operations of the railroad system of the United States. About 1838 Mr. O'Rielly prepared

and published a volume of five hundred pages entitled *Sketches of Rochester, with Incidental Notices of Western New York*. It was the first work of its kind ever published in the interior of the continent. He has deposited with the New York Historical Society, of which he has now (1880) been a member about forty years, almost two hundred volumes, partly in manuscript and partly in print, containing well-arranged documents and other papers relating to the history of important public events in which he has participated. These form authentic materials of inestimable value, especially to the future historian of the early operations of the canal and telegraph systems of the United States.

Origin of the Names of the States. (See *States, Origin of the Names of*.)

Oriskany, BATTLE OF. Brant, the Mohawk chief, came from Canada in the spring of 1777, and in June was at the head of a band of Indian marauders on the upper waters of the Susquehanna. Brigadier-general Nicholas Herkimer was at the head of the Tryon County militia, and was instructed by General Schuyler to watch and check the movements of the Mohawk chief, whose presence had put an end to the neutrality of his tribe and of other portions of the Six Nations. Hearing of the siege of Fort Schuyler by Colonel St. Leger (Aug. 3), Herkimer gathered a goodly number of Tryon County militia, and marched to the relief of the garrison. He and his little army were marching in fancied security on the morning of Aug. 6 at Oriskany, a few miles west of (the present) Utica, when Tories and Indians from St. Leger's camp, lying in ambush, fell upon the patriots at all points with great fury. Herkimer's rear-guard broke and fled; the remainder bravely

newed with greater vigor, when the Indians, hearing the sound of firing in the direction of Fort Schuyler (see *Fort Schuyler, Siege of*), fled to the deep woods in alarm, and were soon followed by the Tories and Canadians. The patriots remained masters of the field, and their brave commander was removed to his home, where he died from loss of blood, owing to unskilful surgery. (See *Herkimer, Nicholas*.)

Orleans, TERRITORY OF. Louisiana, by act of Congress, was divided into two territories, the southern one being called Orleans Territory. The line between them was drawn along the thirty-third parallel of north latitude. This territory then possessed a population of fifty thousand souls, of whom more than half were negro slaves. Refugee planters from Santo Domingo had introduced the sugar-cane into that region, and the cultivation of cotton was beginning to be successful. Solarge were the products of these industries that the planters enjoyed immense incomes. The white inhabitants were principally French Creoles, descendants of the original French colonists.

Orne, AZOR, was born at Marblehead, Mass., in 1732; died in Boston, June 7, 1796. He was a successful merchant and an active patriot, a member of the Massachusetts Provincial Congress, and long one of the Committee of Safety. In organizing the militia, and in collecting arms and ammunition, he was very active. In January, 1776, he was appointed one of the three Massachusetts major-generals, but did not take the field. For many years he was a member of the State Senate and Council of Massachusetts, and was a zealous advocate of education.

Orphan Asylum. The first orphan house in the United States was the "Charleston Orphan Asylum," chartered in 1790. In 1807 the "Orphan Asylum Society of the City of New York," and "St. Stephen's Female Orphan Asylum," of Philadelphia, were chartered. The former owes its origin to Joanna Bethune, and was organized in 1806. For twenty years afterwards no other orphan asylums were established in our country. One was founded at Annapolis, Md., in 1823, and since 1840 they have rapidly increased. In 1876 their number was a little over four hundred. Besides these there are homes for the friendless, juvenile asylums, industrial schools, refuges for the tempted, and in 1853 a "Children's Aid Society" was established in the city of New York, which is doing a vast amount of good.

Ort, JAMES LAWRENCE, was born at Craytonville, S. C., May 12, 1822; died in St. Petersburg, May 5, 1873. He graduated at the University of Virginia in 1842, became a lawyer at Anderson, S. C., and edited a newspaper there in 1843. After serving in the State Legislature, he became a member of Congress in 1849, and remained such by re-election until 1859. He was speaker of the Thirty-fifth Congress. In the South Carolina Convention (Dec. 20, 1860) he voted for secession, and was appointed one of three commissioners to treat with the national government for the surrender of the United

GENERAL HERKIMER'S RESIDENCE.

sustained a severe conflict for more than an hour. General Herkimer had a horse shot dead under him, and the bullet that killed the animal shattered his own leg below the knee. Sitting on his saddle at the foot of a beech-tree, he continued to give orders. A thunder-shower caused a lull in the fight, and then it was re-

States forts in Charleston harbor to the Confederates. He was a Confederate senator from 1862 to 1865, and provisional governor of South Carolina from 1866 to 1868, under the appointment of the President. He afterwards acted with the Republican party, and in 1870 was made judge of the United States Circuit Court. In 1873 he was appointed United States minister to Russia, and died soon after his arrival there.

Orthodoxy Enforced in Massachusetts. In 1651 Roger Williams and John Clarke were appointed agents to seek in England a confirmation of the Rhode Island charter. Before their departure, Mr. Clarke, with Mr. Crandall and Obadiah Holmes, delegates from the Baptist Church at Newport, visited an aged Baptist brother at Lynn, Mass., who was too feeble to attend public worship. On a Sunday morning they ventured to give a public exhortation at the house of the aged brother. For this they were arrested, and carried by force in the afternoon to hear the regular Congregational preacher (Thomas Cobbett, author of "a large, nervous, and golden discourse" against the Baptists). The next day they were sent to Boston, where Clarke was sentenced to pay a fine of \$100, or be whipped. One charge against him was that he neglected to take off his hat when he was forced into the Congregational meeting-house at Lynn. In a sermon just before Clarke's trial, Rev. John Cotton declared that to deny the efficacy of infant baptism was "to overthrow all," and was "soul murder"—a capital offence. So Eudicott held in prison sentences upon the prisoner. He charged Clarke with preaching to the weak and ignorant, and bade him "try and dispute with our ministers." Clarke accepted the challenge, and sent word to the Massachusetts ministers that he would prove to them that the ordinance of baptism—that is, dipping in water—was to be administered only to those who gave evidence of repentance and faith; and that only such visible believers constituted the Church of Christ on the earth. The ministers evaded the trial. Some of Clarke's friends paid his fine; and he was released. Crandall, fined \$25, was released at the same time; but Holmes, a recent convert to Anabaptism, and lately excommunicated, who was fined \$150, had more of the martyr spirit, and went to the whipping-post. As he left the bar the pastor (John Wilson) struck him and cursed him because he said, "I bless God I am counted worthy to suffer for the name of Jesus." Some friends offered to pay Holmes's fine, but he declined it, and was taken to the public whipping-post, where he was scourged with a three-corded whip, with which a stout man gave him thirty stripes most vigorously, "the man spitting on his hands three times." When led away, Holmes said to the magistrates, "You have struck me with roses," and prayed the punishment might not be laid to their charge. Two sympathizing friends came up to the bleeding victim of bigotry and intolerance, and, shaking hands with him, said, "Blessed be God." They were arrested for "contempt of authority," fined forty shillings each, and imprisoned. Holmes returned to Newport, and

lived to old age; and in 1790 his descendants were computed at not less than five thousand. Not long afterwards Sir Richard Saltonstall, one of the founders of the Massachusetts colony, wrote from England to Cotton and Wilson, ministers in Boston, saying, "It doth not a little grieve my spirit to hear what sad things are reported daily of your tyranny and persecution in New England, as that you fine, whip, and imprison men for their consciences. First you compel such to come into your assemblies as you know will not join you in your worship, and when they show their dislike thereof, or witness against it, then you stir up your magistrates to punish them for such as you conceive their public offences. Truly, friends, this your practice of compelling any, in matters of worship, to do that whereof they are not fully persuaded is to make them sin, for so the apostle (Rom. xiv., 23) tells us; and many are made hypocrites thereby, conforming in their outward man for fear of punishment. . . . These rigid ways have laid you very low in the hearts of the saints."

Ortiz, JUAN, AND A CHIEF'S DAUGHTER. Soon after De Soto entered Florida he was met by a Spaniard who was a captive among the Indians. He had been captured when on the expedition with Narvaez (which see), and preparations had been made to sacrifice him. He was bound hand and foot and laid upon a scaffold, under which a fire was kindled to roast him alive. The flames were about reaching the flesh of the poor young man when a daughter of Ucita, the chief, besought her father to spare his life, saying, "If he can do no good, he can do no harm." Though greatly incensed by the conduct of the Spaniards, Ucita granted the petition of his daughter, and Ortiz was lifted from the scaffold, and thenceforth was the slave of the chief. Three years later Ucita was defeated in battle; and, believing that the sparing of Ortiz had brought the misfortune upon him, resolved to sacrifice the young Spaniard. The daughter of Ucita again saved his life. She led him at night beyond the bounds of her father's village, and directed him to the camp of the chief who had defeated Ucita, knowing that he would protect the Christian. When, years afterwards, he was with some hostile Indians fighting De Soto, and a horseman was about to slay him, he cried out, "Don't kill me, I am a Christian; nor these people, they are my friends." The astonished Castilians stayed their firing, and Ortiz became of great use to De Soto as an interpreter.

Osage Indians, TREATY WITH THE. In 1825 a treaty was made at St. Louis by General William Clark with the Great and Little Osage Indians for all their lands in Arkansas and elsewhere. These lands were ceded to the United States in consideration of an annual payment of \$7000 for twenty years, and an immediate contribution of 600 head of cattle, 600 hogs, 1000 fowls, 10 yoke of oxen, 6 carts, with farming utensils, and other provisions similar to those in the treaty with the Kansas Indians (which see). It was also agreed to provide a fund for the support of schools for the benefit of the Osage chil-

dren. Provision was also made for a missionary establishment; also for the United States to assume the payment of certain debts due from Osage chiefs to those of other tribes, and to deliver to the Osage villages, as soon as possible, \$4000 in merchandise and \$2600 in horses and their equipments. This treaty was concluded June 2, 1825.

Osceola (As-se-se-he-ho-lar, or Black Drink) was born on the Chattahoochee River, Ga., in 1804; died at Fort Moultrie, S. C., Jan. 30, 1838. He was a half-breed, a son of Willis Powell, an Englishman and trader, by a Creek Indian woman. In 1808 his mother settled in Florida, and when he grew up he became by eminent ability the governing spirit of the Seminoles. In all their sports he was foremost, and was always independent and self-possessed. From the beginning Osceola opposed the removal of the Seminoles from Florida, and he led them in a war which began in 1835, and continued about seven years. (See *Seminole War, The Second*.) Treacherously seized while under the protection of a flag of truce (Oct. 22, 1837), he was sent to Fort Moultrie, where he was prostrated by grief and wasted by a fever, and finally died in his prison. A monument was erected to his memory

OSCEOLA'S GRAVE.

near the main entrance-gate of Fort Moultrie. His loss was a severe blow to the Seminoles, who continued the war feebly four or five years longer.

Osgood, HELEN LOUISE (Gibson), philanthropist, was born in Boston about 1835; died at Newton Centre, Mass., April 20, 1868. Left an orphan, she was well educated by her guardian (F. B. Fay, of Chelsea), and was endowed with talents for music and conversation. She was among the first to organize soldiers' aid societies when the Civil War began, and provided work for the wives and daughters of soldiers who needed employment. Early in 1862 she went to the army as a nurse, where her gentleness of manner and executive ability made her eminently successful. She administered relief and consolation to thousands of the severely wounded, and she organized and conducted for many months a hospital for one thousand patients of the sick and wounded of the colored soldiers of the Army of the Potomac. In 1866 she was married to Mr. Osgood, a fellow-laborer among the soldiers, but her constitution had

been overtasked, and she died a martyr to the great cause.

Osgood, SAMUEL, was born at Andover, Mass., Feb. 14, 1748; died in New York, Aug. 12, 1813. He graduated at Harvard University in 1770, studied theology, and became a merchant. An active patriot, he was a member of the Provincial Congress of Massachusetts and of various committees; was a captain at Cambridge in 1775, an aid to General Artemas Ward, and became a member of the Massachusetts Board of War. He left the army in 1776 with the rank of colonel, and served in his provincial and state Legislature. He was a member of Congress from 1780 to 1784; first commissioner of the United States treasury from 1785 to 1789, and United States Postmaster-general from 1789 to 1791. He afterwards served in the New York Legislature, and was speaker of the Assembly from 1801 to 1803. From 1803 until his death he was naval officer of the port of New York. Mr. Osgood was well versed in science and literature, and his character was above reproach.

Ostend Manifesto or Circular. In July, 1853, the Secretary of State (Mr. Marcy) wrote to Mr. Soulé, American minister at Madrid, directing him to urge upon the Spanish government the sale or cession of Cuba to the United States. Nothing more was done until after the affair of the *Black Warrior* (which see) in the winter of 1854. In April, 1854, Mr. Soulé was instructed and clothed with full power to negotiate for the purchase of the island. In August the Secretary suggested to Minister Buchanan in London, Minister Mason at Paris, and Minister Soulé at Madrid, the propriety of holding a conference for the purpose of adopting measures for a concert of action in aid of negotiations with Spain. They accordingly met at Ostend, a seaport town in Belgium, Oct. 9, 1854. After a session of three days they adjourned to Aix-la-Chapelle, in Rhenish Prussia, and thence they addressed a letter (Oct. 18) to the United States government embodying their views. In it they suggested that an earnest effort to purchase Cuba ought to be immediately made at a price not to exceed \$120,000,000, and that the proposal should be laid before the Spanish Cortes about to assemble. They set forth the great advantage that such a transfer of political jurisdiction would be to all parties concerned; that the oppression of the Spanish authorities in Cuba would inevitably lead to insurrection and civil war; and, in conclusion, recommended that in the event of the absolute refusal of Spain to sell the island, it would be proper to take it away from its "oppressors" by force. In that event, the ministers said, "we should be justified by every law, human and divine, in wresting it from Spain, if we possess the power." This proposition exhibited the ethics of the mailed hand—might makes right. The bald iniquity of the proposition amazed honest men in both hemispheres. Why it should have been unrebuked by the government at Washington was a question that was answered by subsequent events. The *Ostend Circular* will ever re-

main a blot upon the escutcheon of the nation. President Pierce did not think it prudent to act upon the advice of these ministers, and Mr. Soulé, dissatisfied with his prudence, resigned his office and returned home.

Osterhaus, PETER JOSEPH, was born in Prussia, and served as an officer in its army. He came to America, and settled in St. Louis, Mo., where he entered the service in 1861 as major of volunteers. He served under Lyon and Frémont in Missouri, commanding a brigade under the latter. He commanded a division in the battle of Pea Ridge, and greatly distinguished himself. In June, 1862, he was made brigadier-general, and, commanding a division, he helped to capture Arkansas late in January, 1863. He was in the campaign against Vicksburg and in northern Georgia, and in 1864 he was in the Atlanta campaign. In command of the Fifteenth Corps, he was with Sherman in his march through Georgia and South Carolina. In July, 1864, he was made major-general, and in 1865 he was Canby's chief-of-staff at the surrender of Kirby Smith. (See *Smith, Kirby*).

Oswald, ELEAZAR, was born in England about 1755; died in New York, Oct. 1, 1795, of yellow-fever. He came to America in 1770 or 1771; served under Arnold in the expedition against Ticonderoga and became his secretary; and at the siege of Quebec he commanded with great skill the forlorn hope after Arnold was wounded. In 1777 he was made lieutenant-colonel of Lamb's artillery regiment, and for his bravery at the battle of Mounmouth General Knox highly praised him. Soon after that battle he left the service and engaged in the printing and publishing business in Philadelphia, where he was made public printer. Oswald challenged General Hamilton to fight a duel in 1789, but the quarrel was adjusted. In business in England in 1792, he went to France, joined the French army, and commanded a regiment of artillery.

Oswegatchie (Ogdensburg), INDIAN MISSION AT. To insure the friendship of the Six Nations, Galissonière, Governor of Canada, proceeded in 1754 to establish an Indian mission

the mouth of the Oswegatchie for the station, on the site of Ogdensburg, where he hoped to draw in so many Iroquois converts as would bind all their kindred to the French alliance. By order of General Brown a redoubt was begun in 1812 at the site of old Fort Presentation, which was not finished when Ogdensburg was attacked the second time by the British in 1813.

Oswego, BRITISH ATTACK UPON (1814). During the winter and spring the Americans and British had been preparing to make a struggle for the mastery of Lake Ontario. When the ice in Kingston harbor permitted vessels to leave it, Sir James L. Yeo, commander of the British squadron in those waters, went out upon the lake with his force of about three thousand land-troops and marines. On May 5, 1814, he appeared off Oswego harbor, which was defended by Fort Ontario, on a bluff on the east side of the river, with a garrison of about three hundred men under Lieutenant-colonel George E. Mitchell. Chauncey, not feeling strong enough to oppose Yeo, prudently remained with his squadron at Sackett's Harbor. The active cruising force of Sir James consisted of eight vessels, carrying an aggregate of two hundred and twenty-two pieces of ordnance. To oppose these at Oswego was the schooner *Grouler*, Captain Woolsey. She was in the river for the purpose of conveying guns and naval stores to Sackett's Harbor. To prevent her falling into the hands of the British, she was sunk, and a part of her crew, under Lieutenant Pearce, joined the garrison at the fort. The latter then mounted only six old guns, three of which were almost useless, because they had lost their trunnions. Mitchell's force was too small to defend both the fort and the village, on the west side of the river, so he pitched all his tents near the town and gathered his whole force into the fort. Deceived by the appearance of military strength at the village, the British proceeded to attack the fort, leaving the defenceless town unmolested. The land-troops, in fifteen large boats, covered by the guns of the vessels, moved to the shore near the fort early in the afternoon. They were repulsed by a heavy cannon placed

near the shore. The next day (May 6) the fleet again appeared, and the larger vessels of the squadron opened fire on the fort. The troops landed in the afternoon, and, after a sharp fight in the open field, the garrison retired, and the British took possession of the fort. The main object of the British was the seizure of naval stores at the falls of the Oswego River (now Ful-

APPEARANCE OF FORT OSWEGATCHIE IN 1812.

on the southern bank of the St. Lawrence. For this work the Abbé Francis Piquet (see *Saratoga, Attack upon*) was chosen, and he selected

ton), and Mitchell, after leaving the fort, took position up the river for their defence. Early on the morning of the 7th the invaders with-

drew, after having embarked the guns and a few stores found at Oswego, dismantled the fort, and burned the barracks. They also raised and carried away the *Growler*; also several citizens who had been promised protection and exemption from molestation. In this affair the Americans lost, in killed, wounded, and missing, sixty-

this act induced the Six Nations to take a position of neutrality. The capture of this fort caused the English commander-in-chief to abandon all the expeditions planned for the campaign of 1756.

Oswego, TRADING-HOUSE AT. Governor Burnett, of New York, wisely concluding that it would

ATTACK ON OSWEGO. (From an old print.)

nine men; the British lost nineteen killed and seventy-five wounded.

Oswego, CAPTURE OF (1756). Dieskau had been succeeded by the Marquis de Montcalm, an energetic French officer, who, perceiving the delay of the English at Albany and their weakness through sickness and lack of provisions (of which he was informed by spies), collected about five thousand Frenchmen, Canadians, and Indians at Frontenac (now Kingston), at the foot of Lake Ontario, crossed that lake, and appeared before Oswego in force on Aug. 11, 1756. He attacked Fort Ontario, on the east side of the river, commanded by Colonel Mercer, who, with the garrison, after a short but brave resistance, withdrew to an older fort on the west side of the stream. The English were soon compelled to surrender the fort. Their commander was killed, and on the 14th Montcalm received, as spoils of victory, fourteen hundred prisoners, a large quantity of ammunition and provisions and other stores, one hundred and thirty-four pieces of artillery, and several vessels lying in the harbor. The Six Nations had never been well satisfied with the building of these forts by the English in the heart of their territory. To please them, Montcalm demolished the forts, and by

be important for the English to get and maintain control of Lake Ontario—as well for the benefits of trade and the security of the friendship of the Six Nations (which see) as to frustrate the designs of the French to confine the English colonies to narrow limits—began to erect a trading-house at Oswego in 1722. This pleased the Indians, for they saw in the movement a promise of protection from incursions

OSWEGO IN 1756.

of the French. Soon afterwards, at a convention of governors and commissioners held at Albany, the Six Nations renounced their covenant of friendship with the English.

Otis and his Misfortunes. Because of some severe strictures on the conduct of crown offi-

cers in Boston, made by James Otis in a newspaper, a custom-house officer named Robinson made a personal attack upon the writer, and, by a blow on his head with a cane, the intellect of Otis was seriously deranged. He was partially insane at times, and unthinking men and boys often made themselves merry in the street at his expense. It was sad to see the great orator and statesman so shattered and exposed. His ready use of Latin was illustrated one day, when, passing a crockery-store, a young man familiar with the language, standing in a door of the second story, sprinkled some water upon Otis from a watering-pot he was using, saying, "*Pluit tantum, nescio quantum. Scis ne tu?*"—"It rains so much; I know not how much. Do you know?" Otis immediately picked up a large stone and hurled it through the window, smashing many of the wares in the store, and exclaimed, "*Fregi tot, nescio quot. Scis ne tu?*"—"I have broken so many; I know not how many. Do you know?"

Otis and Writs of Assistance. James Otis was one of the most powerful and persistent opponents of the schemes of the British Parliament for taxing the American colonies. He denounced the Writs of Assistance (which see) in unmeasured terms. At a town-meeting in Boston in 1761, when this government measure was discussed by Mr. Gridley, the calm advocate of the crown, and the equally calm lawyer Oxenbridge Thacher, the fiery James Otis, one of Gridley's pupils, addressed the multitude with words that thrilled every heart in the audience and stirred every patriotic feeling of his hearers into earnest action. Referring to the arbitrary power of the Writ, he said, "A man's house is his castle; and while he is quiet, he is as well guarded as a prince in his castle. This writ, if it shall be declared legal, would totally annihilate this privilege. Custom-house officers may enter our houses when they please; we are commanded to permit their entry. Their menial servants may enter—may break locks, bars, everything in their way; and whether they break through malice or revenge no man, no court, may inquire. . . . I am determined to sacrifice estate, ease, health, applause, and even life, to the sacred calls of my country, in opposition to a kind of power the exercise of which cost one king his head and another his throne." (See *Writs of Assistance*.)

Otis, HARRISON GRAY, was born in Boston, Oct. 8, 1765; died there, Oct. 28, 1848. He graduated at Harvard University in 1783, and was admitted to the bar in 1786, where his fine oratory and varied acquirements soon gained him much fame. In Shay's insurrection (which see) he was aid to Governor Brooks; served in the Massachusetts Legislature; was member of Congress from 1797 to 1801; United States District-attorney in 1801; speaker of the Assembly from 1803 to 1805; president of the State Senate from 1805 to 1811; Judge of Common Pleas from 1814 to 1818; and Mayor of Boston from 1829 to 1832. In 1814 he was a prominent member of the Hartford Convention (which see),

and wrote a series of letters upon it. In 1804 he pronounced an eloquent eulogy of General Hamilton. Many of his occasional addresses have been published. His father was Samuel Alleyne Otis, brother of James.

Otis, JAMES, was born at West Barnstable, Mass., Feb. 5, 1725; died at Andover, Mass., May 23, 1783. He graduated at Harvard University in 1743, and studied law with J. Gridley. He began the practice of his profession at Plymouth, but settled in Boston in 1750, where he soon obtained a high rank as a lawyer and an advocate at the bar. He married Miss Ruth Cunningham in 1755. Fond of literary pursuits, and a thorough classical scholar (see *Otis and his Misfortunes*), he wrote and published *Rudiments of Latin Prosody*. He entered public life as a zealous patriot and gifted orator when the Writs of Assistance (which see) called forth popular discussion in 1761. The same year he was chosen a representative in the Massachusetts Assembly, and therein became a leader of the popular party. In 1764 he published a pamphlet entitled *The Rights of the Colonies Vindicated*, which attracted great attention in England for its finished diction and masterly arguments. Otis proposed (June 6, 1765) the calling of a congress of delegates to consider the Stamp Act. He was chosen a delegate, and was one of the committee to prepare an address to the Commons of England. (See *Stamp Act Congress*.) Governor Bernard feared the fiery orator, and when Otis was elected speaker of the Assembly the governor negatived it. But he could not silence Otis. When the ministry required the Legislature to rescind its Circular Letter to the colonies, requesting them to unite in measures for redress (see *Circular Letter of Massachusetts*), Otis made a speech which his adversaries said was "the most violent, abusive, and treasonable declaration that perhaps was ever uttered." He carried the House with him, and it refused to rescind by a vote of ninety-two to seventeen. (See *Rescindere*.) In the summer of 1769 he published an article in the *Boston Gazette* which greatly exasperated the custom-house officers. He was attacked by one of them (Sept. 9), who struck him on the head with a cane, producing a severe wound and causing a derangement of the brain, manifested at times ever afterwards. Otis obtained a verdict against the inflicter of the wound (Robinson) for \$5000, which he gave up on receiving a written apology. In 1777 Otis withdrew to the country on account of ill-health. He was called into public life again, but was unable to perform the duties; and finally, when the war for independence (which his trumpet-voice had heralded) had closed, he attempted to resume the practice of his profession. But his death was nigh. He had often expressed a wish that his death might be by a stroke of lightning. Standing in his door at Andover during a thunder-shower, he was instantly killed by a lightning-stroke.

Ottawas, THE, a tribe of the Algonquin family, were seated on the northern part of the Mich-

igan peninsula when discovered by the French. When the Iroquois overthrew the Hurons in 1649 the frightened Ottawas fled to the islands in Green Bay, and soon afterwards joined the Sioux beyond the Mississippi. They were speedily expelled, when they recrossed the great river; and after the French settled at Detroit a part of the Ottawas became seated near them. Meanwhile the Jesuits had established missions among them. Finally the part of the nation that was at Mackinaw passed over to Michigan; and in the war that resulted in the conquest of Canada the Ottawas joined the French. Pontiac, who was at the head of the Detroit family, engaged in a great conspiracy in 1763 (see *Pontiac*), but was not joined by those in the north of the peninsula. At that time the whole tribe numbered about fifteen hundred. In the Revolution and subsequent hostilities they were opposed to the Americans, but finally made a treaty of peace at Greenville in 1795, when one band settled on the Miami River. In conjunction with other tribes, they ceded their lands around Lake Michigan to the United States in 1833 in exchange for lands in Missouri, where they flourished for a time. After suffering much trouble, this emigrant band obtained a reservation in the Indian territory, to which the remnant of this portion of the family emigrated in 1870. The Upper Michigan Ottawas remain in the North, in the vicinity of the Great Lakes. There are some in Canada, mingled with other Indians. Roman Catholic and Protestant missions have been established among them. Their own simple religion embraces a belief in a good and evil spirit.

Outanon, Fort, was on the Wabash, just below (present) Lafayette, Ind. At eight o'clock at night, May 31, 1763, a war-belt reached the Indian village near the fort. The next morning (June 1) the commandant was lured into an Indian cabin and bound with cords. On hearing of this his garrison surrendered. The French living near saved the lives of the men by kindly giving wampum to the captors and receiving the Englishmen into their houses. (See *Pontiac's War*.)

Outlook, THE, AT THE CLOSE OF THE YEAR 1812. The reverses that had befallen the American army spread a gloom over the minds of the people, justified the warnings of the opposition who prophesied disaster, and increased the activity and machinations of the unpatriotic Peace party (which see). But before the close of the year the brilliant exploits of the little American navy dispelled the brooding gloom that hung over the people and filled them with joy and confidence. These justified the judgment of the Federalists, who always favored measures for increasing the navy, and the opposition of the Democrats to it ceased. These naval victories astounded the British public. The lion was bearded in his den. The claims of Great Britain to the mastery of the seas were vehemently and practically disputed. Nor were the naval triumphs of the Americans confined to the national vessels. Privateers swarmed on

the oceans in the summer and autumn of 1812, and were making prizes in every direction. Accounts of their exploits filled the newspapers and helped to swell the tide of joy throughout the Union. It is estimated that during the last six months of the year 1812 more than fifty armed British vessels and two hundred and fifty merchantmen, with an aggregate of over three thousand prisoners and a vast amount of booty, were captured by the Americans. The British newspapers raved and uttered opprobrious epithets. A leading London journal petulantly and vulgarly gave vent to its sentiments by expressing an apprehension that England might be stripped of her maritime supremacy "by a piece of striped bunting flying at the mast-heads of a few fir-built frigates, manned by a handful of bastards and cowards." The position of the American army at the close of 1812 was as follows: The Army of the Northwest, first under Hull, and then under General Harrison, was occupying a defensive position among the snows of the wilderness on the banks of the Maumee River; the Army of the Centre, under General Smyth, was resting on the defensive on the Niagara frontier; and the Army of the North, under General Bloomfield, was also resting on the defensive at Plattsburg, on the western shore of Lake Champlain.

Ovando, NICHOLAS DE, was sent by Queen Isabella to supplant Bobadilla as governor of Santo Domingo in 1501, charged by the queen not to allow the enslavement of the natives, but to protect them as subjects of Spain, and to carefully instruct them in the Christian faith. Ovando sailed for the West Indies Feb. 13, 1502, with thirty-two ships, bearing two thousand five hundred persons to become settlers in that country. By command of the queen, the Spaniards and natives were to pay tithes; none but natives of Castile were to live in the Indies; none to go on discoveries without royal permission; no Jews, Moors, nor new converts were to be tolerated there; and all the property that had been taken from Columbus and his brother was to be restored to them. In Ovando's fleet were ten Franciscan friars, the first of that order who came to settle in the Indies. Ovando, like Bobadilla, treated Columbus with injustice. He was recalled in 1508, and was succeeded in office by Diego Columbus, son of the great admiral.

Owen, ROBERT, an English social reformer, was born at Newtown, North Wales, March 14, 1771; died there, Nov. 19, 1858. At the age of eighteen he was part proprietor of a cotton-mill, and became a proprietor of cotton-mills at Lanark, Scotland, where he introduced reforms. In 1812 he published his *New Views of Society*, etc., and afterwards his *Book of the New Moral World*, in which he maintained a theory of modified communism. Immensely wealthy, he distributed tracts inculcating his views very widely, and soon had a host of followers. In 1823 he came to the United States and bought twenty thousand acres of land—the settlement at New Harmony, Ind.—with dwellings for one thou-

sand persons, where he resolved to found a communist society. This was all done at his own expense. It was an utter failure. He returned in 1827, and tried the same experiment in Great Britain, and afterwards in Mexico, with the same result. Yet he continued during his life to advocate his peculiar social notions as the founder of a system of religion and society according to reason. During his latter years he was a believer in spiritualism, and became convinced of the immortality of the soul. He was the originator of the "labor leagues," from which sprang the Chartist movement.

Owen, ROBERT DALE, son of Robert Owen, an English philanthropist, was born in Glasgow, Nov. 7, 1801, and was educated in Switzerland. He came with his father to America in 1825, settled at New Harmony, in Indiana, and, with Madame D'Arusmont (*née* Frances Wright), edited the *New Harmony Gazette*, afterwards published in New York and called the

Free Inquirer (1825-34). He went back to New Harmony, and was elected, first to the Indiana Legislature, and then to Congress, wherein he served from 1843 to 1847, taking a leading part in settling the Northwestern boundary question. He introduced the bill (1845) organizing the Smithsonian Institution, and became one of its regents. He was a member of the convention that amended the constitution of Indiana in 1850, and secured for the women of that state rights of property. In 1853 he was sent to Naples as chargé d'affaires, and was made minister in 1855. He published, in pamphlet form, a discussion he had with Horace Greeley in 1860 on divorce, and it had a circulation of sixty thousand copies. During the Civil War he wrote much in favor of emancipating the slaves, and pleaded for a thorough union of all the states. Mr. Owen was a firm believer in spiritualism, and wrote much on the subject. He died at Lake George, June 25, 1877.

P.

Paca, WILLIAM, a signer of the Declaration of Independence, was born at Wye Hall, Harford Co., Md., Oct. 31, 1740; died in 1799. He studied law in London, and began its practice in Annapolis, where he became a warm opponent of the obnoxious measures of Parliament. He was a member of the Committee of Correspondence in 1774, and was a delegate in Congress from 1774 to 1779. He was state senator from 1777 to 1779; chief-justice from 1778 to 1780, and governor from 1782 to 1786. From 1789 until his death he was United States district judge. From his private wealth Mr. Paca gave liberally to the support of the patriot cause.

Pacific Efforts of the Quakers. (See *Friendly Association*.)

Pacific Exploring Expedition. The acquisition of California opened the way for an immense commercial interest on the Pacific coast of the United States, and in the spring of 1853 Congress sent four armed vessels, under the command of Captain Ringgold, of the Navy, to the eastern shores of Asia, by way of Cape Horn, to explore the regions of the Pacific Ocean, which, it was evident, would soon be traversed by American steamships plying between the ports of the western frontier of the United States and Japan and China. The squadron left Norfolk May 31, with a supply-ship. The expedition returned in the summer of 1856. It made many very important explorations, among them of the whaling and sealing grounds in the region of the coast of Kamtchatka and Behring's Strait, where the United States have since purchased a territory of Russia. (See *Alaska*.)

Pacific Ocean. (See *Nunez, Vasco de Balboa*, and *Magellan, Ferdinand*.)

Pacific Railway. The greatest of American railroad enterprises yet undertaken was the construction of a railway over the great plains and lofty mountain-ranges between the Missouri River and the Pacific Ocean. So early as 1846

such a work was publicly advocated by Asa Whitney. In 1849, after the discovery of gold in California promised a rapid accumulation of wealth and population on the Pacific coast, Senator Thomas H. Benton introduced a bill into Congress providing for preliminary steps in such an undertaking. In 1853 Congress passed an act providing for surveys of various routes by the corps of topographical engineers. They were made at a cost of about \$1,000,000. Nothing further was done, owing to political dissensions between the North and the South, until 1862 and 1864, when Congress, in the midst of the immense strain upon the resources of the government in carrying on the war for the preservation of the Union, passed acts granting subsidies for the work from the treasury of the United States, in the form of 6 per cent. gold bonds, at the rate of \$16,000 a mile from the Missouri River to the eastern base of the Rocky Mountains, \$48,000 a mile for 300 miles through those mountains, \$32,000 a mile between the Rocky Mountains and the Sierra Nevada, and \$16,000 a mile from the western slope of the latter range to the sea. In addition to these subsidies, Congress granted about 25,000,000 acres of land along the line of the road. Some modifications were afterwards made in these grants. Work was begun on the railway in 1863, by two companies—the "Central Pacific," proceeding from California and working eastward, and the "Union Pacific," working westward. The road was completed in 1869, when a continuous line of railroad communication between the Atlantic and Pacific oceans was perfected. The entire length of the road, exclusive of its branches, is about 2000 miles. It crosses nine distinct mountain-ranges, the highest elevation on the route being 7123 feet, at Rattlesnake Pass, west of the Laramie Plains. The route from New York to San Francisco, by way of Chicago and Omaha, is travelled in six or seven days, the distance being about 3400 miles. Another rail-

road subsidized by the government, and called the Northern Pacific Railroad, to extend from Lake Superior to Puget's Sound, on the Pacific, was begun in 1870, but, on account of financial difficulties, the work was suspended in 1873. It was on May 10, 1869, that the great Pacific Railroad was completed, in the presence of full 3000 people, civilized and barbarian. These were gathered in a grassy valley, in mid-continent, to witness the ceremony of fixing the last "tie." The "tie" was made of polished laurel-wood, its ends bound with solid silver bands. A spike of gold had been sent by California, one of silver by Nevada, and one of gold, silver, and iron by Arizona, and these were driven in the presence of the motley assemblage, with religious and other ceremonies. Then the telegraph flashed across the continent, and under the sea to the eastern world, this message: "The last tie is laid, the last spike is driven, and the Pacific Railroad is completed."

Pacific Railway, EXPLORATIONS FOR. At the session of Congress of 1852-53, that body authorized the President to procure surveys for the selection of the best route for railway communication between the Atlantic and Pacific oceans by the corps of topographical engineers. By midsummer, 1853, four expeditions for this purpose were organized to explore as many different routes. One, under Major Stevens, was instructed to explore a northern route, from the Upper Mississippi to Puget's Sound, on the Pacific coast. A second expedition, under the direction of Lieutenant Whipple, was directed to cross the continent from a line adjacent to the 36th parallel of north latitude. It was to proceed from the Mississippi through Walker's Pass of the Rocky Mountains, and strike the Pacific near San Pedro, Los Angeles, or San Diego. A third, under Captain Gunnison, was to proceed through the Rocky Mountains near the headwaters of the Rio del Norte, by way of the Huefeno River and the Great Salt Lake in Utah. And a fourth was to leave the Southern Mississippi, and reach the Pacific somewhere in Lower California—perhaps San Diego. These surveys cost about \$1,000,000. A writer (Edwin Williams), in 1855, declared that "when these gigantic plans shall be consummated—when the shores of the Pacific shall be reached by railways—when the telegraph shall girdle the earth, and ocean steamships shall ply regularly between their termini and farther India, whose wealth the commercial world has so long coveted—the beaten track of commerce will be changed, and a new and wonderful page in the history of the world will be opened." In less than twenty years after that paragraph was written "these gigantic plans" were all completed, and the prophecy has been fulfilled.

Pacification of Indian Tribes. Steps were taken, soon after the close of the War of 1812-15, for a complete pacification of all the Northwestern Indian tribes. At a council held at Detroit (Sept. 1, 1815), by the Senecas, Wyandots, Shawnoese, Delawares, Potawatomes of Lake Michigan, Ottawas, Chippewas, with some, also, of

the Winnebagoes and Sacs, and at which the famous prophet (see *Tecumtha and the Prophet*) was present, the hatchet was formally buried as between all these tribes, and as between them and the United States. Other treaties soon followed with the Potawatomes of the Illinois, the Piankeshaws, Osages, Iowas, Kansas, Foxes, Kickapoos, and various bands of the great Sioux confederacy, with several of which formal relations were now first established.

Pacification of the Indians in the West (1763). Through the generous offices of the French, a general pacification of the Western and Northwestern tribes was secured in the autumn of 1763. Pontiac accepted the peace which "his father, the French," had sent him, and expressed to Gladwin, the English commander at Detroit, his desire that all that had passed should be forgotten. (See *Pontiac's War*.)

"Pacifcus" and "Helvidius." Washington's proclamation of neutrality (which see) was violently assailed by the Democratic press throughout the country, and the administration found determined opposition growing more and more powerful. The President received coarse abuse from the opposing politicians. Under these circumstances, Hamilton took the field in defence of the proclamation, in a series of articles over the signature of "Pacifcus." In these he maintained the President's right, by its issue, to decide upon the position in which the nation stood. He also defended the policy of the measure. To these articles a reply appeared (July 8, 1793), over the signature of "Helvidius," which was written by Madison, at the special request of Jefferson. The latter, in a letter urging Madison to answer Hamilton, felt compelled to say that Genet (see *Genet in the United States*) was a hot-headed, passionate man, without judgment, and likely, by his indecency, to excite public indignation, and give the Secretary of State great trouble. Indeed, Jefferson afterwards offered his resignation, but Washington persuaded him to withdraw it.

Paine and Deane. Silas Deane, who acted as mercantile as well as diplomatic agent of the Continental Congress during the earlier portion of the war, incurred the enmity of Arthur Lee and his brothers, and was so misrepresented by them that Congress recalled him from France. It had been insinuated by Carnichael (which see) that Deane had appropriated the public money to his private use. Two violent parties arose, in and out of Congress, concerning the doings of the agents of Congress abroad. Robert Morris, and others acquainted with financial matters, took the side of Deane. The powerful party against him was led by Richard Henry Lee, brother of Arthur, and chairman of the Committee on Foreign Affairs. Deane published (1779) "*An Address to the People of the United States*," in which he commented severely on the conduct of the Lees, and justly claimed credit for himself in obtaining supplies from France through Beaumarchais. Thomas Paine, who was always ready for contention, was then the Secretary to the Committee on Foreign Affairs.

Availing himself of documents in his custody, he published a reply to Deane's address, in which he asserted that the supplies nominally furnished through a mercantile house came really from the French government. This avowal, which the French and Congress both wished to conceal, drew from the French minister, Gerard, a warm protest, as it proved duplicity on the part of the French court; and, to appease the minister, Congress, by resolution, expressly denied that any present of supplies had been received from France previous to the treaty of alliance (which see). Paine was dismissed from office for his imprudence in revealing the secrets of diplomacy.

Paine, ROBERT TREAT, LL.D., a signer of the Declaration of Independence, was born in Boston, March 11, 1731; died there, May 11, 1814. He graduated at Harvard University in 1749; taught school to help support his parents, and also made a voyage to Europe. He studied theology, and in 1758 was chaplain of provincial troops. Then he studied law, and practised it in Taunton successfully for many years. He was the prosecuting attorney in the case of Captain Preston and his men. (See *Boston Massacre*.) A delegate to the Provincial Congress in 1774, he was sent to the Continental Congress the same year, where he served until 1778. On the organization of the State of Massachusetts, he was made attorney-general, he having been one of the committee who drafted the constitution of that commonwealth. Mr. Paine settled in Boston in 1780, and was Judge of the Massachusetts Supreme Court from 1790 to 1804.

Paine, ROBERT TREAT, JR., poet, son of the signer, was born at Taunton, Mass., Dec. 9, 1773; died at Boston, Nov. 13, 1811. He graduated at Harvard University in 1792. He was originally named Thomas, but in view of the character of Thomas Paine, author of *Common Sense* (which see), he had it changed by the Legislature, he desiring, as he said, to bear a "Christian" name. He became a journalist and a poet, and was the author of the popular ode entitled *Adams and Liberty* (which see). He became a lawyer in 1802, and retired from the profession in 1809. His last important poem—*The Steeds of Apollo*—was written in his father's house in Boston.

Paine, THOMAS, was born at Thetford, Eng., Jan. 29, 1737; died in New York, June 8, 1809. His father was a Friend, or Quaker, from whom Thomas learned the business of stay-making. He went on a privateering cruise in 1755, and afterwards worked at his trade and preached as a Dissenting minister. He was an exciseman at Thetford, and wrote (1772) a pamphlet on the subject. Being accused of smuggling, he was dismissed from office. Meeting Dr. Franklin, the latter advised him to go to America, where he arrived (at Philadelphia) in December, 1774, and was employed as editor of the *Pennsylvania Magazine*. In that paper he published (October, 1775) "Serious Thoughts," in which he declared his hope of the abolition of slavery and the ultimate independence of the American colonies. This led Dr. Rush to incite

him to write his powerful pamphlet *Common Sense*, which, more than anything else, inspired the people with a desire for independence and united them in its support. It opened with the often-quoted words, "These are the times that try men's souls." It was strongly opposed by the Tory class, but it touched the common heart. (See *Common Sense*.) It was first published anonymously and without a copyright.

THOMAS PAINE.

For a short time after the Declaration of Independence Paine was in the military service, and was aide-de-camp to General Greene. In December, 1776, he published the first number of his *Crisis*, and continued it at intervals during the war. (See *Crisis*.) In 1777 Paine was elected secretary to the Committee on Foreign Affairs, but was compelled to resign in consequence of some indiscretions in connection with a quarrel with Silas Deane. Late in November, 1779, he was made Clerk of the Pennsylvania Assembly; and in that capacity read a letter to that body from General Washington, intimating that a mutiny in the army was imminent because of the distresses of the soldiers. The Assembly was disheartened. Paine wrote a letter to Blair McClenaghan, a Philadelphia merchant, stating the case, and enclosing \$500 as his contribution to a relief fund. A meeting of citizens was called, when a subscription was circulated, and very soon the sum of £300,000 (Pennsylvania currency) was collected. With this capital a bank (afterwards the Bank of North America) for the relief of the army was established. With Colonel Laurens, he obtained a loan of 6,000,000 livres from France in 1781. In 1786 Congress gave him \$3000 for his services during the war, and the State of New York granted him a farm of three hundred acres of land at New Rochelle, the confiscated estate of a loyalist. Sailing for France in April, 1787, his fame caused him to be cordially received by distinguished men. In 1788 he was in England, superintending the construction of an iron bridge (the first of its kind) which he had invented. It now spans the Wear, at Sunderland. He wrote the first part of his *Rights of Man* in 1791, in reply to Burke's *Reflections on the Revolution in France*. It had an immense sale, and the American edition had a preface by Thomas Jefferson. An

active member of the revolutionary society in England, he was elected to a seat in the French national convention in 1792. He had a triumphant reception in Paris, but in London he was indicted for sedition, and afterwards outlawed. Paine assisted in framing the French

PAINE'S MONUMENT.

constitution in 1793; and the same year he opposed the execution of the king, and proposed his banishment to America. This action caused the imprisonment of Paine by the Jacobins, and he had a narrow escape from the guillotine. It was at that period that he wrote his *Age of Reason*. James Monroe, the American minister to France, procured his release from prison in 1794. After an absence from the United States for fifteen years, he returned in a government vessel in 1802. His admirers honored him with public dinners; his political opponents insulted him. Settled in New York, he died there, and was buried on his farm at New Rochelle, the Quakers, for peculiar reasons, having denied his request to be interred in one of their burying-grounds. Near where he was buried a neat monument was erected in 1839. In 1819 William Cobbett took his bones to England. In 1875 a memorial building was dedicated in Boston, having over the entrance the inscription, "PAINE MEMORIAL BUILDING AND HOME OF THE BOSTON INVESTIGATOR."

Pakenham, Sir Edward Michael, was born in the northwest of Ireland in 1779; killed at New Orleans, Jan. 8, 1815. At the age of about fifteen years he was appointed major of Light Dragoons, and at twenty lieutenant-colonel of Foot. In 1812 he was made major-general; served with distinction under Wellington in the Peninsular campaign; and in 1814 was intrusted with the expedition against New Orleans. (See *New Orleans, Battle of*.) The body of Sir Edward was conveyed to Villere's, when the viscera were removed and buried between two pecan-trees near the mansion. The rest of

the body was placed in a cask of rum and conveyed to England for interment. Such was the disposition of the bodies of two or three other officers. It is said the pecan-trees never bore fruit after that year, and the negroes looked upon the spot with superstitious awe. These trees were in full vigor in 1860, when the writer made the sketch below.

Palatines. Early in the 18th century many inhabitants of the Lower Palatinate, lying on both sides of the Rhine, in Germany, were driven from their homes by the persecutions of Louis XVI. of France, whose armies desolated their country. England received many of the fugitives. In the spring of 1708, on the petition of Joshua Koekerthal, Evangelical minister of a body of Lutherans, for himself and thirty-nine others to be transported to America, an order was issued by the Queen in Council for such transportation and their naturalization before leaving England. The queen provided for them at her own expense. This first company of Palatines was first landed on Governor's Island, in the harbor of New York, and afterwards settled near the site of Newburgh, in Orange County, N. Y., in the spring of 1709. In 1710 a larger emigration of Palatines to America occurred, under the guidance of Robert Hunter, Governor of New York. These, about three thousand in number, went farther up the Hudson. Some settled on Livingston's Manor, at a place yet called Germantown, where a tract of six thou-

THE PECAN-TREES AT VILLERE'S, NEW ORLEANS.

sand acres was bought from Livingston by the British government for their use. Some soon afterwards crossed the Hudson into Greene

County and settled at a place called West Camp; others went far up the Mohawk and settled the district known as the German Flats; while a considerable body went to Berks County, Penn., and were the ancestors of many German families in that state. Among the emigrants with Hunter a violent sickness broke out, and four hundred and seventy of them died. With this company came John Peter Zenger (see *Zenger's Trial*) and his widowed mother, Johanna. Peter was then a lad. He was soon afterwards apprenticed to William Bradford, printer.

Palfrey, JOHN GORHAM, LL.D., was born in Boston, May 2, 1796. He graduated at Harvard University in 1815. He was minister (Unitarian) of Brattle Street Church, Boston, from 1818 to 1830. He was Dexter Professor of Sacred Literature in Harvard; editor of the *North American Review* from 1835 to 1843; a member of the Legislature of Massachusetts; and from 1844 to 1848 was secretary of the state. From 1861 to 1866 he was postmaster of Boston. Mr. Palfrey is distinguished as a careful historian, as evinced by his *History of New England to 1688* (three volumes), issued in 1858-64. He delivered courses of lectures before the Lowell Institute, and was an early and powerful anti-slavery writer.

Palmer, ERASTUS DOW, sculptor, was born at Pompey, Onondaga Co., N. Y., April 2, 1817. Until he was twenty-nine years of age he was a carpenter, when he began cameo-cutting for jewelry, which was then fashionable. He removed from Utica to Albany. This business injured his eyesight, and he attempted sculpture, at which he succeeded at the age of thirty-five. His first work in marble was an ideal bust of the infant "Ceres," which was exhibited at the Academy of Design, New York. It was followed by two exquisite bass-reliefs representing the morning and evening star. Mr. Palmer ranks among our best sculptors, and his works in bass-relief and statuary are highly esteemed. He has produced more than one hundred works in marble. His "Angel of the Resurrection," at the entrance to the Rural Cemetery at Albany, commands the highest admiration. He went to Europe for the first time in 1873, and his latest important work was a statue of Robert R. Livingston for the national Capitol.

Palmer, INNES N., was born in New York in 1825; graduated at West Point in 1846; served in the war against Mexico; and in August, 1861, was made major of cavalry. In September he was made brigadier-general of volunteers, having been engaged in the battle of Bull's Run in July previous. He commanded a brigade in the Peninsular campaign in 1862; a division in North Carolina the first half of 1863; and from August that year until April, 1864, he commanded the defences of the North Carolina coast. He was in command of the District of North Carolina until March, 1865, participating in Sherman's movements. In March, 1865, he was breveted brigadier-general United States Army.

Palmer, JAMES S., was born in New Jersey in

1810; died of yellow-fever at St. Thomas, W. I., Dec. 7, 1867. He entered the navy as midshipman in 1825, and was made rear-admiral in 1866. He served in the East India seas in 1838, and in blockading the coast of Mexico from 1846 to 1848. At the beginning of the Civil War he was in the blockade fleet under Dupont. In the summer of 1863 he led the advance in the passage of the Vicksburg batteries, and later in the same year performed the same service. Palmer was Farragut's flag-captain in the expedition against New Orleans and Mobile, and fought the Confederate "ram" *Arkansas* (which see). In 1865 he was assigned to the command of the North Atlantic squadron.

Palmer, JOHN McCauley, was born in Scott County, Ky., Sept. 13, 1817; became a resident of Illinois in 1832; was admitted to the bar in 1840; a member of the State Senate from 1852 to 1854; and a delegate to the Peace Convention (which see) in 1861. He was Colonel of the Fourteenth Illinois Volunteers in April, 1861; served under Frémont in Missouri; and in December was made brigadier-general. He was at the capture of New Madrid and Island Number Ten, and commanded a brigade in the Army of the Mississippi. He commanded a division under Grant and Rosecrans in 1862, and was with the latter at the battle of Stone's River. For his gallantry there he was made major-general. General Palmer took part in the battle of Chickamauga, and commanded the Fourteenth Corps in the Atlanta campaign. He was Governor of Illinois from 1869 to 1871.

Palmetto Cockades were made of blue silk ribbon, with a button in the centre bearing the image of a palmetto-tree. They were also called "Secession Cockades." "Secession Bonnets," made by a Northern milliner in Charleston, were worn by the ladies of that city on the streets immediately after the passage of the ordinance of secession.

PALMETTO COCKADE.

Palmetto State. A popular name given to the State of South Carolina, its coat-of-arms bearing the figure of a palmetto-tree.

Palo Alto (tall trees), **BATTLE OF** (1846). On a part of a prairie in Texas, about eight miles northeast from Matamoras, Mexico, flanked by ponds and beautified by tall trees (which gave it the name of Palo Alto), General Taylor, marching with less than two thousand three hundred men from Point Isabel towards Fort Brown, encountered about six thousand Mexicans, led by General Arista. At a little past noon a furious battle was begun with artillery by the Mexicans and a cavalry attack with the lance. The Mexicans were forced back, and, after a contest of about five hours, they retreated to Resaca de la Palma and encamped. They fled in great disorder, having lost in the engagement one hundred men killed and wounded. The Americans lost fifty-three men. During the engagement Major Ringgold, commander of the Ameri-

cau Flying Artillery, which did terrible work in the ranks of the Mexicans, was mortally wounded by a small cannon-ball that passed through both thighs and through his horse. Rider and horse both fell to the ground. The latter was dead; the major died at Point Isabel four days afterwards. (See *Mexico, War with.*)

Panama, CONGRESS AT. In 1823 Simon Bolivar, the liberator of Colombia, S. A., and then president of that republic, invited the governments of Mexico, Peru, Chili, and Buenos Ayres to unite with him in forming a general congress at Panama. Arrangements to that effect were made, but the congress was not held until July, 1826. The object was to settle upon some line of policy having the force of international law respecting the rights of those republics, and to adopt measures for preventing further colonization by European powers, on the American continent. They fully accepted the "Monroe Doctrine" (which see). In the spring of 1825 the United States was invited to send delegates or commissioners to the congress. These were appointed early in 1826, and appeared at the congress early in July; but its results were not important to any of the parties concerned.

Panama Railway, THE, was the first railway extending from the Atlantic to the Pacific side of the great isthmus that connects North and South America, and was completed at the beginning of 1855. It extends from Aspinwall city on the Caribbean Sea to Panama on the Pacific Ocean. The first train passed over it on Jan. 28, 1855.

Paoli Tavern, DEFEAT OF WAYNE NEAR THE. Near the Paoli Tavern, on the Lancaster road, General Wayne lay encamped, with fifteen hundred men and two cannons, in a secluded spot, on the night of Sept. 20, 1777. A Tory informed Howe of this encampment, and he sent General Grey, with a considerable force, to attack it at midnight. The night was dark and stormy. Grey gave orders to use only the bayonet, and give no quarter. He approached stealthily, murdering the pickets near the highway. Warned by this, Wayne immediately paraded his men, but, unfortunately, in the light of his camp-fires. Towards midnight Grey's force, in two divisions, crept up a ravine, and at one o'clock in the morning (Sept. 21) leaped from the gloom like tigers from a jungle, and began the work of death at different points. The patriots, not knowing at what point was the chief attack, fired a few volleys, and, breaking into fragments, fled in confusion towards Chester. The British and Hessians killed one hundred and fifty Americans, some of them in cold blood, after they had surrendered and begged for quarter. A Hessian sergeant afterwards said: "We killed three hundred of the rebels with the bayonet. I stuck them myself like so many pigs, one after another, until the blood ran out of the touchhole of my musket." This event has been properly spoken of

as a massacre. The dead were buried on the site of the encampment. The spot is enclosed by a wall, and a monument of marble within commemorates the dead.

PAOLI MONUMENT.

Papal Representative. The reigning Pope (Pius VI.), unfriendly towards England, looked with favor upon the revolt of the colonies. Soon after the treaty of peace was concluded (Sept. 3, 1783), his nuncio, or ambassador, at Paris, made overtures to Dr. Franklin on the subject of appointing an apostolic vicar for the United States. The matter was referred to Congress, when that body properly replied that the subject being purely spiritual, it was beyond their control. Thus early the idea of total separation between the Church and State—the untrammelled exercise of freedom of conscience—was enunciated. The Pope appointed Rev. John Carroll, of Maryland, to the high office of apostolic vicar, or representative of the Church of Rome in the United States.

Paper Currency. (See *Bills of Credit.*)

Paper Currency in Canada. In the course of the French and Indian War, the French officers in Canada, civil and military, had been guilty of immense peculations. At the close of hostilities there was outstanding, in unpaid bills on France and in card or paper money, more than \$20,000,000, a large portion of which, the French government declared, had been fraudulently issued. The holders of this currency, payment of which had been suspended immediately after the fall of Quebec (1759), received but a small indemnity for it.

Paper Currency in the Colonies Suppressed. In 1748 the British Parliament passed an act for regulating and restraining bills of credit in the English-American colonies. By this act, no such currency was allowed, except for the current expenses of the year and in case of an invasion; but in no case might it be a legal tender for the payment of debts, on pain of dismission from office on the part of any provincial governor who should assent to it, and a perpetual incapability of serving in any public employment. A sudden depreciation in the value

of the paper currency ensued, which occasioned much distress.

Paper Money First Issued in South Carolina. An ill-advised expedition against the Spaniards at St. Augustine, by land and sea, undertaken by Governor Moore, of South Carolina, in September, 1792, was unsuccessful, and involved the colony in a debt of more than \$26,000, for the payment of which bills of credit were issued, the first emission of paper money in that colony.

Papineau, LOUIS JOSEPH, political leader in Canada, was born at Montreal, in October, 1789; died at Monticello, Sept. 23, 1871. He was educated at the Seminary of Quebec; was admitted to the bar, and entered the Lower Canadian Parliament in 1809, becoming speaker in 1815. He became a leader of the radical, or opposition, party at the beginning of his public life. He opposed the union of the two Canadas, at which the English party aimed, and in 1823 he was sent on a mission to London, to remonstrate against that measure. In 1827 he was again a member of the House, and elected its speaker; and in 1834 he introduced to that body a list of the demands and grievances of the Lower Canadians, known as the "Ninety-two Resolutions." He supported the resolutions with great ability, and recommended constitutional resistance to the British government and commercial non-intercourse with England. Matters were brought to a crisis in 1837, when the new governor (Lord Gosford) decided to administer the government without the assistance of the Colonial Parliament. The liberal party flew to arms. Papineau urged peaceful constitutional opposition, but an insurrection was begun that could not be allayed by persuasion, and he took refuge in the United States at the close of that year. (See *Canadian Rebellion*.) In 1839 he went to France, where he engaged in literary pursuits about eight years. After the union of the Canadas, in 1841, and a general amnesty for political offences was proclaimed, in 1844, Papineau returned to his native country (1847), and was made a member of the Canadian Parliament. After 1834 he took no part in public affairs.

Papists and Prelates in Maryland Disfranchised. The Parliamentary Commissioners, in 1654, having established a new government in Maryland, called a new Assembly, one of the first acts of which was to so modify the Act of Toleration of 1649 as to exclude "Papists and prelates" from its benefits. They also passed acts nullifying the oath of allegiance to the Proprietary, and denying his claim to be "absolute lord" of the province, as his charter called him. The Roman Catholics and the Episcopalians in Maryland equally felt the oppressions of the commissioners. Finally, in 1649, a compromise was effected, and toleration restored.

Paredes, MARIANO, was an active participant in the political events in Mexico from 1820 until his death, in the city of Mexico, Sept. 11, 1849. When, upon the annexation of Texas to the United States (1845), President Herrera endeavored to gain the acquiescence of the Mexicans

to the measure, Paredes assisted him, and with 25,000 men defeated Santa Aña, who was banished. Afterwards Paredes, with the assistance of Arista, defeated Herrera, and was installed President of Mexico June 12, 1845. The next day he took command of the army, leaving civil affairs in the hands of Vice-President Bravo. He was at the head of the government on the breaking-out of war with the United States (May, 1846), but when Santa Aña reappeared in Mexico, Paredes was seized and confined, but escaped to Havana. Going to Europe, he sought to place a Spanish or French prince at the head of the Mexicans. He afterwards returned to Mexico.

Parke, JOHN G., was born in Pennsylvania, in 1827; graduated at West Point in 1849. Entering the Engineer Corps, he became brigadier-general of volunteers Nov. 23, 1861. He commanded a brigade under Burnside in his operations on the North Carolina coast (see *Roanoke Island*), early in 1862, and with him joined the Army of the Potomac. He served in McClellan's campaigns with that army, and when Burnside became its commander he was that general's chief-of-staff. In the campaign against Vicksburg he was a conspicuous actor. He was with Sherman, commanding the left wing of his army after the fall of Vicksburg. He was also engaged in the defence of Knoxville (see *Knoxville, Siege of*); and in the Richmond campaign, in 1864, he commanded the Ninth Corps, and continued to do so until the surrender of Lee, in April, 1865. In March, 1865, he was breveted major-general United States Army.

Parker, SIR PETER, was born in 1723; died in 1811. He became a post-captain in the British navy in 1747. As commander of a fleet, he co-

SIR PETER PARKER. (From an English print.)

operated with Sir Henry Clinton in an unsuccessful attack on Charleston, Jan. 28, 1776. (See *Charleston, Defence of*.) He afterwards assisted

both General and Admiral Lord Howe in the capture of New York, and commanded the squadron which took possession of Rhode Island late in that year. Afterwards he was a member of Parliament; was made Admiral of the White, and on the death of Lord Howe (1799), as the oldest admiral in the navy, he became Admiral of the Fleet.

Parker, SIR PETER, IN THE CHESAPEAKE. While the British land and naval forces were engaged in the expedition against Washington, Sir Peter Parker, of the Royal Navy, appeared in Chesapeake Bay, in the frigate *Menelaus*, thirty-eight guns. He was a young and handsome

SIR PETER PARKER.

officer, and was really humane in his impulses; but, under the direction of Admiral Cockburn, his superior, his deportment was so haughty, and his acts so cruel, that he was an object of bitter hatred to the Americans. He frequently sent parties ashore to plunder private property, and he swept domestic commerce from the bay. He boasted that, during his cruise of a month in those waters, not a single American vessel had crossed the bay. In an account of his exploits written by a comrade of Sir Peter, it is related that most wanton cruelty was often exercised under the direction of Cockburn. On one occasion the admiral, Sir Peter, the writer, and a few others went ashore, and stealthily approached a lonely dwelling near the beach at evening. The door was open, and they went in, when they were greeted by screams from three young ladies at tea. The ladies appealed for mercy with tears. Cockburn told them he knew their father to be a colonel of American militia; that it was his duty to burn the house; and he gave them ten minutes in which they might remove what they most desired to save. The young women, on their knees, still pleaded for mercy, and begged him to spare the house, while the brutal Cockburn noted the passing time by his

watch on the table. At the end of the ten minutes he ordered his incendiaries to fire the building. With Sir Peter the girls had specially pleaded, and when Cockburn ordered the fireballs to be lighted and thrown he wept like a child. "We retreated from the scene of ruin," wrote the eye-witness, "leaving the three daughters gazing at the work of destruction, which made the innocent houseless and the affluent beggars." On the capture of Washington, Sir Peter was ordered to proceed down the bay. "I must first have a frolic with the Yankees," he said; and on the night of August 30, after a jolly dinner with his officers and indulgence in drinking and dancing, he proceeded to engage in the sport—to surprise and attack two hundred militia encamped at Moorfields, on the eastern shore. He ran the *Menelaus* into an estuary, landed, near midnight, a force of seamen and marines, armed with muskets, pikes, and cutlasses. They fell upon the Marylanders with great fury. The latter, under the vigilant Colonel Read, who was apprised of the expedition, were ready to receive the marauders, and a fierce conflict of an hour ensued, when the invaders, repulsed, fled back to their vessel, leaving thirteen dead and three wounded on the field. Among those mortally hurt was Sir Peter, a gallant young Irishman, only twenty-eight years of age. He was at the head of his men, cheering them on, when a musket-ball cut the main artery of his thigh. "They have hit me, Pearce," he said to his lieutenant, "but it is nothing; push on, my brave boys, and follow me!" He attempted to cheer, but fell, exhausted, in Pearce's arms, and bled to death before he could procure surgical attention. His body was preserved in spirits, and sent to England.

Parker, THEODORE, a Unitarian clergyman, was born at Lexington, Mass., Aug. 24, 1810; died at Florence, Italy, May 10, 1860. His grandfather, Captain John Parker, commanded the company of minute-men in the skirmish at Lexington (which see). Theodore began to study Latin at ten years of age, Greek at eleven, and metaphysics at twelve. He was an earnest naturalist, and before he was ten he knew all the trees and shrubs of Massachusetts. In 1829 he entered Harvard College, but did not graduate; taught school until 1837, when, having studied divinity at Cambridge, he was settled over a Unitarian society at West Roxbury. He became an acute controversialist, for he was a profound thinker, and had the courage of his convictions. In 1846 he became minister of the Twenty-eighth Congregational Society, in Boston, which, in November, 1852, occupied the great Music Hall for the first time. Parker became the most famous preacher of his time. His place of worship was always crowded, and people came from all parts of the country to hear him. He urgently opposed the war with Mexico as a scheme for the extension of slavery; was an early advocate of temperance and anti-slavery measures; and after the passage of the Fugitive Slave Law (which see) he was one of its most uncompromising opponents. So marked was his sympathy for Anthony Burns, the seized

fugitive slave at Boston (January, 1854), as to cause his indictment and trial for a violation of the Fugitive Slave Law. It was quashed. In 1859 hemorrhage of the lungs terminated his public career. He sailed first to Santa Cruz, thence to Europe, spending the winter of 1859-60 in Rome, whence, in April, he set out for home, but only reached Florence, where he died. He bequeathed his 13,000 valuable books to the Public Library of Boston.

Parliament, ACTION OF (1774-75). The election for members of a new Parliament that took place in November, 1774, resulted in a large ministerial majority, which boded no good for the American colonies. The king, in his opening speech (Nov. 30), spoke of the "daring spirit of resistance in the colonies," and assured the Legislature that he had taken measures and given orders for the restoration of peace and order, which he hoped would be effectual. A large majority of both Houses were ready to support the king and his ministers in coercive measures; but there was a minority of able men, in and out of Parliament, utterly opposed to subduing the colonies by force of arms, and anxious to promote an amicable adjustment. The mercantile and trading interests of every kind, whose business was seriously menaced by the American Association (which see), formed a powerful class of outside opponents of the ministers. The English Dissenters, also, were inclined, by religious sympathies, to favor the Americans. In the House of Commons, the papers referring to America were referred to a committee of the whole; while in the House of Lords, Chatham (William Pitt), after long absence, appeared and proposed an address to the king advising a recall of the troops from Boston. This proposition was rejected by a decisive majority. Petitions for conciliation, which flowed into the House of Commons from all the trading and manufacturing towns in the kingdom, were referred to another committee, which the opposition called the "Committee of Oblivion." Among the petitions to the king was that of the Continental Congress, presented by Franklin, Bollen, and Lee, three colonial agents, who asked to be heard upon it, by counsel, at the bar of the House. Their request was refused on the ground that the Congress was an illegal assembly and the alleged grievances only pretended. On the 1st of February Chatham brought forward a bill for settling the troubles in America, which provided for a full acknowledgment on the part of the colonies of the supremacy and superintending power of Parliament, but that no tax should ever be levied except by consent of the colonial assemblies. It provided for a congress of the colonies to make the acknowledgment, and to vote, at the same time, a free grant to the king of a certain perpetual revenue to be placed at the disposal of Parliament. His bill was refused the courtesy of lying on the table, and was rejected by a vote of two to one at the first reading. The ministry, feeling strong in their large majority of supporters, presented a bill in the House of Commons (Feb. 3) for cutting off the

trade of New England elsewhere than to Great Britain, Ireland, and the British West Indies. This was intended to offset the American Association. It also provided for the suspension of these colonies from the prosecution of the Newfoundland fisheries, a principal branch of their trade and industry. In an address to the throne proposed by ministers (Feb. 7), it was declared that rebellion existed in Massachusetts, countenanced and fomented by unlawful combinations in other colonies. Effectual measures were recommended for suppressing the rebellion. The support of Parliament was pledged to the king. Then Lord North astonished his party and the nation by proposing a scheme for conciliation, not much unlike that of Chatham, except in its avowed mischievous intention. It proposed that when any colony should offer to make a provision for raising a sum of money disposable by Parliament for the common defence, and should provide for the support of civil government and the administration of justice within its own limits, and such offer should be approved by the king, Parliament should forbear the levy of any duties or taxes within such colony, so long as it should be faithful to its promises, excepting such as might be required for the regulation of trade. The bill was warmly opposed by the ultra advocates of parliamentary supremacy, until North explained that he did not believe it would be acceptable to all the colonies, and that it was intended to divide and weaken them. Then the bill passed. With a similar design, a bill with the features of the New England "Restraining Bill" was passed, after hearing of the general support given by the colonial assemblies to the proceedings of the Congress. It extended similar restrictions to all the colonies excepting New York, North Carolina, and Georgia, the first and last named having declined to adopt the American Association, and the ministers entertaining hope of similar action by the Assembly of North Carolina. North hoped, by exempting these, to produce a division in the colonies. Finally Burke offered a series of resolutions to abandon all attempts at parliamentary taxation and to return to the old method of raising American supplies by the free grant of the colonial assemblies. His motion was voted down. Soon afterwards John Wilkes (then Lord Mayor of London, as well as member of the House of Commons), whom the ministry had tried to crush, and whom they regarded as their mortal enemy, presented to the king, in his official capacity, a remonstrance from the City authorities expressing "abhorrence" of the measures in progress for "the oppression of their fellow-subjects in the colonies," and entreating the king, as a first step towards the redress of grievances, to dismiss his present ministry. In these debates the speakers exhibited various phases of statesmanship, from the sagacious reasoner to the flippant optimist, who, believing in the omnipotence of Great Britain and the cowardice and weakness of the Americans, felt very little concern. Mr. Charles James Fox advised the administration to place the Americans where

they stood in 1763, and to repeal every act passed since that time which affected either their freedom or their commerce. Lord North said if such a scheme should be effected there would be an end to the dispute. His plan was to send a powerful armament to America, accompanied by commissioners to offer mercy upon a proper submission, for he believed the Americans were aiming at independence. This belief and its conclusion was denied by General Conway, who asked, "Did the Americans set up a claim for independence previous to 1763?" and answered, "No, they were then dutiful and peaceable subjects, and they are still dutiful." He declared that the obnoxious acts of Parliament had forced them into acts of resistance. "Taxes have been levied upon them," he said; "their charters have been violated, nay, taken away; administration has attempted to overawe them by the most cruel and oppressive laws." Edmund Burke condemned the use of discretionary power made by General Gage at Boston. Mr. James Grenville deprecated the use of force against the Americans, because they did not aim at independence; while Mr. Adam thought it absolutely necessary to reduce them to submission by force, because, if they should be successful in their opposition, they would certainly "proceed to independence." He attempted to show that their subjugation would be easy, because there would be no settled form of government in America, and all must be anarchy and confusion. A fatal mistake of British statesmen. By the institution of colonial assemblies the Americans had learned to govern themselves. Mr. Burke asked leave to bring in a bill for composing the troubles in America, and for quieting the minds of the colonists. He believed concession to be the true path to pursue to reach the happy result. He proposed a renunciation of the exercise of taxation, but not the right; to preserve the power of laying duties for the regulation of commerce, but the money raised was to be at the disposal of the several general assemblies. He proposed to repeal the tea duty of 1767, and to proclaim a general amnesty. His speech on that occasion embraced every consideration of justice and expediency, and warned ministers that if they persisted in vexing the colonies they would drive the Americans to a separation from the mother country. The plan was rejected. Mr. Luttrell proposed to ask the king to authorize commissioners to receive proposals for conciliation from any general convention of Americans, or their Congress, as the most effectual means for preventing the effusion of blood. It was rejected. In the House of Lords the Duke of Grafton proposed to bring in a bill for repealing every act which had been passed by Parliament relative to America since 1763. It was not acted upon. Lord Lyttelton severely condemned the measures of the administration, and united with the Duke of Grafton in his proposition for a repeal of the obnoxious acts. He, with others, had believed that a show of determination to reduce the colonies to submission would cause them to quail. He now knew he was mistaken. The valiant declara-

tion went forth, backed by ten thousand men, but it had not intimidated a single colony. Notwithstanding the strong reasons given by the opposition for ministers to be conciliatory towards the Americans, the majority of Parliament were in favor of attempting coercion with a strong hand. Towards the end of the session Burke asked leave to lay before the Commons the remonstrance lately voted by the Assembly of New York. (See *New York Assembly*.) The ministry and their friends had counted largely on the defection of that province; and they were so sorely disappointed when they found the document so emphatic in its claims of the rights of Englishmen that Lord North opposed and prevented its reception by the House. The acts of that session of Parliament widened the breach between Great Britain and her American colonies.

Parliament, ACTS OF, CONCERNING AMERICA.

The first act was passed in 1548, prohibiting the exaction of any reward by an officer of the English admiralty from English fishermen and mariners going on the service of the fishery at Newfoundland. The next of importance, and the first that elicited debate, was in 1621, when the House of Commons denounced the new charter given to the Plymouth Company as a "grievance." (See *Plymouth Company*.) The king, angered by what he regarded as an attack upon his prerogative, had Sir Edward Coke, Pym (another eminent lawyer), and other members imprisoned, or virtually so, for what he called "factious conduct." The debates involved the declaration of the right of Parliament to absolutely rule colonial affairs and a flat denial of the right—the course of debate followed before the war of the Revolution began in 1775. At that session King James took high-handed measures against the representatives of the people. He declared the proceedings of the House of Commons the work of "fiery, popular, and turbulent spirits." To which they replied by inserting in their journals a declaration that they had the right of discussing all subjects in such order as they might think proper, and asserting that they were not responsible to the king for their conduct. James sent for the book, tore out the obnoxious entry with his own hand and suspended their sittings.

Parliament, AMERICAN AFFAIRS IN (1768).

The second Parliament of George III. opened in December, 1768. All the papers relating to the American colonies were laid before it. The House of Lords severely denounced the public proceedings in Massachusetts, particularly a late convention. (See *Convention in Massachusetts*.) Approving the conduct of the ministry, they recommended instructions to the Governor of Massachusetts to obtain full information "of all treasons," and to send the offenders to England for trial, under an un repealed statute of Henry VIII. for the punishment of treason committed out of the kingdom. These recommendations met powerful opposition in the House of Commons, in which Barré, Burke, and Pownall took the lead. But Parliament, as a body, cou-

sidered the late proceedings in the colonies as indicative of a factious and rebellious spirit, and the recommendations of the House of Lords were adopted by a very decided majority; for each member seemed to consider himself insulted by the independent spirit of the Americans. "Every man in England," wrote Franklin, "regards himself as a piece of a sovereign over America—seems to jostle himself into the throne with the king, and talks of *our* subjects in the colonies."

Parliament before the King. On Feb. 9, 1775, the Lord Chancellor, the Speaker, and a majority of the Lords and Commons sought an audience of the king at the palace, and, in the presence of the representatives of European courts, presented to the monarch a joint address adopted by the two Houses of Parliament, which, in its sanguinary tone, "amounted," it was conceded, "to a declaration of war" against the colonies. The king was pleased, and in his reply he pledged himself speedily and effectually to "enforce obedience to the laws and the authority of the supreme legislature." He had just heard of the seizure of the ammunition in the fort at Portsmouth, N. H., and he made his utterances strong, that they might "open the eyes of the deluded Americans."

Parliament, POWER OF THE, IN THE COLONIES ASSERTED. In 1763 the extent of the powers of Parliament over the colonies began to be seriously questioned. A certain supremacy was admitted. For a long time the colonies, especially of New England, had carried on a struggle with Parliament concerning its interference with colonial manufactures, trade, and commerce. (See *Navigation Acts*.) It had interfered with their currency, with joint-stock companies, the collection of debts, laws of naturalization, assumed to legislate concerning the administration of oaths, and to extend the operations of the mutiny act to the colonies. Against these and other interferences in their local affairs the colonists had protested. Parliament had persisted, and, by a sort of forced, though partial, acquiescence, these interferences came to be regarded as vested rights. The Parliament had never ventured to impose direct taxes on the colonies—a supereminent power—but the indirect taxation, by means of custom-house officers, was regarded as an equivalent by the colonists, and watched with jealous vigilance. When, in 1765, schemes of indirect taxation were put in operation to increase the imperial revenue, and not for the mere regulation of trade, the colonists rebelled, and that rebellion finally resulted in war and colonial independence. (See *Stamp Act*.)

Parliamentary Commissioners in Virginia. (See *Berkeley, Sir William*.)

Parliament-house at York (1813). When the Americans took possession of York (Toronto), Upper Canada (April 27, 1813), the Parliament-house and other public buildings were burned by an unknown hand. It was said that the incendiary was instigated by the indigna-

tion of the Americans, who found hanging upon the wall of the legislative chamber a "human scalp," for which commodity Proctor had paid bounties when at Fort Malden. It is not pleasant to relate a fact so discreditable; but, as one of the latest British historians (Auchinleck), without the shadow of an excuse, has intimated that the scalp in question—which Commodore Chauncey sent to the Secretary of War—was taken from the head of a British Indian "shot, while in a tree," by that officer when the Americans advanced, the fair fame of a dead man seems to demand the revelation of the truth. Chauncey was not on shore at York. A few days after the capture of York (which see) he wrote from Sackett's Harbor to the Secretary of the Navy: "I have the honor to present to you, by the hands of Lieutenant Dudley, the British standard taken at York on the 27th of April last, accompanied by the mace, over which hung a human scalp. These articles were taken from the Parliament-house by one of my officers and presented to me." General Dearborn wrote: "A scalp was found in the legislative council-chamber, suspended near the speaker's chair, accompanied by the mace."

Parria, SAMUEL, first minister of Danvers, Mass. (1689-96), was born in London in 1653; died at Sudbury, Mass., Feb. 27, 1720. He was first a merchant and then a minister. It was in his family that "Salem Witchcraft" (which see) began its terrible work, and he was the most zealous prosecutor of persons accused of the "black art." In April, 1693, his church brought charges against him. He acknowledged his error and was dismissed. He preached in various places afterwards, but was an unhappy wanderer.

Parrott, ENOCH G., was born at Portsmouth, N. H., Dec. 10, 1814. He entered the navy as midshipman in 1831, and was with Commodore M. C. Perry on the coast of Africa in 1843. In the frigate *Congress* he assisted at the capture of Guaymas and Mazatlan on the Mexican Pacific coast, and in 1861 was made commander. He assisted in the destruction of the war-vessels at Norfolk and the navy-yard opposite, in April, 1861, and was at the capture of the *Savannah* (which see). In active service on the Atlantic coast from the Chesapeake to Georgia, and on the James River, he was in command of the *Monadnoc* in the two attacks on Fort Fisher (which see).

Parry, SIR WILLIAM EDWARD, Arctic navigator, was born at Bath, Eng., Dec. 10, 1790; died at Ems, July 7, 1855. He entered the royal navy at thirteen. Being engaged in blockading the New England coast in 1813, he ascended the Connecticut River about twenty miles, and destroyed twenty-seven privateers and other vessels. In 1818 he joined Sir John Ross's expedition to the polar seas, and the next year he commanded a second expedition, penetrating to latitude 70° 44' 20" north and longitude 110° west, which entitled him to receive the reward of \$20,000 offered by Parliament for reaching thus far west within the Arctic Circle. He was promoted to

commander on his return, in 1820, and was knighted in 1829. He made another expedition in 1821-23; and in another, in 1826, he reached the latitude of $82^{\circ} 45'$ in boats and sledges, the nearest point to the north pole which had then been reached. Parry was made Rear-admiral of the White in 1852, and in 1853 lieutenant-governor of Greenwich Hospital.

Parsons' Case, THE. A short crop of tobacco in Virginia having enhanced the value of that staple, and the issuing of bills of credit (1755) for the first time in that province having depreciated the currency, the Assembly passed a temporary act authorizing the payment of all tobacco debts in the depreciated currency, at a stipulated price. Three years later (1758) an expected short crop caused the re-enactment of this tender-law. The salaries of the parish ministers, sixty-five in number, were payable in tobacco, and they were likely to become losers by this tender-law. The clergy sent an agent to England, who obtained an order in council pronouncing the law void. Suits were brought to recover the difference between twopence per pound in depreciated currency and the tobacco, to which, by law, the ministers were entitled. In defending one of these suits the rare eloquence of Patrick Henry was first developed.

Parsons, SAMUEL HOLDEN, was born at Lynn, Conn., May 14, 1737; drowned in the Big Beaver River, Ohio, Nov. 17, 1789. He graduated at Harvard University in 1756, was admitted to the bar in 1759, and was a representative in the Connecticut Assembly for eighteen sessions. He was an active patriot at the beginning of the Revolution. He was made colonel of a Connecticut regiment in 1775, and engaged in the siege of Boston. In August, 1776, he was made a brigadier-general, and as such engaged in the battle on Long Island (which see). In 1779 Parsons succeeded General Putnam in command of the Connecticut line, and in 1780 was commissioned a major-general. At the close of the war he resumed the practice of law, and was appointed by Washington first judge of the Northwestern Territory. He was also employed to treat with the Indians for the extinguishment of their titles to the Connecticut Western Reserve (which see) in northern Ohio. He went to the new territory in 1787, and settled there.

Parsons, THEOPHILUS, LL.D., an eminent jurist, was born at Byfield, Mass., Feb. 24, 1750; died in Boston, Oct. 30, 1813. He graduated at Harvard University in 1769, was admitted to the bar in 1774, and at the same time was at the head of a grammar-school in Falmouth (now Portland), Me., when it was destroyed. (See *Falmouth Burned*.) He began practice in Newburyport, in 1777, and in 1780 was one of the principal framers of the state constitution of Massachusetts. He removed to Boston in 1800, where, until his death, he was regarded as the brightest of the legal lights of New England. He had been a zealous advocate of the national Constitution in 1788, and in 1806 was made chief-justice of the State of Massachusetts. In legal knowledge he had no superior. His decisions are em-

braced in six printed volumes. His memory was wonderful, and he was eloquent as a speaker. His "Opinions" were published in New York, in 1836, under the title of *Commentaries on American Law*.

Party Names (1789). The friends of the national Constitution took for themselves the title of Federalists, and called their opponents Anti-federalists. (See *Federalists and Republicans*.) The Anti-federalists insisted that, as the new Constitution aimed at more than a federal league, and contemplated a consolidation of the government into a half-monarchical central power, the opponents of the Constitution, or state-sovereignty men, should be called Federalists, and the friends of the Constitution Anti-federalists.

Patent Laws. Clause 8, section 8, article 3 of the national Constitution gives to Congress power to "promote the progress of science and useful arts by securing, for a limited time, to authors and inventors, the exclusive right to their respective writings and discoveries." The first law framed under this provision was approved April 10, 1790, and secured to authors and inventors the exclusive rights in the use of their productions for fourteen years. It remained in force three years, when it was repealed. Only three patents were granted the first year, thirty-three the second, and eleven the third. A new law was passed in 1793. It was amended from time to time, and remained in force until 1836, when all existing patent laws were repealed, and a new one was approved. During the ten years from 1790 to 1800 the number of patents granted was two hundred and sixty-six. The matter of infringement of patents was first brought under the equity jurisdiction of the United States courts in 1819, and in 1832 provision was made by Congress for the re-issue of patents under certain conditions. Prior to the new law of 1836, only ten thousand and twenty patents had been issued. Since then their number has increased to about two hundred thousand. In 1861 the time for which patents were issued was extended to seventeen years. In 1870 the Patent Office was made a branch of the State Department; now it is a bureau of the Interior Department.

Patricians and Tribunes. There was much timidity among professed Republicans in New York in 1774, and two distinct parties were formed among them. The line of separation was a social one—Patricians and Tribunes—the merchants and gentry and the mechanics. They coalesced in choosing delegates to the First Continental Congress.

Patriotic Settlement, A. Beyond the Alleghany Mountains, on the headwaters of the Tennessee River, was a Scotch-Irish settlement, chiefly of Presbyterians, where they had organized a church and a civil community. They were isolated, and the proceedings of the First Continental Congress were slow in reaching them. On receiving them, the people assembled in convention. They expressed adhesion to the "American Association" (which see),

and named as their committee to arrange public affairs Charles Cummings, their minister, and Messrs. Preston, Christian, two Campbells, Evan Shelby, and a few of less note among them. They adopted the representatives of Virginia as their own, and feeling that they had a country and rights to defend, said: "We are deliberately and resolutely determined never to surrender any of our inestimable privileges to any power upon earth but at the expense of our lives. These are our real, though unpolished, sentiments of liberty and loyalty, and in them we are resolved to live and die."

Patriotism Aroused (1798). The insolent tone of the French Directory and the depredations upon American commerce aroused a patriotic spirit in the United States in the spring of 1798, which was everywhere manifest. The younger Republicans wore black cockades on their hats, as in the Revolution, and popular songs kept the flame alive among the people. Two of them—*Hail Columbia*, by Joseph Hopkinson, and *Adams and Liberty*, by Robert Treat Paine—were specially instrumental in stirring the popular mind and heart. The former, almost totally destitute of poetic merit, is still sung, and is regarded as a sort of national song; the latter, full of genuine poetry, has been forgotten. Both were the product of the spirit of the time, to serve a temporary purpose. (See *Hail Columbia* and *Adams and Liberty*.)

Patriotism Defiant. Samuel Adams was early marked as an inflexible patriot and most earnest promoter of the cause of freedom. Governor Gage sought to bribe him to desist from his opposition to the acts of Parliament concerning taxation in America. The governor sent Colonel Fenton on this errand. He said to Adams that he was authorized by Gage to assure him that he (the governor) had been empowered to confer upon him such benefits as would be satisfactory, upon the condition that he would engage to cense his opposition to the measures of government. He also observed, that it was the advice of Governor Gage to him not to incur the further displeasure of his majesty; that his conduct had been such as made him liable to the penalties of the Act of Henry VIII., by which persons could be sent to England for trial of treason or misprision of treason, at the discretion of the governor of a province; but by changing his political course, he would not only receive great personal advantages, but would thereby make his peace with his king. Adams listened attentively, and at the conclusion of the colonel's remarks he asked him if he would deliver a reply exactly as it should be given. He assented, when Adams, rising from his chair and assuming a determined manner, said: "I trust I have long since made my peace with the King of kings. No personal consideration shall induce me to abandon the righteous cause of my country. Tell Governor Gage it is the advice of Samuel Adams to him no longer to insult the feelings of an exasperated people."

Patriotism of Mutinous Soldiers. When Sir Henry Clinton heard of the revolt of the

Pennsylvania line (which see), mistaking the spirit of the mutineers, he despatched two emissaries—a British sergeant and a New Jersey Tory named Ogden—to the insurgents, with a written offer that, on laying down their arms and marching to New York, they should receive their arrearages and the amount of the depreciation of the Continental currency in hard cash; that they should be well clothed, have a free pardon for all past offences, and be taken under the protection of the British government; that no military service should be required of them, unless voluntarily offered. Sir Henry requested them to appoint agents to treat with him, and adjust terms; and, not doubting the success of his plans, he went to Staten Island himself, with a large body of troops, to act as circumstances might require. Sir Henry entirely misapprehended the temper of these mutineers. They felt justified in using their power to obtain a redress of grievances, but they looked with horror upon the armed oppressors of their country, and they regarded the act and stain of treason, under any circumstances, as worse than the infliction of death. Clinton's proposals were rejected with disdain. "See, comrades," said one of them, "he takes us for traitors; let us show him that the American army can furnish but one Arnold, and that America has no truer friends than we." They seized the emissaries, and delivered them, with Clinton's papers, into the hands of Wayne, and they were tried, condemned, and executed as spies. The reward which had been offered for the apprehension of the offenders was tendered to the mutineers who seized them. They sealed the pledge of their patriotism by nobly refusing it, saying: "Necessity wrung from us the act of demanding justice from Congress, but we desire no reward for doing our duty to our bleeding country."

Patrons of Husbandry. Public attention was much occupied in 1873 with the subject of cheap transportation along the courses of commerce from the Western States to the seaboard. Congress decided that the national government, under express provisions of the Constitution, had power to regulate commerce carried on by railroads. On March 7, 1874, a bill was introduced, and passed the House of Representatives, for the institution of a Board of Commissioners for the regulation of such commerce carried on between the several states. In that movement a new organization, known as "Patrons of Husbandry," appeared conspicuous. It was a secret order, established for the promotion of the various interests of agriculture, and had then become powerful in numbers and in influence. It was divided into local associations, called granges. There was a central, or parent, organization at Washington, known as the National Grange, and state granges were formed. The membership consisted of men and women engaged in agricultural pursuits. These granges first appeared in 1870, when there were only ninety in the whole Union. In 1876, when they reached their maximum in strength, there were 19,000. Its aims were excellent, and it was the first secret society that admitted both men and women

to membership. The founder of the granges knew the value and influence of women in the work. In one county, of the annual production, in 1876, of more than 600,000,000 pounds of butter and 250,000,000 pounds of cheese, a very large proportion of the manual and mental labor was performed by women. In a similar proportion is her labor seen in the cultivation and harvesting of other farm products.

Patroons. To induce private capitalists to engage in making settlements in New Netherland, the West India Company, in 1629, resolved to grant lands and manorial privileges to such as should accept the conditions of a proposed charter of "Privileges and Exemptions." Reserving the island of Manhattan, they offered to grant lands in any part of New Netherland, to the extent of sixteen miles along any navigable stream (or four miles if on each shore), and indefinitely in the interior, to any person who should agree to plant a colony of fifty adults within four years; or, if he should bring more, his domain to be proportionately enlarged. He was to be absolutely lord of the manor, politically and otherwise, holding inferior courts for the jurisdiction of petty civil cases; and, if cities should grow up on his domain, he was to have power to appoint the magistrates and other officers of such municipalities, and have a deputy to confer with the governor. These lords of manors were called patroons, or patrons, and the settlers under them were to be exempted from all taxation and tribute for the support of the provincial government for ten years; and for the same period every man, woman, and child was bound not to leave the service of the patroon without his written consent. The colonists were forbidden to manufacture cloth of any kind, on pain of banishment; and the company agreed to furnish them with as many African slaves "as they conveniently could;" also, to protect them against foes. Each colony was bound to support a minister of the Gospel and a schoolmaster, and so provide a comforter of the sick and a teacher of the illiterate. Such was the modified feudalism introduced into the young Dutch colony, which naturally fostered aristocratic ideas. It recognized the right of the Indians to the soil by compelling its purchase from them; it invited independent farmers, to whom a homestead should be secured, and promised protection to all in case of war, and encouraged religion and learning. Yet the free New-England system was far better for the development and growth of popular liberty. Several of these patroon domains were secured by directors of the Amsterdam Chamber, that of Van Rensselaer remaining in the family until early in the present century. (See *Anti-rentism*.) The patroons began vigorously to make settlements on the Hudson and Delaware rivers, and so construed the charter of "Privileges and Exemptions" that they claimed a right to traffic with the Indians. This brought them into collision with the other directors, whose jealousy was aroused. The patroons persisted, and an appeal was made to the States-General, which prudently postponed

a decision, "in order to enable the parties to come to an amicable settlement." So ended the action of the Dutch government in the matter. The patroon system discouraged individual enterprise. Private persons who wished to emigrate dared not attempt it. Some of the best tracts of land in the colony were appropriated by the patroons. The latter, ambitious and grasping, attempted to enlarge their privileges, and boldly presented to the States-General a new plan for the purpose, in which they demanded that they should monopolize more territory; have longer time to settle colonists; be invested with larger feudal powers; be made entirely independent of the control of the company with respect to the internal government of the colonies; enjoy free-trade throughout and around New Netherland; have a vote in the Council of the Director-General; be supplied with convicts from Holland as servants, and with negro slaves; and, finally, that all private persons and poor immigrants should be forbidden to purchase lands from the Indians, and should be required to settle themselves within the established colonies and under the control of the manorial lords. These extravagant demands caused their existing privileges to be curtailed by a new charter of "Privileges and Exemptions," issued in 1640. A host of smaller "masters of colonies" was created, and the legal powers of the old patroons were abridged. Quarrels between these lords of manors and the civil government of New Netherland continued until the province passed from the possession of the Dutch to that of the English.

Patten, GEORGE W., was born at Newport, R. I., in 1808. He graduated at Brown University in 1825 and at West Point in 1830. He served in the war against Mexico, and was breveted major for gallantry at Cerro Gordo, where he lost a hand. He was made lieutenant-colonel Second Infantry, June 7, 1862, and retired Feb. 17, 1864. Colonel Patten has been a contributor of poetical pieces for periodicals from his youth, and a volume of his poems was published in 1867. He is also author of an *Army Manual*, published in 1863, and *Tactics and Drill for Infantry, Artillery, and Cavalry*, three volumes (1861-63).

Patterson, DANIEL T., was born in New York, and died at Washington, D. C., Aug. 25, 1839. He entered the navy as midshipman in 1800; was with Bainbridge at Tripoli, and was master-commander in 1813. In 1814 he commanded the naval force at and near New Orleans that co-operated efficiently with General Jackson in defence of that city. (See *New Orleans, Battles near*.) Patterson was active, afloat and ashore, for nearly forty years.

Patterson, JOHN, was born at New Britain, Conn., in 1744; died in Broome County, N. Y., July 19, 1808. He graduated at Yale College in 1762; became a lawyer, and was an active patriot in Massachusetts at the breaking-out of the Revolution, being a member of the Provincial Congress. He lived in Berkshire. After the affair at Lexington (April 19, 1775) he hast-

ened with a regiment of minute-men to Cambridge, where he cast up the first redoubt of the fortifications around Boston. After the evacuation of that city he was sent to Canada, and a part of his regiment was engaged at the Cedars (which see). When the army left Canada he joined Washington, and was engaged in the battles of Trenton and Princeton; and in February, 1777, he was made brigadier-general and attached to the Northern Department, where he rendered important services in the events which ended in the capture of Burgoyne. At the battle of Monmouth, the next year, he was very efficient, and remained in the service until the close of the war. In 1786 he headed a detachment of Berkshire militia, sent to suppress Shays's Insurrection (which see). He removed to Lisle, N. Y., after that, where he became a member of the Legislature, member of the convention that revised the state constitution in 1801, and member of Congress from 1803 to 1805.

Patterson, ROBERT, was born in Tyrone County, Ireland, January 12, 1792, and was brought to America by his parents in his early youth. He engaged in mercantile pursuits; but when the War of 1812 broke out, he gratified his taste for the military profession, and entered the army in 1813 as first-lieutenant of infantry, and soon became assistant deputy-quartermaster with the rank of captain. He was made full captain in 1814, and served to the end of the war. He resumed mercantile life and became largely interested in manufactures. Commissioned major-general of volunteers when the war with Mexico broke out, he took an active part in the campaign under Scott from Vera Cruz to the city of Mexico. When the Civil War broke out, in 1861, General Patterson was placed in command of a division of three months' men, and was assigned to a military department composed of the states of Pennsylvania, Delaware, and Maryland, and the District of Columbia. In command of troops watching the forces under the Confederate general Johnston at Winchester, Va., the failure of

ROBERT PATTERSON.

General Scott to send him orders for which he had been positively directed to wait, caused him to fail to co-operate with McDowell in his movements that resulted in the battle of Bull's Run.

For this failure he was unjustly dismissed from the service, and he was under a cloud for some time. Documentary evidence finally exonerated him from all blame. He did not re-enter the service, being then nearly seventy years of age. He yet (1880) lives, possessed of remarkable vigor of mind and body.

Paulding, HIRAM, was born in Westchester County, N. Y., Dec. 11, 1797; died at Huntington, L. I., Oct. 20, 1878. In September, 1811, he entered the United States Navy as midshipman; was under Macdonough, on Lake Champlain, and

HIRAM PAULDING.

received a sword from Congress for his services there. He accompanied Porter against the pirates in the West Indies in 1823, and became master-commander in 1837. He was commissioned captain in 1844, and was in active service in the West Indies and on the Pacific coast; and for the important services which he rendered the State of Nicaragua in suppressing the filibuster Walker (see *Nicaragua, Invasion of*), that republic gave him a sword. He was made a rear-admiral on the retired list (1861). In command of the navy-yard at Brooklyn (1862-65) he did excellent service in preparing ships for the different squadrons, and in 1866 was governor of the Philadelphia Naval Asylum. Admiral Paulding was a son of John Paulding, one of the captors of Major André.

Paulding, JAMES KIRKE, was born in Dutchess County, N. Y., Aug. 22, 1779; died at Hyde Park, in the same county, April 5, 1860. He was a son of an active Revolutionary soldier, who was commissary-general of New York troops in the Continental service, and was ruined by the non-acceptance by the government of his drafts, or non-redemption of his pledges, and he was imprisoned for debt. James went to the city of New York, and in early life became engaged in literary pursuits with Washington Irving, whose brother William married Paulding's sister. They began, in 1807, the popular publica-

tion *Salmagundi*. He was introduced to the government through his pamphlet on *The United States and England*, and, in 1814, he was made secretary of the Board of Naval Commissioners. Afterwards he was Navy Agent at New York, and, from 1839 to 1841, he was Secretary of the Navy. Mr. Paulding was a facile and elegant writer of essays and stories, and was possessed of a fund of humor that pervaded his compositions. He contributed to the periodicals of the day, and wrote and published several volumes.

Paulding, JOHN, one of the captors of André, was born in 1758; died at Staatsburg, N. Y., Feb. 18, 1818. Three times he was made a prisoner

JOHN PAULDING.

during the war for independence, and had escaped, the second time, only four days before the capture of André. He and his associates received from Congress a silver medal each, and were awarded an annuity of \$200. In 1827 a marble monument was erected by the corpora-

PAULDING'S MONUMENT, AND ST. PETER'S CHURCH.

tion of New York city in St. Peter's church-yard near Peekskill as a memorial of him.

Paulus's Hook, SURPRISE OF. There was a

British military work at Paulus's Hook (now Jersey City), garrisoned by 500 men, under Major Sutherland. A plan was formed for taking it by surprise, and its execution was intrusted to Major Henry Lee, then back of Bergen. With 300 picked men, followed by a strong detachment under Lord Stirling as a reserve, at half-past three o'clock on the morning of the 19th of August, 1779, he had passed the unguarded outer works and entered the main works undiscovered; for the garrison, feeling secure, had not barred the sally-port, and the sentinels were all absent or asleep. The surprise was most complete. He captured 159 of the garrison, including officers. The remainder retreated to a circular redoubt. It was too strong to be affected by small-arms, and Lee retreated, with his prisoners, back to camp. His loss was only two killed and three wounded. (See *Lee, Henry*.) In September following Congress voted thanks to Lee for this exploit, and a gold medal, represented in the engraving on p. 1059.

Pavonia. Michael Penn, one of the directors of the Dutch West India Company (which see), bought (1630) a large tract of land in (present) New Jersey of the Indians, including Jersey City and Hoboken, to which he presently added, by purchase, Staten Island and neighboring districts, and became a patroon (which see). This region was called Pavonia.

Pawnees. This warlike tribe of North American Indians lived in villages of earth-covered logs, on the borders of the Platte River, in Nebraska and Kansas. They appear to be of the Illinois family, divided into several bands, and were continually at war with the Sioux and other surrounding tribes. Hostile to the Spaniards, they have ever been friendly towards the Americans. Sometimes they sacrificed prisoners to the sun; cultivated a few vegetables; shaved their heads, excepting the scalp-lock; the women dressed decently, and the men went on a hunt regularly to the plains for buffalo. At the beginning of this century they numbered about 6000, with 2000 warriors. In 1833 they were seated upon a reservation north of the Nebraska River, and made rapid progress towards civilization, when the fierce Sioux swept down upon them, ravaged their country, and killed many of their people. Driven south of the Nebraska, they lost nearly half their number by disease. In 1861 they numbered 3414, and assisted the government in a war with the Sioux. As soon as the latter made peace with the government, they fell upon the Pawnees and slaughtered them without mercy. In 1872 their crops were destroyed by locusts, and they removed to another section, where they were placed under charge of the Friends, or Quakers, with a perpetual annuity of \$30,000.

Paxton Mob, MASSACRE OF INDIANS BY THE. The atrocities of Pontiac's confederates on the frontiers of Pennsylvania (see *Pontiac's War*) aroused the ferocity of the Scotch-Irish settlers there, and, on the night of Dec. 14, 1763, nearly fifty of them fell upon some

peaceful and friendly Indians at Conestoga, on the Susquehanna, who were living quietly there, under the guidance of Moravian missionaries. These Indians were wrongly suspected of harboring or corresponding with hostile barbarians. Very few of the Indians were ever at Conestoga, and all who remained—men, women, and children

success, and, at the age of twenty and twenty-one, he played with equal success at Drury Lane, London. While there he produced many dramas, chiefly adaptations from the French. In one of these occurs the song "Home, Sweet Home," by which he is chiefly known. Payne became a correspondent of Coleridge and Lamb; and, in 1818, when he was twenty-six years of age, his tragedy of *Brutus* was successfully brought out at Drury Lane. Payne returned to America, after suffering many vicissitudes abroad, in 1832. In 1841 he was appointed consul at Tunis; was recalled in 1845, and reappointed in 1851. He died in office there.

MEDAL AWARDED TO LEE. (See p. 1058.)

—were murdered by the "Paxton Boys," as they called themselves. The village, with the winter stores, was laid in ashes. The citizens of Lancaster collected the scattered survivors into the workhouse for protection. The "Paxton Boys" burst into it, and before the citizens could assemble, murdered all the Indians and fled. The Moravian Indians at Wyalusing and Nain hurried to Philadelphia for protection, but the "Paxton Boys" threatened to go there in large numbers and kill them, and they were sent to Province Island, put under the charge of a garrison there, and were saved. The government offered a reward for the arrest of the murderers, but such was the state of feeling in the interior of Pennsylvania that no one dared to move in the matter. It assumed a political and religious aspect. The proprietary governor was blamed for not removing these friendly Indians to Philadelphia long before, as he had promised to do. The Moravians and Quakers were blamed for fostering "murderous Indians." The citizens of Lancaster were blamed for what they did and what they did not do; and the whole Presbyterian Church (the Scotch-Irish were mostly Presbyterians) was charged with shielding the murderers from the hands of justice. The participants in the crime were not ignorant and vulgar borderers, but men of such high standing and consequence that the press, in denouncing their acts, forbore to give their names.

Payne, JOHN HOWARD, was born in New York, June 9, 1792; died at Tunis, Africa, April 10, 1852. He was very precocious, editing *The Thespian Mirror* when only thirteen years of age. He became a poet, a dramatist, and an actor of renown. At the age of fifteen and sixteen he published twenty-five numbers of a periodical called *The Pastime*, and in 1809, at the age of seventeen, he made a successful entrance upon the theatrical profession at the Park Theatre, New York, as "Young Norval." In 1810 he played "Hamlet" and other leading parts with great

1869. After serving as clerk in his uncle's store in Georgetown, D. C., in 1812-13, he became a partner with Elisha Riggs, in New York, and afterwards in Baltimore. In July, 1843, he became a banker, in London, and amassed an immense fortune, which he used in making princely benefactions, as follows: To his native town, \$200,000, to establish a lyceum and library; to the first Grinnell expedition in search of Sir John Franklin, \$10,000; to found an institute of science, literature, and the fine arts, in Baltimore, \$1,400,000; and, in 1862, to the city of London, \$2,500,000, for the benefit of its poor, for which the queen gave him her portrait, the city its "freedom," and the citizens erected a statue of him. In 1866 he gave to Harvard University \$150,000 to establish a museum and professorship of American archæology and ethnology, and, the same year, to the Southern Educational Fund, just created, \$2,000,000. He also gave to Yale College, to found a geological branch of instruction, \$150,000.

Peace and Loyalty in South Carolina. The fall of Charleston in May, 1780, and the presence of large bodies of British troops marching into the interior, caused all resistance in that state to cease for a time. On June 3 Sir Henry Clinton issued a proclamation, signed by himself alone, in which he required all the inhabitants of the province who were then prisoners on parole to take an active part in securing the royal government. "Should they neglect to return to their allegiance," said the proclamation, "they will be treated as rebels to the government of the king." For a while there seemed to be only one side in politics in the Palmetto State; and when he was on the eve of departure for New York, Sir Henry reported to Germain that "the inhabitants from every quarter declare their allegiance to the king, and offer their services in arms. There are few men in South Carolina who are not either our prisoners or in arms with us." He left behind him a slumbering volcano.

Peace Commissioners. General and Admiral Howe, who arrived at New York almost simultaneously (July, 1776), were authorized as joint commissioners to treat with the Americans for reconciliation, pursuant to a recent act of Parliament. They had very limited powers. They were not allowed to recognize the validity of any Congress, or of the commission of any military officer among the colonies; they could only treat with persons as individuals; grant pardons to individuals or communities which should lay down their arms or dissolve their governments, but they might not be judges of any complaints, nor promise any redress. They began the business of their mission in the spirit of these instructions by addressing the American commander-in-chief as "Mr. Washington, Esq.," in superscribing a note which they sent by a flag, accompanied with a copy of the declaration of the royal clemency. Washington refused to receive it. An officer who bore a second note (which also was not received), assured Washington that the commissioners were invested with large powers to effect reconciliation. "They seem to have power only to grant pardons," said Washington—"having committed no fault, we need no pardon." The admiral addressed a letter to Dr. Franklin, whom he had known personally in England, and received a reply, courteous in tone, but in nowise soothing to his feelings as a statesman or a Briton. As they had equal power to negotiate peace or wage war, the commissioners now prosecuted the latter, and not long afterwards the battle on Long Island occurred, in which the Americans were defeated. General Sullivan was among the prisoners. Thinking it to be a favorable time to try their peace measures again, the commissioners sent Sullivan, on his parole, to Congress, to induce that body to designate some person with whom the admiral might hold a conference. They appointed Messrs. Franklin, Adams, and Rutledge a committee to meet him, informally, at a place on Staten Island (which he had indicated) opposite Amboy. They met there (Sept. 11, 1776) at the house of the loyalist Colonel Billop. Both parties were very cour-

THE BILLOP HOUSE.

teous. Lord Howe told them he could not receive them as representatives of the Congress, but as private gentlemen, and that the independence of the colonists, lately declared, could not be considered for a moment. "You may call us what you please," they said, "we are, nevertheless, the representatives of a free and

independent people, and will entertain no proposition which does not recognize our independence." Further conference was unnecessary; the gulf between them was too great.

Peace Commissioners, AMERICAN. After the total destruction of the Southern Army near Camden (August, 1780), some of the Southern members of Congress, alarmed at the progress of the British, became so anxious for the aid of Spain that they proposed (October, 1780) to abandon all claims to the navigation of the Mississippi as the price of a Spanish subsidy and alliance. Meanwhile (January, 1781) the Empress of Russia had been joined by the Emperor of Germany in an offer of mediation. Great Britain, getting wearied of the war, had accepted the offer. These facts being communicated to Congress by the French minister, a committee was appointed to confer with him. Their report, the opinions of the French ambassador, and the financial pressure made Congress greatly modify its terms of peace on which they had so strenuously insisted. They waived an express acknowledgment of independence. They were willing (May) to accept anything which substantially amounted to it. The treaty with France was to be maintained in full force, but all else was intrusted to the discretion of the negotiators for peace who might be appointed, former instructions indicating the wishes of Congress. These concessions (June) were opposed by the New England delegates, but were adopted by the votes of Southern members, who, again invaded, were anxious for peace. It was proposed to have five commissioners who should represent the different sections of the Union, and John Adams, John Jay, Benjamin Franklin, Thomas Jefferson, and Henry Laurens were appointed. The Russian and German mediation resulted in nothing. Great Britain haughtily refused to acknowledge the independence of the United States in any form. (See *Treaty of Peace, Preliminary and Definitive*.)

Peace Commissioners, NEW. On June 4, 1778, the Earl of Carlisle, George Johnstone, and William Eden, commissioners appointed by the king under Lord North's Conciliatory Bills (which see), arrived at Philadelphia with Adam Ferguson as secretary. The brothers Howe, who were to be of the commission, could not join them, but Sir Henry Clinton took the place of Sir William. The commissioners sent their credentials and other papers by Ferguson to the Congress at York, Penn., with a flag. That body and the American people, having already perused the bills and found in them no word about independence, had resolved to have nothing to do with commissioners that might be sent, and to meet no advance on the part of the government of Great Britain unless the fleets and armies should be withdrawn and the independence of the United States be declared. Their papers were returned to them with a letter from the president of the Congress saying they could not treat excepting on a basis of acknowledged independence. The commissioners tried by various arts to accomplish their purpose, but failed, and, after issuing

an angry and threatening manifesto, sailed for England in October.

Peace Conference at Hampton Roads. Francis P. Blair, Sr., conceived the idea that through his personal acquaintance with most of the Confederate leaders at Richmond he might be able to effect a peace between the government and the insurgents. So, without informing the President of his purpose, he asked Mr. Lincoln for a pass through the National lines to the Confederate capital. On Dec. 26, 1864, the President handed Mr. Blair a card on which was written, "Allow Mr. F. P. Blair, Sr., to pass our lines to go South and return," and signed his name to it. This self-constituted peace commissioner went to Richmond, had several interviews with President Davis, and made his way back to Washington in January, 1865, with a letter written to himself by Jefferson Davis, in which the latter expressed a willingness to appoint a commission "to renew the effort (see *Greeley's Peace Mission*) to enter into a conference with a view to secure peace to the two countries." This letter Mr. Blair placed in the hands of the President, when the latter wrote a note to Blair which he might show to Davis, in which he expressed a willingness now, as he had ever had, to take proper measures for "securing peace to the people of our common country." With this letter Blair returned to Richmond. Mr. Lincoln's expression, "our common country," as opposed to Davis's "the two countries," deprived the latter of all hope of a negotiation on terms of independence for the "Confederate States." But there was an intense popular desire for the war to cease which he dared not resist, and he appointed Alexander H. Stephens, John A. Campbell, and R. M. T. Hunter, commissioners to proceed to Washington. They were permitted to go on a steamer only as far as Hampton Roads, without the privilege of landing, and there, on board the vessel that conveyed them, they held a conference (Feb. 3, 1865) of several hours with President Lincoln and Secretary of State Seward. That conference clearly revealed the wishes of both parties. The Confederates wanted an armistice by which an immediate peace might be secured, leaving the question of the separation of the "Confederate States" from the Union to be settled afterwards. The President told them plainly that there would be no suspension of hostilities and no negotiations, except on the basis of the disbandment of the insurgent forces and the recognition of the national authority throughout the Republic. He declared, also, that he should not recede from his position on the subject of slavery, and the commissioners were informed of the adoption by Congress three days before of the Thirteenth Amendment to the Constitution (which see). So ended the Peace Conference. In a speech at a public meeting in Richmond on Jan. 6, Davis, in reference to the words of President Lincoln—"our common country"—said, "Sooner than we should ever be united again, I would be willing to yield up everything I hold on earth, and, if it were possible, would sacrifice my life a thousand times before I would succumb." The meeting passed

resolutions spurning with indignation the terms offered by the President as a "gross insult" and "premeditated indignity" to the people of the "Confederate States." Davis declared that in less than twelve months they would "compel the Yankees to petition them for peace upon their own terms." He spoke of "His Majesty Abraham the First," and said that "before the campaign was over, Lincoln and Seward might find they had been speaking to their masters." At a war-meeting held a few days afterwards at Richmond, it was resolved that they would never lay down their arms until their independence was won.

Peace Congress. On Jan. 19, 1861, a series of resolutions were adopted by the Virginia Legislature, recommending a National Peace Convention or Congress to be held in the city of Washington on the 4th day of February, for the alleged purpose of effecting a general and permanent pacification; commending the Crittenden Compromise (which see) as a just basis of settlement; and appointing two commissioners, one to go to the President of the United States, and the other to the governors of the seceding states, to ask them to abstain from all hostile action pending the proceedings of the proposed convention. The proposition for such a convention was received with great favor. The President (Buchanan) laid it before Congress with a commendatory message, but the Virginians accompanied this proposition with a menace. On the same day the Legislature resolved, "That if all efforts to reconcile the unhappy differences between the sections of our country shall prove abortive, then every consideration of honor and interest demands that Virginia shall unite her destinies with the slave-holding states." Delegates to the Peace convention were chosen from nearly every state but the seven seceding ones. They met at Willard's Hotel, in Washington city, Feb. 4. The convention was permanently organized by the appointment of ex-President John Tyler, of Virginia, to preside, and Crafts J. Wright, of Ohio, as secretary. The convention was opened with prayer by Rev. Dr. P. D. Gurley. Mr. Guthrie, of Kentucky, opened the business by offering a resolution for the appointment of a committee consisting of one from each state represented, to whom all resolutions and propositions for the adjustment of difficulties might be referred, with authority to report a plan to "restore harmony and preserve the Union." The committee was appointed, and Mr. Guthrie was chosen its chairman. He made a report on the 15th, in which several amendments to the Constitution were offered. It proposed, *First*. The re-establishment of the boundary between slavery and freedom on the line fixed by the Missouri Compromise (which see)—36° 30' north latitude. It also proposed that when any territory north or south of that line should contain the requisite number of inhabitants to form a state, it *should* (the national Constitution says *may*) be admitted into the Union on an equal footing with the original states, either with or without slavery, as the constitution of the new state may determine. *Sec-*

ond. That territory should not be acquired by the United States unless by treaty, nor, except for naval or commercial stations, unless such treaty should be ratified by four fifths of all the members of the Senate. *Third.* That neither the Constitution nor any amendment thereof should be construed to give power to Congress to interfere with slavery in any of the states of the Union, nor in the District of Columbia, without the consent of Maryland and the slaveholders concerned, compensation to be made for slaves emancipated to owners who refuse their consent; nor to interfere with slavery under the jurisdiction of the United States, such as in arsenals, navy-yards, etc., in states where it was recognized; nor to interfere with the transportation of slaves from one slave-labor state to another; nor to authorize any higher taxation on slaves than on land. *Fourth.* That the clause in the Constitution relating to the rendition of slaves should not be construed to prevent any of the states, by appropriate legislation, and through the action of their judicial and ministerial officers, from enforcing the delivery of fugitives from labor to the person to whom such service or labor should be due. *Fifth.* That the foreign slave-trade should be forever prohibited. *Sixth.* That the 1st, 2d, 3d, and 5th of the foregoing propositions, when in the form of ratified amendments to the Constitution, and the clause relating to the rendition of fugitive slaves, should not be amended or abolished without the consent of all the states. *Seventh.* That Congress should provide by law that the United States should pay to the owner the full value of his fugitive slave in all cases where the law-officer whose duty it was to arrest such fugitive should be prevented from doing so by violence or intimidation, or where such fugitive should be rescued, after arrest, and the claimant thereby should lose his property. This was the majority report, and was substantially the Crittenden Compromise then before the Senate. Two members of the committee—Baldwin, of Connecticut, and Seddon, of Virginia—each presented a minority report. The former proposed a general convention of all the states to consider amendments to the Constitution; the latter objected to the majority report because it fell short of the demands of Virginia. He proposed an amendment to the Constitution that would protect the slaveholder in transporting his slaves anywhere, as property; also that should forever exclude from the ballot-box and public office "persons who are in whole or in part of the African race." He also proposed an amendment recognizing the right of peaceable secession. Seddon was afterwards the Confederate "Secretary of War." Other propositions were submitted by members in open convention, among them one from Salmon P. Chase, of Ohio, proposing an adjournment of the convention to the 4th of April, to enable all the states to be represented. The various propositions were earnestly discussed for several days. David Dudley Field, of New York, proposed (Feb. 26) to amend the majority report by striking out the 7th section and inserting the words "No state shall withdraw

from the Union without the consent of all the states convened in pursuance of an act passed by two thirds of each House of Congress." This was rejected by a vote of eleven states against ten. The votes were by states. When, on the same day, the majority report was taken up for final action, Baldwin's proposition, offered as a substitute, was rejected by a vote of thirteen states against eight. Seddon then offered his substitute, and it was rejected—sixteen states against four. James B. Clay, a son of Henry Clay, then offered Crittenden's Compromise. It was rejected by fourteen states against five. Guthrie's report was then taken up, and after some modifications was adopted. Following this, T. E. Franklin moved, as the sense of the convention, that the highest political duty of every citizen of the United States is allegiance to the national government, and that no state has a constitutional right to secede therefrom. It was rejected by ten states against seven. Mr. Guthrie offered a preamble to his propositions, which was agreed to, and Mr. Tyler was requested to present the plan to Congress forthwith. This ended the business of the convention, when Reverdy Johnson, of Maryland, obtained leave to place on record and have printed with the proceedings of the convention a resolution deploring the secession of some of the states; expressing a hope that they would return; that "the republican institutions guaranteed each state cannot and ought not to be maintained by force," and that therefore the convention deprecated any effort of the Federal government to coerce, in any form, the said states to reunion or submission, as tending to an irreparable breach, and leading to incalculable ills. The proceedings of the convention were immediately laid before the Senate (March 2, 1861). After a long debate on that and several other propositions, it was finally decided by a vote of twenty-five to eleven to postpone the "Guthrie plan" in favor of a proposition of amendment adopted by the House of Representatives, which provided that "no amendment shall be made to the Constitution which will authorize or give to Congress the power to interfere within any state with the domestic institutions thereof." The Senate concurred, and the Crittenden Compromise being called up, it was rejected. The Peace convention was a failure. It was a vain attempt to conciliate the slave power.

Peace Congress at Vienna (1782). Prince Kaunitz agreed with Vergennes that, in a proposed peace congress at Vienna, the United States government should be represented, so that direct negotiations between it and Great Britain might proceed simultaneously with those of the European powers. The proposition was pronounced by the able Queen of France to be a masterpiece of political wisdom. But England refused to negotiate for peace with France until that power should give up its connection with the American "rebels." This proposition was embodied by Kaunitz in the preliminary articles which he prepared for the peace congress. He cast the blame of its ill-success on the unreasonable pretensions of the British ministry.

Peace Establishment (1784). When the evacuation of the seaboard by the British was completed (November, 1783) the Northern and Western frontier posts continued to be held by British garrisons. These were Oswegatchie (now Ogdensburg), Oswego, Niagara, Presque Isle (now Erie), Sandusky, Detroit, Mackinaw, and some of lesser importance. The occupation of these posts by garrisons did not enter into the calculations for an immediate peace establishment at the close of the Revolution, and the military force retained was less than seven hundred men. These were under the command of Knox, and placed in garrison at West Point and Pittsburgh. Even these were discharged very soon afterwards, excepting twenty-five men to guard the stores at Pittsburgh and fifty-five for West Point. No officer above the rank of captain was retained in the service. It was provided, however, that whenever the Western posts should be surrendered by the British, Connecticut, New York, New Jersey, and Pennsylvania should furnish their quota of seven hundred twelve-months' men to do garrison duty.

Peace Establishment (1815). At the close of the war President Madison proposed a military peace establishment of 20,000 men. When Congress considered it, the House of Representatives proposed 6000, and the Senate proposed 15,000. There was a compromise, and 10,000 was the number agreed to. Two major-generals, four brigadier-generals, and the necessary staff, regimental, and company officers, were selected by the President from those in the service. The supernumerary officers and men, ac-

counting \$200,000 annually for three years for its gradual increase. A board of three naval officers was created to exercise, under the Secretary of the Navy, the general superintendence of the Navy Department. The grade of officers in the naval service remained unaltered, a proposition to create the offices of admiral and vice-admiral having failed.

Peace Medals. There was rejoicing in Great Britain as well as America on the concluding of peace in 1814, particularly among the manufacturing and mercantile classes. A medal was

MEDAL COMMEMORATIVE OF THE TREATY OF PEACE.

struck in commemoration of the great event, which bore upon one side the words "TREATY OF PEACE AND AMITY BETWEEN GREAT BRITAIN AND THE UNITED STATES OF AMERICA. SIGNED AT GHENT, DEC. 24, 1814;" and upon the other a feminine figure standing on the segment of a globe, bearing the cornucopia of plenty, and holding in one hand the olive-branch of peace. Another was struck, which is represented in the above engraving. The British government, grateful for the loyalty of Canada during the war, caused a medal of gratitude to be struck, as seen in the engraving below.

MEDAL OF GRATITUDE.

ording to the original terms of enlistment, were to be discharged, with three months' extra pay. The naval establishment was left as it was, with an additional appropriation of

Peace Party (1812-15). On the declaration of war (June, 1812), an organization known as the "Peace party" soon appeared, composed of the more violent opposers of the administration

and disaffected Democrats, whose partisan spirit held their patriotism in complete subordination. Lacking the sincerity and integrity of the patriotic members of the Congressional minority, whose protest against the war had been conscientiously made, this Peace faction endeavored—by attempting to injure the public credit, preventing enlistments into the armies, spreading false stories concerning the strength of the British and the weakness of the Americans, and public speeches, sermons, pamphlets, and newspaper essays—to compel the government to sheath the sword and hold out the olive-branch of peace at the cost of national honor and independence. Their unscrupulous, and sometimes treasonable, machinations were kept up during the whole war, and prolonged it by embarrassing their government. The better portion of the Federal party discountenanced these acts. With a clear perception of duty to the country, rather than to their party, leaders like Quincy, Emott, and a host of others gave their support to the government in its hour of need.

Peace Party (1861–65). The first call for the marshalling of the hosts of the Peace party, so conspicuous during the late Civil War, was sounded in Congress when (July 10, 1861) a loan bill was introduced authorizing the Secretary of the Treasury to borrow \$250,000,000 for the support of the government and to prosecute a war in its defence. Clement L. Vallandigham, a representative in Congress from Ohio, made an elaborate speech against the measure and the entire policy of the administration in its vindication of the national authority by force of arms. He charged the President with usurpation in calling out and increasing the military and naval forces of the country; in blockading ports; in suspending the privilege of the writ of *habeas corpus*; and other acts which the safety of the government seemed to require—and all done without the express authority of Congress. He declared that the denunciation of slavery and slaveholders was the cause of the war; denounced the revenue laws as injurious to the cotton-growers; charged his political opponents with being anxious for war instead of peace, and of having adopted a war policy for partisan purposes; warned the country that other usurpations would follow, such as the denial of the right of petition and the freedom of conscience; and pronounced the war for the “coercion of sovereign states” to be “unholy and unjust.” From that time until the close of the war, and afterwards, Mr. Vallandigham used all his powers in giving “aid and comfort” to the Secessionists. He and the Peace party opposed every measure of the administration for suppressing insurrection during the entire war. They were doubtless sincere; but the friends of the Republic regarded them as mistaken and mischievous. Benjamin Wood, representative from New York, proposed (July 15) that Congress should take measures for assembling a border-state convention to devise means for securing peace. Mr. Powell, of Kentucky, introduced (July 18) an addition to a bill for the reorganization of the army, which de-

clared that no part of the army or navy should be employed in “subjecting or holding as a conquered province any sovereign state now or lately one of the United States.” To this J. C. Breckinridge (who soon afterwards held a brigadier-general’s commission in the Confederate army) added “or to abolish slavery therein.” From the beginning of the Civil War there was a faction, composed of the disloyal politicians of the opposition, who used every means in their power to embarrass their government and give aid and comfort to the Secessionists. They affiliated with the “Knights of the Golden Circle” (which see), and, like the Peace faction in 1812–15, they were practical enemies of their country. Matthew F. Maury, formerly Superintendent of the National Observatory, in a letter to the *London Times* (Aug. 17, 1863), said, in proof that there was no chance for the preservation of the Union, “There is already a Peace party in the North. All the embarrassments with which that party can surround Mr. Lincoln, and all the difficulties that it can throw in the way of the War party in the North, operate directly as so much aid and comfort to the South.” The faction issued many publications in furtherance of their views, and never ceased their operations until the close of the war which they had prolonged.

Peace, PROCLAMATION OF (1783). When the preliminary treaty of peace arrived, the Continental Congress adopted (April 11, 1783) a proclamation declaring peace between the United States and Great Britain; and on the 19th Washington proclaimed, in the camp at Newburgh, the cessation of hostilities. This was just eight years after the skirmish at Lexington.

Peace, RESOLUTIONS FOR (1782). During the holiday recess of Parliament (1781–82) the people and legislators of England had the surrender of Cornwallis to reflect upon, and came to the conclusion that further efforts to subdue the colonies were useless. On Feb. 22, 1782, a motion was offered by Conway, in the House of Commons, against continuing the war in America. It was then negatived by a majority of one. Five days later, Conway’s resolution for an address to the king on the subject was carried by a majority of nineteen. To this address the stubborn king gave an equivocal answer. On March 4 Conway brought forward an address to the king to declare that the House would consider as enemies to the king and country all those who should further attempt the prosecution of a war on the continent of America for the purpose of reducing the revolted colonies to obedience. It was adopted without a division. The next day, with like unanimity, leave was given by the House to bring in an “enabling bill,” allowing the king to make a peace or truce with America. It was accordingly brought in, but it was ten weeks before it became a law under a new administration. The North administration was no more. Of it Dr. Johnson said, “Such a bunch of imbecility never disgraced the country. It was composed of many corrupt and greedy men, who yielded to

the stubbornness of the king for the sake of the honors and emoluments of office."

Peace, TREATY OF (1814-15). The British government rejected the mediation of the Empress of Russia in bringing about a peace with the United States (see *Russian Mediation*), but finally offered to treat directly with the United States, proposing London as the meeting-place of commissioners; or, in case the United States government objected, Gothenburg, in Sweden. The President accepted the proposition, and chose the latter place. The ancient city of Ghent, in southern Netherlands (now Belgium), was substituted, and there the commissioners of the two governments met in the summer of 1814. The American commissioners were John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell, and Albert Gallatin. The British commissioners were Lord Gambier, Henry Goulburn, and William Adams. These joined the American commissioners at Ghent, Aug. 6, 1814. Christopher Hughes, Jr., then American

CHRISTOPHER HUGHES, JR.

chargé d'affaires at Stockholm, was appointed secretary to the American commissioners. Negotiations were speedily opened, when a wide difference of views appeared, which at first threatened the most formidable obstructions to an agreement. The discussions continued several months, and a conclusion was reached by a mutual agreement to a treaty on Dec. 24, 1814, when it was signed by the respective commissioners. It provided for the mutual restoration of all conquered territory, and for three commissions—one to settle the titles to islands in Passamaquoddy Bay, another to mark out the northeastern boundary of the United States as far as the St. Lawrence, and a third to run the line through the St. Lawrence and the Lakes to the Lake of the Woods. In case of disagreement in either commission, the point in dispute

was to be referred to some friendly power. No provision was made as to the boundary west of the Lake of the Woods, nor as to the fisheries on the shores of British America. It took away from the British a nominal right (never used), that of navigating the Mississippi; and from the New England fishermen a valuable right, hitherto used from the earliest time, that of catching and curing fish on the shores of the Gulf of St. Lawrence. It was agreed that both parties should use their best endeavors to suppress the African slave-trade. Hostilities on land were to terminate with the ratification of the treaty of peace, and on the ocean at specified periods, according to distance, the longest being four months. It did not secure to the Americans what they went to war for—namely, immunity from search and impressment. The treaty was signed by the commissioners, with their seals attached, as seen in the engraving on pages 1066-7, which gives a fac-simile of the last paragraph of the treaty and of their signatures. These were carefully copied by the writer from the originals at Washington. The treaty was ratified on the 28th by the Prince Regent, and sent to America, where the Senate of the United States ratified it (Feb. 17, 1815) by unanimous vote. It was promulgated the next day by proclamation of President Madison.

Peace with the Indians. The energy with which the French and Indian War had been conducted since the accession of Pitt to the premiership of England, especially in the campaign of 1758, had alarmed the Indian allies of the French, and they withdrew from the field in large numbers. The blow struck by Bradstreet at Fort Frontenac had been severely felt on the Ohio in the failure of expected supplies from that quarter (see *Frontenac, Fort, Capture of*), and the Indians, from the Six Nations in New York to the Miamis in Ohio, were strongly inclined to peace. Before the capture of Fort Duquesne (November, 1758) a treaty had been concluded with the Six Nations, Delawares, and other tribes, by which all existing difficulties had been finally settled and peace restored to the frontiers of Pennsylvania and Virginia, and Maryland was relieved from Indian incursions. (See *Easton, Treaties at*.)

Peacock and Epervier. In March, 1814, the *Peacock*, 18 guns, Captain Warrington, sailed from New York on a cruise. She was off the coast of Florida for some time without encountering any conspicuous adventure. Finally, on April 29, Warrington discovered three sail to the windward, under convoy of an armed brig of large dimensions. The two war-vessels made for each other, and very soon a close and severe battle ensued. The *Peacock* was so badly injured in her rigging at the beginning that she was compelled to fight "running at large," as the phrase is. She could not manœuvre much, and the contest became one of gunnery. The *Peacock* won the game at the end of forty minutes. Her antagonist, which proved to be the *Epervier*, 18 guns, Captain Wales, struck her colors. She was badly injured, no less than forty-

B. Nicholson, came near being captured by two English frigates. She entered the Savannah River in safety on May 1, 1814. The *Peacock* reached the same port on May 4. This capture produced much exultation. Congress thanked Warrington in the name of the nation, and gave him a gold medal. In another cruise to the shores of Portugal soon afterwards, the *Peacock* captured fourteen vessels, and returned to New York at the end of October.

Peacock and Nautilus. After parting with Biddle (see *Hornet, Chase of the*), Captain Warrington pursued his cruise in the *Peacock*, and on June 30, 1815, when off Anjer, in the Strait of Sunda, between Sumatra

five round-shot having struck her hull. Twenty-two of her men were killed or wounded. Only two of the *Peacock's* men were wounded; and so little was she injured that an hour after the battle she was in perfect fighting order. The *Épervier* sold for \$55,000, and on board of her was found \$118,000 in specie. She was such a

valuable prize that Warrington determined to take her into Savannah himself. On the way, when abreast of Amelia Island, on the coast of Florida, the *Épervier*, in charge of Lieutenant J.

ilities. Warrington was ignorant of any such treaty, but, being informed the next day of its ratification, he gave up the *Nautilus* and did everything in his power to alleviate the suffer-

ings of her wounded crew. He then returned home, bearing the distinction of having fired the last shot in the second war for independence. (See *Nautilus*.) When the *Peacock* reached America every cruiser, public and private, that had been out against the British had returned to port, and the war over.

Peale, CHARLES WILSON, was born at Chestertown, Md., April 16, 1741; died in Philadelphia, Feb. 22, 1827. He was at first apprenticed to a saddler, and afterwards carried on that business, as well as silversmith, watch-maker, and carver. He finally became a portrait-painter,

CHARLES WILSON PEALE.

and was a good sportsman, naturalist, preserver of animals, an inventor, and was the first dentist in the country who made sets of artificial teeth. He took instructions from Copley, in Boston, in 1770-71. He studied at the Royal Academy in London. In 1772 he painted the first portrait of Washington ever executed, in the costume of a Virginia colonel, and at the same time he painted a miniature of Mrs. Washington. He did military service and carried on portrait-painting during the war for independence; and for fifteen years he was the only portrait-painter in America. He made a portrait gallery of Revolutionary worthies, and opened, in Philadelphia, the first museum in the country, and was the first to give lectures on natural history. Mr. Peale painted several portraits of Washington, among them one for Houdon's use in making his statue of the patriot. He labored long for the establishment of an academy of the fine arts in Philadelphia, and when it was founded he co-operated faithfully in its management, and contributed to seventeen annual exhibitions. Most of his family inherited his artistic and philosophical tastes.—**REMBRANDT**, his son, painted a portrait of Washington from life, which is now in the Senate-chamber in Washington, and was commended by personal friends of the patriot as the best likeness of him (excepting Houdon's statue) ever made. Rembrandt was born in Bucks County, Penn., Feb. 22, 1778; died in Philadelphia, Oct. 3, 1860. He studied under West in London, and, going to Paris, painted portraits of many eminent men for his father's museum.—**Charles Wilson Peale's** youngest son, **TITLÁN**, yet (1880) living in Philadelphia, is also

a painter and naturalist. He was painter and naturalist to the Wilkes South Sea Exploring Expedition (which see).

Pea Ridge, BATTLE AT. When the Confederates under General Price fled into Arkansas (see *Missouri Purged*) in February, 1861, General Curtis and a strong force of Nationals pursued him. Curtis crossed the Arkansas line on Feb. 18 and drove Price and his followers over the Boston Mountains. He then fell back and took a position near Pea Ridge, a spur of the Ozark Mountains. Meanwhile Price had been joined by General Earl Van Dorn, a dashing young officer who was his senior in rank, and now took chief command of the Confederates. Forty heavy guns thundered a welcome to the young general. "Soldiers!" cried the general, "behold your leader! He comes to show you the way to glory and immortal renown. He comes to hurl back the minions of the despots at Washington, whose ignorance, licentiousness, and brutality are equalled only by their craven natures. They come to free your slaves, lay waste your plantations, burn your villages, and abuse your loving wives and beautiful daughters." Van Dorn came from western Arkansas with generals McCulloch, McIntosh, and Pike. The latter was a New England man and a poet, and came at the head of a band of Indians whom he had lured into the service. The whole insurgent force then numbered 25,000 men; the National troops, led by Curtis, did not exceed 11,000 men, with fifty pieces of artillery. On March 5, Curtis was informed by his scouts of the swift approach of an overwhelming force of Confederates; he concentrated his army in the Sugar Creek valley. He was compelled to fight or make a disastrous retreat. Choosing the former, he prepared for the struggle. Meanwhile Van Dorn, by a quick movement, had flanked Curtis and gained his rear, and on the morning of the 7th he moved to attack the Nationals, not doubting his ability to crush him and capture his train of two hundred wagons. Curtis's troops were in battle order. His first and second divisions, on the left, were commanded respectively by Generals Asboth and Sigel; the third was under General J. C. Davis, and composed the centre, and the fourth, on the right, was commanded by Colonel Carr. His line of battle extended about four miles, and there was only a broad ravine between his troops and the heavy Confederate force. Towards noon the battle was opened by a simultaneous attack of Nationals and Confederates. A very severe conflict ensued, and continued a greater part of the day with varying fortunes to each party, the lines of strife swaying like a pendulum. At about eleven o'clock the pickets on Curtis's extreme right under Major Weston were violently assailed, and Colonel Osterhaus, with a detachment of Iowa cavalry and Davidson's Peoria Battery, supported by Missouri cavalry and Indiana infantry, attacked a portion of Van Dorn's troops before he was fairly ready for battle. Colonel Carr went to the assistance of Weston, and a severe engagement ensued. Thus the battle near Pea Ridge was opened. Osterhaus

met with a warm reception, for the woods were swarming with Confederates. His cavalry were driven back, when General Davis came to his rescue with General Sigel, who attacked the Confederate flank. Soon afterwards Davis fought severely with McCulloch, McIntosh, and Pike. Then the battle raged most fiercely. The issue of the strife seemed doubtful, when the Eighteenth Indiana attacked the Confederate flank and rear so vigorously with ball and bayonet that they were driven from that part of the field, when it was strewn with the dead bodies of Texans and Indians. The Confederates now became fugitives, and in their flight they left their dead and wounded on the field. Among the latter were Generals McCulloch and McIntosh, mortally hurt. Osterhaus, and Sigel with his heavy guns, now went to the assistance of Colonel Carr on the right. But Carr had held his ground. There were no indications that the Confederates wished to renew the fight, for it was now sunset. The Nationals bivouacked on the battle-field that night among the dead and dying. The contest was renewed at dawn (March 8), when the Nationals hurled such a destructive tempest of shot and shell upon the Confederates that the latter soon broke and fled in every direction in the wildest confusion. Van Dorn, who had been a greater part of the day with the troops that fought Carr, concentrated his whole available force on Curtis's right. The latter had been vigilant, and at two o'clock in the morning he had been joined by Sigel and his command. The whole four divisions of the army were in position to fight Van Dorn at daylight. With batteries advantageously planted, and infantry lying down in front of them, Curtis opened a terrible cannonade. Battery after battery of the Confederates were silenced in the course of two hours, and so horrible was the tempest of iron that Van Dorn and his followers were compelled to fly to the shelter of the ravines of Cross Timber Hollow. At the same time, Sigel's infantry, with the troops of the centre and right, engaged in the battle. Van Dorn fled so suddenly, and in such a scattering manner, that it was difficult for Curtis to determine the main route of his retreat. General Price had been posted some distance off, and he, too, participated in the flight. The Confederate army, made so strong and hopeful by Van Dorn's speech twenty-four hours before, was now broken into fragments. This conflict, called the battle of Pea Ridge by the Nationals and Elkhorn by the Confederates, was a sanguinary one. The Indians under Pike shamefully tomahawked, scalped, and mangled the bodies of National soldiers. It is said they were maddened with intoxicating drink before the battle. The Nationals lost 1351 killed, wounded, and missing. The loss of the Confederates was never reported. It was probably about the same as that of the Nationals.

Pearson, GEORGE F., was born at Exeter, N. H., in 1799; died at Portsmouth, N. H., June 30, 1867. He entered the navy as midshipman, March 11, 1815, and rose to captain in 1855. While he was at Constantinople, in 1837 (then

lieutenant), the Sultan offered to give him command of the Turkish navy, with the rank of admiral, and the salary of \$10,000 a year. It was declined. He effectually cleared the Gulf of Mexico of pirates. In 1855-56 he was in command of the Pacific squadron.

Peck, JOHN JAY, was born at Manlius, N. Y., Jan. 4, 1821; died at Syracuse, N. Y., April 21, 1879. He graduated at West Point, in 1843, entering the Second Artillery. He served in the war against Mexico, and resigned in 1853, settling in Syracuse as a banker. In August, 1861, he was made brigadier-general of volunteers, and major-general July 4, 1862. He performed excellent service during the whole Civil War, especially in defence of Suffolk. (See *Suffolk, Siege of*.) He was mustered out in August, 1865, after which he was president of the State Life Insurance Company, Syracuse.

Peerage of Mrs. Pitt. When, on Oct. 5, 1761, William Pitt, well advanced in years, feeble from repeated attacks of hereditary gout, and his nervous system unstrung, stood before young King George, and offered his resignation of the seals of office, his appearance and the recollection of his great services stirred the generous nature of the monarch, and he made the retiring minister unlimited offers of reward. Pitt, melted by the king's generosity, said: "I confess, sir, I had but too much reason to expect your majesty's displeasure. I did not come prepared for this exceeding goodness; pardon me, sir, it overpowers, it oppresses me!" and he burst into tears. The next day he offered Pitt the governorship of Canada, with a salary of \$20,000. "I should be doubly happy," he said, "could I see those dearer to me than myself comprehended in that token of royal approbation and goodness." The king took the hint, and conferred a peerage on his wife, with a grant of \$12,000, to be paid annually during the lives of herself, her husband, and their eldest son. She was named Countess of Chatham.

Pegram, JOHN, was born at Richmond, Va., in 1832; died at Petersburg, Va., Feb. 6, 1865, of wounds received in battle. He graduated at West Point in 1856. He left the army, and took command of a Confederate regiment, which he led when made a prisoner by General McClellan. (See *Rich Mountain*.) In 1862 he was made a brigadier-general, was a noted leader in all the campaigns in Virginia, and was regarded as one of the ablest of the Confederate division commanders. Wounded in a battle at Hatchee's Run (which see), he died soon afterwards.

Peirce, BENJAMIN, LL.D., scientist, was born at Salem, Mass., April 4, 1809, and graduated at Harvard University in 1829. In 1831 he became tutor in mathematics there, and from 1842 to 1867 he was Perkins Professor of Astronomy and Mathematics, and also consulting astronomer to *The Ephemeris and Nautical Almanac* since its establishment in 1849. Dr. Peirce was a pupil of Dr. Bowditch, and read the proof-sheets of his translation of the *Mécanique Céleste*. In September, 1867, he was appointed superintendent of the United States Coast Survey, which

position he now (1880) holds. He is a member of leading scientific societies at home and abroad; an associate of the Royal Astronomical Society of London since 1842; member of the Royal Society of London since 1852; was president of the American Association for the Advancement of Science in 1853; and one of the scientific council that established the Dudley Observatory at Albany in 1855. Dr. Peirce has published many scientific essays; and in 1851 he discovered and announced the fluidity of Saturn's rings.

Pemaquid, Maine. On Feb. 29, 1631, the President and Council for New England granted to Robert Aldworth and Giles Elbridge one hundred acres of land for every person whom they should transport to the province of Maine within seven years, who should continue there three years, and an absolute grant of twelve thousand acres of land as "their proper inheritance forever," to be laid out near the Pemaquid River. In 1677 Governor Andros sent a sloop, with some forces, to take possession of the territory in Maine called Cornwall, which had been granted to the Duke of York. He caused a fort (Frederick) to be built at Pemaquid Point, a headland of the southwest entrance to Bristol Bay. The Eastern Indians, who, ever since King Philip's War, had been hostile, now appeared friendly, and a treaty was made with them at Cusco (April 12, 1678) by the commissioners, which put an end to a distressing war. In 1692 Sir William Phipps, with four hundred and fifty men, built a large stone fort there, which was superior to any structure of the kind that had been built by the English in America. It was called Fort William Henry, and was garrisoned by sixty men. There, in 1693, a treaty was made with the Indians, by which they acknowledged subjection to the crown of England, and delivered hostages as a pledge of their fidelity; but, instigated by the French, they violated the treaty the next year. The French, regarding the fort at Pemaquid as "controlling all Acadia," determined to expel the English from it. An expedition against it was committed to Iberville and Bouaventure, who anchored at Pentagoet (Aug. 7, 1696), where they were joined by the Baron de Castine, with two hundred Indians. (See *Castine, Vincent*.) These auxiliaries went forward in canoes, the French in their vessels, and invested the fort on the 14th. Major Chubb was in command. To a summons from Iberville to surrender, the major replied: "If the sea were covered with French vessels and the land with Indians, yet I would not give up the fort." Some skirmishing occurred that day, and, having completed a battery, the next day Iberville threw some bombs into the fort, which greatly terrified the garrison. Castine sent a letter, assuring the garrison that, if the place should be taken by assault, they would be left to the Indians, who would give no quarter; he had seen the king's letter to that effect. The garrison, compelling Chubb to surrender, were sent to Boston, to be exchanged for French and Indian prisoners, and the costly fort was demolished.

Pemberton, JOHN C., was born in Philadelphia in 1818, and graduated at West Point in 1837. He served in the Seminole War, and was aide-de-camp to General Worth in the war against Mexico. He entered the Confederate service in April, 1861, as colonel of cavalry and assistant adjutant-general to General J. E. Johnston. He rose to lieutenant-general, and was the opponent of Grant in northern Mississippi in 1863, to whom he surrendered, with his army, at Vicksburg (which see).

Pendleton, EDMUND, was born in Caroline County, Va., Sept. 9, 1721; died at Richmond, Va., Oct. 23, 1803. He was a leading member of the Virginia House of Burgesses when the Revolution broke out, and, as a conservative patriot, was opposed to radical Patrick Henry. He was a member of the Continental Congress (1774-75), and President of the Virginia conventions of December, 1775, and May, 1776, the latter instructing their representatives in Congress to vote for independence. Mr. Pendleton had been a member of the Committee of Correspondence before the war, and during the earlier period of the war was one of the Committee of Safety, which controlled the military and naval affairs of Virginia. On the organization of the State Senate he was appointed speaker of the Assembly, and with Wythe and Jefferson revised the colonial laws. He was president of both the Court of Chancery and Court of Appeals, and in 1788 he presided over the convention that ratified the national Constitution, of which he was a powerful champion. In 1789 Washington appointed Mr. Pendleton Judge of the United States District Court of Virginia, but he declined it; and when war with France seemed imminent, in 1798, he protested against hostilities towards a sister republic.

Peninsular Campaign is the name of the campaign conducted by General McClellan in 1862 on the Virginia peninsula, between the York River and its tributaries and the James River, which rivers empty into Chesapeake Bay or its adjacent waters. On the extremity of the point of land between them stands Fortress Monroe. The campaign continued from the landing of General Heintzelman's corps of the Army of the Potomac at Fortress Monroe, March 22, 1862, until the departure of the army from Harrison's Landing, in August of the same year, including the famous seven days' battle before Richmond.

Penn, JOHN, a signer of the Declaration of Independence, was born in Caroline County, Va., May 17, 1741; died September, 1788. He studied law with Edmund Pendleton, was an eloquent and effective speaker, and possessed a high order of talent. In 1774 he settled in Greenville County, N. C., and was a delegate in the Continental Congress from there in 1775-76, and from 1778 to 1780. Mr. Penn was placed in charge of public affairs in North Carolina when Cornwallis invaded the state in 1781.

Penn, JOHN, called the "American Penn," because born here, was a native of Philadelphia, and died in Bucks County, Penn., in February, 1795.

His government of Pennsylvania was ended by the Revolution, yet he remained in America. In 1777, having refused to sign a parole, he was confined at Fredericksburg, Va. His estate was confiscated, and he claimed of the British government, for himself and brother Richard, as compensation for their losses, about \$4,700,000, but they received only a part of that sum.

Penn, WILLIAM, was the founder of Pennsylvania and one of the most distinguished members of the Society of Friends, or Quakers, as a preacher and writer. His father was Admiral Sir William Penn, of the royal navy, and his mother was an excellent Dutchwoman, of Rotterdam. William was born in London, Oct. 14,

WILLIAM PENN.

1644; died at Ruscombe, Berkshire, July 30, 1718. He received very strong religious impressions while he was yet a child. At the age of fifteen years he entered Christ Church College, Oxford, where, through the preaching of Thomas Loe, he became a convert to the doctrine of the Quakers. He, with two or three others, refused to conform to the worship of the Established Church, or to wear the surplice, or gown, of the student. He and his companions even went so far as to strip some of the students of their robes, for which he was expelled from the college. For this offence his father beat him and turned him out of the house. The mother reconciled them, and the youth was sent to France, with a hope that gay society in Paris might redeem him from his almost morbid soberness. It failed to do so, and, on his return, in 1664, in compliance with the wishes of his father, he became a student of law. The great fire in London, in 1665, drove him from the city and deepened his serious convictions. Then he was sent to the management of his father's estates, near Cork, Ireland, where he again fell in with Thomas Loe, and became a Quaker in all but garb. On returning to England, his father tried to persuade him to conform to the customs of polite society, but he steadily refused. He soon became a Quaker preacher and a powerful controversial writer, producing several no-

table pamphlets. He attacked the generally received doctrines of the Trinity, but afterwards partially retracted, when it had produced great excitement in the religious society of England. He was confined in the Tower nine months, during which he wrote his principal work, entitled *No Cross, no Crown*. The Duke of York, under whom Admiral Penn had served, procured his release. Penn was arrested for preaching in the streets, in London, charged with creating a tumult and disturbing the peace. His trial took place in the mayor's court. The jury declared him not guilty, but the court determined to convict him, and ordered the jury to bring in a verdict of guilty. They refused, and were fined and sent to Newgate Prison. Afterwards he suffered much persecution for his non-conformity. He travelled in Holland and Germany to propagate the doctrines of Friends, and there interceded in behalf of his persecuted brethren. In 1672 Penn married a daughter of Sir William Springett, and, the next few years, devoted his time to preaching and writing. In 1674 he became umpire in a dispute between Fenwick and Byllinge, both Quakers, concerning their property rights in New Jersey. Penn decided in favor of Byllinge, and afterwards bought the domain from him. Penn at once became zealously engaged in the work of colonization, and, desiring to have a safe asylum from persecution for his brethren, he obtained a grant of a large domain in America from Charles II., in 1681, in payment of a debt of about \$80,000 due to his father from the crown. The charter vested the perpetual proprietorship of the vast region (with Delaware, which was then annexed to it) containing forty-five thousand square miles, in him and his heirs, in the fealty of an annual payment of two beaver-skins. Penn wished to call the domain New Wales, and afterwards, on account of extensive forests, he suggested Sylvania. The king ordered it to be called Penn Sylvania, because he had great admiration for Penn's father. Penn tried to get the secretary to change the name, but could not, and it was called Pennsylvania in the charter. Penn, with others, purchased East Jersey, which was already a flourishing colony. (See *New Jersey*.) He proposed a liberal scheme of government for his colony. In September, 1682, he embarked for America on the ship *Welcome*, and, at the end of six weeks, landed (Oct. 28, O. S.) near the site of New Castle, Del., where he was joyfully received by the settlers. After conferring with Indian chiefs and making some unimportant treaties, he went up the Delaware to the site of a portion of Philadelphia, and there made a famous treaty, which gave great satisfaction to the natives. (See *Penn's Treaty*.) Then he purchased land from the Swedes, between the Delaware and Schuylkill rivers, upon which he caused Philadelphia to be laid out. (See *Brotherly Love, City of*.) Penn visited New York and New Jersey, and, after meeting a General Assembly (see *Pennsylvania*), he sailed for England, August, 1684. The king died a few months after Penn's arrival in England. He was succeeded by James, Duke of York, who

was a warm friend of Penn. The latter took lodgings near the court, where he constantly used his influence in obtaining relief for his suffering brethren, who thronged his house by hundreds, seeking his aid. He finally obtained a royal decree, by which more than twelve hundred Quakers were released from prison. This was followed by a proclamation of the king (April, 1687), declaring liberty of conscience to all, and removing tests and penalties. Meanwhile Penn had made a tour on the Continent, and, by order of James, had a conference with the monarch's son-in-law, William of Orange, and tried to persuade him to adopt the principles of universal toleration. Because Penn had been personally intimate with James, soon after the Revolution (1688) he was summoned before the Privy Council to answer a charge of treason. No evidence appearing against him, he was discharged. Not long afterwards, a letter from the exiled monarch to Penn, asking him to come to France, having been intercepted, he was again brought before the council, in presence of King William. Penn declared his friendship for James, but did not approve his policy, and he was again discharged. In 1690 he was a third time accused, and was arrested on a charge of conspiracy, tried by the Court of the King's Bench, and acquitted. The charge was renewed, in 1691, by a man who was afterwards brauded by the House of Commons as a cheat, a rogue, and a false accuser. In the meantime Pennsylvania had been much disturbed by civil and religious quarrels, and, in 1692, the monarchs deprived Penn of his authority as governor of the province, and directed Governor Fletcher, of New York, to assume the administration of Pennsylvania. Powerful friends interceded in Penn's behalf, and he was honorably acquitted (November, 1693) by the king and council. Three months later his wife, Gulielma Maria, died, and, within two years, he married Hannah Callowhill, a Quaker lady of great excellence. His proprietary rights having been fully restored to him (August, 1694), he sailed for Pennsylvania with his wife and daughter, in September, 1699. He was soon recalled by tidings that the House of Lords was considering a measure for bringing all the proprietary governments in America under the crown. Penn hastened to England, giving to Philadelphia a city charter, dated Oct. 25, 1701. It was one of his last official acts. The measure which hastened his departure from America was soon abandoned; but he was deeply moved with anxiety about his affairs in Pennsylvania, where his son, whom he had sent as his deputy, had been guilty of disgraceful conduct. At the same time his confidential agent in London, who was a Friend, had left to his executors false charges against Penn to a very large amount. To avoid extortion, Penn suffered himself to be confined in Fleet Prison (debtor's jail) for a long time (1708), until his friends compromised with his creditors. In 1712 Penn made arrangements for the transfer of his proprietary rights to the crown for \$60,000, when he was prostrated by repeated shocks of paralysis. He lived six years

longer, much of the time unable to move, and never regained his mental vigor. Penn's remains were buried in Jordan's Cemetery, near the village of Chalfont St. Giles, in Buckinghamshire. William Penn's character was frequently assailed by the wicked and envious, during his life, but always without success, and Lord Macanlay, in our day, has been equally unsuccessful in his assaults upon the honor, honesty, purity, and integrity of the founder of Pennsylvania, for official records have disproved the truth of allegations made by contemporaries and the eminent historian. William Penn had a fine country residence, sometimes called "The Palace," on the bank of the Delaware River, nearly opposite Bordentown. It was constructed in 1683, at an expense of about \$35,000. In 1700 his city residence in Philadelphia was the "Slate-roof House," on the northeast corner of Second

SLATE-ROOF (PENN'S) HOUSE.

Street and Norris's Alley. It was a spacious building for the time, constructed of brick and covered with slate. It was built for another in 1690. Penn occupied it while he remained in America, and there his son, John Penn, governor of Pennsylvania when the Revolution broke out, was born. In that house the agent of Penn (James Logan) entertained Lord Cornbury, of New York, and his suite of fifty persons. The house was purchased by William Trent, the founder of Trenton. Arnold occupied it as his headquarters in 1778, and lived there in extravagant style.

Penn's Advertisement and Code. When he had secured his charter for Pennsylvania, William Penn issued an advertisement which contained inducements for persons to emigrate to the new province, and a scheme of administration of justice suited to the disposition of the Quakers. He declared that his object was to establish a just and righteous government in the province, that would be an example for others. He assumed that government is a part of religion itself, as sacred in its institution and end; that any government is free to the people under it, whatever be its frame, where the laws rule and the people are a party to the laws. He declared that governments depend upon men, not men upon governments; and he guaranteed liberty of conscience. He declared that none should be molested or prejudiced in matters of faith and

worship, and that nobody should be compelled, at any time, to frequent or maintain any religious place of worship or ministry whatsoever. He said that prisons must be converted into schools of reformation and education; that litigation ought to give way to arbitration; that an oath was a superfluity, and made lying punishable as a crime. Trial by jury was established, and in all cases where an Indian was involved, the jury should consist of six white men and six barbarians; and that the person of an Indian should be held as sacred as that of a white man. Penn advertised his land at forty shillings an acre, and servants could hold fifty acres in fee-simple. Penn was so well known in his own country and on the Continent, that perfect confidence was placed in his declarations of every sort. English Friends, in large numbers, proposed to come over, and a German company, led by Franz Pastorius, bought fifteen thousand acres. This was the commencement of German emigration to Pennsylvania. The colony flourished. The

PENN'S SEAL.

motto on Penn's seal—"MERCY AND JUSTICE"—expressed prominent traits of his character.

Penn's Treaty. After William Penn had completed the annexation of the territory of Delaware to Pennsylvania, and stood upon his own domain, among almost a thousand new emigrants, on the site of New Castle, he went, in a boat, many miles up the river to the present Kensington District, Philadelphia. There, under a wide-spreading elm, then just shedding its later foliage, he met representatives of many neighboring tribes, and concluded a treaty with them for the purchase of their lands, which confirmed former treaties made by his cousin, William Markham, his general agent. It was to be an everlasting covenant of peace and friendship between the two races. "We meet," said Penn, "on the broad pathway of good faith and goodwill; no advantage shall be taken on either side, but all shall be openness and love. I will not call you children, for parents sometimes chide their children too severely; nor brothers only, for brothers differ. The friendship between me and you I will not compare to a chain, for that the rains might rust, or a falling tree might break. We are the same as if one man's body was to be divided into two parts; we are all one flesh and blood." Then Penn gave the chiefs presents, and they, in turn, handed him a belt of wampum, an official pledge of

their fidelity. Delighted with his words, and with implicit faith in his promises, they said: "We will live in love with William Penn and his children as long as the sun and moon shall endure." This promise was kept; not a drop of the blood of a Quaker was ever shed by an Indian. Penn had achieved a mighty victory by the power of justice and love. There is no written record of that treaty extant; it seemed an ineradicable tradition among both races. Of the personal character of the European actors in it we have more information. Penn was then thirty-eight years of age. Most of his companions—the deputy-governor and a few others—were younger than he, and were dressed in the garb of Friends—the fashion of the more simple Puritans during the Protectorate of Cromwell. The Indians were partly clad in the skins of beasts, for it was on the verge of winter (Nov. 4, 1682), and they had brought their wives and children to the council, as was their habit. The scene must have been a most interesting one—Europeans and Indians mingling around a great fire, kindled under the high branches of the elm, and the contracting parties smoking the calumet. That tree was blown down in 1810, and was found to be two hundred and thirty-three years old. Upon its site the Penn Society, of Philadelphia, erected a commemorative monu-

TREATY MONUMENT.

ment. It stands near the intersection of Beach and Hanover streets.

Pennsylvania, COLONY OF, one of the thirteen original states of our Union, has for its entire eastern boundary the Delaware River, so called (with the bay) in compliment to Lord De la Warr, or Delaware, governor of Virginia. (See *Virginia*.) The Dutch claimed jurisdiction over the waters of the bay and river, and this right was first assailed by a colony of Swedes, who settled upon the west side of those waters in 1638, but were subdued and absorbed by the Dutch in 1655. (See *New Sweden*.) The territory west of the Delaware was granted by Charles II., in 1684, to William Penn, son of the eminent Admiral Penn, and a member of the Society of Friends. (See *Penn, William*.) He

sent settlers to colonize the domain, under the general superintendence of William Markham, who kindly treated the Swedes already there. Penn purchased the land from the Indians (see *Penn's Treaty*), and founded a capital city. The present area of the State of Delaware was originally included in Penn's grant, and, to prevent any difficulty, the territory was formally surrendered to Penn by the Duke of York in the autumn of 1682, on the arrival of the proprietor of Pennsylvania. That territory was afterwards known as the Lower Counties. (See *Delaware, The Colony and State of*.) They continued in that dependent relation until the close of the century, when an independent legislature was granted them, but not a separate government. Penn arrived at the site of New Castle, Del., in the fall of 1682, where he was received with joy by the inhabitants—Dutch, English, and Swedes. The settlers were quite numerous, and the domain was divided into six counties. He proceeded up the Delaware, and, after making a treaty with the Indians, he called representatives of the counties to meet him at the newly laid out city of Philadelphia in March following. They were there at the appointed time—Dutch, English, Swedes, and Welsh, for many of the latter people had settled in Pennsylvania. A "Charter of Liberties" was then granted to the colonists and signed and sealed by Penn's own hand. (See *Penn's Charter of Liberties*.) Population increased, and when the proprietor left for England (August, 1684) there were twenty settled townships and seven thousand inhabitants in Pennsylvania. He left Thomas Lloyd, a Quaker preacher, governor of the province, with five members of the council to assist him in administering the government. Because of his personal regard for King James, Penn was accused of disaffection to the new government after the accession of William and Mary (1689), and suffered imprisonment and deprivation of his colonial rights for a time. Meanwhile discontents had sprung up in Pennsylvania, and the "three lower counties on the Delaware," offended at some action of the council, seceded (April, 1691), and, with the reluctant assent of Penn, set up a distinct and separate government, with William Markham as governor. Penn's colonial government was taken from him in 1692, and the province was placed under the authority of Governor Fletcher, of New York, who reunited the Delaware counties (May, 1693) to the parent province. All suspicion of Penn's loyalty being removed, his chartered rights were restored to him (Aug. 30), and he appointed his original agent, Markham, deputy-governor. Penn returned to America in December, 1699, and was pained to find discontents rife again. There was a clamor for greater political privileges. He gave them a new charter (Nov. 6, 1701), far more liberal in its concessions than the former. The people of Pennsylvania cheerfully accepted it, but those of the lower counties, whose delegates had withdrawn from the Assembly, declined it. The people of these territories evidently aimed at independence. Penn acquiesced

in their decision, and allowed them a distinct Assembly. This satisfied them, and their first independent Legislature convened at New Castle in 1703. Although Pennsylvania and Delaware each had a distinct Legislature, they were under one government until 1776. The boundaries between the provinces of Pennsylvania and Maryland continued to be a topic of dispute for many years; it was finally settled by a survey by Mason and Dixon (1763-67). (See *Mason and Dixon's Line*.) The peaceful policy with the Indians inaugurated by Penn at the beginning kept the commonwealth quiet while the descendants of Penn ruled it. Members of the Society of Friends had been the chief settlers until, between 1715 and 1725, there was a heavy immigration of German and Scotch-Irish families, and a few years later there was another large immigration. During the French and Indian War, western Pennsylvania was the theatre of stirring events, in which George Washington became first distinguished, and when the quarrel with Great Britain waxed hot, the people of Pennsylvania were conspicuous participants, notwithstanding there was difference of opinion concerning the policy of political independence. In the war that was waged for liberty her sons were found everywhere engaged on the side of the patriots. A state constitution was adopted on Sept. 28, 1776, when Pennsylvania took her place in the union of states.

Pennsylvania Applies for a Royal Government. An attempt of the Pennsylvania Assembly, in 1764, to enact a new militia law brought on another quarrel between the proprietaries and the representatives of the people. One of the former, John Penn, was now governor. He claimed the right to appoint the officers of the militia, and insisted upon several other provisions, to which the Assembly would not give its assent. At the same time a controversy arose concerning the interpretation of the decision of the Lords of Trade and Plantations, authorizing the taxation of the proprietary estates. At the annual election (May, 1764) the proprietary party in Philadelphia, by great exertions, defeated Franklin in that city. Yet the anti-proprietary party had a large majority in the Assembly. The new Assembly sent Franklin to England again as their agent, authorized to ask for the abrogation of the proprietary authority, and the establishment of a royal government. The mutterings of the gathering tempest of revolution which finally gave independence to the Americans were then growing louder and louder, and nothing more was done in the matter. The opponents of the proprietaries in Pennsylvania were by no means united on this point. The Episcopalians and Quakers were favorable to a change, while the Scotch-Irish Presbyterians were opposed to it, because they feared the ascendancy of the Church of England. The patronage of the proprietaries attached many to their interests, and the sweet memories of William Penn inclined many to favor them.

Pennsylvania Committee of Safety. (See *Pennsylvania Volunteers*.)

Pennsylvania Convention (1774). A state convention assembled at Philadelphia in 1774, and took the government of Pennsylvania into its own hands. The regular Assembly continued to meet, but no quorum could be obtained; and finally, with an impotent protest, the old colonial legislature expired in September.

Pennsylvania for Independence. On June 18, 1774, there was a general conference of the committees of the several counties in the state. They assembled at Carpenters' Hall. In this conference few, if any, of the old Assembly appeared. Thomas McKean was chosen president, and on the 19th the one hundred and four members present unanimously approved the action of Congress respecting the formation of states. They condemned the present government of the colony as incompetent, and a new one was ordered to be formed, on the authority of the people. On the afternoon of the 24th, with equal unanimity, the delegates declared, for themselves and their constituents, their willingness to concur in a vote of Congress for independence.

Pennsylvania Legislature Hesitates. Timidity marked the course of the Legislature of Pennsylvania in the autumn of 1775, while the people at large, especially in Philadelphia, were zealously in favor of the martial proceedings of Congress. The Assembly was under the influence of John Dickinson, who opposed independence to the last. When the Assembly met (Oct. 16, 1775), all of the members present subscribed to the usual engagement of allegiance to the king. In a few days the Quakers presented an address in favor of conciliatory measures, and deprecating everything "likely to widen or perpetuate the breach with the parent state." The Committee of Sixty for the City and Liberties of Philadelphia, headed by George Clymer and Thomas McKean, went in procession, two by two, to the State-house, and delivered a remonstrance, calculated to counteract the influence of Dickinson and the Quakers. This halting spirit in the Pennsylvania Assembly appeared several months longer, and on the vote for independence (July 2, 1776) the Pennsylvania delegates were divided.

Pennsylvania Paper-currency. In 1723 Pennsylvania made its first issue of a paper-currency. It issued, in March, paper bills of credit to the amount of \$60,000, made them a legal tender in all payments on pain of confiscating the debt or forfeiting the commodity, imposed sufficient penalties on all persons who presumed to make any bargain or sale on cheaper terms in case of being paid in gold or silver, and provided for the gradual reduction of the bills by enacting that one eighth of the principal, as well as the whole interest, should be paid annually. It made no loans but on land security or plate deposited in the loan office, and obliged borrowers to pay five per cent. for the sums they took up. The scheme worked so well that, in the latter end of the year, the government emitted bills to the amount of \$150,000 on the same terms. In 1729 there was a new emission of \$150,000 to be reduced one sixteenth

a year. Pennsylvania was one of the last—if not the very last—provinces that emitted a paper-currency.

Pennsylvania, POSITION OF (1861). The great State of Pennsylvania, with 3,000,000 inhabitants, was profoundly moved by the rising tempest of secession at near the close of 1860. There was an immense assemblage of citizens in Independence Square, Philadelphia (called by Mayor Alexander Henry), on Dec. 13. In his proclamation, the mayor said disunion was inevitable, unless "the loyal people, casting off the spirit of party, should in a special manner avow their unflinching fidelity to the Union and their abiding faith in the Constitution and laws." The Protestant bishop of the diocese (Alonzo Potter, D.D.) opened the meeting with prayer, and it was addressed by patriotic men of all parties. The prevailing sentiment expressed in the speeches was highly conservative, and even submissive to the demands of the slaveholders, while some more earnest souls recommended a manly and energetic assertion of the sovereignty of the national government. The resolutions adopted by the meeting proposed the repeal of the Personal Liberty Act of Pennsylvania, and the obligations of the people to assist in the full execution of the Fugitive Slave Law; pointed with "pride and satisfaction to the recent conviction and punishment, in Philadelphia," of those who had attempted to rescue an alleged fugitive slave from bondage; recommended the passage of a law providing for the payment of full remuneration to the owner of a slave who might lose him by such rescue; declared they regarded slaves as property, in accordance with the decision of the Supreme Court of the United States; and, also, "that all denunciation of slavery, as existing in the United States, and of our fellow-citizens who maintain that institution and who hold slaves under it, are inconsistent with the spirit of brotherhood and kindness which ought to animate all who live under and profess to support the Constitution of the American Union." These obsequious resolutions were passed a week before the South Carolina Ordinance of Secession was passed. They did not express the sentiments of the people of Pennsylvania, as was made manifest immediately afterwards. On Jan. 15, 1861, Andrew J. Curtin—a Republican—was inaugurated governor of the state, and his address on that occasion was a foreshadowing of the energy and loyalty to the Union which he displayed throughout the war that ensued. Two days afterwards the Legislature, by resolutions, approved the course of Major Anderson in Charleston and of Governor Hicks of Maryland. (See *Maryland, Position of.*) In a series of resolutions adopted on the 24th, they pointedly condemned the secession movements in the South, and pledged "the faith and power of Pennsylvania" to the support of measures for suppressing the rising insurrection, saying: "All plots, conspiracies, and warlike preparations against the United States, in any section of the country, are treasonable in their character," and that all the powers of government should be used, if necessary, to sup-

press them "without delay." By its loyal governor and firm Legislature, Pennsylvania was placed squarely as a staunch supporter of the government, and fully redeemed all its pledges.

Pennsylvania, RAPID GROWTH OF THE COLONY OF. The same year that Penn landed (1682), twenty-three ships sailed up the Delaware. In less than a year eighty houses and cottages had been built, three hundred farms laid out, and plentiful crops had been gathered. In 1684 there were three hundred and fifty-seven large and well-built houses, and fifty townships had been settled. There were six hundred houses in 1685, and in one year ninety vessels brought more than seven thousand emigrants to the province.

Pennsylvania Reserves. General Patterson, commander of the Department of Pennsylvania (see *Military Departments* in 1861), comprehended the wants of government, and, while the capital was cut off from communication with the loyal people of the state, he took the responsibility of officially requesting (April 25) the governor of Pennsylvania to direct the organization in that state of twenty-five regiments of volunteers. It was done. These were in addition to the sixteen regiments called for by the Secretary of War. The Legislature took the twenty-five regiments into the service of the state, the Secretary of War first declining to receive them. This was the origin of the fine body of soldiers known as the Pennsylvania Reserves, who were gladly accepted by the Secretary after the battle of Bull's Run.

Pennsylvania State Government. The first attempt to organize a state government in Pennsylvania was a failure. A new state constitution had been formed, and an election for members of Assembly had been held. A very large and influential party in the state, regarding the new constitution as too democratic, had plotted against it in some counties, and these had produced a neglect to choose the councillors in whom the executive authority was vested. In consequence of these machinations, when the Assembly met (Nov. 28, 1776), they were compelled to adjourn without organizing a legislature. Councillors were afterwards elected, and a new state government was organized on March 4, 1777, with Thomas Wharton, Jr., as president.

Pennsylvania, THE STATE OF, was governed by a code framed by William Penn, and several times amended, until 1776, when a provisional constitution was prepared by a convention, of which Benjamin Franklin was president. In 1790 a new constitution was adopted, which has since been several times amended. In 1838 provision was made for electing, instead of appointing, county officers; the right of voting was limited to white persons, and the term of judicial offices was reduced from life to ten and fifteen years. In 1850 the judiciary was made elective by the people; subscriptions to internal improvements by municipal authorities was prohibited, and in 1864 the right of suffrage was guaranteed to soldiers in the field. An amended constitution

went into force on Jan. 1, 1874. Philadelphia, the oldest and largest city of Pennsylvania, was the scene of very important events—the meeting of the Continental Congress, the adoption and signing of the Declaration of Independence, and the framing of the National Constitution.

STATE SEAL OF PENNSYLVANIA.

It was the national capital for several years. In Pennsylvania occurred the first very severe strain that tested the strength of the national government, in the Whiskey Insurrection (which see), in 1794. Lancaster was chosen as the seat of the state government in

1799, and in 1812 Harrisburg became the state capital. In the Civil War Pennsylvania was invaded by the Confederates, and on its soil the decisive battle of the war occurred, at Gettysburg (which see). The next year (1864) the Confederates penetrated to Chambersburg, and nearly destroyed the town by fire. At the beginning of the Civil War, Pennsylvania raised a large body of reserve troops (see *Pennsylvania Reserves*), and during the war furnished to the national army 387,284 troops.

Pennsylvania Troops at the Capital. Pennsylvania has the honor of having sent the first troops to the National capital for its defence, in April, 1861. The troops comprised five companies from the interior of the state—namely, "Washington Artillery" and "National Light Infantry," of Pottsville, Schuylkill Co.; the "Ringgold Light Artillery," of Reading, Bucks Co.; the "Logan Guards," of Lewistown, Mifflin Co.; and the "Allen Infantry," of Allentown, Lehigh Co. On the call of the President, the commanders of these companies telegraphed to Governor Curtin that their ranks were full and ready for service. They were assembled at Harrisburg on the evening of April 17. Accompanied by forty regular soldiers destined for Fort McHenry, they went by rail to Baltimore the next morning, and while passing from one railway station to another were subjected to gross insults and attacked with missiles by a mob. They were without arms, for their expected new muskets were not ready when they got to Harrisburg. They found Maryland a hostile territory to pass through, but they reached the capital in safety early in the evening of April 18. They were received by the government and loyal people there with heartfelt joy, for rumors that the minute-men of Maryland and Virginia were about to seize Washington city had been prevalent all day. The Pennsylvanians were hailed as deliverers. They were marched to the capitol-grounds, greeted by cheer after cheer, and assigned to quarters in the hall of the House of Representatives. The startling rumor soon spread over the city that 2000 National troops had arrived, well armed with Minié rifles. The real number was 530. The disunion-

ists and the sympathizers were overawed just in time to save the capital from seizure.

Pennsylvania Volunteers. The skirmishes at Lexington and Concord caused great commotion in other colonies. A large public meeting was held at Philadelphia (April 24, 1775), at which measures were taken for entering into a volunteer military association, the spirit of which pervaded the whole province. Many of the young Quakers took part in the organization, in spite of the remonstrance of their elders, and were disowned. They afterwards formed a society called "Free Quakers." Thomas Mifflin (afterwards a major-general) was a leading spirit among these. John Dickinson (which see) accepted the command of a regiment; so, also, did Thomas McKean and James Wilson, both afterwards signers of the Declaration of Independence. The Assembly, which met soon afterwards, voted £1800 towards the expenses of these volunteers. They also appointed a Committee of Safety, with Dr. Franklin as chairman, which not only took measures for the defence of Philadelphia, but soon afterwards assumed the whole executive authority of the province.

Pennymite and Yankee War. Trouble began in Wyoming valley between Connecticut settlers under the auspices of the Susquehanna Company and the Pennsylvanians in 1769, when the former made a second attempt to clear the way for planting a colony in that region. (See *Susquehanna Company*.) In 1768 the proprietary of Pennsylvania purchased of the Six Nations the whole Wyoming valley, and leased it for seven years to three Pennsylvanians, who built a fortified trading-house there. In February, 1769, forty pioneers of the Susquehanna Company entered the Wyoming valley and invested the block-house, garrisoned by ten men, who gave Governor Penn notice of the situation. Three of the Connecticut men were lured into the block-house under pretence of making an adjustment of difficulties, and were seized by the sheriff and taken to jail at Easton. Other emigrants flocked in from Connecticut, and the sheriff called upon the posse of the county to assist in their arrest. The Connecticut people, also, had built a block-house, which they named Forty Fort. The sheriff broke down its doors, arrested thirty of the inmates, and sent them to Easton jail. When admitted to bail, they returned with about two hundred men from Connecticut, who built Fort Durkee, just below Wilkesbarre, so named in honor of their commander, John Durkee, the "bold Bean-hiller of Norwich." Then the sheriff reported to the governor that the whole power of the county was insufficient to oppose the "Yankees." Meanwhile the company had sent commissioners to Philadelphia to confer upon a compromise. The governor (Penn) refused to receive them, and sent an armed force, under Colonel Francis, into the valley. The sheriff joined Francis with a strong armed party, with a 6-pound cannon. Colonel Durkee and several of the inhabitants were captured, and the fort was surrendered upon conditions which were immediately vio-

lated. The next year Colonel Durkee, released, took command of the Connecticut people, and captured the sheriff's cannon; also one of the leading Pennsylvanians (Amos Ogden), who had fortified his house. Imitating the bad faith of their opponents, the Yankees seized his property and burned his house. Governor Penn now (1770) called upon General Gage, in command of the British troops at New York, for a detachment "to restore order in Wyoming." He refused. In the autumn Ogden marched by the Lehigh route, with one hundred and forty men, to surprise the settlers in Wyoming. From the mountain-tops he saw the farmers in the valley pursuing their avocations without suspicion of danger. He swooped down upon the settlement in the night, and assailed Fort Durkee, then filled with women and children. The fort and the houses of the settlement were plundered, and many of the chief inhabitants were sent to Easton jail. The Yankees left the valley, and the "Pennymites," as the Pennsylvanians were called, took possession again. On the night of Dec. 18 the Connecticut people, led by Lazarus Stewart, returned, and, attacking Fort Durkee, with the shout of "Huzza for King George!" captured it and drove the Pennymites out of the valley. In January following they returned in force, when Stewart, perceiving that he could not long resist them, fled from the valley (Jan. 20, 1771), leaving a garrison of twelve men in the fort, who were made prisoners and sent to Easton. Peace reigned there until near midsummer, when Captain Zebulon Butler, with seventy armed men from Connecticut and a party under Stewart, suddenly descended from the mountains and menaced a new fort which Ogden had built. The besieged, within strong works, were well supplied with provisions, and defied their assailants. Ogden managed to escape, went to Philadelphia, and induced the governor (then Hamilton) to send a detachment of one hundred men to Wyoming. The expedition was unsuccessful. The besiegers kept them at bay, and the siege, during which several persons were killed, was ended Aug. 11. By the terms of capitulation, the Pennsylvanians were to leave the valley. So ended the contest for 1771. The Yankees held the coveted domain, and, under the advice of the Connecticut Assembly, they organized civil government there upon a democratic system. The government was well administered, the colony rapidly increased, and the people were prosperous and happy. The settlement was incorporated with the colony of Connecticut, after a judicial decision in England. (See *Susquehanna Company*.) The territory was called Westmoreland, and attached to Litchfield County, Conn., and its representatives were admitted into the General Assembly. Wilkesbarre was laid out, and for four years peace smiled upon the beautiful valley. Suddenly, in the autumn of 1775, the Pennsylvanians, encouraged by Governor Penn, renewed the civil war, killing and imprisoning the inhabitants. The Continental Congress interfered in vain; but when the proprietary government was abolished, in the

progress of the contest for independence, this "Pennymite and Yaukee War" was suddenly ended.

Penobscot. The first permanent English occupation of the region of the Penobscot—to which the French laid claim—was acquired in 1759, when Governor Pownall, of Massachusetts, with the consent of the Legislature, caused a fort to be built on the western bank of the Penobscot (now Fort Knox), near the village of Prospect, which was named Fort Pownall. An armed force from Massachusetts took possession of the region, built the fort, cut off the communications of the Eastern Indians (the only ones then hostile to the English), and so ended the contest for the Penobscot region by arms.

Penobscot, EXPEDITION TO THE. A British force of several hundred men from Nova Scotia entered eastern Maine and established themselves in a fortified place on the Penobscot River. Massachusetts sent a force to dislodge the intruders. The expedition consisted of nineteen armed vessels (three of them Continental), under Captain Saltonstall, of Connecticut, and fifteen hundred militia, commanded by General Lovell. These were borne on the fleet of Saltonstall, and landed (July 26, 1779) near the obnoxious post, with a loss of one hundred men. Finding the works too strong for his troops, Lovell sent to General Gates, at Boston, to forward a detachment of Continentals. Hearing of this expedition, Sir George Collins, who had been made chief naval commander on the American station, sailed for the Penobscot with five heavy war-ships. The Massachusetts troops re-embarked (Aug. 13) when Sir George approached, and, in the smaller vessels, fled up the river. When they found they could not escape, they ran five frigates and ten smaller vessels ashore and blew them up. The others were captured by the British. The soldiers and seamen escaped to the shore, and suffered much for want of provisions while traversing an uninhabited country for one hundred miles.

Penobscot Taken Possession of by the French. The "Company of New France," which had purchased Sir W. Alexander's rights to territory in Nova Scotia through Stephen, Lord of La Tour, in 1630, conveyed the territory on the banks of the River St. John to this nobleman in 1635. Rossellon, commander of a French fort in Acadia, sent a French man-of-war to Penobscot and took possession of the Plymouth trading-house there, with all its goods. A vessel was sent from Plymouth to recover the property. The French fortified the place, and were so strongly intrenched that the expedition was abandoned. The Plymouth people never afterwards recovered their interest at Penobscot.

Pensacola (1814). In April, 1814, Andrew Jackson was commissioned a major-general in the army of the United States and appointed to the command of the Seventh Military District. While he was yet arranging the treaty with the conquered Creeks, he had been alarmed by reports of succor and refuge given to some of them by the Spanish authorities at Pensacola,

and of a communication opened with them by a British vessel which had landed arms and agents at Appalachicola. In consequence of his report of these doings, he received orders to take possession of Pensacola. But these orders were six months on the way. Meanwhile two British sloop-of-war, with two or three smaller vessels, had arrived at Pensacola, and were proclaimed (Aug. 4) as the van of a much larger naval force. Colonel Edward Nichols had been permitted to land a small body of troops at Pensacola, and to draw around him, arm, and train hostile refugee Creeks. Jackson's headquarters were at Mobile. Late in August the mask of Spanish neutrality was removed, when nine British vessels of war lay at anchor in the harbor of Pensacola, and Colonel Nichols was made a welcome guest of the Spanish governor. A British flag, raised over one of the Spanish forts there, proclaimed the alliance; and it was found that Indian runners had been sent out from Pensacola among the neighboring Seminole-Creeks, inviting them to Pensacola, there to be enrolled in the service of the British. Almost one thousand of these barbarians were gathered there, where they received arms and ammunition in abundance from the British officers. Nichols also sent out proclamations to the inhabitants of the Gulf region containing inflammatory appeals to the prejudices of the French and the discontent of others; and he told his troops that they were called upon to make long and tedious marches in the wilderness and to conciliate the Indians. At this juncture Jackson acted promptly and effectively, without the advice of his tardy government. He caused a beat-up for volunteers, and very soon two thousand sturdy young men were ready for the field. After they arrived Jackson took some time to get his forces well in hand; and early in November he marched from Fort Montgomery, which was due north from Pensacola, with four thousand ardent troops—some Mississippi dragoons in the advance—and encamped within two miles of Pensacola on the evening of Nov. 6. He sent word to the Spanish governor that he had come, not to make war on a neutral power, nor to injure the town, but to deprive the enemies of the Republic of a place of refuge. His messenger (Major Pierre) was instructed to demand the surrender of the forts. When Pierre approached, under a flag of truce, he was fired upon by a 12-pounder at Fort St. Michael, which was garrisoned by British troops. Jackson sent Pierre again at midnight with a proposition to the governor to allow Americans to occupy the forts at Pensacola until the Spanish government could send a sufficient force to maintain neutrality. This proposition was rejected; and Jackson, satisfied that the governor's protestations of inability to resist the British invasion were only pretexts, marched upon Pensacola before the dawn with three thousand men. They avoided the fire of the forts and the shipping in the harbor, and the centre of the column made a gallant charge into the town. They were met by a two-gun battery in the principal street, and showers of

bullets from the houses and gardens. The Americans, led by Captain Laval, captured the battery, when the frightened governor appeared with a white flag and promised to comply with any terms if Jackson would spare the town. An instant surrender of all the forts was demanded and promised, and, after some delay, it was done. The British, also alarmed by this sudden attack, blew up Fort Barancas, six miles from Pensacola, which they occupied; and early in the morning (Nov. 7, 1814) their ships left the harbor, bearing away, besides the British, the Spanish commandant of the forts, with four hundred men and a considerable number of Indians. The Spanish governor (Maurequez) was indignant because of the flight of his British friends, and the Creeks were deeply impressed with a feeling that it would be imprudent to again defy the wrath of General Jackson. He had, by this expedition, accomplished three important results—namely, the expulsion of the British from Pensacola, the scattering of the gathering Indians in great alarm, and the punishing of the Spaniards for such perfidy.

Pensacola Occupied by the Spaniards. When Iberville, the Canadian (which see), was on his way to plant a colony at the mouth of the Mississippi River, he attempted to enter Pensacola Bay, but found himself confronted by Spaniards in arms, who had come from Vera Cruz and built a fort there, under the guns of which lay two Spanish ships. The Spaniards still claimed the whole circuit of the Gulf of Mexico, and, jealous of the designs of the French, had hastened to occupy Pensacola harbor, the best on the Gulf. The barrier there constructed ultimately established the dividing line between Florida and Louisiana. In 1696 Don Andre d'Arriola was appointed the first governor of Pensacola, and took possession of the province. He built a fort with four bastions, which he called Fort Charles; also a church and some houses.

Pensacola Taken by the Spaniards (1781). On Feb. 28, 1781, Galvez, the Spanish governor of Louisiana, sailed from New Orleans with fourteen hundred men to seize Pensacola, Fla. He could effect but little alone; but finally he was joined (May 9) by an armed squadron from Havana, and by a reinforcement from Mobile. Galvez now gained possession of the harbor of Pensacola, and soon afterwards Colonel Campbell, who commanded the British garrison there, surrendered. Pensacola and the rest of Florida had passed into the possession of the British by the treaty of 1763. Two years after Galvez captured the place (1783) the whole province was retroceded to Spain.

Pensions of Revolutionary Soldiers. In 1820 a curtailment of the public expenses was clamored for, and the first act in that direction was to weed out the Revolutionary pensioners. Their number then was about sixteen thousand, the greater part citizens of the Northern States. Their aggregate pensions amounted to \$3,000,000 annually. An act was passed to restrict pensioners to such applicants as, upon a schedule

of their property, exhibited under oath, the Secretary of War (Calhoun) should judge indigent. All were excluded, with a very few exceptions, whose schedules exceeded \$200. Under this stringent rule the list of pensioners was reduced about one half.

Pepperell, Sir William, was born at Kittery Point, Me., June 27, 1696; died there, July 6, 1759. His father, a Welshman, came to New England as apprentice to a fisherman, where he married. The son became a merchant,

SIR WILLIAM PEPPERELL

amassed a large fortune, and became an influential man. Fitted by temperament for military life, he was frequently engaged against the Indians, and attained much distinction. About 1727 he was appointed one of his majesty's council for the province of Massachusetts, and held the office, by re-election, thirty-two consecutive years. Appointed Chief-justice of Common Pleas in 1730, he became eminent as a jurist. In 1745 he commanded the successful expedition against Louisburg, and was knighted. On visiting England in 1749, he was commissioned colonel in the British army; became major-general in 1755; and lieutenant-general in 1759. From 1756 to 1758 Sir William was acting governor of Massachusetts before the arrival of Pownall.

Pequod Fort, ATTACK ON THE. The principal fort of the Pequods, or rather their palisaded village, was upon a hill near the Mystic River, in the town of Stonington, Conn. It was crowded with men, women, and children, all unobtrusive of danger near, when, on the night of May 25, 1637, Captain John Mason, with about two hundred New-Englanders and several hundred Indians, lay near, like crouching tigers, ready to spring upon their prey. Sounds of mirth were heard in the fort until late in the night. Just at dawn, when deep slumber made the Indian camp silent, Mason and his followers, led by Uucas and a Pequod sachem who

had deserted his people, crept silently to within a rod of the palisades and completely surrounded the fort. The sleepers were awakened by the barking of a dog, when a Pequod sprang to his feet and cried, "Englishmen! Englishmen!" There were two sally-ports to the fort. Into one of these Mason entered, and Captain John Underhill (which see) rushed in at the other, each followed by white men and Indians. There was no chance for escape to the doomed Pequods but by overpowering the assailants. In the confusion of a sudden awakening, the resistance was feeble. The women and children tried to hide themselves. The assailants made indiscriminate slaughter. The weapons were not swift enough in the work of destruction. "We must burn them," Mason cried, and, snatching a firebrand, he thrust it into the dried branches and mats that covered the wigwams. Others followed the example, and very soon the whole palisaded village was ablaze. Through the fire and smoke the Indians attempted to escape, but they met the guns and swords of Englishmen first, and the weapons of a circle of hostile barbarians more remote. "Such a dreadful terror did the Almighty let fall upon their spirits," wrote Mason, "that they would fly from us and run into the very flames, where many of them perished." Of the whole six or seven hundred people who lay quietly slumbering before the dawn within the palisades, only seven escaped the fire and sword. "Thus," piously exclaimed Captain Mason, "did the Lord judge among the heathen!" Only two Englishmen were killed, and about twenty wounded. The Indians who escaped carried the dreadful news to Sassacus, who, a few miles distant, had still about three hundred warriors at his command. Fearing these, the treacherous Narragansets deserted the English, but Uncas remained true. The Pequod War continued five months. (See *Pequod War*.)

Pequod War, THE. The most powerful of the New England tribes were the Pequods (see *Indians*), whose territory extended from Narraganset Bay to Hudson's River, and over Long Island. Sassacus, their emperor, ruled over twenty-six native princes. He was bold, cruel, cool, calculating, treacherous, haughty, fierce, and malignant. Jealous of the friendship of the English for the Mohegans, and believing the garrison at the mouth of the Connecticut River would soon be strengthened (see *Saybrook*) and endanger his dominions, Sassacus determined to exterminate the white people. He tried to induce the Narragansets and the Mohegans to join him in the business. The united tribes might put 4000 braves on the war-path at once, while there were not more than 250 Englishmen in the Connecticut valley capable of bearing arms. Sassacus undertook the task alone. First his people kidnapped children, murdered men alone in the forests or on the waters, and swept away fourteen families. A Massachusetts trading-vessel was seized by the Indians at Block Island, plundered, and its commander, John Oldham, murdered. They were allies of the Pequods, who protected them. The authorities at Boston

sent Eudicott and Captain Gardiner to chastise them. With a small military force in three vessels they entered Long Island Sound. They killed some Indians at Block Island, and left the domain a blackened desolation. Then they went over to the mainland, made some demands which they could not enforce; desolated fields, burned wigwams, killed a few people and departed. The exasperated Pequods sent ambassadors to the Narragansets urging them to join in a war of extermination. Through the influence of Roger Williams, who rendered good for evil, the Narragansets were not only kept from joining the Pequods, but became allies of the English in making war upon them. All through the next winter the Pequods harassed the settlements in the Connecticut valley, and in the spring of 1637 the colonists determined to make war upon the aggressors. They had slain more than thirty Englishmen. Massachusetts sent troops to assist the Connecticut people. The English were joined by the Mohegans under Uncas, and the entire army was under the command of Captain John Mason, who had been a soldier in the Netherlands. The little army proceeded by water to the Narraganset country, whence the Pequods would least expect attack, and marched upon their rear. The Indians, seeing them sail eastward, concluded the English had abandoned the expedition and the Connecticut valley. It was a fatal mistake. The white people were joined by many Narragansets and Niantics, and while Sassacus was dreaming of the flight of the Europeans, more than five hundred warriors, pale and dusky, were marching swiftly to attack his stronghold near the waters of the Mystic River. Mason was accompanied by Captain Underhill, another brave soldier. When the invaders reached the foot of the hill on which the fort of Sassacus stood—a circular structure strongly palisaded, embracing seventy wigwams covered with matting and thatch—they were yet undiscovered. The sentinels could hear the sounds of revelry among the savages within the fortress. At midnight all was still. Two hours before the dawn (May 26, 1637) the invaders marched upon the fort in two columns. The Indian allies grew fearful, for Sassacus was regarded as all but a god. Uncas was firm. The dusky warriors lingered behind, and formed a cordon in the woods around the fortress to kill any who might attempt to escape. The moon shone brightly. Stealthily the little army crept up the hill, when an aroused sentinel awakened the sleepers within the fort. Mason and Underhill, approaching from opposite directions, burst in the sally-ports. The terrified savages rushed out, but were driven back by swords and musket-balls. Their thatched wigwams were fired, and within an hour about six hundred men, women, and children were slain. The blood-thirsty and the innocent shared the same fate. Only a few of the Pequods escaped death, and Cotton Mather afterwards wrote, "It was supposed that no less than five or six hundred Pequod souls were brought down to hell that day." Sassacus was not there; he was at another fort near the Thames, opposite the site of New Lon-

don. Sassacus sat stately and sullen when told of the massacre at the Mystic. His warriors were furious, and they threatened his life if he did not immediately lead them against the invaders. Just then the blast of a trumpet was heard. The white invaders were near, full two hundred strong. The savages fled with their women and children across the Thames, through the forest and over green savannas westward, closely pursued. The fugitives took refuge in Sasco Swamp, near Fairfield, where they all surrendered to the English excepting Sassacus and a few followers who escaped. A nation had perished in a day. That blow gave peace to New England for forty years. The last representative of the pure blood of the Pequods, probably, was Eunice Mauwee, who died at Kent, Conn., about the year 1860, aged one hundred years. Sassacus took refuge with the Mohawks, who, at the request of the Narragansets, cut off his head.

Percy (Earl), HUGH, was born Aug. 25, 1742; died July 10, 1817. Entering the army in his youth, he first saw service under Prince Ferdinand in Germany. He commanded as brigadier-general against the Americans in 1775-76. To Lexington, on the morning of the affray there (April, 1775), he led a timely reinforcement, and in the fall of 1776 he assisted in the reduction of Fort Washington (which see). The next month his mother died, when he succeeded to the baronetcy of Percy, and returned to England. He became Duke of Northumberland in June, 1786.

HUGH PERCY.

Perkins, JACOB, inventor, was born at Newburyport, Mass., July 9, 1766; died in London, July 30, 1849. So early as his fifteenth year he carried on the business of a goldsmith in Newburyport, and he early invented a method for plating shoe-buckles. He made dies for coining money when the United States Mint was under consideration. He was then twenty-one, and when he was twenty-four he invented a machine for making nails at one operation, and steel plates for bank-notes, which, it was supposed, could not be counterfeited. After living in Boston, New York, and Philadelphia, he went to England (1815), where he perfected steam-engines, and for many years carried on a large manufactory in London. He originated the process used by bank-note engravers for transferring an engraving from one steel plate to another, and perfected many other inventions, for which he received the gold medal of the Society of Arts in London.

Perry, MATTHEW CALBRAITH, was born at Newport, R. I., in 1794; died in New York, March 4, 1858. He was a brother of Commodore O. H. Perry, and entered the navy as midshipman in 1809. In command of the *Cyane*, in 1819, he fixed the locality of the settlement of Liberia. (See *Colonization Society, American*.) He captured several pirate vessels in the West Indies from 1821

to 1824, and was employed on shore from 1833 to 1841, when he again, as commodore, went to sea in command of squadrons for several years, engaging in the siege of Vera Cruz in 1847. From 1852 to 1854 he commanded the expedition to Japan, and negotiated a very important treaty with the rulers of that empire, which has led to wonderful results in the social and religious condition of that people, and secured great advantages to America.

Perry, OLIVER HAZARD, was born at South Kingstown, R. I., Aug. 23, 1785; died in Trinidad, W. I., of yellow fever, Aug. 23, 1819. He entered

OLIVER HAZARD PERRY.

the navy as midshipman in 1799; served in the Tripolitan War; had charge of a flotilla of gunboats in New York harbor in 1812; and in 1813 was called to the command of a fleet on Lake Erie. He first served under Chauncey on Lake Ontario. His squadron was built at Presque Isle (now Erie), and on Sept. 10, 1813, he gained a complete victory over a British squadron. (See

PERRY'S MONUMENT, NEWPORT.

Lake Erie, Battle of.) He was then only master-commander, but was immediately promoted to captain, and received the thanks of Congress

PERRY'S STATUE.

and a medal. He assisted Harrison in retaking Detroit late in 1813. In 1815 Perry commanded the *Jara* in Decatur's squadron in the Mediterranean, and in 1819 he was sent against the pirates in the West Indies. The name and fame of Perry is held in loving remembrance by the Americans. In 1860 a fine marble statue of him by Walcutt was erected in a public square in Cleveland, O., with imposing ceremonies, and a fine monument to his memory has been erected in Newport, R.I. At the unveiling of the statue at Cleveland, George Bancroft, the historian, delivered an address; Dr. Usher Parsons, Perry's surgeon in the fight on Lake Erie, read an historical discourse, and, at a dinner afterwards, about three hundred surviving soldiers of the War of 1812-15 sat down. The average of their ages was about seventy years, and the aggregate of the venerable company was about 20,000 years!

Perry's Battle-flag. On the evening of the 9th of September, 1813, Commodore Perry called around him the officers of his squadron and gave in-

structions to each in writing, for he had determined to attack the British squadron at its anchorage the next day. The conference ended at about ten o'clock. The unclouded moon was at its full. Just before the officers departed, Perry brought out a square battle-flag which had been privately prepared for him at Erie. It was blue, and bore in large white letters made of muslin the alleged dying words of Lawrence—"DON'T GIVE UP THE SHIP." "When this flag shall be hoisted at the main-yard," said Perry, "it shall be your signal for going into action." This flag is at the Naval Academy, Annapolis. (See *Lake Erie, Battle of*.)

Perry's Famous Despatch. When Commodore Perry had fought the victorious battle on Lake Erie (which see), and his eye saw at a glance that victory was secure, he wrote in pencil on the back of an old letter, resting the paper on his navy cap, the following despatch to General Harrison, the first clause of which has often been quoted:

"We have met the enemy and they are ours: two ships, two brigs, one schooner, and one sloop.

Yours, with great respect and esteem,

O. H. PERRY."

Many songs were written and sung in commemoration of Perry's victory. One of the most popular of these was "American Perry," beginning,

"Bold Barclay one day to Proctor did say,
I'm tired of Jamaica and cherry;
So let us go down to that new floating town
And get some American Perry.
Oh, cheap American Perry!
Most pleasant American Perry!
We need only bear down, knock and call,
And we'll have the American Perry."

Among the caricatures of the day was one by Charles, of Philadelphia, representing John Bull, in the person of the king, seated, with his hand pressed upon his stomach, indicating pain, which the fresh juice of the pear, called perry, will produce. Queen Charlotte, the king's wife (a fair likeness of whom is given), enters with a bottle labelled "Perry," out of which the cork has flown, and in the foam are seen the names of the vessels

PERRY'S BATTLE-FLAG.

composing the American squadron. She says, "Johnny, won't you take some more Perry?" John Bull replies, while writhing in pain produced by perry, "Oh! Perry!!! Curse that Perry! One disaster after another—I have not half recovered of the bloody nose I got at the boxing-

they made Richard Hawes "Provisional Governor of Kentucky" while Bragg's plundering bands were scouring the state and driving away southward thousands of hogs and cattle and numerous trains bearing bacon, breadstuffs, and storegoods taken from merchants in various large

*I have met the enemy and they are ours.
Two Ships, two Brigs one
Schooner & one Sloop.
Yours, with great respect and esteem
O P Perry.*

FAC-SIMILE OF PERRY'S DESPATCH.

match" This last expression refers to the capture of the *Boxer* by the American schooner *Enterprise*. This caricature is entitled "Queen Charlotte and Johnny Bull got their dose of Perry." The point will be better perceived by remembering that one of the principal vessels of the British squadron was named the *Queen Charlotte*, in honor of the royal consort. In a ballad of the day occur the following lines:

"On Erie's wave, while Barclay brave,
With *Charlotte* making merry,
He chanced to take the belly-ache,
We drenched him so with Perry."

towns. As a show of honesty, these raiders gave Confederate scrip in exchange. Regarding Kentucky as a part of the Confederacy (see *Kentucky Ordinance of Secession*), conscription was put in force by Bragg at the point of the bayonet. The loyal people cried for help. The cautious Buell made a tardy response. He had been engaged in a race for Louisville with Bragg, and on the 1st of October turned to strike his opponent. His army, 100,000 strong, was arranged in three corps, commanded respectively by Generals Gilbert, Crittenden, and McCook. General George

Perryville, BATTLE AT. Bragg's troops formed a junction with those of General E. Kirby Smith (see *Richmond, Ky.*) at Frankfort, Oct. 1, when

H. Thomas, Buell's second in command, had charge of the right wing, and soon began to feel the Confederates. Bragg, outflanked, fell slow-

ly back towards Springfield, when Buell, informed that he was moving to concentrate his army at Harrodsburg or Perryville, ordered the central division of his army under Gilbert to march for the latter place. The head of this division, under General R. B. Mitchell, fell in with a heavy force of Confederates (Oct. 7) within five miles of Perryville, drawn up in battle order. These were pressed back about three miles, when General Sheridan's division was ordered up to an eligible position. Buell was there, and, expecting a battle in the morning, he sent for the flank corps of Crittenden and McCook to close up on his right, and, if possible, surround the Confederates. There was a delay in the arrival of Crittenden, and Bragg, perceiving his peril, had begun to retreat. He was anxious to secure the exit of the plunder-trains from the state. As Crittenden did not speedily arrive, Bragg resolved to give battle in his absence. His army was immediately commanded by General Polk. There had been a sharp engagement on the morning of the 8th, when the Confederates were repulsed and driven back by troops under Colonel D. McCook, of Sheridan's division, with Barnett's battery, some Michigan cavalry, and a Missouri regiment. The Confederates were repulsed, and so ended the preliminary battle of that day. Mitchell, Sheridan, Rousseau, and Jackson advanced with troops to secure the position, and a Michigan and an Indiana battery were planted in commanding positions. A reconnoissance in force was now made. Bragg was stealthily approaching, being well masked, and Cheatham's division fell suddenly and heavily upon McCook's flank with horrid yells, when the raw and outnumbered troops of General Terrell broke and fled. General Jackson had been killed. In an attempt to rally his troops, Terrell was mortally wounded. When Terrell's force was scattered, the Confederates fell with equal weight upon Rousseau's division. An attempt to destroy it was met by Starkweather's brigade and the batteries of Bush and Stone, who maintained their positions for nearly three hours, until the ammunition of both infantry and artillery was nearly exhausted. Bush's battery had lost thirty-five horses. Meanwhile, Rousseau's troops fought stubbornly, and held their position while resisting Confederates commanded by Bragg in person. The Confederates finally made a fierce charge on the brigade of Lytle, hurling it back with heavy loss. They pressed forward to Gilbert's flank, held by Mitchell and Sheridan. The latter held the king-point of the Union position. He quickly turned his guns on the assailants, when Mitchell sent Carlin's brigade to the support of Sheridan's right. This force charged at the double-quick, broke the Confederate line, and drove them through Perryville to the protection of their batteries on the bluff beyond. Meanwhile, Colonel Gooding's brigade had been sent to the aid of McCook, and fought with great persistence for two hours against odds, losing full one third of its number, its commander being made prisoner. General Buell did not know the magnitude of the sanguinary battle until four o'clock in the after-

noon, when McCook sent a request for reinforcements. They were promptly sent. The conflict ended at dark in a victory for the Nationals, the Confederates having been repulsed at all points, and during the night they retired to Harrodsburg, where Bragg was joined by Kirby Smith and General Withers. All fled towards East Tennessee, leaving 1200 of their sick and wounded at Harrodsburg, and about 25,000 barrels of pork at various points. The retreat was conducted by General Polk, covered by Wheeler's cavalry. Buell's effective force that advanced on Perryville was 58,000, of whom 22,000 were raw troops. He lost in the battle at Perryville 4348 men, of whom 916 were killed. The Confederate loss was estimated at about the same. Bragg claimed to have captured fifteen guns and 400 prisoners. It is believed that the Confederates lost more than they gained by their plundering raid. Buell was soon superseded in command by General Rosecrans, and the name of the Army of the Ohio was changed to the Army of the Cumberland.

Personal Liberty Laws. The unrighteous provisions of the Fugitive Slave Law (which see), and the danger to the liberty of free colored citizens, caused several states to pass laws for their protection. The laws of Maine provided that no public officer of the state should arrest or aid in so doing, or in detaining in any building belonging to the state, or county or town within it, any alleged fugitive slaves; so that business was left to the United States officers. The laws of New Hampshire provided that any slave coming into that state by the consent of the master should be free, and declared that an attempt to hold any person as a slave within the state was a felony, unless done by an officer of the United States in the execution of legal process. This was to relieve the people of the duty of becoming slave-catchers by command of the United States officers. The law in Vermont provided that judicial officers of the state should take no cognizance of any warrant or process under the Fugitive Slave Law, and that no person should assist in the removal of any alleged fugitive from the state, excepting United States officers. It also ordered that the privilege of the writ of *habeas corpus*, and a trial of facts by a jury, should be given to the alleged fugitive, with the state's attorney for counsel. This was a nullification of the Fugitive Slave Law. The law in Massachusetts provided for trial by jury of alleged fugitive slaves, who might have the services of any attorney. It forbade the issuing of any process under the Fugitive Slave Law by any legal officer in the state, or "to do any official act in furtherance of the execution of the Fugitive Slave Law of 1793 or that of 1850." It forbade the use of any prison in the state for the same purpose. All public officers were forbidden to assist in the arrest of alleged fugitive slaves, and no officer in the state, acting as United States commissioner, was allowed to issue any warrant, excepting for the summoning of witnesses, nor allowed to hear and try any cause under the law. This, also, was a virtual nullification of the Fugitive Slave Law. The law in

Connecticut was intended only to prevent the kidnapping of free persons of color within its borders, by imposing a heavy penalty upon those who should cause to be arrested any free colored person with the intent to reduce him or her to slavery. The law in Rhode Island forbade the carrying away of any person by force out of the state, and provided that no public officer should officially aid in the execution of the Fugitive Slave Law, and denied the use of the jails for that purpose. Neither New York, New Jersey, nor Pennsylvania passed any laws on the subject, their statute-books already containing acts which they deemed sufficient to meet the case. The law in Michigan secured to the person arrested the privilege of the writ of *habeas corpus*, a trial by jury, and the employment of the state's attorney as counsel. It denied the use of the jails in the execution of the Fugitive Slave Law, and imposed a heavy penalty for the arrest of free colored persons as fugitive slaves. The law in Wisconsin was precisely like that of Michigan. The remainder of the free-labor states refrained from passing any laws on the subject.

Peters, HUGH, was born at Fowey, Cornwall, Eng., in 1599; executed in London, Oct. 16, 1660. He was a clergyman and politician, and after imprisonment for non-conformity he went to Rotterdam, where he preached several years. He came to New England in 1635, succeeded Roger Williams as pastor at Salem, and excommunicated his adherents. In politics and commerce he was equally active. In 1641 he sailed for England, to procure an alteration in the navigation laws, and had several interviews with the king (Charles I.). He preached to and commanded a regiment of Parliamentary troops in Ireland in 1649, and afterwards held civil offices. After the restoration he was committed to the Tower, and soon afterwards beheaded for high-treason, as having been concerned in the death of Charles I. He wrote a work called *A Good Work for a Good Magistrate*, in 1651, in which he recommended burning the historical records in the Tower. Differing estimates have been made of his character.

Peters, RICHARD, was born near Philadelphia, Aug. 22, 1744; died there, Aug. 21, 1828. He was a distinguished lawyer, a good German scholar, and a bright wit. At the beginning of the Revolution he commanded a company, but Congress placed him with the Board of War, of which he was made secretary in June, 1776, and served as such until December, 1781. In 1782-83 he was a member of Congress, and from 1789 until his death he was United States District Judge of Pennsylvania. Our country is indebted to Judge Peters for the introduction of gypsum as a fertilizer. In 1797 he published an account of his experience with it on his own farm. He was President of the Philadelphia Agricultural Society.

Peters, SAMUEL ANDREW, D.D., LL.D., was born at Hebron, Conn., Dec. 12, 1735; died in New York, April 19, 1826. He graduated at Yale College in 1757, became a clergyman of the Church of England, and in 1762 took charge of

the Episcopal churches at Hebron and Hartford. He opposed the movements of the patriots, and became exceedingly obnoxious to them, and in 1774 he was obliged to flee to England. In 1781 he published *A General History of Connecticut*, which has been characterized as the "most unscrupulous and malicious of lying narratives." In it he gave pretended extracts from the "Blue Laws" (which see), and the whole narrative shows an "independence of time, place, and probabilities." In 1794 he was chosen bishop of Vermont, but was never consecrated. In 1805 he returned to America, and towards the latter years of his life lived in obscurity in New York city, chiefly on a small pension.

Petersburg, FINAL STRUGGLE AT. The Army of the Potomac had its winter quarters in front of the Army of Northern Virginia in 1864-65. The left of the former held a tight grasp upon the Weldon road, while the Army of the James, on the north side of that river, and forming the right of the besiegers of Petersburg and Richmond, had its pickets within a few miles of the latter city. Sheridan, at the same time, was at Kernstown, near Winchester, full master of the Shenandoah valley from Harper's Ferry to Staunton. Grant's chief business during the winter was to hold Lee tightly while Sherman, Thomas, and Canby were making their important conquests, in accordance with the comprehensive plan of the lieutenant-general. The leaders in the Confederate government at Richmond contemplated the abandonment of Virginia and the concentration of the troops of Lee and Johnston south of the Roanoke. The politicians of Virginia would not allow such a movement, nor would Lee have led the Army of Northern Virginia out of that state; so Davis and his compeers had to abandon their project. Besides, Grant held Lee so firmly that he had no free choice in the matter. It was near the close of March, 1865, before Grant was ready for a general movement against Lee. Early in December Warren had seized the Weldon road farther south than had yet been done. He destroyed it (Dec. 7) all the way to the Meherrin River, meeting with little opposition. A few weeks later there was some sharp skirmishing between Confederate gunboats and National batteries near Dutch Gap Canal. (See *Amphibious Engagement on the James River*.) A little later a movement was made on the extreme left of the Nationals to seize the Southside Railway and to develop the strength of Lee's right. The entire army in front of Petersburg received marching orders, and, on Feb. 6, the flanking movement began. After a sharp fight near Hatcher's Run, the Nationals permanently extended their left to that stream. (See *Hatcher's Run, Battle of*.) Grant now determined to cut off all communication with Richmond north of that city. The opportunity offered towards the middle of February. Lee had drawn the greater portion of his forces from the Shenandoah valley, and Sheridan, under instructions, made a grand cavalry raid against the northern communications with the Confederate capital, and especially for the seizure of Lynchburg. It was

a most destructive march, and very bewildering to the Confederates. (See *Sheridan's Raid*, 1865.) This raid, the junction of the National armies in North Carolina, and the operations at Mobile (which see) and in central Alabama (see *Wilson's Raid*), satisfied Lee that he could no longer maintain his position, unless, by some means, his army might be vastly increased and new and ample resources for its supply obtained. He had recommended the emancipation of the slaves and making soldiers of them, but the slave interest was too powerful in the civil councils of the Confederacy to obtain a law to that effect. Viewing the situation calmly, he saw no hope for the preservation of his army from starvation or capture, nor for the existence of the Confederacy, except in breaking through Grant's lines and forming a junction with Johnston in North Carolina. He knew such a movement would be perilous, but he resolved to attempt it; and he prepared for a retreat from the Appomattox to the Roanoke. Grant saw symptoms of such a movement, and, on March 24 (1865), issued an order for a general forward movement on the 29th. On the 25th Lee's army attempted to break the National line at the strong point of Fort Steadman, in front of the Ninth Corps. (See *Fort Steadman*.) They also assailed Fort Haskell, on the left of Fort Steadman, but were repulsed. These were sharp but fruitless struggles by the Confederates to break the line. The grand movement of the whole National army on the 29th was begun by the left, for the purpose of turning Lee's right, with an overwhelming force. At the same time Sheridan was approaching the Southside Railway to destroy it. Lee's right intrenched lines extended beyond Hatcher's Run, and against these and the men who held them the turning column marched. General Ord, with three divisions of the Army of the James, had been drawn from the north side of that river and transferred to the left of the National lines before Petersburg. The remainder of Ord's command was left in charge of General Weitzel, to hold the extended lines of the Nationals, full thirty-five miles in length. Sheridan reached Dinwiddie Court-house towards the evening of March 29. Early that morning the corps of Warren (Fifth) and Humphreys (Second) moved on parallel roads against the flank of the Confederates, and, when within two miles of their works, encountered a line of battle. A sharp fight occurred, and the Confederates were repulsed, with a loss of many killed and wounded and 100 made prisoners. Warren lost 370 men. Lee now fully comprehended the perils that menaced him. The only line of communication with the rest of the Confederacy might be cut at any hour. He also perceived the necessity of strengthening his right to avert the impending shock of battle; likewise of maintaining his extended line of works covering Petersburg and Richmond. Not aware of the withdrawal of troops from the north side of the James, he left Longstreet's corps, 8000 strong, to defend Richmond. Lee had massed a great body of his troops—some 15,000—at a point in

front of the corps of Warren and Humphreys, the former on the extreme right of the Confederates. There Lee attempted (March 30) to break through the National lines, and for a moment his success seemed assured. A part of the line was pushed back, but Griffin's division stood firm and stemmed the fierce torrent, while Ayres and Crawford re-formed the broken column. Warren soon assumed the offensive, made a countercharge, and, by the aid of a part of Hancock's corps, drove back the Confederates. Lee then struck another blow at a supposed weak point on the extreme left of the Nationals, held by Sheridan. A severe battle ensued. (See *Five Forks, Battle of*.) Both parties lost heavily. On the evening of the same day all the National guns in front of Petersburg opened on the Confederate lines from Appomattox to Hatcher's Run. Wright, Parke, and Ord, holding the intrenchments at Petersburg, were ordered to follow up the bombardment with an assault. The bombardment was kept up until four o'clock in the morning (April 2), and the assault began at daybreak. Parke carried the outer line of the Confederate works in his front, but was checked at an inner line. Wright drove everything before him to the Boydton plank-road, where he turned to the left towards Hatcher's Run, and, pressing along the rear of the Confederate intrenchments, captured several thousand men and many guns. Ord's division broke the Confederate division on Hatcher's Run, when the combined forces swung round to the right and pushed towards Petersburg from the southwest. On the same day the Southside Railway was first struck at three points by the Nationals, who had driven the Confederates from their intrenchments and captured many. This achievement effectually cut off one of Lee's most important communications. Gibbon's division of Ord's command captured two strong redoubts south of Petersburg. In this assault Gibbon lost about 500 men. The Confederates were now confined to an inner line of works close around Petersburg. Longstreet went to the help of Lee, and the latter ordered a charge to be made to recover some of the lost intrenchments. It failed; and so ended the really last blow struck for the defence of Richmond by Lee's army. General A. P. Hill, one of Lee's best officers, was shot dead while reconnoitring. Lee now perceived that he could no longer hold Petersburg or the capital with safety to his army. At half-past ten o'clock on Sunday morning (April 2) he telegraphed to the government at Richmond: "My lines are broken in three places; Richmond must be evacuated this evening." Then Lee's troops withdrew from Petersburg, and the struggle there ended.

Petersburg, OPERATIONS AGAINST (1864). This city, on the south side of the Appomattox River, about twenty miles from Richmond and fifteen from City Point, was occupied, in the summer of 1864, by a large Confederate force, who cast up strong intrenchments upon its exposed sides. When the Army of the Potomac was led to the south side of the James River

(June 14-16), it began immediate operations against Petersburg, which was now the strong defence of Richmond. Butler, at Bermuda Hundred, was very securely intrenched. Grant sent General Smith's troops quickly back to him after the battle at Cool Arbor (which see), and directed him to co-operate with the Army of the Potomac in an attempt to capture Petersburg. On June 10 Butler sent 10,500 men, under Gillmore, and 1500 cavalry, under Kautz (which see), to attack the Confederates at Petersburg; at the same time two gunboats went up the Appomattox to bombard an earthwork a little below Petersburg. The troops crossed the Appomattox four miles above City Point, and marched on Petersburg, while Kautz swept round to attack on the south. The enterprise was a failure, and the Nationals retired. Five days later there was another attempt to capture Petersburg. Smith arrived at Bermuda Hundred with his troops on June 14, and pushed on to the front of the defences of Petersburg, northeastward of the city. These were found to be very formidable, and, ignorant of what forces lay behind these works, he proceeded so cautiously that it was near sunset (June 15, 1864) before he was prepared for an assault. The Confederates were driven from their strong line of rifle-pits. Pushing on, they captured a powerful salient, four redoubts, and a connecting line of intrenchments about two miles and a half in extent, with 15 guns and 300 prisoners. Two divisions of Hancock's corps had come up, and rested upon their arms within the works just captured. While these troops were reposing, nearly the whole of Lee's army were crossing the James River at Richmond, and troops were streaming down towards Petersburg to assist in its defence. During the night (June 15-16) very strong works were thrown up, and a cloud of warriors were behind them. The coveted prize was lost. Twenty-four hours before, Petersburg might have been easily taken; now it defied the Nationals, and endured a most distressing siege for ten months longer. Now, at the middle of June, a large portion of the Army of Northern Virginia was holding the city of Petersburg and the surrounding intrenchments, and a great part of the Army of the Potomac, with the command of Smith upon its right, confronted the Confederates. On the evening of the 16th a heavy bombardment was opened upon the Confederate works, and was kept up until six o'clock the next morning. Birney, of Hancock's corps, stormed and carried a redoubt on his front, but Burnside's corps could make no impression for a long time, in the face of a murderous fire. There was a general advance of the Nationals, but at a fearful cost of life. At dawn General Potter's division of Burnside's corps charged upon the works in their front, carried them, and captured four guns and 400 men. He was relieved by General Ledlie's column, which advanced to within half a mile of the city, and held a position from which shells might be cast into the town. They were driven back with great loss. On the same day (June 16) General Butler sent out General Terry to force Beauregard's lines, and destroy

and hold, if possible, the railway in that vicinity. He had gained possession of the track, and was proceeding to destroy it, when he was attacked by a division of Longstreet's corps, on its way from Richmond to Petersburg. Terry was driven back to the intrenchments at Bermuda Hundred before aid could reach him. On the morning of the 17th the Seventh and Ninth corps renewed the attack upon the works at Petersburg, when the hill upon which Fort Steadman was afterwards built was carried and held by the former. Another attack was made by the Ninth in the afternoon, and a severe battle began, and continued until night, with great slaughter. Desperate attempts had been made to recapture what the Confederates had lost, and that night a heavy Confederate force drove back the Ninth (Burnside's) Corps. A general assault was made on the 18th, with disaster to the Nationals, who were repulsed at every point. And now, after a loss of nearly 10,000 men, further attempts to take Petersburg by storm were abandoned for a while, and Grant prepared for a regular siege. He at once began intrenching, and to extend his left in the direction of the Petersburg and Weldon Railway, which he desired to seize, and thus envelop Petersburg with his army. He moved the corps of Hancock and Wright stealthily to the left, to attempt to turn the Confederate right. The former was pushed back. On the following morning (June 22) the Nationals were attacked by divisions of the corps of A. P. Hill, driving back a portion of them with heavy loss. At sunset Meade came up and ordered both corps to advance and retake what had been lost. It was done, when Hill retired with 2500 prisoners. The next morning Hancock and Wright advanced, and reached the Weldon road without much opposition, until they began to destroy it, when a part of Hill's corps drove off the destroyers. The National line had now been extended to the Weldon road. Meanwhile a cavalry expedition, 8000 strong, under Kautz and Wilson, had been raiding upon the railways leading southward from Petersburg, the latter being in chief command. They destroyed the buildings at Reams's Station, ten miles south of Petersburg, and the track for a long distance. They then struck the Southside Railway, and destroyed it over a space of twenty miles, fighting and defeating a cavalry force under Fitzhugh Lee. Kautz pushed on, and tore up the track of the Southside and Danville Railway, at and near their junction. The united forces destroyed the Danville road to the Staunton River, where they were confronted by a large force of Confederates. They were compelled to fight their way back to Reams's Station, on the Weldon road, which they had left in the possession of the Nationals; but they found the cavalry of Wade Hampton there, and a considerable body of Confederate infantry. In attempting to force their way through them, the Nationals were defeated, with heavy loss, and they made their way sadly back to camp with their terribly shattered army of troopers. Their estimated loss during the raid was nearly 1000 men. Now, after a san-

guinary struggle for two months, both armies were willing to seek repose, and for some time there was a lull in the storm of strife. The Union army lay in front of a formidable line of redans and redoubts, with lines of intrenchments and abatis, altogether forty miles in length, extending from the left bank of the Appomattox around to the western side of Petersburg, and to and across the James to the northeastern side of Richmond. Within eight or nine weeks, the Union army, then investing Petersburg, had lost, in killed, wounded, and prisoners, about 70,000 men. Reinforcements had kept up its numbers, but not the quality of its materials. Many veterans remained, but a vast number were raw troops. The Nationals had been building fortifications at the same time, and preparing for an effective siege. Butler, by a quick movement, had thrown Foster's brigade across the James River at Deep Bottom, and formed an intrenched camp there, within ten miles of Richmond, and connected with the army at Bermuda Hundred by a pontoon bridge. By this movement a way was provided to move heavy masses of troops to the north side of the James at a moment's warning, if desired. Lee met this by laying a similar bridge at Drewry's Bluff. By the close of July, 1864, Grant was in a position to choose his method of warfare—whether by a direct assault, by the slower process of a regular siege, or by heavy operations on the flanks of the Confederates.

Petersburg, SIEGE OF (1864). The regular siege of Petersburg began in July. General Grant had caused strong works to be built in front of those of the Confederates. On the 25th of June operations began for mining under the Confederate forts so as to blow them up. One of these operations was in charge of Lieutenant-colonel Pleasants, who completed it on the 22d of July. When the mine was ready Grant sent Hancock to assist Foster to flank the Confederates at Deep Bottom, and, pushing on to Chapin's Bluff, below Drewry's Bluff, to menace Lee's line of communication across the river. (See *Petersburg, Operations against.*) It was done; and, to meet the seeming impending danger to Richmond, Lee withdrew five of his eight remaining divisions on the south side of the James, between the 27th and the 29th. Grant's opportunity for a grand assault now offered. The mine under one of the principal forts was exploded early on the morning of July 30, with terrible effect. In the place of the fort was left a crater of loose earth, 200 feet in length, full 50 feet in width, and from 20 to 30 feet in depth. The fort, its guns, and other munitions of war, with 300 men, were thrown high in air and annihilated. Then the great guns of the Nationals opened a heavy cannonade upon the remainder of the Confederate works, with precision and fatal effect, all along the line; but, owing partly to the slowness of motion of a portion of the assaulting force, the result was a most disastrous failure on the part of the assailants. A fortnight later General Grant sent another expedition to the north side of the James, at Deep Bottom, composed of the divisions of Birney and

Hancock, with cavalry under Gregg. They had sharp engagements with the Confederates on the 13th, 16th, and 18th of August, in which the Nationals lost about 5000 men without gaining any special advantage excepting the incidental one of giving assistance to troops sent to seize the Weldon Railway south of Petersburg. This General Warren effected on the 18th of August. Three days afterwards he repulsed a Confederate force which attempted to recapture the portion of the road held by the Unionists; and on the same day (Aug. 21) General Hancock, who had returned from the north side of the James, struck the Weldon road at Reams's Station and destroyed the track for some distance. The Nationals were finally driven from the road with considerable loss. (See *Reams's Station, Battle of.*) For a little more than a month after this there was comparative quiet in the vicinity of Petersburg and Richmond. The National troops were moved simultaneously towards each city. General Butler, with the corps of Birney and Ord, moved upon and captured Fort Harrison (which see) on Sept. 29. These troops charged upon another fort near by, but were repulsed with heavy loss. Among the slain was General Burnham, and Ord was severely wounded. In honor of the slain general the captured works were named Fort Burnham. In these assaults the gallantry of the colored troops was conspicuous. Meanwhile, Meade had sent Generals Warren and Parke, with two divisions of troops each, to attempt the extension of the National left to the Weldon road and beyond. It was a feint in favor of Butler's movement on the north side of the James, but it resulted in severe fighting on Oct. 1 and 2, with varying fortunes for both parties. Now there was another pause, but not a settled rest, for about two months, when the greater portion of the Army of the Potomac was massed on the Confederate right, south of the James. On Oct. 27 they assailed Lee's works on Hatcher's Run, westward of the Weldon road, where a severe struggle ensued. (See *Boydton Plank-road.*) The Nationals were repulsed, and, on the 29th, they withdrew to their intrenchments in front of Petersburg. Very little was done by the Army of the Potomac until the opening of the spring campaign of 1865. The losses of that army had been fearful during six months, from the beginning of May until November, 1864. The aggregate number in killed, wounded, missing, and prisoners was over 80,000 men, of whom nearly 10,000 were killed in battle. Add to these the losses of the Army of the James during the same period, and the sum would be full 100,000 men. The Army of the Potomac had captured 15,378 prisoners, sixty-seven colors, and thirty-two guns. They had lost twenty-five guns. The Confederates had lost, including 15,000 prisoners, about 40,000 men.

Petition of Congress Refused. On the 26th of January, 1775, Dr. Franklin, William Bolla, and Arthur Lee, agents of the colonies in England, by authority of the First Continental Congress (which see), presented a petition to the king from that body. It was referred to Parliament, and the agents solicited a hearing at the bar of

the House, in explanation and defence of the petition. This request elicited a violent debate. The friends of the ministry, while they refused to hear and discuss the petition, insulted it, as containing nothing but pretended grievances. It was rejected by a large majority.

Petition to the King. A petition to the king was adopted and signed by the members of the Continental Congress present July 8, 1775, in which, after allusion to the oppression the colonists had been subjected to, they declared their loyalty to the throne. It was taken to England from Philadelphia by Richard Penn, who delivered it to Lord Dartmouth. Penn assured him the colonies had no designs for independence. On the strength of that testimony the Duke of Richmond moved in the House of Lords that the petition, which had been laid before Parliament, be made the basis of a conciliation with America. After a warm debate the motion was rejected, and no further notice was taken of the petition.

Petitions and Remonstrances against Taxation Schemes. In 1764, when the Stamp Act and other Parliamentary schemes for taxing the colonies attracted attention and opposition in America, a committee of the Massachusetts Assembly adopted a strong petition to Parliament, drawn by James Otis, which was really a remonstrance. The Council refused to concur, when a joint-committee was charged with the duty of drafting another petition. It was drawn by Thomas Hutchinson, a strong loyalist, but was too tame to suit the more ardent spirits in the Massachusetts government. After some alterations it was adopted, and intrusted to Dr. Franklin, lately appointed agent of the colony of Pennsylvania in England for the overthrow of the proprietary government. Their instructions to the agent were more decided in tone, especially on the topic of self-taxation as a right, not as a mere usage or favor. Connecticut sent a petition couched in the same moderate language. But one from New York was so strong and decided that no member of Parliament could be found to present it. It was re-echoed by Rhode Island. In Virginia a committee composed of the leading members of the House of Burgesses was appointed to draw up a petition to the king, a memorial to the House of Lords, and a remonstrance to the House of Commons, in tones moderate but firm, on the subject of self-taxation. But all these petitions and remonstrances produced no sensible effect on the king and Parliament. The Stamp Act was passed. (See *Stamp Act*.)

Petrel, THE PRIVATEER (1861). The United States revenue cutter *Aiken*, which had been surrendered to the insurgents at Charleston, in December, 1860, was converted into a privateer, manned by a crew of thirty-six men, mostly Irish, and called the *Petrel*. On July 28, 1861, she went to sea, and soon fell in with the National frigate *St. Lawrence*, which she mistook for a merchantman. She was regarded as a rich prize, and the *Petrel* bore down upon her, while she appeared to be trying to escape.

When the latter came within fair range, the *St. Lawrence* opened her ports and gave her the contents of three heavy guns. One of these sent a shell known as the "Thunderbolt," which exploded in the hold of the *Petrel*, while a 32-pound shot struck her amidships, below the water-mark. In an instant she was made a total wreck, and went to the bottom of the ocean, leaving the foaming waters over her grave thickly strewn with splinters and her struggling crew. Four of these were drowned; the remainder were saved. They were so dazed that they did not know what had happened. A flash of fire, a thunder-peal, the crash of timbers, and engulfment in the sea had been the incidents of a moment of their experience. Her surviving crew were sent to prison to answer the charge of piracy, but received the same treatment as those of the *Savannah*. (See *Savannah, The Privateer*.)

Petroleum. The early settlers around the headwaters of the Alleghany River, in Pennsylvania and New York, were acquainted with the existence of petroleum there, where it oozed out of the banks of streams. Springs of petroleum were struck in Ohio, in 1820, where it so much interfered with soft-water wells that it was considered a nuisance. Its real value was suspected by S. P. Hildreth, who wrote, in 1826: "It affords a clear, brisk light when burned in this way [in lamps in workshops], and it will be a valuable article for lighting the street-lamps in the future cities of Ohio." It remained unappreciated until 1859, when Messrs. Bowditch & Drake, of New Haven, Conn., bored through the rock at Titusville, on Oil Creek, Penn., and struck oil at the depth of seventy feet. They pumped 1000 gallons a day, and so the regular boring for petroleum was begun. From 1861 until 1876 the average daily product of all the wells was about 11,000 barrels. The total yield within that period was about 2,250,000,000 gallons of crude oil. The first export of petroleum was in 1861, of 27,000 barrels, valued at \$1,000,000. The export in 1875 was 222,000,000 gallons, in various forms, besides more than 100,000 barrels of residuum, in the form of tar, etc., from which the bodies had been distilled. Of the amount exported, 191,500,000 gallons were in the form of kerosene and other illuminating oils.

Phelps. JOHN WOLCOTT, was born at Guilford, Vt., Nov. 13, 1813, and graduated at West Point in 1836, serving in the artillery in the Seminole War. He served in the war against Mexico, and in the Utah expedition in 1858. (See *Mormons*.) He resigned in 1859. In May, 1861, he became colonel of a Vermont volunteer regiment, with which he established an intrenched camp at Newport-Newce, and was soon afterwards made brigadier-general. Attached to General Butler's expedition against New Orleans, he landed on Ship Island, Miss., on Dec. 4, 1861, when he issued a proclamation hostile to slavery. It was disavowed by his superiors, and the temporizing policy which he believed was to rule caused his resignation. He was the first officer who enlisted and disciplined

negro soldiers in the Civil War. (See *New Orleans, Capture of*.)

Phelps, OLIVER, was born at Windsor, Conn., in 1749; died at Canandaigua, N. Y., Feb. 21, 1809. He was a successful merchant, and during the war for independence was in the Massachusetts Commissary Department. In 1788 he, with Nathaniel Gorham, purchased a large tract of land (2,200,000 acres) in the State of New York, and at Canandaigua opened the first land-office established in America. (See *Holland Land Company*.) In 1795 he and William Hart bought the Connecticut Western Reserve, in Ohio, comprising 3,300,000 acres. (See *Western Reserve*.) Mr. Phelps afterwards settled with his family at Canandaigua, then a wilderness; represented that district in Congress from 1803 to 1805; and was judge of a circuit court.

Philadelphia. (See *Brotherly Love, City of*.)

Philadelphia Abandoned (1777). After the battle at the Brandywine, Washington fell back to Philadelphia, and on Sept. 16 he recrossed the Schuylkill and marched against the advancing British. The armies met twenty miles from Philadelphia, and began to skirmish, when a violent storm of rain prevented the impending battle. Washington again retired across the Schuylkill, and, while manœuvring to prevent Howe from crossing that river above him, the enemy crossed below him, and was thus placed between the American army and Philadelphia. Nothing but a battle and a victory could now save that city. Washington's troops, inferior in numbers and much fatigued by recent marches, were also sadly deficient in shoes and clothing; their arms were in a bad condition; and the regular supply of food had been rendered very precarious. Under these circumstances, it seemed too hazardous to risk a battle. The Congress had already left Philadelphia, and Washington was compelled to abandon it. He formed a camp at Skippack Creek, about twenty miles from Philadelphia. Howe found a large number of loyalists in Philadelphia, who welcomed him. He stationed the bulk of his army near Germantown, about five miles from the city (Sept. 25). Four regiments were quartered in the city, and Joseph Galloway, a Tory who had accompanied the army, was made chief of police there.

Philadelphia Excited (1814). The operations of the British blockading fleet on the New England coast, the capture of Washington city by the British, and the attack on Baltimore, in the summer of 1814, alarmed Philadelphia as well as New York, and the greatest patriotic efforts were exerted in the preparation of defences in both cities. (See *New York Excited*.) In Philadelphia a public meeting was held in the State-house yard on Aug. 26, and a committee of defence was appointed, with ample powers to adopt such measures as the exigency seemed to require. "They determined," says Wescott, "that, for the safety of the city, field fortifications should be thrown up in the most eligible situations on the western side of the town, and where an attack might be ex-

pected. A fort was planned near Gray's Ferry and Darby roads; also a redoubt opposite Hamilton's Grove, another upon the Lancaster road, and a third upon the site of an old British redoubt on the southern side of the hill at Fairmount, which would command the bridge at Market Street and the roads leading to it." To construct these works, the volunteer assistance of the citizens was given, and a hearty enthusiasm was shown in the service. Societies, trades, and religious associations of every kind organized bands of workers—as in New York—to perform the work systematically under the direction of the committee. Labor began on Sept. 3, and ended on Oct. 1, when the field-works were completed. Physicians, lawyers, clergymen, colored people, and persons in all walks of life participated in the patriotic work; and when all the defences were finished, it appeared that about fifteen thousand persons had labored on them. Those unable or unwilling to labor gave money in lieu of service. About \$6000 were so contributed. The method of procedure in the labor was as follows: "Arriving at the fortifications," says Wescott, "the citizens, having been previously divided into companies, were put to work. At ten o'clock the drum beat for 'grog,' when liquor sufficient for each company was dealt out by its captain. At twelve o'clock the drum beat for dinner, when more 'grog' was furnished. This was also the case at three and five o'clock in the afternoon. At six o'clock the drum beat the retreat, when, it was suggested in general orders, 'for the honor of the cause we are engaged in, freemen to live or die, it is hoped that every man will retire sober.'" The enemy did not come, and the beautiful city was spared the horrors of war. The origin of the word "grog," used above, was as follows: Admiral Vernon wore a heavy coat of sea, made of thick stuff composed of silk and hair, which was called "groggram." He was usually called by the sailors, on this account, "Old Grog," the latter word the short for grogram. "Old Grog" was the first to introduce spirits and water not sweetened among his crew, and they gave it the name of "grog."

Philadelphia, THE FRIGATE, DESTRUCTION OF. The *Philadelphia*, Captain Bainbridge, chased a corsair into the harbor of Tripoli on Oct. 3, 1803. In endeavoring to beat off, the *Philadelphia* struck a sunken rock not laid down in the charts. In that helpless condition Bainbridge and his men were made prisoners, and the vessel was finally released and taken into the harbor of Tripoli. Bainbridge found means to inform Preble, at Malta, of his misfortune, and suggested the destruction of the *Philadelphia*, which the Tripolitans were fitting for sea. The Americans had captured a ketch, which was taken into the service and named *Intrepid*. She was devoted to the service of cutting out, or destroying, the *Philadelphia*. Lieutenant Stephen Decatur was placed in command, and, with seventy determined young men, sailed for Tripoli, accompanied by the brig *Siren*, Lieutenant Charles Stewart. On a moonlight evening (Feb. 16, 1804) the *Intrepid* sailed into the harbor, and

was warped alongside the *Philadelphia* without exciting suspicion, for she seemed like an innocent merchant-vessel with a small crew, as most of the officers and men were concealed below. At a signal given, officers and men rushed from their concealment, sprang on board the *Philadelphia*, and, after a desperate struggle, drove her turbaned defenders into the sea. She was immediately burned, and the *Intrepid* and *Siren* departed for Syracuse.

Philadelphia Troops Attacked in Baltimore (1861). Ten companies of the Washington Brigade of Philadelphia accompanied the Sixth Massachusetts regiment to Washington, under General Wilson C. Small. They were entirely unarmed. These remained at the President Street Station in Baltimore, while the Sixth Massachusetts went on to the Camden Street Station. After the latter had encountered the mob (see *Massachusetts Troops in Baltimore*), the Philadelphians, who had remained in the cars, were attacked. The mob had tried in vain to seize arms. Quite a large number of Union men of Baltimore had gathered around these troops, and many of the latter sprang out of the cars and engaged in a hand-to-hand fight with the rioters for about two hours, assisted by the Baltimore Unionists. The soldiers were discomfited by numbers. Order was finally restored, and the Philadelphians went on to Washington.

Philip, KING, Sachem of the Wampanoags, whose Indian name was Pometaconi, or Metacomet, was the youngest son of Massasoit, the friend of the English. (See *Massasoit*.) His brother Alexander died, and in 1662 Philip became sachem. His wife was Woo-to-nek-anus-ke, daughter of Witamo, the feminine sachem of the Pokanokets, on the eastern shore of Narraganset Bay. Philip's tribe was the Wampanoags. Both he and they had been corrupted by contact with the English—with imaginary wants—and they were so anxious to have things like the white people that they had sold off a large portion of their lands to procure such luxuries. Of Philip's life before he became sachem very little is known. He had witnessed frequent broils between the English and the Narragansets, and felt that his people were often wronged. Yet he respected the treaty made by his father and renewed by his dead brother. In 1665 he went to Nantucket to kill an Indian who had profaned the name of his father, according to an Indian law that whoever should speak evil of the dead should be put to death by the next of kin. In 1671 the English were alarmed by warlike preparations made by Philip. A conference was held with Philip and some of his warriors in the meeting-house at Plymouth, when he averred that his warlike preparations were not against the English, but the Narragansets. This, however, it is said, he confessed was false, and that he had formed a plot against the English "out of the naughtiness of his own heart." He and four of his chief men signed a submission, and agreed to give up their arms to the Plymouth

authorities. Subsequently he was compelled to pay a sum of money to defray the expenses of the colony caused by his conduct. These things, especially the disarming of the Wampanoags, caused great indignation in the tribe. His warriors urged him to strike a blow for the extermination of the English, but he hesitated long. Finally he made open war in July, 1675, and perished at its close in 1676. (See *King Philip's War*.) The death of Philip occurred in this wise: An Indian deserter came to Captain Church, in Rhode Island, and told him that Philip was at Mount Hope, at the same time offering to guide him to the place and help to kill him, for the sachem had killed his (the informant's) brother, and it was his duty to kill the murderer. This was the "faithless Indian" who shot Philip. The barbarous law of England that a traitor should be quartered was carried out in the case of Philip. Church's Indian executioner performed that service with his hatchet upon the dead body of the sachem. (See *King Philip's War*.)

Philippi (VA.), SKIRMISH AT (1861). One of the earliest contests in the Civil War occurred at Philippi, a small village on Tygart's Valley River, about sixteen miles southward from Grafton. Ohio and Indiana volunteers gathered at Grafton (on the Baltimore and Ohio Railroad), and loyal armed Virginians who had assembled there, were divided into two columns, one commanded by Colonel Benjamin F. Kelley, and the other by Colonel E. Dumont, of Indiana. Colonel Porterfield, with fifteen hundred Virginians, one third of them mounted, was at Philippi. The two Union columns marched against him, by different routes, to make a simultaneous attack. In darkness and a drenching rain the columns moved over the rugged hills, through hot valleys, and across swollen streams. Kelley was misled by a treacherous guide, and Dumont approached Philippi first. His troops were discovered by a woman, who fired a pistol at Colonel Lander, and sent her boy to alarm Porterfield. The lad was caught and detained, but Porterfield's camp was put in commotion by the pistol. Dumont took position on the heights, with cannon commanding a bridge, the village, and the insurgent camp. Colonel Lander had taken command of the artillery, and, without waiting for the arrival of Kelley, he opened heavy guns upon the insurgents. At the same time Dumont's infantry swept down to the bridge, where the insurgents had gathered to dispute their passage. The Confederates were panic-stricken, and fled. Kelley, approaching rapidly, struck the flank of the flying insurgents, who were driven in wild confusion through the village and up the Beverly Road. The two columns pursued them about two miles, when the fugitives, abandoning their baggage-train, escaped. Colonel Kelley was severely wounded by a pistol-shot that passed through his right breast, and, fainting from loss of blood, fell into the arms of some of his soldiers. For a long time his recovery was doubtful, but, under the watchful care of a devoted daughter, he finally recovered, and was commissioned a brig-

adier-general. Colonel Dumont assumed the command of the combined columns. Lacking transportation, the Indiana troops were recalled to Grafton by the chief-commander, T. A. Morris.

Phillips, JOHN, was born at Andover, Mass., Dec. 6, 1719; died at Exeter, N. H., April 21, 1795. He graduated at Harvard University in 1735; studied theology; preached a while; and then, becoming a merchant, was very successful. He endowed a professorship in Dartmouth College; contributed largely to the college at Princeton, N. J.; and gave to the Phillips Academy at Andover \$31,000, besides a third interest in his estate. He also founded the Phillips Academy at Exeter (1781), and endowed it with \$134,000.—His nephew, **SAMUEL PHILLIPS, Jr., LL.D.**, also generously endowed the academy at Andover, planning and organizing it and giving it lands and money. He was born at Andover, Feb. 7, 1751, and died there, Feb. 10, 1802. He, also, graduated at Harvard University (1771); was a member of the Massachusetts Provincial Congress four years; assisted in framing a state constitution in 1779; was state senator twenty years; and president of the Senate fifteen years. He was a judge of the Court of Common Pleas; commissioner of the state to deal with Shays's insurrection (which see); and was lieutenant-governor of the state at his death. He left \$5000 to the town of Andover, the interest of which was to be applied to educational purposes. Mr. Phillips was one of the founders of the Academy of Arts and Sciences at Boston.

Phillips, WENDELL, orator and reformer, was born in Boston, Nov. 29, 1811. He graduated at Harvard University in 1831, and at the Cambridge Law School in 1833, and was admitted to the bar in 1834. At that time the agitation of the slavery question was violent and wide-spread, and in 1836 Mr. Phillips joined the Abolitionists. He conceived it such a wrong in the Constitution of the United States in sanctioning slavery that he could not conscientiously act under his attorney's oath to that Constitution, and he abandoned the profession. From that time until the emancipation of the slaves in 1863 he did not cease to lift up his voice against the system of slavery and in condemnation of the Constitution of the United States. His first great speech against the evil was in Faneuil Hall, in December, 1837, at a meeting "to notice in a suitable manner the murder, in the city of Alton, Ill., of Rev. Elijah P. Lovejoy, who fell in defence of the freedom of the press." Mr. Phillips is an eloquent, logical, and effective speaker. He conscientiously abstained from voting under the Constitution, and was ever the most earnest of "Garrisonian abolitionists." He is an earnest advocate of other reforms—temperance, labor, and other social relations. He was president of the American Anti-Slavery Society at the time of its dissolution, April 9, 1870.

Phipps, SIR WILLIAM, was born at Woolwich, Me., Feb. 2, 1631; died in London, Feb. 18, 1695. He was one of twenty-six children by the same

father and mother, twenty-one of whom were sons. Nurtured in comparative poverty in childhood and youth, he was at first a shepherd-boy, and at eighteen years of age became an apprentice to a ship-carpenter. He went to Boston in 1673, where he learned to read and write. In 1684 he went to England to procure means to recover a treasure-ship wrecked near the Bahamas. With a ship furnished by the government, he was unsuccessful; but with another furnished by the Duke of Albemarle, he recovered treasure to the amount of about \$1,400,000, of which his share amounted to about \$75,000. The king knighted him, and he was appointed High Sheriff of New England. In 1690, in command of a fleet, he captured Port Royal (Acadia), and late in the same year he led an unsuccessful expedition against Quebec. Phipps went to England in 1692 to solicit another expedition against Canada. There he was appointed Captain-general and Governor of Massachusetts under a new royal charter, just issued, and he returned in May of that year, bringing the charter with him. In 1694 he was summoned to England to answer charges preferred against him, and there he died of a malignant fever. Sir William was a member of the congregation over which Cotton Mather preached. He was dull of intellect, rudely educated, egotistical, superstitious, headstrong, and patriotic, but totally unfitted for statesmanship or to be a leader in civil or military affairs.

Phonograph, THE, is a machine that may be attached to pianofortes or other keyed instruments of music, by which any air played may be written down on blank paper. It rules and prints the notes simultaneously by the motive power of electro-magnetism. It was patented by Mr. Fenby, June 13, 1863. Machines for a similar purpose were produced in 1747, 1774, and 1827. In 1877-78 Thomas A. Edison, a remarkable inventor, produced a little instrument which he called a "phonograph," because it made a permanent record of sounds on tin-foil by means of indentations. By this simple contrivance words may be caught, as it were, exactly as they fall in modulations of the voice from a speaker's lips, laid away, and reproduced a hundred years hence in exactly the same tones and modulations as they were spoken. Had a phonograph caught an oration of Demosthenes, who lived more than twenty-two hundred years ago, it might have been reproduced, and so have settled the vexed question among philologists, "How did Demosthenes pronounce the Greek language?"

Pickens, ANDREW, was born in Bucks County, Penn., Sept. 13, 1739; died in Pendleton District, S. C., Aug. 17, 1817. His parents, who were of Huguenot descent, went to South Carolina in 1752. Andrew served in the Cherokee War (which see) in 1761, and at the beginning of the Revolution he was made a captain of militia, and soon rose to the rank of brigadier-general. He, with Marion and Sumter, by their zeal and boldness, kept alive the spirit of resistance in the South when Cornwallis overran South Carolina. He performed excellent service in the

field during the war, and for his conduct at the battle of the Cowpens (which see) Congress voted him a sword. He led the Carolina militia in the battle of Eutaw Spring, and in 1782

ANDREW PICKENS.

he led a successful expedition against the Cherokees. From the close of the war till 1793 he was in the South Carolina Legislature, and was in Congress from 1793 to 1795. In the latter year he was made major-general of militia, and was in the Legislature from 1801 to 1812. A successful treaty made by him with the Cherokees obtained from the latter the region of South Carolina now known as Pendleton and Greenville districts, and he settled in the former district.

Pickens, FRANCIS W., Governor of South Carolina, was born in St. Paul's Parish, S. C., April 7, 1807; died at Edgefield, S. C., Jan. 25, 1869. He became a lawyer, and was a distinguished debater in the South Carolina Legislature dur-

FRANCIS W. PICKENS.

ing the nullification excitement. He spoke and wrote much against the claim that Congress might abolish slavery in the District of Colum-

bia. He was minister to Russia (1857-60); and when South Carolina declared its secession from the Union, he was elected the first governor, or president, of that "sovereign nation." He maintained the dignity of his office until he relinquished it in 1862. Governor Pickens was a successful planter, of great wealth, and was popular in his state as a speaker before colleges and literary institutions.

Pickering, TIMOTHY, LL.D., was born at Salem, Mass., July 17, 1745; died there, Jan. 29, 1829. He graduated at Harvard University in 1763, and was admitted to the bar in 1768. Pickering was the leader of the Essex Whigs in the controversy preceding the war for independence; was on the Committee of Correspondence, and wrote and delivered the address of the people of Salem to Governor Gage, on the occasion of the Boston Port Bill (which see), in 1774. The first armed resistance to British troops was by Pickering, as colonel of militia, in February, 1775, at a drawbridge at Salem, where the sol-

TIMOTHY PICKERING.

diers were trying to seize military stores. He was a judge in 1775, and in the fall of 1776 he joined Washington, in New Jersey, with his regiment of seven hundred men. In May, 1777, he was made adjutant-general of the army, and after he had participated in the battles of Brandywine and Germantown, he was appointed a member of the Board of War. He succeeded Greene as quartermaster-general in August, 1780, and after the war resided in Philadelphia. In 1786 he was sent to the Wyoming Settlement, to adjust difficulties there (see *Susquehanna Company* and *Pennymite and Yankee War*), where he was personally abused, imprisoned, and put in jeopardy of his life. He was an earnest advocate of the national Constitution, and succeeded Osgood (which see) as United States Postmaster-general. In 1794-95 he was Secretary of War, and Secretary of State from 1795 to 1800. Pickering left office poor, and settling on some wild land in Pennsylvania, he there lived, with his family, in a log hut; but the liberality of friends enabled him to return to Salem in 1801. He was made Chief Judge of the Essex County Court of Common Pleas in 1802, and United States Sen-

ator from 1803 to 1811, when he was made a member of the Council. During the war of 1812-15 he was a member of the Massachusetts Board of War, and of Congress from 1815 to 1817.

Pictures for the Capitol. In 1816 Congress, by joint resolution, authorized the President of the United States to procure, for the ornamenting of the new Capitol, then building, four large paintings of Revolutionary scenes from the hand of John Trumbull, a worthy pupil of Benjamin West. He possessed a large number of portraits of the prominent actors in the events of the Revolution, painted by himself, and these he used in his compositions. These pictures are now in the rotunda of the Capitol, under the magnificent new dome, and are of peculiar historic value, as they perpetuate correct likenesses of the men whom Americans delight to pay homage to. These paintings represent the "Signers of the Declaration of Independence," the "Surrender of Burgoyne" at Saratoga, the "Surrender of Cornwallis" at Yorktown, and the "Resignation of Washington's Commission" at Annapolis. To these have since been added four others, of the same general size—namely, the "Landing of Columbus," by John Vanderlyn; the "Burial of De Soto," by George Powell; the "Baptism of Pocahontas," by J. G. Chapman; and the "Embarkation of the Pilgrims," by Robert W. Weir.

Picture-writing among the Indians. There was no written language in all North America when Europeans came, excepting in the form of pictography, which had a near relationship to the hieroglyphics of the Egyptians. It was used in aid of historic and other traditions, and in illustration of their mythology, which was rich in symbolism, and formed a part of their religious system. They personified their ideas by delineations of natural objects. An excellent illustration is given in the act of To-mo-chi-chi, an aged Creek chief, when he first visited Oglethorpe on the site of Savannah. He presented a buffalo's skin ornamented with a picture of an eagle, saying: "The eagle is an emblem of speed, and the buffalo of strength. The English are as swift as the bird, for they fly over vast seas, and, like the buffalo, are so strong nothing can withstand them. The feathers of the bird are soft, and signify love; the buffalo's skin is warm, and signifies protection. Therefore love and protect our little families."

Piedmont, BATTLE AT. General Hunter, with nine thousand men, advanced on Staunton early in June, 1864. At Piedmont, not far from Staunton, he encountered (June 5) an equal force of Confederates, under Generals Jones and McCausland. An obstinate and hard-fought battle ensued, which ended with the day, and resulted in the complete defeat of the Confederates. Their leader, General Jones, was killed by a shot through the head, and fifteen hundred Confederates were made prisoners. The spoils of victory were battle-flags, three guns, and three thousand small-arms.

Pierce, FRANKLIN, fourteenth President of the United States, was born at Hillsborough,

N. H., Nov. 23, 1804; died at Concord, N. H., Oct. 8, 1869. He graduated at Bowdoin College in 1824, became a lawyer, was admitted to the bar in 1827, and in 1838 made his permanent res-

FRANKLIN PIERCE.

idence at Concord. He was in Congress from 1833 to 1837; United States Senator from 1837 to 1842; served first as colonel of United States infantry in the war against Mexico, and as brigadier-general, under Scott, in 1847, leading a large reinforcement for that general's army on its march for the Mexican capital. In June, 1852, the Democratic Convention nominated him for President of the United States, and he was elected in November. (See *Inauguration of President Pierce*.) President Pierce used his official influence to promote the interests of the pro-slavery party in Kansas, and in January, 1856, in a message to Congress, he denounced the formation of a free-state government in Kansas as an act of rebellion. During the Civil War, ex-President Pierce was in full sympathy with the Confederate leaders.

Pierce's Cabinet. On the 7th of March, 1853, President Pierce nominated the following persons for his cabinet ministers: William L. Marcy, of New York, Secretary of State; James Guthrie, of Kentucky, Secretary of the Treasury; Jefferson Davis, of Mississippi, Secretary of War; James C. Dobbin, of North Carolina, Secretary of the Navy; Robert McClelland, of Michigan, Secretary of the Interior; James Campbell, of Pennsylvania, Postmaster-general; and Caleb Cushing, of Massachusetts, Attorney-general. The Senate confirmed these nominations the same day.

Pierson, ABRAHAM, first President of Yale College (1701-7), was born at Lynn, Mass., in 1641; died March 5, 1707. He graduated at Harvard College in 1668. He was ordained a colleague of his father, at Newark, N. J., in March, 1672, and from 1694 till his death was minister of Killingworth. His father (Abraham) was one of the first settlers of Newark (1667), and was the first minister in that town. He also preached to the Long Island Indians in their own language.

Pike, ALBERT, poet, born in Boston, Dec. 29,

1809. At the age of sixteen years he entered Harvard University, but, unable to support himself there, he taught school at Newburyport and Fairhaven, and in 1831 travelled (mostly on foot) to St. Louis, where he joined an expedition to New Mexico, acting as merchant's clerk and pedler in Santa Fé. Roaming with trappers awhile, he became editor and proprietor of a newspaper in Arkansas in 1834, and in 1836 was admitted to the bar. Pike was an advocate for state supremacy, served in the war against Mexico in command of Arkansas cavalry, and in the Civil War he organized and led a body of Cherokee Indians, himself disguised in barbarian costume, in the battle of Pea Ridge (which see). After the war he edited the *Memphis Appeal* for a while. A collection of his poems was printed in Philadelphia, in 1854, but was not published.

Pike, ZEBULON MONTGOMERY, was born at Lamberton, N. J., Jan. 5, 1779; killed at York, Upper Canada, April 27, 1813. He was appointed a cadet in the regiment of his father (a captain in the army of the Revolution) and brevet

ZEBULON MONTGOMERY PIKE.

lieutenant-colonel in the United States army when he was twenty years of age. He was made captain in 1806, and was appointed (1805) to lead an expedition in search of the sources of the Mississippi River, which performed the required duties satisfactorily in eight months and twenty days of most fatiguing explorations. In 1806-7 he was engaged in a geographical exploration of Louisiana, when he was seized by the Spaniards, taken to Santa Fé, and, after a long examination and the seizure of his papers, was escorted to Natchitoches (July 1, 1807) and dismissed. The government rewarded him with a major's commission (May, 1808). Passing through the various grades, he was commissioned brigadier-general March 12, 1813. Early in that year he had been appointed adjutant and inspector-general of the army on the northern frontier. He lost his life in an attack upon York, Upper Canada. (See *York, Capture of*.)

Pikeville, BATTLE NEAR. General William Nelson was in command of about three thousand loyalists in eastern Kentucky in November, 1861. About one thousand insurgents, under Colonel J. S. Williams, were at Pikeville, the capital of Pike County, Ky. Nelson sent Colonel Sill, with Ohio and Kentucky troops, to gain the rear of Williams, while, with the remainder, he should attack his front. A battalion of Kentucky volunteers, under Colonel C. A. Marshall, moved in advance of Nelson. On the 9th these were attacked by Confederates in ambush, and a battle ensued, which lasted about an hour and a half, when the insurgents fled, leaving thirty of their number dead on the field. Nelson lost six killed and twenty-four wounded. He did not pursue, as he had no cavalry. Williams fled to the mountains at Pound Gap, carrying with him a large number of cattle and other spoils. Nelson joined Sill (who had fought his way) at Pikeville, where he said to his troops: "In a campaign of twenty days you have driven the rebels from Eastern Kentucky, and given repose to that portion of the States."

Pilgrim Fathers. The following are the names of the forty-one persons who signed the constitution of government on board the *Mayflower*, and are known as the Pilgrim Fathers: John Carver, William Bradford, Edward Winslow, William Brewster, Isaac Allerton, Miles Standish, John Alden, Samuel Fuller, Christopher Martin, William Mullins, William White, Richard Warren, John Howland, Stephen Hopkins, Edward Tilley, John Tilley, Francis Cook, Thomas Rogers, Thomas Tinker, John Ridgedale, Edward Fuller, John Turner, Francis Eaton, James Chilton, John Crackston, John Billington, Moses Fletcher, John Goodman, Degory Priest, Thomas Williams, Gilbert Winslow, Edward Margeson, Peter Brown, Richard Britteridge, George Soule, Richard Clarke, Richard Gardiner, John Allerton, Thomas English, Edward Doty, Edward Lister. Each subscriber placed opposite his name the number of his family. Edward Winslow buried his young wife in the spring of 1621. William White was also one of the victims of the fever that desolated the colony. Winslow, the young widower, married the young widow. This was the second nuptial ceremony celebrated among the Pilgrims at New Plymouth, and the first white mother in New England became the second white bride. (See *Maiden Bride, The First, in New England*.)

Pilgrims' First Landing at Cape Cod. The *Mayflower* first anchored in Cape Cod Bay, just within the cape, on Nov. 21 (N. S.), in what is now the harbor of Provincetown, the only windward port for many a league where the vessel could have long safely laid. It was there that the constitution of the Plymouth colony (see *Pilgrim Fathers*) was signed by the adult male members of the company. Nearly all the company went ashore, glad to touch land after the long voyage. They first fell on their knees, and thanked God for the preservation of their lives. The waters were shallow, and they had waded ashore—the men to explore the country,

the women to wash their clothes after the long voyage. (See *Pilgrims, The*.)

Pilgrims Prepare for America. The non-conformist English refugees in Holland under the pastorate of Rev. Mr. Robinson, yearning for a secluded asylum from persecution under the English government, proposed to go to Virginia and settle there in a distinct body under the general government of that colony. They sent Robert Cushman (which see) and John Carver to Eng-

at Norwich, who, after many difficulties, made their way to Amsterdam in small companies in 1608, and at Leyden they formed a congregation with John Robinson as pastor; and there, with their families, they were happy. At length they heard of "beautiful Virginia," and longed to enjoy the freedom of the forest; so they formed a plan for emigrating to America. The Dutch offered them a seat in the region of the newly discovered Mauritius or Hudson's River, but they

HANDWRITING OF THE PILGRIMS. (See p. 1095.)

land in 1617 to treat with the London Company, and to ascertain whether the king would grant them liberty of conscience in that distant country. The company were anxious to have these people settle in Virginia, and offered them ample privileges, but the king would not promise not to molest them. These agents returned to Leyden. The discouraged refugees sent other agents to England in February, 1619, and finally made an arrangement with the company and with London merchants and others for their settlement in Virginia, and they at once prepared for the memorable voyage in the *Mayflower* in 1620. Several of the congregation at Leyden sold their estates and made a common bank, which, with the aid of their London partners, enabled them to purchase the *Speedwell*, a ship of sixty tons, and to hire in England the *Mayflower*, a ship of one hundred and eighty tons, for the intended voyage. They left Leyden for England in the *Speedwell* (July, 1620), and in August sailed from Southampton, but on account of the leakiness of the ship, were twice compelled to return to port. Dismissing this unseaworthy vessel, 101 of the number who came from Leyden sailed in the *Mayflower*, Sept. 6 (O. S.). These were the "Pilgrim Fathers," so called (which see).

Pilgrims, THE. Persecution of the Puritans in England during the earlier years of the reign of King James I. caused large numbers of them to seek refuge in Holland, the asylum for the oppressed. (See *Puritans*.) Among these refugees were the members of a dissenting church

were loyal to England, notwithstanding its government oppressed them, so they declined, as they wished to settle on "English land." They sent two agents to England to ask permission of the Plymouth Company to settle within their domain, and to get a guarantee from the king that they should not be molested in their new home. The company readily gave their permission, but the king would not give them a written promise—only his word—which could not be trusted. A stock company was formed by London merchants and others, by the terms of which the services of such of the "Pilgrims," as they called themselves, as could not furnish money, should be considered as the equivalent of cash. The shares were \$50 each. All profits were to be reserved for seven years, at the end of which time the lands, houses, and every product of their joint industry were to be valued, and an equal portion to be divided among the shareholders. Captain Smith, the founder of Virginia, offered to accompany them, but his aristocratic notions were a bar to their acceptance of him. It was agreed that only a portion of the congregation—"the youngest and strongest"—should first go to America, under the spiritual guidance of Elder William Brewster, then a little more than fifty years of age. The larger portion were to remain in Holland with Mr. Robinson, and emigrate the next year. Two small vessels—*Speedwell* and *Mayflower*—were employed (the former purchased, the latter hired) for the voyage, and in the summer of 1620 a portion of the Leyden

congregation embarked at Delft Haven for England. On the 6th of August the two ships sailed for America. The *Speedwell*, springing a leak, returned; and being reported unseaworthy, she was left behind, while the *Mayflower*, a stanch vessel of one hundred and eighty tons, proceed-

the youngest of the Pilgrims, being only twenty-one years of age; John Allerton, and Dr. Edward Fuller. After a voyage of sixty-three days, the *Mayflower* arrived off Cape Cod; but as they intended to land farther south, they proceeded in that direction, but were turned back by shoals

ed on her voyage (Sept. 6) with forty-one men and their families, making in all one hundred and one souls. Among the most prominent of these "Pilgrim Fathers" were William Brewster and his numerous family, William Bradford, John Carver, a deacon in the church at Leyden, young Ed-

THE MAYFLOWER.

ward Winslow and his bride, the richest couple of the flock; Miles Standish, a fiery little soldier, and his wife Rose; John Alden, a cooper, and

(Nantucket?), and entered Cape Cod Bay, where they anchored. Some of those who embarked from England had intimated that they would be governed by no law when ashore, when the following agreement was drawn up on the lid of Elder Brewster's chest (see *Brewster, William*), and every man (forty-one in all) was required to sign it: "In the name of God, Amen. We whose names are hereunder written, the loyal subjects of our dread sovereign lord, King James, by the grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith, etc., having undertaken for the glory of God and advancement of the Christian Faith, and honor of our King and Country, a voyage to plant the first colony in the northern parts of Virginia, do by these presents solemnly and mutually, in the presence of God and of one another, covenant and combine ourselves together into a civil body politic for our better ordering and preservation and furtherance of the ends aforesaid; and by virtue hereof to enact, constitute, and frame such just and equal laws, ordinances, acts, constitution, and offices, from time to time, as shall be thought most meet and convenient for the general good of the colony, unto which we promise all due submission and obedience. In witness whereof we have hereunto subscribed our names, at Cape Cod, the 11th of November [O. S.], in the year of the reign of our

sovereign lord, King James, of England, France, and Ireland, the eighteenth, and of Scotland the fifty-fourth, Anno Domini 1620." Thus was signed on the lid of Elder Brewster's chest the first constitution of government, to which the signatures of a whole people were attached. (See *Pilgrim Fathers*.) More than a month passed after this act before the Pilgrims landed. Some of them explored the coast for a good place to plant a settlement. The weather became biting cold, and snow fell to a great depth. The savages were shy and some were hostile. At length all of the people of the *Mayflower* landed upon a rock in a snug harbor (Dec. 22 [N. S.], 1620). Just before landing, the wife of William White gave birth to a boy, who was named Peregrine. This was the first European child born in New England, if we except Snorre. (See *Northmen in America*.) In the midst of snow they built log cabins, but before spring flowers appeared nearly one half of the emigrants were in the grave. (See *Massachusetts*.) John Carver was chosen governor, and the remnant of the Pilgrims persevered, under great deprivations and perils, in their efforts to establish a permanent colony.

Pillow, GIDEON JOHNSON, was born in Williams County, Tenn., June 8, 1806; died at his residence at the mouth of the St. Francis River, Ark., Oct. 8, 1878. He graduated at the University of Nashville, studied law, and rose to the first rank in his profession. At the head of a brigade of Tennessee volunteers he joined General Scott at Vera Cruz in 1847, and performed gallant service throughout the war against Mexico. Scott made serious charges against him, but a court of inquiry acquitted him and left his fame untarnished. Pillow entered heartily into the great insurrection against the government in 1861, but his military career was cut short early in 1862 by his conduct at Fort Donelson (which see).

Pinckney, CHARLES, LL.D., was born in Charleston, S. C., in 1758; died there, Oct. 29, 1824. He was made prisoner at the capture of Charleston (1780), and sent to St. Augustine. (See *Gadsden, Christopher*.) He was a member of Congress from 1784 to 1787, and was a member of the convention that framed the national Constitution in the latter year. He was governor of South Carolina (1789-92, 1796-98, and 1806-8); United States Senator from 1798 to 1801, and minister to Spain from 1802 to 1803, when he negotiated a release from that power of all claims to the territory purchased by the United States from France. (See *Louisiana*.) In Congress, from 1819 to 1821, he was an opponent of the Missouri Compromise (which see).

Pinckney, CHARLES COTESWORTH, LL.D., was born in Charleston, S. C., Feb. 25, 1746; died there, Aug. 16, 1825. He was educated in England; read law in London; passed nine months in a military academy in France, and returning in 1769 began the practice of law. He was a member of the first Provincial Congress of South Carolina, and was made colonel of a regiment. After the defence of Fort Sullivan (which see), he joined the army in the North, and was aid to

Washington in the battles of Brandywine and Germantown. He was engaged in the unsuccessful expedition into Florida in 1778, and the

CHARLES COTESWORTH PINCKNEY.

next year presided over the State Senate of South Carolina. On the surrender of Charleston (May, 1780), he was made a prisoner, and suffered cruel treatment until exchanged early in 1782. He was made brigadier-general in November, 1783, and in 1787 was a member of the convention that framed the national Constitution. In July, 1796, he was appointed minister-plenipotentiary to the French republic, but the French Directory, failing to bribe him into a compliance with their demands, ordered him to leave the country, when he withdrew to Amsterdam in February, 1797. General Washington created him a major-general on his return home, and in 1800 he was a candidate for the vice-presidency of the United States.

Pinckney, THOMAS, Governor of South Carolina (1787-89), was born in Charleston, S. C., Oct.

THOMAS PINCKNEY.

23, 1750; died there Nov. 2, 1828. He was educated in England, and was admitted to the bar

in 1770. He joined the army in 1775; became a major and aid to General Lincoln, and afterwards to Count d'Estaing in the siege of Savannah (which see). He was distinguished in the battle at Stono River, and was aid to General Gates in the battle near Camden (see *Sanders's Creek, Battle of*), where he was wounded and made prisoner. In 1792 he was sent as minister to Great Britain, and in 1794 to Spain, where he negotiated the treaty of St. Ildefonso (see *Treaties*), which secured to the United States the free navigation of the Mississippi River. In 1799 he was a member of Congress, and in March, 1812, President Madison appointed him commander of the Sixth Military District. His last military service was under General Jackson at the last decisive battle with the Creeks at Horseshoe Bend (which see). General Pinckney married a daughter of Rebecca Motte (which see).

Pine, ROBERT EDGE, painter of portraits, was born in England in 1742; died in Philadelphia, October, 1788. He had gained considerable reputation in England before he came to America at the close of the Revolution. In Philadelphia he exhibited the first cast of the Venus de' Medici ever seen in America. Mr. Pine was befriended by Francis Hopkinson, and painted from life, at Mount Vernon, a portrait of Washington. He also painted portraits of other worthies of the period of the Revolution.

Pine Bluff, BATTLE AT. Fifty miles below Little Rock, on the south side of the Arkansas River, is Pine Bluff, the capital of Jefferson County. In October, 1863, it was occupied by Colonel Powell Clayton, with about 350 men and four guns. Marmaduke attempted to capture it with over 2000 men and twelve guns. He advanced upon the post in three columns. Clayton had just been reinforced by Indiana cavalry, making the number of his fighting-men about 600. About 200 negroes had built barricades of cotton-bales in the streets. The attack was made (October 25) by Marmaduke, and was kept up for about five hours. The Confederates were repulsed with a loss of 183 men killed, wounded, and prisoners; the Nationals lost 57, of whom 17 were killed. The town was badly shattered, and the court-house and many dwellings were laid in ashes.

Pinkney, WILLIAM, LL.D., was born at Annapolis, Md., March 17, 1764; died Feb. 25, 1822. His father, an Englishman, was a loyalist in the Revolution, but the son espoused its principles. He studied law with Judge Chase, and was admitted to practice in 1786, in which profession he soon acquired great reputation for his impassioned oratory. He was a delegate in the Maryland convention that ratified the national Constitution. After serving a term in the Maryland Legislature, he was married to a sister of Commodore Rodgers (1789), and the next year was elected to a seat in Congress, but declined the honor on account of the state of his private affairs. In 1796 he was appointed one of the commissioners in London under Jay's treaty, and obtained for the State of Maryland a claim on the Bank of England for \$300,000. Pinkney

was made attorney-general of his state in 1805, and the next year he was sent to England as minister-extraordinary to treat with the British government in conjunction with Monroe. He

WILLIAM PINKNEY.

was resident minister there from 1807 to 1811, and in the autumn of the latter year he was chosen to his State Senate from Baltimore. From December, 1811, until 1814, he was United States Attorney-general. In the latter year he entered the military service to repel a British invasion of his state, and was severely wounded in the battle of Bladensburg. Again in Congress (1815-16), he took a leading part. In 1816 he went to Naples as special minister there, and became resident minister at St. Petersburg, whence he returned home in 1818. From 1820 until his death he held a seat in the United States Senate. In that body he opposed with all his powers of oratory the admission of Missouri into the Union under the terms of the Compromise. (See *Missouri Compromise*.) His death was occasioned by over-exertion in a case in the Supreme Court of the United States.

Pins, AMERICAN. Our country was supplied with pins by England until the War of 1812-15, when the interruption of commerce caused a great rise in all imported articles. Pins sold for \$1 a paper. Their manufacture was first attempted here by two Englishmen in the State Prison at New York, but the effort, renewed in 1820 at the Bellevue Hospital, New York, was unsuccessful. Wellman Wright, an American, procured a patent in England for a machine for making solid-headed pins, and the first of these ever manufactured were introduced into London in 1833. An invention of a machine for making pins, by John I. Howe, was put into operation in New York in 1836. The Howe Manufacturing Company removed to Birmingham, Conn., in 1838, and there, in 1840, made solid-headed pins by a process invented by Mr. Howe. Earlier than this, Samuel Slocum invented a machine

for making solid-headed pins, and with Mr. Gillson established a manufactory in Poughkeepsie, N. Y., in 1838. He invented a pin-sticking machine in 1840, which was never patented, and is used secretly in the factory at Poughkeepsie carried on by Messrs. Pelton. Great improvements have since been made. In 1870 there were nearly forty establishments for the manufacture of pins in the United States, the annual product of which amounted to about \$1,000,000.

Pinzon, AMBITION OF. Martin Alonzo Pinzon, who accompanied Columbus on his first voyage across the Atlantic, was led by his ambition to attempt to deprive that navigator of the honor of his great discovery. He commanded the *Pinta*, one of the three vessels of the squadron of Columbus. When he heard of the wreck of the vessel in which Columbus sailed, on the northern shores of Cuba (see *Columbus, Christopher*), instead of going to his relief, he kidnapped some natives of the West India Islands and sailed for Spain. Columbus, having lost all confidence in the honor of Pinzon, immediately followed him in the *Nina*. He saw the *Pinta*, but the two vessels soon parted company. Terrible storms swept over the Atlantic; and when the *Pinta* reached the port of Bayonne, Pinzon, believing the *Nina* had gone to the bottom of the sea, sent a letter to the Spanish monarchs recounting his adventures and discoveries, hoping thereby to gain honors and rewards. Meanwhile the *Nina* had reached the mouth of the Tagus, and Columbus sent a courier to the court of Spain to announce his great discoveries. Then he put to sea, and soon afterwards entered the port of Palos, where he was received with delight. The same evening the *Pinta* entered that harbor, and when Pinzon saw the flag of the *Nina* his heart failed him. He was in expectation of being greeted with great honors by the citizens and his sovereigns. He hastened into seclusion, filled with mortification and fear. Then came a letter from the monarchs, in answer to his, filled with reproaches for attempting to defraud the admiral of his just fame, and forbidding Pinzon to appear at court. The blow was fatal. Pinzon died of mortified pride and ambition a few days after reading the royal epistle.

Pinzon, VINCENT YAÑEZ, who commanded the *Nina* in the first voyage of Columbus (1492), in 1499 led an expedition composed of four caravels, which sailed from Palos in December, and first saw the continent of South America at Cape Augustine, Brazil. There he took possession of the country in the name of the crown of Castile. Sailing northward, he explored the coasts of Brazil, and discovered and named the River Amazon. He lost two or three of his ships on the homeward voyage. Martin Alonzo Pinzon, who commanded the *Pinta*, one of the ships of Columbus in his first voyage to America, was a brother of Vincent Yañez.

Pioneer Bishop in North America. John Talbot, who was chaplain of the British ship *Centurion* in 1673, visited Virginia, where he had lived ten years before. He soon afterwards left

the service of the admiralty and became a missionary among the Indians, sometimes traveling five hundred miles on horseback to attend to their spiritual wants. Satisfied that the Church of England needed a bishop in America, he frequently spoke of it. In 1704 he was made rector of St. Mary's Church, New Brunswick, N. J. The next year the clergy of New York, New Jersey, and Pennsylvania petitioned for a bishop, and Talbot was persuaded to carry the petition to London himself. He was favored by Queen Anne in his efforts to have the prayer of the petition granted, but failed to obtain the appointment of a suffragan, and he resolved to ask for consecration for himself by nonjuring bishops. This was done by two bishops in 1722, and in 1724 he returned to America and assumed episcopal authority. The governor of Pennsylvania (Keith) complained of him to the Lords of the Privy Seal, and he was summoned to England. He did not go. Bishop Talbot died at Burlington, Nov. 30, 1727, having exercised the episcopal office with fidelity for three years, as the pioneer bishop of North America.

Piqua, COUNCIL AT (1751). Late in 1750 the Ohio Land Company (which see) sent Christopher Gist, a dweller near the Yadkin, to explore the Ohio region as far as the falls (Louisville). He arrived at the Scioto valley early in 1751, and was kindly received by the great sachem of the Miami Confederacy, rivals of the Six Nations, with whom they were at peace. Agents of Pennsylvania and Virginia were there, come to make a treaty of friendship and alliance; and there, also, were white traders. The council was held at Piqua, far up the Scioto valley. It was a town of four hundred families, the largest in the Ohio region. On Feb. 21 the treaty was concluded, and just as it was signed some Ottawas came with presents from the governor of Canada. They were admitted to the council, and expressed a desire for a renewal of friendship with the French. A sachem arose, and, setting up the colors of the English and the French, denounced the latter as enemies of the Miamis. Having delivered his speech, he strode out of the council, when an Ottawa chief, the envoy of the French, wept and howled, pretending great sorrow for the Miamis. After one or two more speeches by braves in favor of the English, the great war-chief of the Miamis, in the presence of the Ottawa ambassadors, spoke as if to the French, saying, "Fathers, you have desired we should go home to you; but I tell you it is not our home, for we have made a path to the sun-rising, and have been taken by the hand by our brothers, the English, the Six Nations, the Delawares, the Shawnoese, and the Wyandots; and, we assure you, in that road we shall go. And as you threaten us with war in the spring, we tell you, if you are angry we are ready to receive you, and resolve to die here before we will go to you. That you may know this is our mind, we send you this string of black wampum. Brothers, the Ottawas, you hear what I say. Tell that to your fathers, the French; for that is our mind, and we speak it

from our hearts." The colors of the French were taken down and their ambassadors were dismissed. On March 1 Gist took his leave, bearing this message to the English beyond the Alleghenies: "Our friendship shall stand like the loftiest mountain." In the spring the French and Indians from Sandusky struck the Miamis a stunning blow. Piqua was destroyed, and the great chief of the Miami confederacy was taken captive, sacrificed, and eaten by the savage allies of the French.

Piracy, NEW ACT CONCERNING (1820). Privateersmen cruising under the Spanish-American flags degenerated into downright pirates. In 1819 Commodore Perry had been sent to the West Indies in the frigate *John Adams* to cruise against the pirates who swarmed there; but before he had accomplished much he was smitten by yellow-fever, and died (Aug. 23, 1819) just as his ship was entering the port of Trinidad. Two other small vessels were sent to cruise against them. Many convictions and executions for piracy had taken place; but as there had been many escapes through loop-holes in the law, the act on that subject was revised and strengthened. In one of the sections of the new act the name of piracy and the punishment of death were extended to the detention or transportation of any free negro or mulatto in any vessel as a slave.

Pirate, or Patriot, of the Thousand Islands. THE. William (commonly known as "Bill") Johnston had been an American spy on the Canada frontier during the War of 1812-15. He was

WILLIAM JOHNSTON.

living at Clayton, N. Y., on the bank of the St. Lawrence, when the "patriot" war in Canada broke out in 1837. (See *Canadian Rebellion*.) Being a bold and adventurous man, and cordially hating the British, Johnston was easily persuaded by the American sympathizers in the movement to join in the strife. The leaders regarded him as a valuable assistant, for he was thoroughly

acquainted with the whole region of the Thousand Islands, in the St. Lawrence, from Kingston to Ogdensburg. He was employed to capture the steamboat *Robert Peel*, that carried passengers and the mail between Prescott and Toronto, and also to seize the *Great Britain*, another steamer, for the use of the "patriots." With a desperate band, Johnston rushed on board of the *Peel* at Wells's Island, not far below Clayton, on the night of May 29, 1838. They were armed with muskets and bayonets and painted like Indians, and appeared with a shout, "Remember the *Caroline*!"—a vessel which some persons from Canada had cut loose at Schlosser (on Niagara River), set on fire, and sent blazing over Niagara Falls. The passengers and baggage of the *Peel* were put on shore and the vessel was burned, because her captors could not manage her. Governor Marcy, of New York, declared Johnston an outlaw, and offered a reward of \$500 for his person. The Governor of Canada (Earl of Durham) offered \$5000 for the conviction of any person concerned in the "infamous outrage." Johnston, in a proclamation issued from "Fort Watson," declared himself the leader of the band; that his companions were nearly all Englishmen; and that his headquarters were on an island within the jurisdiction of the United States. Fort Watson was a myth. It was wherever Johnston was seated among the Thousand Islands, where for a long time he was concealed, going from one island to another to avoid arrest. His daughter, a handsome maiden of eighteen years, who was an expert rower, went to his retreat at night with food. At length he was arrested, tried at Syracuse on a charge of violating the neutrality laws, and acquitted. Again arrested and put in jail, he managed to escape, when a reward of \$200 was offered for him. He gave himself up at Albany, was tried, convicted, and sentenced to one year's imprisonment in the jail there, and to pay a fine of \$250. His faithful daughter, who had acquired the title of "The Heroine of the Thousand Islands," hastened to Albany and shared the prison with her father. He procured a key that would unlock his prison-door. His daughter

departed and waited for him at Rome. He left the jail, walked forty miles the first night, and soon joined her. They went home, and Johnston was not molested afterwards. The "patriots" urged him to engage in the struggle again. He had had enough of it. They sent him the commission of commodore, dated at "Windsor, U. C., Sept. 5, 1839," and signed "H. S. Hand, Commander-in-chief of the Northwestern Army, on Patriot Service in Upper

JOHNSTON'S COMMISSION.

Canada." On that commission was the device seen in the engraving—the American eagle carrying off the British lion. The maple-leaf is an emblem of Canada. But he refused to serve, and remained quietly at home. President Pierce appointed him light-house keeper on Rock Island, in the St. Lawrence, in sight of the place where the *Peel* was burned. There the writer saw him in 1858. He was a man of medium height, a native of Canada, and was then seventy-eight years of age.

Pirates in Chesapeake Bay. On June 28, 1861, the steamer *St. Nicholas*, Captain Kirwan, that plied between Baltimore and Point Lookout, at the mouth of the Potomac River, left the former place with forty or fifty passengers, including about twenty who passed for mechanics. There were a few women among them—one who professed to be a young Frenchwoman. When, on the following morning, the steamer was near Point Lookout, the Frenchwoman was suddenly transformed into a stout young man, and the twenty mechanics into well-armed Marylanders, who demanded the surrender of the *St. Nicholas*. Kirwan had no means for resistance, and yielded. The other passengers were landed on the Virginia shore, and the captain and crew kept as prisoners. Then one hundred and fifty armed accomplices of the pirates went on board the steamer, which was destined for the Confederate navy. She cruised down the Chesapeake, captured three brigs, and, with her prizes, went up the Rappahannock River to Fredericksburg, where the pirates sold their plunder, divided the prize-money, and were entertained at a public dinner by the citizens. There the young Marylander produced much merriment by appearing in the costume of a Frenchwoman. His name was Thomas—a son of a citizen of St. Mary's County, Md. A few days afterwards some of Kenly's Baltimore police were on the steamer *Mary Washington*, going home from a post on the Chesapeake. On board were Captain Kirwan and his crew; also Thomas and his associates, evidently intending to repeat their operation on the *Mary Washington*. The captain was directed to land at Fort McHenry. When the pirates perceived the destination of the vessel young Thomas remonstrated. Finally he drew his revolver, and, calling his fellow-pirates around him, he threatened to throw the officers overboard and seize the vessel. The pirates were overcome by numbers. General Banks sent a squad of men on board to seize Thomas and his confederates. The former was found concealed in a drawer in the ladies' cabin of the boat. He was drawn out, and, with his accomplices, lodged in Fort McHenry.

Pirates Suppressed. For a long time merchants and ship-masters suffered from the depredations of pirates on the southern coasts of what are now the United States and in the West Indies. (See *Buccaners*.) In 1718 King George I. ordered a naval force to suppress them. At the same time he issued a proclamation promising pardon to all pirates who should surren-

der themselves in the space of twelve months. Captain Woods Rogers, with a few vessels, took the Island of New Providence, the chief rendezvous of the pirates, in the name of the crown of England. All the pirates, excepting about ninety who escaped in a sloop, took advantage of the king's proclamation. Rogers was made governor of the island. He built forts, and had a military establishment. From that time the West Indies were fairly protected from the pirates. They yet infested the coast of the Carolinas. About thirty of them took possession of the mouth of the Cape Fear River. Governor Johnson determined to extirpate them. He sent out an armed vessel under the command of William Rhett, who captured a piratical sloop with its commander and about thirty men, and took them to Charleston. Johnson soon afterwards embarked in person, and sailed after and captured another armed sloop. All the pirates excepting two were killed during the desperate fight that occurred, and those two were hanged. Those first taken into Charleston were also hanged, excepting one man. Altogether, forty-two pirates were executed at Charleston; and so the waters of the coast were relieved of these desperate men.

Pitcairn, JOHN, a British officer, was killed at the battle of Bunker's Hill, June 17, 1775. He was a native of Scotland, and was made major in the British army in 1771. Leading troops to seize stores at Concord, he engaged in the opening skirmish of the war for independence at Lexington (which see). He was shot dead on entering the redoubt on Bunker's (Breed's) Hill.

Pitt and the American Colonies. William Pitt, the ablest statesman in England at the middle of the last century, when he became the first minister of the realm, saw, with enlightened vision, the justice and the policy of treating the American colonies with generosity and confidence. This treatment gained their affections, and, under the guidance of Pitt, they gave such generous support to the government in the war with the French and Indians that the conquest of Canada was achieved, and the French dominion in America was destroyed. At the same time Halifax, with the sanction of the spiritless and undiscerning George II., was urging schemes of taxation which irritated the colonists and alienated their regard. The project of an American Stamp Act was pressed (1757), which Pitt disdained to favor in the day of the distress of the colonists. He was thwarted in his efforts to be just to all, and, through the efforts of the Duke of Cumberland, Pitt and Temple were both driven from office in April, 1757, leaving the government in a state of anarchy in the hands of incompetent and very unscrupulous men. The immense energies of the British government were paralyzed by a haughty aristocracy. Affairs in America were in a wretched condition. The laziness and stupidity of Lord Loudoun was leading to ruin by his inefficiency and his zeal in overawing colonial assemblies. In this strait the confused aristocracy turned to Pitt, the great commoner of England (then

suffering from gout, out of office, and physically feeble but morally strong), as the only man who could save the nation from ruin. Like a giant, he directed the affairs of the nation—in England, on the Continent, and in America—with so much wisdom that in two short years that country was placed at the head of nationalities in power and glory. So to the people the aristocracy were compelled to look for salvation.

Pitt as Earl of Chatham. When Pitt accepted a peerage as Earl of Chatham, and abandoned the House of Commons, the theatre of his great exploits in statesmanship, he lost caste in the estimation of the people, and the terror of his name in continental Europe vanished. When Frederick the Great heard of it, he said, "My friend has harmed himself by accepting a peerage." The King of Poland remarked, "It argues a senselessness to glory to forfeit the name of Pitt to any title." He was everywhere known as "The Great Commoner of England." His health was too much shattered to lead the Commons any longer, and he probably felt willing to secure dignity and a competence in his old age. He descended from the pedestal of a greater dignity to the level of an English earl, a title *per se* that conferred no real special honor. "He no longer represented the enthusiastic nationality of the British people."

Pitt on the Stamp Act. William Pitt, tortured with the gout, had been for some time withdrawn from public affairs. In January, 1766, he appeared in his place in the House of Commons, and declared that "the king had no right to levy a tax on the colonies," and said they had invariably, by their representatives in their several assemblies, exercised the constitutional right of giving and granting their own money. "They would have been slaves," he said, "if they had not. . . . The colonies acknowledge your authority in all things, with the sole exception that you shall not take their money out of their pockets without their consent." This avowal of the great commoner made a profound impression on the House. Grenville arose to vindicate the Stamp Act, and, looking steadily at Pitt, he said, with great emphasis: "The seditious spirit of the colonies owes its birth to factions in this House. Gentlemen are careless of the consequences of what they say, provided it answers the purpose of opposition!" This challenge brought Pitt to his feet, and he declared that he would fight him (Grenville) on every foot of the field of combat. He made a powerful speech against the Stamp Act, to which the new ministry were compelled to give heed. Franklin was summoned to the bar of the House to testify. He gave reasons why the Stamp Act could not be enforced in America, and a bill for its repeal was carried (March 18, 1766) by a large majority; and the non-importation leagues in America were dissolved.

Pitt, WILLIAM, the "Great Commoner" of England, exercised great influence in American affairs for about twenty years. Born at Westminster, Nov. 15, 1708; died May 11, 1778. Educated at Oxford and Eton, he entered Parlia-

ment in 1735, where he was the most formidable opponent of Robert Walpole. In 1744 the famous Duchess of Marlborough bequeathed him \$50,000 "for having defended the laws of his

WILLIAM PITT. (From an English print.)

country and endeavoring to save it from ruin." Afterwards Sir William Pynsent left him the whole of his fortune. He held the office of Vice-treasurer of Ireland (1746), and soon afterwards was made paymaster of the army and one of the Privy Council. In 1755 he was dismissed from office, but in 1757 was made Secretary of State, and soon infused his own energy into every part of the public service, placing England in the front rank of nations. By his energy in pressing the war in America (see *French and Indian War*) he added Canada to the British empire. In 1761 he retired from office and received a pension of \$15,000 a year, and all through the progress of the disputes between Great Britain and its American colonies he advocated a conciliatory and righteous policy towards the Americans. In 1766 he was called to the head of affairs again; was created Earl of Chatham; but quitted office forever in 1768. In the House of Lords he opposed coercive measures towards the Americans, in speeches remarkable for their vigor and eloquence. He was opposed to the political independence of the Americans, for he deprecated a dismemberment of the empire, and, while opposing a motion to that effect, in an earnest speech in the House of Lords (April, 1778), he swooned, and was carried to his home so much exhausted that he never rallied. He had risen from a sick-bed to take his place in Parliament on that occasion, and the excitement overcame him. His funeral was a public one, at the national expense, and he was buried in Westminster Abbey, and a handsome marble monument was erected to his memory.

Pitt, WILLIAM (the younger), ON THE WAR. On hearing of the disastrous victory won at Guilford Court-house (March 15, 1781), young

Pitt, then only twenty-one years of age, denounced, in the House of Commons, the war against the Americans as a "most accursed" one, "wicked, barbarous, cruel, and unnatural. Conceived in injustice," he said, "its footsteps are marked with slaughter and devastation, while it meditates destruction to the miserable people who are the devoted objects of the resentments which produced it." His sentiments were shared by other statesmen, and were widely echoed among the people. There was plain talk in Parliament. Charles James Fox said: "America is lost, irretrievably lost, to the country." He had moved (June 12) to recommend ministers to conclude a peace with the Americans. "We can lose nothing," he said, "by a vote declaring them independent."

Pitt's Compliment to Franklin. In January, 1775, the Earl of Chatham (William Pitt) introduced Dr. Franklin on the floor of the House of Lords, when the former made an eloquent plea for justice towards the Americans. This was in support of a measure which he proposed. Lord Sandwich, speaking for the majority in the House of Lords, grew very petulant. He declared that the measure ought to be instantly rejected. "I can never believe it to be the production of a British peer," he said. "It appears to me rather the work of some American;" and, turning his face towards Franklin, who stood leaning on the bar, "I fancy," he continued, "I have in my eye the person who drew it up, one of the bitterest and most mischievous enemies this country ever had." The eyes of the peers were turned on Franklin, when Chatham retorted: "The plan is entirely my own; but if I were the first minister, and had the care of settling this momentous business, I should not be ashamed of publicly calling to my assistance a person so perfectly acquainted with the whole of American affairs, one whom all Europe ranks with our Boyles and Newtons, as an honor, not to the English nation only, but to human nature."

Pitt's Statue at Charleston. In token of their gratitude to the Earl of Chatham for his successful efforts in procuring a repeal of the Stamp Act (which see), in 1766, the Americans ordered two statues of their friend to be erected, one in New York and the other in Charleston. The Legislature of South Carolina (like that of New York) caused a statue of marble to be erected at the intersection of Broad and Meeting streets, Charleston. During the siege of that city in 1780, a cannon-ball from the British besiegers broke off one of the arms. Regarding the mutilated statue as an obstruction in the streets, it was removed many years afterwards. Dragging it from its pedestal with ropes, its head was broken off when it fell. The fragments were stored away until the Orphan-house in Charleston was built, when the commissioners had the statue restored, as far as possible, excepting the dissevered arm, and placed it upon a pedestal in front of their building, where it stood as late as 1876. Judge Grimke, of Charleston, had preserved the origi-

nal marble tablet, bearing the inscription, as follows: "In grateful memory of his services to his country in general and to America in particular, the Commons House of Assembly of South

PITT'S STATUE AT CHARLESTON.

Carolina unanimously voted this statue of the Right Hon. WILLIAM PITT, Esq., who gloriously exerted himself in defending the freedom of Americans, the true sons of England, by promoting a repeal of the Stamp Act, in the year 1776. Time shall sooner destroy this mark of their esteem than erase from their minds the just sense of his patriotic virtue."

Pizarro, FRANCISCO, was a native of Estremadura, Spain; born about the year 1471; died at Lima, Peru, June 26, 1541. Low-born, he received little care from his parents, and was a swineherd in his earlier years. He went with Ojeda (which see) from Santo Domingo to Central America in 1510, and assisted Vasco de Balboa Nuñez (which see) in establishing the settlement at Darien. Trafficking with the natives on the Isthmus of Panama, in 1515, he settled near the city of Panama founded there, and engaged in the cultivation of land by Indian slaves. With a priest and another illiterate adventurer named Almagro, he explored the southern coast, in 1524, with one hundred followers in one vessel and seventy in another, under the last-named person. Their explorations were fruitless, except in information of Peru, the land of gold. He went as far as the borders of that

land, plundered the people, carried some of them away, and took them to Spain in the summer of 1528. His creditors imprisoned him at Seville, but the king ordered his release and received him at court with distinction. From the monarch (Charles V.) he received a commission to conquer Peru, with the title of governor or captain-general of the province when he had subdued it. With four of his brothers he crossed the Atlantic early in 1530. The following year he left Panama with one hundred and eighty men and twenty-seven horses, on an expedition against Peru, leaving Almagro behind to procure provisions and reinforcements. After a voyage of about fourteen days, he landed on the shores of a bay in 1° north latitude, and plundered a town on the borders of the empire of the Incas, which was then distracted by civil war. There he was reinforced by one hundred and thirty men, and marched to meet Atahualpa, who had contended with his brother for the kingdom, and had just made the latter a prisoner. With one hundred and seventy-seven men Pizarro went with pretended friendship to the successful Inca, in September, 1532, and treacherously made him prisoner. The Inca's army fled in dismay. Atahualpa offered for his own ransom to fill the room he was in with gold. The precious metals and golden ornaments of the temples, worth, when melted down, more than \$17,000,000, were laid at Pizarro's feet, when the treacherous Spaniard caused his royal captive to be murdered (Aug. 29, 1533). Marching to Cuzco, in November, Pizarro proclaimed the half-brother of the dead Inca, Manco Capac, his successor, and then founded a new capital nearer the coast, now Lima. The new Inca escaped, rebelled, slaughtered many Spaniards, and laid siege to Lima, which they soon raised. A dispute between Pizarro and Almagro led to open warfare. Almagro was defeated and slain in 1538. The empire of the Incas lay prostrate at the feet of the Spaniards, with Pizarro as ruler. The latter married a daughter of Atahualpa. The son of Almagro, continuing the war begun by his father, led a faction to attack the Spanish ruler in his palace, and the latter was slain. Pizarro never learned to read or write. He was cunning, treacherous, and cruel, his chief merits being courage and fortitude.

Plague in New England. About four years before the landing of "the Pilgrims" a devastating plague had destroyed a greater portion of the barbarians of that region where they founded New Plymouth. Indeed, they were informed by a friendly Indian that, for a long distance along the coast and far back into the forest, not "a man, woman, or child remained." So it was that in taking possession of the land the "Pilgrims" did not displace any people to make room for the English. English navigators had made known in England the effects of this plague before King James gave a charter to the Plymouth Company (Nov. 3, 1620). And he gave, in the charter itself, as a reason for granting it, that the country had been desolated "so that there is not left, for many leagues together on the main,

any that doe claime or challenge any kind of interest therein."

Plan of the Advance against Richmond (1864). Lieutenant-general Grant arrived at the headquarters of the Army of the Potomac, at Culpepper Court-house, March 23, 1864; and before the close of the month he and Meade had formed a plan for the grand advance of the Army of the Potomac and its auxiliaries. The main army was to make an overland march from the Rapid Anna to the James, with auxiliary forces menacing the communications with Richmond. General Butler was to advance from Fortress Monroe with about 30,000 troops, and form an intrenched camp near the mouth of the Appomattox River, to attack Richmond or join the Army of the Potomac, as circumstances might require. General Franz Sigel, then protecting West Virginia, was to form his army into two columns, one of them, 10,000 strong, under General Crook, to operate against the Virginia and East Tennessee Railway; the other, 7000 strong, led by Sigel, to go up the Shenandoah valley and menace Lee's westward lines of supply. Lee's army was then occupying a line nearly twenty miles long on each side of Orange Court-house, its left covered by the Rapid Anna, and its right by strong works on Mine Run (which see). Volunteering was now rapidly increasing, and the governors of Ohio, Illinois, Indiana, Iowa, and Wisconsin tendered to the President (April 21, 1864) 100,000 men for one hundred days, without requiring any bounty to be paid or the services charged or credited to any draft. This patriotic offer was accepted. On the evening of the 3d of May the army of the Potomac was ready to advance, and at midnight began its march.

Plantations, CONTEMPT FOR THE. On the accession of James II. that monarch declared, without the formality of law, the charter of Massachusetts to be void, and appointed Joseph Dudley president of the country from Rhode Island to Nova Scotia. The people of England, misinformed by their rulers, approved the measure, and the tone of society there was one of contempt for the plantations. The poet Dryden, who was then a supple servant of the crown, in a dramatic prologue, wrote as follows:

"Since faction ebbs, and rogues go out of fashion,
Their penny scribes take care to inform the nation
How well men thrive in this or that Plantation.

"How Pennsylvania's air agrees with Quakers,
And Carolina's with Associates;
Both e'en too good for madmen and for traitors.

"Truth is, our land with saints is so run o'er,
And every age produces such a store,
That now there's need of two New Englands more."

Planter, THE. Robert Small was an intelligent slave, and pilot of the little steamer *Planter*, in Charleston harbor. Small and eight of his dusky companions, on the evening of May 11, 1863, after the white officers of the vessel had gone ashore to spend the night, went out of the harbor with the *Planter*, bearing the families of Small and the engineer on board. She did not reach Fort Sumter until daylight, when a proper signal was given, and she passed on un-

suspected. When out of the range of Confederate batteries, Small raised a white flag and went out to Dupont's blockading squadron, where he gave up the vessel to the captain of the *Augusta*. She was sent to the *Wabash*, the flag-ship, where Small gave Commodore Dupont valuable information, who sent the colored families to Hilton Head and took the pilot and the other colored men into the National service.

Plattsburg, BATTLES AT, ON LAND AND WATER (1814). When General Izard marched from Champlain for Sackett's Harbor, with 4000 men (August, 1814), he left 1500 soldiers there, under the command of General Alexander Macomb. During the spring and summer of that year both parties had been busy in the preparation of war-vessels for Lake Champlain, and the command of the American squadron there was held by Captain Thomas Macdonough. Released from duty in Europe by the downfall of Napoleon, a number of Wellington's troops had arrived in Canada. There were about 15,000 British troops

(chiefly these veterans) at Montreal at the close of August, and Sir George Prevost, Governor of Canada and general-in-chief of the forces there, proceeded to invade New York. Izard had made a requisition for militia and light dragoons, and at the beginning of September Macomb found himself at the head of about 3500 men. These he gathered at Plattsburg, to repel an expected invasion. Prevost advanced from the St. Lawrence with about 14,000 men, assisted by General De Rottenburg as his second, and at the same time the British flotilla, under Captain Pringle, came out of the Sorel River, the outlet of Lake Champlain. Prevost announced his intention to seize and hold northern New York as far down as Ticonderoga, and he called upon the inhabitants to cast off their allegiance and furnish him with supplies.

In the meantime Macomb, with untiring energy, prepared for a defence of the threatened region. He had completed redoubts and block-houses at Plattsburg, to prevent the invaders crossing the Saranac River. The militia were under the command of General Benjamin Mooers. He had been very active in gathering them, and when Prevost advanced he was at the head of about 5000 men. Prevost arrived at Champlain on Sept. 3, and two days afterwards pushed to a point within eight miles of Plattsburg. At the same time Macomb divided his troops into detachments, to

complete fortifications already begun. Detachments were sent northward, to watch the movements of the British. On the 6th Prevost moved upon Plattsburg with his whole force, in two columns, the right crossing on to the Beekmantown road. Informed of this, Macomb sent the gallant Major John E. Wool (who volunteered for the purpose), with some regulars, to support the militia under Mooers, who was out in that direction, and to oppose the advance of the foe. His force was 280 strong. At Beekmantown he encountered Prevost's advanced guard. The militia broke, and fled towards Plattsburg, but the regulars stood firm. He fought the invaders, inch by inch, all the way to Plattsburg. His and other detachments were pushed back by the overwhelming force of the British, and retired to the south side of the Saranac, tearing up the bridges behind them, and using the timbers for breastworks. The invaders tried to force a passage across the stream, but were repulsed by a small company of volunteers in a

OLD STONE MILL.

stone mill near the site of the lower bridge, who fired sharp volleys of musketry upon them from that strong citadel. Prevost now perceived that he had serious work before him, and employed the time from the 7th to the 11th in bringing up his batteries and supply-trains, and constructing works to command those of the Americans on the south side of the Saranac. Meanwhile the naval force, under the command of Commodore Downie, had approached Cumberland Head. His flag-ship was the *Confiance*, 38 guns, and with it were one brig, two sloops-of-war, and twelve gunboats. Macdonough's squadron lay in Platte-

burg Bay, and consisted of the *Saratoga*, 26 guns (his flag-ship), with one brig, two schooners, and ten gunboats, or galleys. The British came around Cumberland Head, with a fair wind, on the morning of the 11th, and at the same time the British land-forces were moving for a combined attack upon the Americans by land and water. Macdonough had skilfully prepared his vessels for action, and when all was in readiness he knelt on the deck of the *Saratoga*, and offered up a fervent prayer to God, imploring divine aid. His officers were around him, and very soon after he arose the guns of both squadrons opened, and a sharp naval action began. A shot from one of the British vessels demolished a hen-coop on the deck of the *Saratoga*, in which was a young game-cock. The released fowl, startled by the noise of cannons, flew upon a gun-slide, and, flapping his wings, crowed lust-

British commodore (Downie) was killed, and his remains were buried at Plattsburg. The Americans lost 110 men; the British loss was over 200 men. While this naval battle was raging, there was a sharp conflict on the land. The British troops had attempted to force their way across the Saranac at two places, but after a short and desperate struggle they were repulsed by the gallant regulars and militia led by Maccomb and Mooers. Some of the British had crossed the stream near the site of the upper bridge, and the Americans were driving them back, when tidings came that the British fleet had just surrendered. The Americans gave three hearty cheers. The British took them as indications of good news for their antagonists, and their line wavered. Soon Prevost was notified of the disaster on the water, and, naturally timid in the presence of danger, saw with alarm

THEATRE OF NAVAL ENGAGEMENT, PLATTSBURG BAY. (Adirondack Mountains in the distance.)

ily and defiantly. The sailors cheered, and the incident was regarded by them as ominous of victory. Their courage was strengthened. The *Confiance* and *Saratoga* fought desperately. A broadside from the former had a terrible effect upon the latter. Forty of the *Saratoga's* people were disabled. This stunning blow was felt only for a moment. The battle became general, and lasted about two hours and twenty minutes. The vessels were all terribly shattered. "There was not a mast in either squadron," wrote Macdonough, "that could stand to make sail on." One of the officers of the *Confiance* wrote: "Our masts, yards, and sails were so shattered that one looked like so many bundles of matches and the other like so many bundles of rags." The contest was witnessed by hundreds of spectators on the headlands of the Vermont shore. It ended with victory for the Americans. The

the rapid gathering of the neighboring militia, who menaced his flanks and rear. At twilight (Sept. 11, 1814) he ceased fighting, and prepared for flight back to Canada. At midnight, something having given him greater alarm, he retreated in such haste that he left his sick and wounded and a vast amount of stores behind. Light troops, militia, and volunteers started in pursuit, but a heavy fall of rain compelled them to give it up. Prevost halted and encamped at Champlain, and on the 24th he left the United States territory, and returned to Montreal with the main army. The loss of Prevost, after he crossed the international boundary, in killed, wounded, missing, and deserters, did not fall much short of 2000. The loss of the Americans on the land was less than 150. The whole country rang with the praises of Maccomb and Macdonough, the chief leaders in the battles at Platts-

burg. In almost every village and city in the land there were bonfires and illuminations. Governor Tompkins presented Macomb with a sword in the name of the people of the State of New York, and Dewitt Clinton, Mayor of New York, presented him, in the name of the corporation, with the freedom of the city. (See *Freedom of a City*.) Congress gave him the thanks of the nation, and voted him a gold medal. The

which the fugitives and their pursuers were advancing General Dwight formed his brigade, and on his left was another brigade, commanded by Colonel Lewis Benedict. Another was held in reserve. Their ranks were opened to receive the flying columns, which passed through to the rear, the Confederates close upon their heels. In strong force they assailed Emory's troops. A severe battle ensued, which lasted an hour and

MACOMB'S MEDAL.

State of New York gave Macdonough two thousand acres of land. The State of Vermont purchased two hundred acres on Cumberland Head, and presented them to him, the house upon it overlooking the scene of his gallant exploits. "Thus," said Macdonough to a friend, while tears filled his eyes, "from a poor lieutenant I became a rich man." Congress gave him the thanks of the nation and a gold medal.

a half, the Confederates making the most desperate efforts to turn the National left, firmly held by Benedict. The assailants were repulsed, and very soon the battle ceased on that part of the field. Everywhere else the Confederates were thrown back, with great slaughter. Then the Nationals retired to Pleasant Hill, fifteen miles distant (see *Red River Expedition*), followed by the Confederates.

MACDONOUGH'S MEDAL.

Pleasant Grove, BATTLE AT. At Pleasant Grove, three miles from Sabine Cross-roads (which see), General Emory, advancing with his fine corps, had halted at six o'clock (April 8, 1864), when the Nationals, defeated at the Cross-roads, were retreating. Across the road along

Pleasant Hill, BATTLE AT. When it was discovered that the Confederates were following the Nationals in strong force after the battle at Pleasant Grove (which see), Banks formed a battle-line at Pleasant Hill, fifteen miles east of the latter place, with Emory's division in the

front, the right occupied by Dwight's brigade, another, under General Millan, in the centre, and a third, under Colonel Benedict, on the left. A New York battery was planted on a commanding hill. The army trains, guarded by Lee's cavalry, a brigade of colored troops, and Ransom's shattered columns, were sent some distance on the road towards Grand Ecore. Towards noon (April 9, 1863), the Confederate advance appeared, and between five and six o'clock a furious battle began. The assailants fell heavily on Emory's left, held by Benedict's brigade, with crushing force, and pushed it back. At the first onset, and while trying to rally his men to charge, Benedict was slain by a bullet which passed through his head. While the left was giving way, and the Confederates had captured four guns, Emory's right stood firm until enveloped on three sides by a superior force, when it fell back a little. Then the tide was changed by a heavy countercharge by Smith's veterans, under General Mower. The right of the Confederates was driven more than a mile by this charge. Then the whole of Smith's reserves were ordered up, when the Confederates were routed and pursued until dark. General Banks reported his losses in the battles of the 7th, 8th, and 9th of April at 3969, of whom 289 were killed and 2150 missing, most of the latter taken prisoners. The Nationals had also lost, thus far, 20 pieces of artillery, 160 wagons, and 1200 horses and mules. They had captured 2300 prisoners, 25 cannons (chiefly by the fleet), and 3000 bales of cotton. The Confederate losses were never reported. (See *Red River Expedition*.)

Pleasanton, ALFRED, was born in Washington, D. C., in January 1824, and graduated at West Point in 1844, entering the dragoons. He served in the war against Mexico, and afterwards in California, New Mexico, and Texas. For several years he was assistant adjutant-general and adjutant-general to General Harney, and in the fall of 1861 was acting colonel of the Second Cavalry. He was made brigadier-general of volunteers in July, 1862, and took command of Stoneman's cavalry brigade, leading the van when McClellan crossed the Potomac, in October. Pleasanton was in the battles at Fredericksburg, Chancellorsville, and Gettysburg, and was afterwards efficient in driving Price out of Missouri, in 1864. He resigned in 1868. In March, 1865, he was breveted major-general United States Army for "meritorious services during the rebellion." He was afterwards engaged in mining, and was United States Collector.

Pledge Signed by Patriots. Two days after the affairs at Lexington and Concord, the people of New York city held a convention, under the guidance of the Sons of Liberty, at which they formed a patriotic association, and adopted a pledge, copies of which were sent to every county in the province for signatures. The object was to winnow out the Tories—to ascertain who, in every community, was an adherent to the American cause, and who was not. Committees were appointed in each county, town,

and precinct, to visit the inhabitants, and obtain the signatures of persons willing to sign and the names of persons who should refuse to sign. A thorough canvass of the province was thus made. The following is a copy of the pledge: "Persuaded that the salvation of the rights and liberties of America depend, under God, on the firm union of its inhabitants in a vigorous prosecution of the measures necessary for its safety, and convinced of the necessity of preventing the anarchy and confusion which attend a dissolution of the powers of government, we, the freemen, freeholders, and inhabitants of —, being greatly alarmed at the avowed design of the ministry to raise a revenue in America, and shocked by the bloody scenes now acting in Massachusetts Bay, do, in the most solemn manner, resolve never to become slaves, and do associate, under all the ties of religion, honor, and love to our country, to adopt, and endeavor to carry into execution, whatsoever measures may be recommended by the Continental Congress or resolved upon by our Provincial Convention for the purpose of preserving our Constitution and of opposing the several arbitrary acts of the British Parliament, until a reconciliation between Great Britain and America, on constitutional principles (which we most solemnly desire), can be obtained; and that we will in all things follow the advice of our General Committee respecting the purposes aforesaid, the preservation of peace and good order, and the safety of individuals and property."

Plot against Washington. Toryism was more rampant in the city of New York in the summer of 1776 than anywhere else on the continent. The Provincial Congress was timid, and Tryon, the royal governor, was active in fomenting disaffection from his marine retreat. Washington made his summer headquarters in New York at Richmond Hill, at the intersection of Charlton and Varick streets, and Tryon, on board the *Duchess of Gordon*, formed a plot for the uprising of the Tories in the city and in the lower valley of the Hudson to cut off all communication with the mainland, to fire the magazines, to murder Washington, his staff-officers, and other leaders of the American army, or to seize them and send them to England for trial on a charge of treason, and to make prisoners of the great body of the troops. The ramifications of the plot were extensive, and a large number of persons were employed. The mayor of New York (Mathews) was implicated in it, and even the Life-guard of Washington was tampered with. An Irishman named Hickey, of that guard, was employed to poison Washington. He tried to make the housekeeper at headquarters—the faithful daughter of France, the famous innkeeper—his accomplice. She feigned compliance. Hickey knew that Washington was fond of green pease, and he made an arrangement for her to have poison in a mess of them served at the table of the commander-in-chief. The maiden gave warning to Washington. Hickey put arsenic in the pease. She conveyed them to Washington, who declined to

take any, but caused the immediate arrest of the faithless Life-guardisman, and he was hanged. The horrible plot was revealed, and traced to Tryon as its author.

Plough Patent, or LIGONIA. In 1630 a patent was granted by the Plymouth Company of rights and soil to a region in (present) Maine, forty miles square, between Cape Porpoise and Casco, called Ligonía. Several husbandmen agreed to emigrate to it, and formed an agricultural colony. They came over in a vessel of sixty tons, called the *Plough*, in compliment to them. The idea of agriculture there was treated with so much contempt by other adventurers, who engaged in fishing and trade, that the patent itself was called, in ridicule, the "Plough Patent." After a brief experiment the settlement was abandoned. (See *Ligonía, Province of*.)

Ploughs. Thomas Jefferson appears to have been the first American who made experiments to solve the problem of the true form of the mould-board of the plough, then the great want. He communicated his theory to the French Institute, and in 1793 he put it into practice on his own farm in Virginia. His mould-board was about the same in form as the most approved of our day. In 1797 Charles Newbold, of Burlington, N. J., obtained a patent for a cast-iron plough. Others made improvements, the best of which was by Jethro Wood, of Scipio, N. Y., patented in 1810 and 1819. One of the most useful is the "sub-soil plough," of comparatively recent introduction. Ploughs moved by steam have been used on the Western prairies. E. C. Bellinger, of South Carolina, obtained a patent for one in 1833. Improvements in this have been made. The great want, yet unsatisfied, is a traction engine or locomotive. The business of manufacturing ploughs in the United States has greatly increased within twenty-five years. The number of ploughs made in this country in 1870 was about 865,000.

Plymouth (N. C.), CAPTURE OF. About 7000 Confederates, under General R. F. Hoke, attacked Plymouth, at the mouth of the Roanoke River, April 17, 1864. The post was fortified, and garrisoned by 2400 men, under General H. W. Wessells. Hoke was assisted by the powerful "ram" *Albemarle*. The town was closely besieged. A gunboat that went to the assistance of the garrison was soon disabled and captured. On April 20 the Confederates made a general assault, and the town and Fort Williams were compelled to surrender. There were 1600 men surrendered, with 25 cannons, 2000 small-arms, and valuable stores.

Plymouth Company. The domain in America assigned to this company extended from lat. 41° to 45° north. (See *London Company*.) Members of this company were in the field of adventure before it was organized. Adventurers from England had been on the coast of New England, but had failed to plant a permanent settlement. (See *New England*.) The principal members of the company were Sir John Popham (then Chief-justice of England, who had, with scandalous

injustice, condemned Raleigh to die on the scaffold), his brother George Popham, Sir Ferdinando Gorges, Sir John and Raleigh Gilbert (sons of Sir Humphrey Gilbert, who perished in the *Squirrel*) (see *Gilbert, Sir Humphrey*), William Parker, and Thomas Hanham. In 1606 Justice Popham sent a vessel at his own cost, commanded by Henry Challons, to make further discoveries of the North Virginia region. Challons and his crew of about thirty persons were captured by the Spaniards, and the vessel was confiscated. Soon after the departure of Challons, Thomas Hanham, afterwards one of the company, sailed in a small vessel for America, accompanied by Martin Pring (see *New England*), to discover a good place for a settlement; and his report was so favorable, so confirmatory of Gosnold's statements (see *Gosnold, Bartholomew*), that the above-named gentlemen and others formed an association called the Plymouth Company, and received a charter from King James late in that year. (See *London Company*.) In the spring of 1607 they sent three small vessels to the domain with one hundred emigrants, and George Popham as governor of the colony. They landed, late in August, at a rather sterile place near the mouth of the Kennebec, Me., now known as Parker's Island, where, after a sermon had been delivered, and the patent and other laws read, they dug a well, built a stone house, a few log-huts, and a stockade, which they called Fort St. George. They experienced the bitter fruit of Weymouth's kidnapping in the hostility of the natives, who refused to furnish them with maize or other food. The season was too far advanced to raise food for the colony, so, on the 5th of December (1607), two of the ships returned to England, leaving forty-five persons, with sufficient stores, Popham being president of the colony, and Raleigh Gilbert admiral. During the severe winter their storehouse was burned by accident. The next spring a vessel arrived at Fort St. George with supplies, and with the sad intelligence of the death of Chief-justice Popham and Sir John Gilbert, two of the most influential members of the Plymouth Company. Discouraged and disheartened by the severity of the winter, during which their houses were almost covered with snow, their losses by disease, and the death of their governor, Henry Popham, the colonists forsook their new abode and returned to England. For a few years the operations of the company were confined to fishing voyages and a little traffic with the natives. Their prospects brightened by the first successful voyage of Captain Smith, but were again darkened by subsequent misfortunes. (See *New England*.) The company had indignantly dismissed Hunt from their service on hearing of his conduct, and when they found Squanto had escaped from Spain and made his way to England, they sought him out, loaded him with presents, and sent him to New England with Captain Dermer (see *Dermer, Thomas*) to pacify the natives. But they were still too indignant to listen, and they attacked and dangerously wounded Dermer and several of his party. The company now abandoned all thoughts of

establishing colonies in New England at that time, and looked forward to receiving large profits by the fisheries and by traffic. The London Company had by its second charter obtained new territory. The Plymouth Company desired to secure greater privileges by a distinct and separate grant, by which they might have the monopoly of the fisheries on the New England coast. The London Company and private traders warmly opposed them, for they wished to keep these fisheries free; but they obtained a charter from the king, Nov. 3, 1620, known as the "Great Patent," and the popular name of the association was changed to "The Council of Plymouth." By the new charter all North America, from lat. 40° to 48° north, excepting places possessed by "any Christian prince or people," was granted in full property, with exclusive rights of jurisdiction, settlement, and traffic, to forty wealthy and influential persons, incorporated as "The Council established at Plymouth, in the County of Devon, for the Planting, Ruling, Ordering, and Governing of New England, in America." The line between the London and Plymouth colonies was nearly coincident with that between the late slave-labor and free-labor states. But that powerful organization was not permitted to make the first permanent English settlement within its domain; it was done by a handful of feeble liberty-loving people fleeing from persecution in England. (See *Plymouth, New*.) The pretences of the council to an exclusive right of fishing on the New England coast was denounced in the House of Commons (1621) soon after the granting of the charter as a "grievance," and a committee reported that the charter was vitiated by the clause in it which forfeited the ships of intruders without the sanction of Parliament. That body had not met for seven years, and were strongly tinctured with the idea that the people had "divine rights" as well as the king, and acted accordingly. Sir Ferdinando Gorges appeared before it in defence of the charter. So also was the king there to defend his prerogative if it should be assailed. Sir Edwin Sandys, the wise statesman and friend of Virginia (see *Sandys, Sir Edwin*), opposed Gorges. Sir Edward Coke, a member of Parliament and of the Privy Council (who had been Lord Chief-justice of England), also opposed the monopolists; and then began his famous contest with King James which resulted in a notable exhibition of wrath and despotism on the part of the sovereign. Sandys pleaded for freedom in fishing and in general commerce, which was then the staple source of wealth for England. "America is not annexed to the realm, nor within the jurisdiction of Parliament," said George Calvert, a supporter of the monopoly. "You therefore have no right to interfere." (See *Calvert, George*.) "We make laws for Virginia," retorted another member; "a bill passed by the Commons and the Lords, if it receive the king's assent, will control the patent." Coke argued (referring to many statutes of the realm) that, as the charter was granted without regard to pre-existing rights, it was necessarily void. This attack upon his prerogative stirred the anger of

the monarch, who was sitting near the Speaker's chair, and he blurted out some silly words about the "divine right of kings," when the Commons, in defiance of his wrath, passed a bill giving freedom to commerce in spite of the charter. Before the bill had passed through the form of legislation the king dissolved the Parliament, and forbade by proclamation any vessel to approach the shores of New England without the special consent of the Council of Plymouth. He also caused the imprisonment of Coke, Pym, and other leaders of the Commons, after adjournment, for their alleged factious behavior. The next Parliament proceeded to perfect what the former one had begun. Under the king's proclamation, the Council sent out Francis West as admiral of New England, to impose a tribute upon fishing-vessels on the northeast coast; but the final decision of Parliament took away his occupation, and virtually destroyed the power of the Council. Many of the parties withdrew their interests in the company, and those who remained, like Gorges, did little more than issue grants of domain in the northeastern parts of America. (See *Gorges, Sir Ferdinando*.) After the accession of Charles I. (1625) there was much restiveness concerning the monopoly, even in its weakened state, and the merchants prayed for a revocation of the charter. The Commons, growing more and more democratic, regarded it as a royal instrument; churchmen looked upon it as a foe to prelacy, because Puritans were sheltered on its domain; and Charles, as bigoted a believer in the doctrine of the "divine right of kings" as his father, suspected the New England colonists were enjoying liberties inconsistent with the royal prerogative. The company prepared for its dissolution by dividing North Virginia into twelve royal provinces, assigning each to persons named, and at their last meeting (April, 1635) they caused to be entered upon their minutes the following record: "We have been bereaved of friends; oppressed by losses, expenses, and troubles; assailed before the Privy Council again and again with groundless charges; weakened by the French and other foes without and within the realm; and what remains is only a breathless carcass. We therefore now resign the patent to the king, first reserving all grants by us made and all vested rights—a patent we have holden about fifteen years."

Plymouth Declaration of Rights. In 1636 the Plymouth Colony adopted a body of laws called "The General Fundamentals." The first article declared "That no act, imposition, law, or ordinance be made or imposed upon us at present or to come but such as shall be enacted by the consent of the body of freemen or associates, or their representatives legally assembled; which is according to the free liberties of the freeborn people of England." The second article read: "And for the well governing of this colony, it is also ordered that there be free elections annually of governor, deputy-governor, and assistants by the vote of the freemen of this corporation." These and other fundamentals are dated 1636, and were revised in 1671. The

style of enactment is: "We, the associates of the colony of New Plimouth, coming hither as freeborn subjects of the kingdom of England, endowed with all and singular the privileges belonging to each, being assembled, do enact," etc. The seal adopted by the Plymouth Colony is represented on p. 990, and is called the "Old Colony" seal, because Plymouth Colony was established before Massachusetts Bay Colony.

Plymouth New, was founded by "pilgrims" from Holland in 1620. (See *Pilgrims*.) Their first care on landing from the *Mayflower* was to build a rude fort and plant five cannons upon it which they had brought with them. Then they "fell to building houses." Distributed into nineteen families, they all worked diligently until nearly all were prostrated by sickness. There were no delicacies for the sick and very little wholesome food. The sailors of the *Mayflower* had unkindly refused to let the passengers have a variety by sharing their own coarse food with them. At times that winter the huts at New Plymouth were half buried in snow-drifts. The pilgrims trembled in fear of the surrounding savages, but felt comforted by the voice of one of them as he went through the new village, crying "Welcome, Englishmen! Welcome, Englishmen!" It was Samoset, who had learned a few English words from English sailors at Mohegan. He afterwards brought to New Plymouth Squanto, whom Hunt kidnapped. Squanto had returned, and through him an acquaintance and friendship were formed with Massasoit. The town lay on a slope; and when, six years after the arrival of the *Mayflower*, it was visited by Dutch commissioners (see *Dutch, The, at New Plymouth*), the houses were built of hewn timber, and the whole village was surrounded by a palisade of timbers driven into the ground and pointed at the top, a mile in circuit, and at the end of the streets were three gates made of strong beams. In the centre of the village was the governor's house, before which was a square enclosure bearing four mounted swivels. Upon an eminence was a square house, with a flat roof, made of thick sawed planks, stayed with oak beams, upon which were mounted six 5-pounder cannons. The lower part of this building was used for a church, where worshippers were seen with loaded muskets.

Plymouth Rock. The passengers on the *Mayflower*, on account of great privations and exposure in their winter-houses at New Plymouth, sickened, and a large number of them died before the warm spring weather of 1621 arrived. They were buried near the rock on which the great body of the "Pilgrims" landed. Lest the Indians who might come there should see their weakness by the great mortality, the graves were seeded over, and the rock remained the enduring monument and guide. Thomas Faunce, who died in 1746, aged ninety-nine years, was a ruling elder in the first church at New Plymouth, and knew some of the *Mayflower's* passengers, who showed him the rock on which they landed. On hearing that it was about to be covered by the erection of a wharf, the ven-

erable man was so affected that he wept. His tears probably saved that rock from oblivion, a fragment of which is carefully preserved at New Plymouth. Before the Revolution the sea had washed up sand and buried the rock. This sand was removed, and in attempting to move the rock it split asunder. The upper half, or shell, was taken to the middle of the village. In 1834 it was removed from the town square to a position in front of Pilgrim Hall, where it was enclosed in an iron railing, lost all its historical interest, and was reduced to a vulgar stone. In Sept., 1880, the citizens wisely took the fragment back and reunited it to the other portion, when it resumed its original dignity and significance.

Pocahontas. When Captain John Smith was on trial before Powhatan, two of the emperor's daughters occupied seats near him, one on each side of the "throne." One of these was Maton, or Pocahontas, who subsequently made a conspicuous figure in Virginia history. When Smith was brought before Powhatan, the scene that ensued was impressive. There were at least two hundred warriors present. The emperor wore a mantle of raccoon skins and a head-dress of eagle's feathers. The room was a long house, or arbor, made of boughs. The warriors stood in rows on each side in their gayest attire, and back of them as many women, with their necks painted red, their heads covered with the white down of birds, and strings of white beads falling over their bosoms. The captive was received with a shout, when the "Queen of Appomattox" brought water for him to wash his hands, and another woman a bunch of feathers to dry them with. Then he was feasted, and afterwards a solemn council was held, by which he was doomed to die. Two large stones were brought before the emperor, when Smith was dragged to them, his arms were pinioned, and his head placed upon them. Pocahontas petitioned her father to spare the captive's life, but in vain. Huge clubs were raised by strong men to beat out his brains, when Pocahontas, the "king's dearest daughter," who, Smith says in his narrative, was "sixteen or eighteen years" old, sprang from her father's side, clasped the prisoner's head with her arms, and laid her own head upon his. Powhatan yielded to his daughter, and consented to spare Smith, who was released and sent with an Indian escort to Jamestown. The emperor and his people promised to be friends of the English. Two years after this event the Indians conspired to exterminate the white people. Again Pocahontas was an angel of deliverance to them. She heard of the plan, and on a dark and stormy night left her father's cabin, sped to Jamestown, informed Smith of the danger, and was back to her conch before the dawn. The English regarded the gentle Indian princess with great affection; and yet, when Smith had left the colony, and the Indians, offended, would help them to food no longer, that kind girl was ruthlessly torn from her kindred by a rude sea captain and kept a prisoner several months. (See *Argall, Samuel*.) That wicked act proved a blessing to the colony. While she was a captive mutual

love was engendered between Pocahontas and John Rolfe, a young Englishman of good family and education. He was a Christian, she was a pagan. "Is it not my duty," he said, "to lead the blind into light?" He labored for her enlightenment and conversion, and succeeded. The young princess was baptized at a font "hollowed out like a canoe" in the little chapel at Jamestown, whose columns were rough pine-trees; its rude pews were of "sweet-smelling cedar," and the rough communion-table and pulpit of black walnut. She received the Christian name of Rebecca—the first Christian convert in Virginia. Not long afterwards—on a charming day in April, 1613—Pocahontas, with her father's

POCAHONTAS.

consent, stood before the chancel of the chapel with Rolfe, a young widower, her affianced, and was married to him by the Rev. Mr. Whittaker, the rector. All the people of Jamestown were pleased spectators. The chapel was trimmed with evergreens, wild flowers, and scarlet-berried holly. Pocahontas was dressed in a simple tunic of white muslin from the looms of Dacca. Her arms were bare even to her shoulders, and hanging loosely to her feet was a robe of rich stuff presented by the governor, Sir Thomas Dale, fancifully embroidered by herself and her maidens. A gaudy fillet encircled her head, and held the plumage of birds and a veil of gauze, while her wrists and ankles were adorned with the simple jewelry of the native workshops. When the ceremony was ended, the eucharist was administered, with bread from the wheat-fields around Jamestown and wine from the grapes of the adjacent forest. Her brothers and sisters and forest maidens were present; also the governor and council, and five Englishwomen—all that were in the colony—who afterwards returned to England. Rolfe and his spouse "lived civilly and lovingly together" until Governor Dale returned to England (1616), when they and the Englishwomen in Virginia accompanied him. The "Lady Rebecca" received great attentions at court and from all below it. She was entertained by the Lord Bishop of London,

and at court she was treated with the respect due to the daughter of a monarch. The silly King James was angry because one of his subjects dared marry a *lady of royal blood*! And Captain Smith, for fear of displeasing the royal bigot, would not allow her to call him "father," as she desired to do, and her loving heart was grieved. The king, in his absurd dreams of the divinity of the royal prerogative, imagined Rolfe or his descendants might claim the crown of Virginia on behalf of his royal wife; and he asked the Privy Council if the husband had not committed treason! Pocahontas remained in England about a year; and when, with her husband and son, she was about to return to Virginia, with her father's chief councillor, she was seized with small-pox at Gravesend, and died in June, 1617. Her remains lie within the parish church-yard at Gravesend. Her son, Thomas Rolfe, afterwards became a distinguished man in Virginia, and his descendants are found among the most honorable citizens of that commonwealth.

Point Pleasant, BATTLE AT. Colonel Andrew Lewis led the left wing of the Virginia forces in Dunmore's War (which see) in the summer and autumn of 1774. He had about 1200 men, and, crossing the mountain-ranges, struck the Great Kanawha and followed it to the Ohio, and there encamped, Oct. 6. Expecting Dunmore with the right wing, he did not cast up intrenchments, and in this exposed situation was attacked (Oct. 10) by 1000 chosen warriors of the Western Confederacy, led by the giant chief Cornstalk, who came from Pickaway Plains, and Logan, the Mingo chief. So stealthily did the Indians approach that within an hour after they were discovered a bloody battle was raging. It continued several hours, the Indians slowly retreating from tree to tree, while Cornstalk encouraged them with the words "Be strong!" A desultory fire was kept up until sunset; and during the night the Indians retreated, having lost, in killed and wounded, about 150 men. The Virginians lost about one half their commissioned officers. Their entire loss was about 70 killed and a large number wounded.

Policy of France Avowed (1797). The consul-general of the United States in France complained of the condemnation of American vessels unjustly. Merlin, the French Minister of Justice, made a reply (1797), in which he openly avowed the intention to humble the Americans and compel Congress to conform to the wishes of France by depredations upon American commerce. "Let your government," wrote this minister of justice (who was also a speculator in privateers), "return to a sense of what is due to itself and its true friends, become just and grateful, and let it break the incomprehensible treaty which it has concluded with our most implacable enemies, and then the French Republic will cease to take advantage of this treaty, which favors England at its expense, and no appeals will then, I can assure you, be made to any tribunal against injustice." This insolent reply made sensible men of the opposition pause.

Policy of William III. towards the Colonies. Though the Revolution in England (1688) found its warmest friends among the Low Churchmen and Non-conformists there, who composed the English Whig party, the high ideas which William entertained of royal authority made him naturally coalesce with the Tories and the High-Church party. As to the government of the colonies, he seems not to have abated any of the pretensions set up by his predecessors. The colonial assemblies had hastened to enact in behalf of the people the Bill of Rights of the Convention Parliament. To these William gave frequent and decided negatives. The provincial acts for establishing the writ of *habeas corpus* were also vetoed by the king. He also continued the order of James II. prohibiting printing in the colonies. Even men of liberal tendencies, like Locke, Somers, and Chief-justice Holt, conceded prerogatives to the king in the colonies which they denied him at home. The most renowned jurists of the kingdom had not yet comprehended the true nature of the connective principle between the parent country and her colonies.

Political Aspect in 1813. The events of the war on land during 1812 had been discouraging, but these discouragements were lessened by the victories achieved on the ocean. There was much opposition to the war among the Federalists, especially in New England; but, on the whole, the administration was well sustained, especially in Congress. Madison had been re-elected in the autumn of 1812. According to a law passed in February (1813) before Madison's second inauguration, the new Congress (Thirteenth) assembled on May 24, when Henry Clay was chosen Speaker of the House of Representatives. In that body ardent young men like Cheves, Calhoun, Lowndes, Grundy, and Troup had become leaders. Quincy had declined a reelection, and was active in the Massachusetts Legislature; but the extreme Federalists were well represented by the venerable revolutionary patriots Timothy Pickering and Egbert Benson. In both Houses there was a strong administration working party, notwithstanding there had been decided gains for the Peace party in New England at the spring elections. In New York, where the Federalists were expecting a triumph, they had been defeated; and in New Jersey and Pennsylvania and all the Southern States, and their children in the valley of the Mississippi, were decided friends of the administration.

Political Organization in Massachusetts (1774). At the close of 1774, political power in Massachusetts was widely distributed, so that it was felt in every nerve of the body politic. There was a Provincial Congress having the general and supreme direction of public affairs. The efforts of this body were zealously seconded in every town by a Committee of Safety, vested with general executive powers, a Committee of Correspondence, and a Committee of Inspection. The duty of the latter was to look after and enforce the observance of the re-

quirements of the American Association (which see).

Political Parties in England (1765). In July a change of ministry occurred in England which gave hopes of justice to the American colonies. The old Whig aristocracy which had governed the kingdom since Queen Anne's reign had been split into factions, bitter and hostile, chiefly on account of personal considerations. The accession of George III. had given rise to a new party, headed by the Earl of Bute, who called themselves "The King's Friends," and which had driven Pitt from the office of premier. It was largely composed of political adventurers from among the Whigs, and also of representatives of the old Tory party. Their distinguishing doctrine was that the authority of the monarch had been usurped and encroached upon by the House of Commons, and they were regarded as hostile to popular rights. The new minister, the Marquis of Rockingham, who was a leader of the old Whig party, was liberally disposed; but, as yet, there hardly existed a popular party in England, in our American sense. The House of Commons represented a narrow aristocracy, a majority of the members being substantially nominated by the great landholders. They debated with closed doors, and to publish an account of their proceedings was a breach of privilege; therefore only brief sketches of the debates found their way to the public in print. There were then only faint signs of that great and beneficent social revolution which has since given complete publicity to the proceedings of all legislative bodies in America and Europe.

Political Proscription (1801). When Mr. Jefferson became President of the United States, he found that he was not his own master. He had been elected by a party whose leaders, like those of all parties, were lustful for office, and he was compelled to listen to their clamorous assertion that "to the victors belong the spoils" — an assertion of a doctrine first formulated in these words by Governor Marcy, of New York. He proceeded accordingly to fill the most important offices with his political friends, dismissing faithful men who had been appointed by Washington and Adams. Then was commenced that system of political proscription in appointments to office which has grown to alarming proportions, and has worked much mischief in the administration of our state and national governments.

Polk, JAMES KNOX, eleventh President of the United States, was born in Mecklenburg County, Tenn., Nov. 2, 1795; died at Nashville, Tenn., June 15, 1849. His ancestral name was Pollock, and he was of Scotch-Irish descent. He was graduated at the University of North Carolina in 1818, and admitted to the bar in 1820. Three years afterwards he was a member of the State Legislature of Tennessee, and was sent a delegate to Congress in 1825, where he was a conspicuous opponent of the administration of John Quincy Adams. He was Speaker of the House of Representatives from 1835 to 1837, and in 1839, having served fourteen years in Congress, he

declined a re-election. He was a candidate for the vice-presidency in 1840, but was defeated. In 1844 the Democratic National Convention at Baltimore nominated him for the presidency,

JAMES KNOX POLK.

chiefly because he was strongly in favor of the annexation of Texas (which see), a favorite measure of the Southern politicians. During his administration, the most important event was a war with Mexico (which see) from 1846 to 1848. The other chief events of his administration were the establishment of an independent treasury system, the enactment of a low tariff system, and the creation of the Department of the Interior. Three months after he retired from office, Mr. Polk was seized with illness and died in a few days.

Polk, JAMES K., NOMINATION OF, FOR PRESIDENT. In the spring of 1844 preparations were made for the presidential campaign of that year. Henry Clay was the favorite candidate for nomination by the Whigs, and a larger portion of the Democratic party seemed to prefer Martin Van Buren. Letters of inquiry concerning the annexation of Texas were addressed to both. Their replies showed that both were unfavorable to the immediate annexation of Texas. That was in April, 1844. The Democrats of the South determined to oppose Mr. Van Buren's nomination, and in the Democratic National Convention held at Baltimore May 27, 1844, in which all the states excepting South Carolina were represented, that opposition to Mr. Van Buren appeared formidable. On the first ballot, however, Van Buren received a majority of the votes, but the convention had adopted a rule requiring a vote of two thirds of the members present to nominate. Several ballottings ensued, and, finally, a bargain was made by which the delegates concentrated their votes on James K. Polk, of Tennessee, and he was nominated. The Whig Nominating Convention put forward the names of Henry Clay for President, and Theodore Frelinghuysen, of New Jersey, for Vice-President. George M. Dallas, of Pennsylvania, had been nominated for Vice-President with Mr. Polk, and both were elected in the fall of 1844.

Polk, LEONIDAS, was born at Raleigh, N. C.,

in 1806. He was graduated at the West Point Military Academy in 1827; ordained a clergyman in the Protestant Episcopal Church in America, and was chosen bishop of the diocese of Louisiana in 1841. In 1861 he joined the enemies of the Union, and became a major-general in the Confederate army, in which capacity he was distinguished for his zeal and activity. He first appeared conspicuous as a soldier in the occupation of Columbus, Ky., late in 1861. He commanded a division at the battle of Shiloh (April, 1862), and was in the great battle at Stone's River at the close of that year, when he was lieutenant-general. He led a corps at the battle of Chickamauga (September, 1863). For disobedience of orders in this battle he was relieved of command and placed under arrest. In the winter and spring of 1864 he was in temporary charge of the Department of the Mississippi. With Johnston when opposing Sherman's march on Atlanta, he was killed by a cannon-shot, in June, 1864, on Pine Knob, not many miles from Marietta, Ga. Lieutenant-colonel Freemantle, of the British army, who became acquainted with Polk while in the military service, says he

LEONIDAS POLK.

expressed the intention of resuming the prelacy at the close of the war. "He (Polk) is very rich," said Freemantle, "and, I am told, owns seven hundred negroes."

Polk's Cabinet Ministers. The Senate being in session at the time of his inauguration, President Polk sent in his nominations for cabinet-officers as follows: James Buchanan, of Pennsylvania, Secretary of State; Robert J. Walker, of Mississippi, Secretary of the Treasury; William L. Marcy, of New York, Secretary of War; George Bancroft, of Massachusetts, Secretary of the Navy; Cave Johnson, of Tennessee, Postmaster-general; and John Y. Mason, of Virginia, Attorney-general. With these constitutional advisers President Polk entered upon his important duties at a critical period in the foreign relations of the United States.

Pomeroy, SETH, was a captain in the provincial army of Massachusetts in 1744; and was at the capture of Louisburg in 1745. In 1775 he took command of Colonel Williams's regiment, after his death, in the battle of Lake George.

(See *Sacrament, Lake*.) In 1774-75 he was a delegate to the Provincial Congress, and was chosen a brigadier-general of militia in February, 1775, but fought as a private soldier at the battle of Bunker's (Breed's) Hill. On his appointment as senior brigadier of the Continental army, some difficulty arose about rank, when he resigned and retired to his farm; but when, late in 1776, New Jersey was invaded by the British, he again took the field, and at the head of militia marched to the Hudson River, at Peekskill, where he died in February, 1777.

Ponce de Leon, JUAN, was the discoverer of Florida. He was a distinguished Spanish cavalier in the wars with the Moors in Granada. Accompanying Columbus on his second voyage, Ponce was made commander of a portion of Santo Domingo, and in 1509 he conquered and was made governor of Porto Rico, where he amassed a large fortune. There he was told of a Fountain of Youth—a fountain whose waters would restore youth to the aged. It was situated in one of the Bahama Islands, surrounded by magnificent trees, and the air was laden with the delicious perfumes of flowers; the trees bearing golden fruit that was plucked by beautiful maidens, who presented it to strangers. It was the old story of the Garden of the Hesperides, and inclination, prompted by his credulity, made Ponce go in search of the miraculous fountain, for his hair was white and his face was wrinkled with age. Ponce de Leon sailed north from Porto Rico in March, 1513, and searched for the wonderful spring among the Bahama Islands, drinking and bathing in the waters of every fountain that fell in his way. But he experienced no change, saw no magnificent trees with golden fruit plucked by beautiful maidens, and, disappointed but not disheartened, he sailed towards the northwest until westerly winds came laden with the perfumes of sweet flowers. Then he landed, and in the imperial magnolia-trees, laden with fragrant blossoms, he thought he beheld the introduction to the paradise he was seeking. It was on the morning of Easter Sunday when Ponce de Leon landed on the site of the present St. Augustine, in Florida, and he took possession of the country in the name of the Spanish monarch. Because of its wealth of flowers, or because of the holy day when he first saw the land (*Pascua de Flores*), he gave the name of Florida to the great island (as he supposed) he had discovered. There he sought the Fountain of Youth in vain. Sailing along the coast southward, he discovered and named the *Tortugas* (Turtle) islands. At another group he found a single inhabitant—a wrinkled old Indian woman—not one of the beautiful maidens he expected to find. Abandoning the search himself, but leaving one of his vessels to continue it, he returned to Porto Rico a wiser and an older man, but bearing the honor of discovering an important portion of the continent of America. In 1514 Ponce returned to Spain and received permission from Ferdinand to colonize the "Island of Florida," and was appointed its governor; but he did not proceed to take possession until 1521, having in the meantime con-

ducted an unsuccessful expedition against the Caribs. On going to Florida with two ships and many followers, he met the determined hostilities of the natives, and after a sharp conflict he was driven back to his ships mortally wounded, and died soon afterwards in Cuba. Upon his tomb was placed this inscription: "IN THIS SEPULCHRE REST THE BONES OF A MAN WHO WAS LEON BY NAME AND STILL MORE BY NATURE."

Pontiac, an Ottawa chief, was born on the Ottawa River in 1720; died in Illinois in 1769. He became an early ally of the French. With a body of Ottawas he defended the French trading-post of Detroit against more northerly tribes, and it is supposed he led the Ottawas who assisted the French in defeating Braddock on the Monongahela. (See *Braddock's Defeat*.) In 1760, after the conquest of Canada, Major Rogers was sent to take possession of the Western posts. Pontiac feigned friendship for the English for a while, but in 1763 he was the leader in a conspiracy of many tribes to drive the English from the Ohio country back beyond the Alleghany Mountains. (See *Pontiac's War*.) The tribes made peace, but Pontiac remained hostile and endeavored to stir up the Indians on the Miami and other portions of Ohio and Michigan, and, in vain, asked the co-operation of the French at New Orleans. His followers deserted him, and in 1766 he submitted to the English and made his abode with the Illinois. Near Cahokia, on the Mississippi, a Peoria Indian, bribed by an English trader with a barrel of rum, killed Pontiac. He was an able sachem and warrior, and, like King Philip, was doubtless moved by patriotic impulses; for the mighty flow of emigration over the mountains threatened his race with displacement if not with destruction.

Pontiac's War. After the capture of Fort Duquesne, settlers from Pennsylvania, Maryland, and Virginia went over the mountains into the Ohio region in large numbers. They were not kindly disposed towards the Indians, and French traders fanned the embers of hostility between the races. The Delawares and Shawnoese, who had lately emigrated from Pennsylvania, and were on the banks of the Muskingum, Scioto, and Miami, nursed hatred of the English and stirred up the Western tribes against the white people. Pontiac, a sagacious chief of the Ottawas, took the lead in a wide-spread conspiracy, and organized a confederacy for the purpose of driving the English back beyond the Alleghanies. The confederacy was composed of the Ottawas, Miamis, Wyandots, Delawares, Shawnoese, Ontagamies, Chippewas, Potawatomes, Mississagans, Foxes, and Winnebagoes. These had been allies of the French. The Senecas, the most westerly of the Six Nations, joined the confederacy, but the other tribes of the Iroquois confederacy were kept quiet by Sir William Johnson. It was arranged for a simultaneous attack to be made along the whole frontier of Pennsylvania and Virginia. The conspiracy was unsuspected until it was ripe and the first blow had been struck, in June, 1763. English traders scattered through the frontier regions were plundered

and slain. At almost the same instant they attacked all of the English outposts taken from the French, and made themselves masters of nine of them, massacring or dispersing the garrisons. Forts Pitt, Niagara, and Detroit were saved. Colonel Bouquet saved Fort Pitt (now Pittsburgh); Niagara was not attacked, and Detroit, after a long siege by Pontiac in person, was relieved by Colonel Bradstreet in 1764. The Indians were speedily subdued, but Pontiac remained hostile until his death in 1769.

Pontiac's War, ORIGIN OF. The French had won the affection and respect of the Indian tribes with whom they came in contact, by their kindness, sociability, and religious influence; and when the English, formidable enemies of the red men, supplanted the French in the alleged possession of the vast domain acquired by the treaty of Paris (which see), expelled the Roman Catholic priests, and haughtily assumed to be absolute lords of the Indians' country, the latter were exasperated, and resolved to stand firmly in the way of English pretensions. "Since the French must go, no other nation should take their place." The conspiracy known as Pontiac's began with the lower nations. The Senecas, of the Six Nations, the Delawares and Shawnoese, had for some time urged the Northwestern Indians to take up arms against the English. They said: "The English mean to make slaves of us, by occupying so many posts in our country." The British had erected log forts here and there in the western wilderness. "We had better attempt something now to recover our liberty, than to wait till they are better established," said the nations, and their persuasions had begun to stir up the patriotism of the Northwestern barbarians, when an Abenake prophet from eastern New Jersey appeared among them. He was a chief, and had first satisfied his own people that the Great Spirit had given him wisdom to proclaim war against the new invaders. He said the great Maniton had appeared to him in a vision, saying, "I am the Lord of life; it is I who made all men; I wake for their safety. Therefore I give you warning, that if you suffer the Englishmen to dwell in your midst, their diseases and their poisons shall destroy you utterly, and you shall die." This chief preached a crusade against the English among the Western tribes, and so prepared the way for Pontiac to easily form his conspiracy. (See *Pontiac's War*.)

Poor, ENOCH, was born at Andover, Mass., in 1736; killed in a duel with a French officer near Hackensack, N. J., Sept. 8, 1780. He became a merchant in Exeter, N. H. After the affair at Lexington (April 19, 1775) he was appointed colonel by the Provincial Congress, and after the evacuation of Boston (which see) his regiment was ordered to join the troops in New York that invaded Canada. In February, 1777, he was appointed brigadier-general, and as such commanded troops in the campaign against Burgoyne, after whose surrender he joined the army under Washington in Pennsylvania. He was in the movements near Philadelphia late in the

year; spent the winter amid the snows of Valley Forge (1777-78), and in June, 1778, was engaged in the battle of Monmouth. He accompanied Sullivan on his expedition against the Indians in 1779 (which see). When the corps of light infantry was formed (August, 1780), Poor was placed in command of one of the two brigades. In announcing his death, Washington said he "was an officer of distinguished merit, who, as a citizen and a soldier, had every claim to the esteem of his country."

Poor Richard. A fictitious name assumed by Benjamin Franklin. In 1732 he began the publication in Philadelphia of an almanac, with the name of Richard Sanders as author. It continued twenty-five years. Sometimes the author called himself "Poor Richard," and the publication was generally known as *Poor Richard's Almanac*. It was distinguished for its numerous maxims on temperance, frugality, order, justice, cleanliness, chastity, and the like. It has been said that its precepts are "as valuable as any that have descended from Pythagoras."

Pope, JOHN, was born in Kentucky, March 16, 1823, and graduated at West Point in 1842, entering the corps of topographical engineers. He served under General Taylor in the war against Mexico. In 1849-50 he conducted explorations in Minnesota, and from 1854 to 1859 he was exploring the Rocky Mountains. In 1856 he was made captain, and in 1860, in an address at Cincinnati on "Fortifications," he boldly denounced the policy of President Buchanan, for which offence he was court-martialled, but the matter was dropped. Captain Pope was one of the officers who escorted Mr. Lincoln to Washington (February, 1861), and in May was made brigadier-general of volunteers and appointed to a command in Missouri, where he operated successfully until the capture of Island No. Ten (which see) in 1862. In March, 1862, he became major-general of volunteers, and, in April, he took command of a grand division of Halleck's army. Late in June he was summoned to Washington to take command of the Army of Virginia, where, for fifteen days from Aug. 18, he fought the Confederate army under Lee continuously; but finally, for want of adequate support, was compelled to take refuge behind the defences of Washington. At his own request, he was relieved of the command of the Army of Virginia and assigned to that of the Northwest. In March, 1865, he was breveted major-general in the United States Army for the capture of Island No. Ten.

Pope's Gift, THE. On the return of Columbus from his first voyage of discovery (see *Columbus, Christopher*), the Portuguese, who had previously explored the Azores and other Atlantic islands, instantly claimed a title to the newly discovered lands, to the exclusion of the Spaniards. Simultaneous with the order given to Columbus at Barcelona to return to Hispaniola (see *Santo Domingo*) an ambassador was sent to Rome to obtain the pope's sanction of their claims to the region discovered, and to make a conquest of the West Indies. The reigning pope

(see *Alexander VI., Pope*), who was a native of Spain, readily assented to the proposal, and, on the 3d of May, 1493, he issued a bull, in which the lofty pretensions of the Bishop of Rome to be the sole arbiter of the world were fully set forth, and a grant given to Ferdinand and Isabella of all the countries inhabited by "infidels" which they had discovered or should discover, extending the assignment to their heirs and successors, the kings and queens of Castile and Leon. (See *Ojeda, Alonso de.*) To prevent the interference of this grant with one previously given to the Portuguese, he directed that a line, supposed to be drawn from pole to pole, at the distance of one hundred leagues westward of the Azores, should serve as a boundary. All the countries to the east of this imaginary line, not in possession of a Christian prince, he gave to the Portuguese, and all westward of it to the Spaniards. On account of the dissatisfaction with the pope's partition, the line was fixed two hundred and seventy leagues farther west. Other nations of Europe subsequently paid no attention to the pope's gifts to Spain and Portugal, but planted colonies on the Western Continent without the leave of the sovereigns of Spain or the pope. A little more than a century afterwards the English Parliament insisted that occupancy confers a good title, by the law of nations and nature. This remains a law of nations. Portugal soon disregarded the pope's donation to Spain, and sent an expedition to North America in 1500. (See *Cortereal, Gaspar.*)

Popham Colony. Sir John Popham, chief-justice, and Sir Ferdinando Gorges, inspired by information given of New England by Indians carried to Old England by Weymouth (which see), sent out a colony of one hundred and twenty persons, in May, 1607, of whom Richard Seymour was chaplain. Among the colonists were mechanics and farmers and a good ship-builder. One of the Indians kidnapped by Weymouth came with the colonists as guide and interpreter. They landed on the shores of the Sagadahock River, in the middle of August, and there they built a fort and a vessel of thirty tons called the *Virginia*. The rigors of the winter discouraged the colonists, and before it was over about two thirds of them returned to England in the *Virginia*. The neighboring Indians became hostile. Popham (the commander), made governor of the colony, died. Then came news of the death of Chief-justice Popham. These various misfortunes caused the remainder of the colonists (forty-five in number) to abandon New England and return home in the spring.

Popham, GEORGE, president of the first company of settlers in New England, sailed from Plymouth, Eng., May 31, 1607, with two ships and one hundred men. Popham commanded one of the vessels and Raleigh Gilbert the other. The expedition was a failure. Popham died Feb. 5, 1608. (See *New England.*) — His brother, SIR JOHN, who was Lord Chief-justice of the King's Bench, and an earnest promoter of settlements in America, was born in Somersetshire, Eng., in 1531, and

died in June, 1607. He became chief-justice in 1592.

Population of the Colonies at the Beginning of the French and Indian War (which see). There was no exact enumeration of the inhabitants at that time (1754), the period when the American people "set up for themselves" in political and social life; but from a careful examination of official records, Mr. Bancroft estimates the number as follows:

COLONIES.	White.	Colored.
Massachusetts.....	207,000	} 3,000
New Hampshire.....	50,000	
Connecticut.....	133,000	3,800
Rhode Island.....	35,000	4,500
New York.....	85,000	11,000
New Jersey.....	73,000	5,000
Pennsylvania and Delaware.....	195,000	11,000
Maryland.....	104,000	44,000
Virginia.....	168,000	116,000
North Carolina.....	70,000	20,000
South Carolina.....	40,000	40,000
Georgia.....	5,000	2,000
Total.....	1,165,000	260,000

The population of the English-American colonies in the year 1700 was estimated at 262,000.

Porcupine's Gazette. William Cobbett, a British soldier, emigrated to America in 1792. He was a vigorous but often coarse writer, independent and fearless in spirit, familiar with the French language, a complete master of the English tongue, and possessed of very ardent feelings. Then only thirty years of age, he began the publication of political pamphlets in 1794. His hatred of the French and loyalty to England caused him to write a bitter satirical one on Dr. Joseph Priestley's emigration to and reception in New York and Philadelphia. The pamphlet was so favorably received by the Federalists that it was followed up by several others, principally relating to Jay's treaty, and published over the name of "Peter Porcupine." He was so successful that he set up a shop in Philadelphia for the publication and sale of his own writings, and, simultaneous with the beginning of Adams's administration (1797), he began the publication of a small daily paper called *Porcupine's Gazette*. It was a formidable and dreaded adversary of the "French" (or Republican) party; and the *Gazette* fought the *Aurora* with the keen and effective weapons of scathing satire. But he did not spare the other side, and often came into sharp collision with the *Minerva*, the leading Federalist paper of New York, edited by Noah Webster, afterwards the lexicographer. Cobbett assailed leading citizens in his *Gazette*, and was prosecuted for libels. He was fined \$5000 for a libel on Dr. Rush, and this caused the death of the *Gazette*.

Porey, JOHN, was an English traveller and author, and a protégé of Hakluyt, but his reputation was clouded by intemperate habits. Educated at Cambridge, he travelled much, and made intelligent observations. While in Italy, in 1613, he was imprisoned for debt, from which he was released by Sir Dudley Carleton, who wrote to a friend: "I fear he has fallen too much in love with the pot to be much esteemed." At about the same time another wrote of

Porey: "He must have both meat and money; for drink he will find out himself, if it be above ground, or no deeper than the cellar." Porey was made Secretary of the Virginia Colony in 1619, but, on account of his exactions, was recalled in 1622. Early in that year he, with some friends, penetrated the country southward beyond the Roanoke River, with a view to making a settlement. (See *North Carolina, Colony of*.) On his arrival in London, Porey joined the disaffected members of the London Company, which so excited the mind of the king against the corporation that, in 1624, he deprived them of their charter. He had been sent early in that year as one of the commissioners to inquire into the state of the Virginia colony, and while there he bribed the Clerk of the Council to give him a copy of their proceedings, for which offence the poor scribe was made to stand in the pillory and lose one of his ears.

Port Gibson, BATTLE AT (1863). Grant crossed the Mississippi at Bruinsburg on the gunboats and transports which had run by Grand Gulf (which see). His troops consisted chiefly of General McClelland's Thirteenth Army Corps. These troops pushed forward and were met (May 1, 1863), eight miles from Bruinsburg, by a Confederate force, which was pushed back to a point four miles from Port Gibson. There McClelland was confronted by a strong force from Vicksburg, under General Bowen, advantageously posted. The Nationals were divided for the occasion. On McClelland's right were the divisions of Generals Hovey, Carr, and Smith, and on his left that of Osterhaus. The former pressed the Confederates steadily back to Port Gibson. The troops of Osterhaus were reinforced by a brigade of General Logan's division of the advance of McPherson's corps, and others were sent to help McClelland. Late in the afternoon the Confederates were repulsed and pursued to Port Gibson. Night ended the conflict, and under its cover the Confederates fled across a bayou, burning the bridges behind them, and retreated towards Vicksburg. The Nationals lost in this battle 840 men, of whom 130 were killed. They captured guns and flags and 580 prisoners.

Port Hudson, SIEGE AND CAPTURE OF. Port Hudson, or Hickey's Landing, was on a high bluff on the left bank of the Mississippi, in Louisiana, at a very sharp bend in the stream. At the foot of the bluff was Hickey's Landing. The Confederates had erected a series of batteries, extending along the river from Port Hudson to Thompson's Creek above, a distance of about three miles. They were armed with very heavy guns. There were field batteries that might be moved to any part of the line. Immediately after Banks took command of the Department of the Gulf (Dec. 18, 1862), he determined to attempt to remove this serious obstruction to the navigation of the Mississippi at Port Hudson. He sent General Grover with 10,000 men to occupy Baton Rouge, but the advance on Port Hudson was delayed, because it would require a larger force than Banks could then spare. So

he operated for a while among the rich sugar and cotton regions of Louisiana, west of the river. In March, 1863, he concentrated his forces—nearly 25,000 strong—at Baton Rouge. At the same time Commodore Farragut had gathered a small fleet at a point below Port Hudson, with a determination to run by the batteries there and recover the control of the river between that place and Vicksburg. To make this movement, Banks sent towards Port Hudson (March 13) 12,000 men, who drove in the pickets, while two gunboats and some mortar-boats bombarded the works. That night Farragut attempted to pass, but failed, and Banks returned to Baton Rouge. After more operations in Louisiana, Banks returned to the Mississippi and began the investment of Port Hudson, May 24, 1863. His troops were commanded by Generals Weitzel, Auger, Grover, Dwight, and T. W. Sherman, and the beleaguered garrison was under the command of General Frank K. Gardner. On his march from Baton Rouge to Port Hudson, Auger had encountered and repulsed a Confederate force, which lost 150 of its men. Farragut, with his flag-ship (*Hartford*) and one or two other vessels, was now above Port Hudson, holding the river, while four other gunboats and some mortar-boats, under Commander C. H. B. Caldwell, held it below. On the morning of May 27 Banks opened his cannons on the works in connection with those on the water, preparatory to a general assault. The attack was made at ten o'clock by a portion of the troops, but others did not come up in time to make the assault general. A very severe battle was fought, the Nationals making desperate charges, from time to time, and gaining ground continually. In this contest was the first fair trial of the mettle of negro troops. The Confederates had been driven to their fortifications, and, at sunset, they were all behind their works. Close up to them the Nationals pressed, and they and their antagonists held opposite sides of the parapet. This position the Nationals on the right continued to hold, but those on the left, exposed to a flank fire, withdrew to a belt of woods not far off. So ended the first general assault on Port Hudson, in which the Nationals lost 1842 men, of whom 293 were killed. The Confederate loss did not exceed 300 in killed and wounded. Banks, undismayed by this disastrous failure, continued the siege. His great guns and those of Farragut hurled destructive missiles upon the works daily, wearing out the garrison by excessive watching and fatigue. Their provisions and medical stores were failing, and famine threatened the brave defenders of the post. It was closely hemmed in, and so, also, was the besieging force of about 12,000 men by a hostile population and concentrating Confederate cavalry in its rear, while General Richard Taylor was gathering a new army in Louisiana, west of the river. A speedy reduction of the fort had become a necessity for Banks, and on June 11 another attempt was made, and failed. This was followed by an attempt to take the fort by storm on the 14th. At that time the Nationals lay mostly in two lines, forming a right au-

gle, with a right and left but no centre. When a final disposition for assault was made, General Gardner was entreated to surrender and stop the effusion of blood, but he refused, hoping, as did Pemberton, at Vicksburg, that Johnston would come to his relief. The grand assault began at dawn (June 14) by Generals Grover, Weitzel, Auger, and Dwight. A desperate battle ensued, and the Nationals were repulsed at all points, losing about 700 men. Again the siege went on as usual. The fortitude of the half-starved garrison, daily enduring the affliction of missiles from the land and water, was wonderful. Gun after gun on the Confederate works was disabled, until only fifteen remained on the land side; and only twenty rounds of ammunition for small-arms was left. Famine was about to do what the National arms could not effect—compel a surrender—when the garrison was startled (July 7) by the thunder of cannons along the whole line of their assailants, and shouts from the pickets, "Vicksburg is taken!" That night Gardner sent a note to Banks, asking if the report were true, and if so, requesting a cessation of hostilities. The surrender of the post and all its men and property was completed on July 9, when 6408 men, including 455 officers, were made prisoners of war. The little hamlet of Port Hudson was in ruins. The loss of Banks during the siege of forty-five days was about 3000 men, and that of Gardner, exclusive of prisoners, about 800. The spoils of victory were the important post, 2 steamers, 51 pieces of artillery, 5000 small-arms, and a large amount of fixed ammunition. Banks reported that his winnings in Louisiana up to that time were the partial repossession of large areas of territory, 10,584 prisoners, 73 great guns, 6000 small-arms, 3 gunboats, 8 transports, and a large amount of cotton and cattle. This conquest gave the final blow to the obstruction of the navigation of the Mississippi River. On July 16, 1863, the steamer *Imperial*, from St. Louis, arrived at New Orleans, the first communication of the kind between the two cities in two years. Then the waters of the Mississippi, as President Lincoln said, "went unvexed to the sea." Powerful portions of the Confederacy were thus severed.

Port of Boston, CLOSING OF THE. The Boston Port Bill (which see) went into operation on June 1, 1774. General Gage, who had succeeded Hutchinson as Governor of Massachusetts, went to Boston (May 13) to execute the measure, and was received with much respect by an immense crowd that met him at the wharf. The same evening Hutchinson was burned in effigy on the Common. The people met in Faneuil Hall. Samuel Adams presided. They voted that it was their opinion that "if the other colonies come into a joint resolution to stop all importation from, and exportation to, Great Britain and every part of the West Indies till the act be repealed, the same will prove the salvation of North America and her liberties; and that the impolicy, injustice, inhumanity, and cruelty of the act exceed all our powers of expression. We, therefore, leave it to the just

censure of others, and appeal to God and the world." Paul Revere, an active patriot of Boston, was sent to New York and Philadelphia to invoke sympathy and co-operation. Gage proceeded, under instructions, to transfer the government to Salem. The last session of the Assembly held in Boston was on May 31, 1774. It was adjourned to the 7th of June, at Salem, and the port of Boston was closed, by proclamation, at noon on June 1. No vessels were allowed to enter, and none to depart, after the 14th. Two regiments of soldiers arrived at the same time, and soon afterwards several others came from Halifax, making Boston an immense garrison. All business was utterly prostrated. The rich, deprived of their rents, became poor; and the poor, deprived of the privilege of labor, were reduced to beggary. But the fortitude of all classes was remarkable. In every part of the colonies the warmest sympathies for them were excited, and from various points, even so far south as Georgia, substantial aid was sent to the sufferers. The city of London, in its corporate capacity, subscribed \$150,000 for the relief of the poor of Boston. The people of Marblehead and Salem offered the Boston merchants the free use of their wharves and stores, for they scorned to enrich themselves at the expense of their oppressed neighbors. This cruel act hastened the impending war for independence. It was denounced from the pulpit and forum, and newspapers placed at their heads a device employed during the Stamp Act excitement—a serpent cut into ten pieces, with the inscription "JOIN OR DIE!"

Port Republic, BATTLE AT (1862). Before the battle at Cross Keys (which see), "Stonewall" Jackson had crossed the Shenandoah River, and was encamped at Port Republic. The vanguard of Shields's force, under General Carroll—less than 1000 infantry, 150 cavalry, and a battery of six guns—had arrived there almost simultaneously with Jackson. With his cavalry and five pieces of artillery, Carroll dashed into the village, drove Jackson's cavalry out of it, and took possession of the bridge that spanned the river. Had he burned that structure, he might have ruined Jackson, for he would have cut him off from Ewell at Cross Keys. But he waited for his infantry to come up, and was attacked by a superior force and driven to a point two miles from the town, where he was afterwards joined by General E. B. Tyler and his brigade, 2000 strong, Tyler taking command. Meanwhile, Ewell had escaped from Frémont, crossed the bridge, and reinforced Jackson. A flanking movement was now begun by the Confederates, which Tyler resisted with his whole force, about 3000 in number. With these he drove 8000 Confederates into the woods. At the same time an augmented force attacked Tyler's right, and a severe battle ensued. General Dick Taylor's Louisiana brigade made a sudden dash through the woods and captured a National battery, when Colonel Candy, with Ohio troops, made a countercharge and recaptured it, with one of the guns of the Confederates. The artillery—horses having been killed, he could not

carry off the battery; but he took back with him sixty-seven Confederates. So overwhelming was Jackson's force that Tyler was compelled to retreat, and was pursued about five miles, covered by Carroll's cavalry. The battle was disastrous to the Nationals, but it was recognized by both sides as one of the most brilliant of the war. In the engagement and retreat the Confederates captured 450 prisoners and 800 muskets. The National army now fell back to Harrisonburg (June 9), when Fremont went on to Mount Jackson, and Shields to Newmarket.

Port Royal Ferry, BATTLE AT (1862). After an expedition from Hampton Roads, under Admiral Dupont and General T. W. Sherman, had taken possession of Port Royal Sound (which see) and the neighboring islands (Nov. 7, 1861), the only stand made by the Confederates in defence of the South Carolina coast islands was at Port Royal Ferry, on the Coosa, at the close of the year. General R. S. Ripley, of the United States Army, who had joined the Confederates, was in command of that sea-coast district, and had established a fortified post at the ferry. When the Nationals landed at Beaufort it had a garrison estimated to be eight thousand strong, under Generals Gregg and Pope. The Nationals proceeded to expel them. For this purpose a joint land and naval force, the former commanded by Brigadier-general Stevens, and the latter by Commodore C. R. P. Rogers, proceeded to attack them. Stevens had about four thousand troops—of New York, Pennsylvania, and Michigan; and the naval force consisted of four gunboats, an armed ferry-boat, and four large row-boats, each carrying a 12-pounder howitzer. The expedition moved on the evening of Dec. 31. The land and naval forces were joined three miles below the ferry on the morning of June 1, 1862, and pressed forward to the attack. The first onset was sharp and quick. A concealed battery near the ferry that was opened upon the Nationals was soon silenced by a close encounter, in which the Eighth Michigan bore the brunt. But very little fighting occurred afterwards. The Confederates, seeing the gunboats coming forward, abandoned their works and fled, and the Pennsylvania "Round-heads" passed over the ferry and occupied them. The works were demolished, and the houses in the vicinity were burned. Stevens had nine men wounded, one mortally.

Port Royal Island, BRITISH ATTEMPT TO TAKE (1779). When Prevost joined Campbell at Savannah (see *Sunbury*) the British commanders determined to extend a part of their forces into South Carolina. Major Gardiner was detached, with two hundred men, to take possession of Port Royal Island; but soon after he landed, General Moultrie, with the same number of men (only nine of whom were regulars), attacked and drove him off the island. Two field-pieces, well served by some militia under Captains Heyward and Rutledge, were principally gainers of this advantage. A small body of horsemen, under Captain John Bar-

well, who gained the rear of the British, were also efficient in contributing to the result.

Port Royal Island, SETTLEMENT UPON. In 1682 Lord Cardross (afterwards Earl of Buchan), a Scotch nobleman, led a colony from his native land, where the Presbyterians were persecuted. Some of their agents went to England to treat with the proprietaries of Carolina for a lodgment there. It is believed that one of these agents was Lord Cardross, and that his colony were Presbyterians, who preferred exile in peace to their native land, where they were continually harassed. When Cardross arrived there were instant premonitions of trouble. In pursuance of some agreement or understanding with the proprietaries, Lord Cardross claimed for himself and associates co-ordinate authority with the governor and grand council at Charleston. This claim the provincial government disallowed, and the colony at Port Royal was compelled to acknowledge submission. Soon afterwards Lord Cardross returned home. Some time afterwards his colonists were dislodged by the Spaniards at St. Augustine (1686), who accused them of inciting the Indians to invade their territory.

Port Royal Sound, EXPEDITION TO. On the morning of Oct. 29, 1861, a land and naval armament left Hampton Roads for a destination known only to the officers. It was composed of fifty ships of war and transports, commanded by Admiral S. F. Dupont, and fifteen thousand troops under General T. W. Sherman. Dupont's flag-ship *Wabash* led the way out to sea, and each ship sailed under sealed orders, to be opened in case of the dispersion of the fleet. Off Cape Hatteras the fleet was so terribly smitten by a tempest that very soon only one vessel could be seen from the deck of the flag-ship. The sealed orders were opened, and each commander was ordered to rendezvous at Port Royal Sound, on the coast of South Carolina. There all but four transports that were lost were gathered on the evening of Nov. 4. No human life on the perished transports had been lost. The entrance to the sound is between Hilton Head and Phillip's Island, and was guarded by the Confederates with a strong battery on each side—Forts Walker and Beauregard. Within the sound was a small Confederate flotilla, commanded by the veteran Commodore Tatnall, of the United States Navy, who had joined the enemies of his government. It was called the "Mosquito Fleet." The guns of the guarding forts were silenced, and on the morning of Nov. 7 Dupont's fleet passed into the sound and drove Tatnall's fleet into shallow water. The National forces took possession of Port Royal Island and the neighboring ones, and found them deserted by the planters and their families. Most of the slaves remained. They refused to follow their masters, for they had a mysterious faith and belief that the people of the North in the ships were their friends. Groups of them actually stood upon the shore, with little bundles containing all their worldly possessions, ready to go on board the ships of the invaders, who, they had been told, were coming to steal or sell

the negroes in Cuba, or to kill and bury them in the sound. In the conflict with the forts at the entrance of the sound Dupont had lost eight killed and twenty-three wounded. The Confederate officers reported their loss in both forts (Walker and Beauregard) at ten killed and forty wounded. Troops having taken possession of Hilton Head also, General Sherman went vigorously to work to strengthen the position. The Nationals held the islands and controlled Port Royal Sound until the end of the war.

Port Royal (N. S.) Taken (1690). The Indians having taken the fort at Pemaquid (which see), and French privateers from Acadia infesting the coasts of New England, the General Court of Massachusetts determined to seize Port Royal. A fleet of eight small vessels, bearing about eight hundred men, under the command of Sir William Phipps, sailed for that purpose on April 28, 1690. The weak fort at Port Royal was surrendered without resistance, and the whole sea-coast from that town to the north-east settlements was taken possession of by Sir William.

Porter and Smyth, GENERALS. (See *Smyth and Porter*.)

Porter, ANDREW, was born in Montgomery County, Penn., Sept. 24, 1743, died at Harrisburg, Pa., Nov. 16, 1813. In 1776 he was made captain of marines and ordered on board the frigate *Effingham*, but was soon transferred to the artillery service. He served with great distinction, and at the end of the war was colonel of the Pennsylvania artillery. In the battle of Germantown nearly all his company were killed or made prisoners. He was with Sullivan in his expedition in 1779, when he rendered important service by the exercise of his scientific knowledge. In 1784 he was a commissioner to run the state boundary-lines, and in 1800 was made major-general of the state militia. He was appointed Surveyor-general of Pennsylvania in 1809, and on account of his age and infirmities he declined a seat in Madison's cabinet as Secretary of War.

Porter, COMMODORE, IN THE PACIFIC OCEAN. The cruise of Commodore Porter, in the *Essex*, on the broad Pacific Ocean was one of the most remarkable recorded in history. He had swept around the southern cape of South America, and up its western coast, and on March 14, 1813, after being enveloped in thick fogs several days, he saw the city and harbor of Valparaiso, the chief seaport town of Chili. There he learned, for the first time, that Chili had become an independent state, and that the Spanish Viceroy of Peru had sent out cruisers against the American cruisers in that region. Porter's appearance with a strong frigate was very opportune, for American commerce then lay at the mercy of English whale-ships armed as privateers and of Peruvian corsairs. The *Essex* was cordially welcomed by the Chilean authorities. She put to sea on the 25th. She pressed up the coast, and soon overhauled a Peruvian corsair which had captured two American vessels. He took from her all the captured Americans, cast her

armament overboard, and sent her into Callao, with a letter to the viceroy, in which he denounced the piratical conduct of her commander. Recapturing one of the American vessels, Porter sailed for the Galapagos Islands, the resort of English whalers. There were over twenty of them in that region, most of them armed, and bearing letters-of-marque. Porter cruised eagerly among the Galapagos Islands for nearly a fortnight without meeting a vessel. On the 29th of April he discovered two or three English whale-ships. He first captured the *Montezuma*. He had made a flotilla of small boats, which he placed under the command of Lieutenant Downes. These pushed forward and captured the *Georgiana* and *Policy*. From these Porter procured ample supplies of provisions and naval stores. With the guns of the *Policy* added to those of the *Georgiana*, the latter, fitted up as a cruiser, became a worthy consort of the *Essex*. Her armament now consisted of sixteen guns, and she was placed under the command of Lieutenant Downes. Other English vessels were soon captured and fitted up as cruisers; and at the end of eight months after he sailed from the Delaware in the solitary *Essex*, Porter found himself in command of a squadron of nine armed vessels, prepared for formidable naval warfare. In July he captured the *Seringapatam*, an English vessel built for a cruiser for Sultan Tippoo Sahib. She was the most formidable enemy of American ships on the Pacific. He now admitted a large number of his crowd of prisoners to their parole, and sent them to Rio Janeiro. With his squadron, Porter sailed for the Marquesas Islands, capturing other English vessels on the way, and late in October he anchored in the bay of Nooaheevah with his prizes. The *Essex* was the first vessel that carried the American pennant to these far-distant seas. She was more than ten thousand miles from home, with no friendly port to steer to. She had swept the Pacific of her enemies, and now lay, surrounded by her trophies, in the quiet waters of an almost unfrequented island on the mighty ocean. The *Essex* had just cast anchor, when a canoe shot out from the shore containing three white men—one an Englishman who had been there twenty years. The other two were Americans—one of them Midshipman John Maury, of the United States Navy. They informed Porter that a war was raging on the island between native tribes, and that, in order to obtain supplies, he would have to take part with the Tacehs, who dwelt in the valley that opened out upon the bay. Porter sent a message to the enemies of the Tacehs that he had a force sufficient to subdue the whole island, and that if they ventured into the valley of the Tacehs while he remained he would punish them severely. He gave them permission to bring hogs and fruit to the ship to sell, and promised them protection while trafficking. In an interview with the King of the Tacehs, Porter agreed to assist him in his wars. With muskets and a cannon, Porter's men drove the enemies of the king from hill to hill, until they made a stand, four thousand strong, and sent stones and jave-

lines against their assailants. The hostile tribes soon sued for peace, and on the 19th of November, 1813, Porter took possession of the island in the name of the United States. One tribe had remained hostile. These Porter subdued. On Dec. 12 he started for home in the *Essex*, taking with him the three white men. They reached Valparaiso Feb. 3, 1814. In that harbor the *Essex* was captured by the British ship *Phæbe*, and the great conqueror on the Pacific Ocean became a prisoner. (See *Essex, Cruise of the*.)

Porter, DAVID, commodore, was born in Boston, Feb. 1, 1780; died at Pera, near Constantinople, March 3, 1843. He was appointed a midshipman April 16, 1798, and, passing through the next grades, was commissioned a captain July 2, 1812. Porter, as lieutenant on board the frigate *Constellation*, fought *L'Insurgente* in February, 1799, and was promoted soon afterwards. He was wounded in an engagement with a pirate (January, 1800) off Santo Domingo, and was first-lieutenant of the *Enterprise*, which captured a Tripolitan corsair. He afterwards commanded an expedition that destroyed some feluccas, laden with wheat, under the batteries at Tripoli, where he was wounded. In October, 1803, he was captured in the *Philadelphia* when she grounded in the harbor of Tripoli, and was a prisoner and slave for eighteen months. In 1806, in command of the *Enterprise*, he fought and severely handled twelve Spanish gunboats near Gibraltar. In 1812 he was commissioned captain and placed in command of the *Essex*, in which he made a long and successful cruise in the Pacific Ocean,

DAVID PORTER.

but finally lost his vessel in an engagement near Valparaiso, S. A. He was one of the Naval Commissioners from 1815 to 1823, and in the latter year he made a successful cruise against pirates

in the Gulf of Mexico. In consequence of some irregularity, he was suspended from command for six months; and in 1826 he resigned, and entered the Mexican navy as its commander-in-chief. He was appointed United States Consul at Algiers in 1829; and when that country fell into the hands of the French he was made *charge d'affaires* at Constantinople, where he afterwards, as American minister, negotiated several important treaties. He was minister there at the time of his death.

Porter, DAVID D., admiral, was born in Philadelphia in June, 1813, and entered the United States Navy as midshipman Feb. 2, 1829. He was attached to the Coast Survey (which see) from 1836 to 1840. Then he cruised in Brazilian

DAVID D. PORTER.

waters, and served in the Naval Observatory at Washington for a while. He engaged in the war against Mexico on land and on water, and in 1861 joined the Gulf squadron, in command of the *Powhatan*. He was in the expedition up the Mississippi against New Orleans in 1862, in command of twenty-one mortar-boats and several steamers. Porter did important service on the Mississippi and Red rivers in 1863-64, and was conspicuous in the siege of Vicksburg (which see). For the latter service he was made rear-admiral July 4, 1863. In 1864 he was in command of the North Atlantic blockading squadron, and rendered efficient service in the capture of Fort Fisher (which see) in January, 1865. He was made vice-admiral in July, 1866, and admiral Oct. 17, 1870. He was Superintendent of the Naval Academy at Annapolis from 1866 to 1870.

Porter, FITZ-JOHN, was born at Portsmouth, N. H., in 1822, and graduated at West Point in 1845, entering the artillery corps. He was adjutant of that post in 1853-54, and assistant instructor of cavalry and artillery in 1854-55. In 1856 he was made assistant adjutant-general. In May, 1861, he was made brigadier-general of volunteers and chief-of-staff to Generals Patterson and Banks until August, when he was assigned to the Army of the Potomac, in command of a division. In May, 1862, he took command

of the Fifth Army Corps; directed the siege of Yorktown, Va., and was one of McClellan's most efficient commanders during the Peninsular campaign ending with the battle of Malvern Hills (which see). For services in that campaign he was promoted to major-general of volunteers. Temporarily attached to the Army of Virginia (Pope's), and formal charges having been made against him, he was deprived of his command. At the request of General McClellan, he was restored, and accompanied that general in the campaign in Maryland. In November he was ordered to Washington for trial by court-martial, on charges preferred by General Pope, and on Jan. 21, 1863, he was cashiered for violation of the ninth and fifty-second Articles of War. In 1870 he appealed to the President for a reversal of this sentence, and in 1878 a commission of inquiry was instituted to determine whether there was new evidence in his favor sufficient to war-

ry, and received the thanks of Congress and a gold medal. President Madison offered him the position of commander-in-chief of the army in

FITZ-JOHN PORTER.

rant the ordering of a new trial. They reported in the affirmative.

Porter, MOSES, was born at Danvers, Mass., in 1755; died at Cambridge, April 14, 1822. He was in the battle of Bunker's (Breed's) Hill, and many of the prominent battles of the Revolution, and was one of the few old officers selected for the first Peace Establishment (which see). In 1791 he was promoted to captain, and served under Wayne in 1794. In March, 1812, he was colonel of light artillery, and was distinguished at the capture of Fort George (which see), in May, 1813. He accompanied Wilkinson's army on the St. Lawrence, and in the autumn of 1814 he was breveted brigadier-general, and ordered to the defence of Norfolk, Va.

Porter, PETER BUEL, was born at Salisbury, Conn., Aug. 14, 1773; died at Niagara Falls, March 20, 1844. He studied law, and began its practice at Canandaigua, N. Y., in 1795. Porter was a member of Congress from 1809 to 1813, and again in 1815-16. He settled at Black Rock, near Buffalo, where he and his brothers made large purchases of land along the Niagara River. A leader of volunteers on the Niagara frontier, he became distinguished for his skill and brave-

PETER BUEL PORTER.

1815, which he declined. He was Secretary of State of New York (1815-16), and was Secretary of War, under President J. Q. Adams, in 1828. General Porter was one of the early projectors of the Erie Canal, and one of the first Board of Commissioners.

Porter, WILLIAM DAVID, was born in New Orleans, in 1810; died in New York city, May 1, 1864. He was a brother of Admiral Porter. He entered the navy in 1823. In the sloop-of-war *St. Mary*, on the Pacific station, when the Civil War broke out, he was wrongly suspected of disloyalty. He was ordered to duty on the Mississippi River, in fitting out a gunboat fleet, and was put in command of the *Essex*, which took part in the attacks on Forts Henry and Donelson, when Porter was severely scalded. He fought his way past all the batteries between Cairo and New Orleans, taking part in the attack on Vicksburg. He caused the destruction of the Confederate "ram" *Arkansas*, near Baton Rouge, and assisted in the attack on Port Hudson. For these services he was made commodore in July, 1862. His feeble health prevented his doing much afterwards.

Portrait-painter, FIRST, IN AMERICA. Among the persons who accompanied Dean Berkeley to Rhode Island was John Smybert, born at Edinburgh, about 1684. He served his time with a common house-painter. Aspiring to something higher in art, he went to London, where he subsisted by coach-painting while studying the best works he could find. He obtained admittance into an academy of fine arts there. He finally went to Italy, where he spent three years, copying from the best pictures of the masters. He returned, prosecuted portrait-painting, and, by invitation of Dean Berkeley, embarked in

his scheme for establishing a college in the Bermudas, which was to be one of universal science and art. He accompanied Berkeley to Newport, and remained there during the two years and a half that the dean lived there, and on the departure of the latter for England, Smybert went to Boston, where he married a New England woman with a considerable fortune, and succeeded in his art. He died in 1751, leaving a widow and two children. Smybert introduced portrait-painting into America. He was not an artist of the first rank, for the arts were then at a low ebb in England; but the best portraits that we have of the eminent magistrates and divines in New England and New York, who lived between 1725 and 1751, are from his pencil. While with Berkeley at Newport he painted a group of portraits, including the dean and a part of his family, in which the figure of the artist appears. The picture belongs to Yale College.

Portsmouth, N. H., was founded at Strawberry Bank, at the mouth of the Piscataqua River, by Mason, who tried to be "lord of the manor;" but his people were too independent to allow special privileges to any one. An Episcopalian named Gibson was the first minister at Portsmouth, for whom a chapel was built in 1638. He was dismissed by the General Court of Massachusetts, which claimed jurisdiction over that region, and a Puritan minister—James Parker—was put in his place.

Posey, THOMAS, was born in Virginia, July 9, 1750; died at Shawneetown, Ill., March 19, 1818. At the age of nineteen he removed to western Virginia, and was quartermaster to Lewis's division in Dunmore's army in 1774. He raised a company in Virginia, and assisted in the defeat of Dunmore at Gwyn's Island. He joined Washington, in New Jersey, early in 1777; was transferred to Morgan's rifle regiment, and with them did valuable service on Bemis's Heights and at Saratoga. He commanded the regiment in the spring of 1778, and was finally placed in command of a battalion of Febiger's regiment, under Wayne, participating in the capture of Stony Point in July, 1779, where he was one of the first to enter the works. Colonel Posey was at the surrender of Yorktown, and was afterwards with Wayne until the evacuation of Savannah, in 1782. In February, 1793, he was made brigadier-general; settled in Kentucky; became State Senator; was lieutenant-governor four years; in 1809 was major-general of Kentucky levies, and in 1812-13 was United States Senator. He succeeded Harrison as Governor of Indiana Territory in March, 1813, and in 1816 was made Agent for Indian Affairs, which post he held at the time of his death.

Position of Virginia (1861). The politicians who controlled Virginia early in 1861 assumed an arrogant tone towards all sections of the Union, especially towards the North. An epigrammatist of the day (in the *New York Commercial Advertiser*, March 1, 1861) defined Virginia's position by making her say to the North:

"First.—Move not a finger; 'tis coercion—
The signal for our prompt dispersion.

"Second.—Wait till I speak my full decision,
Be it for union or division.

"Third.—If I declare my ultimatum,
Accept my terms as I shall state 'em.

"Fourth.—Then I'll remain while I'm inclined to,
Seceding when I have a mind to."

Postal Service in the Colonies. The first Parliamentary act for the establishment of a post-office in the English-American colonies was passed in April, 1692, and a royal patent was granted to Thomas Neale for the purpose. He was to transport letters and packets "at such rates as the planters should agree to give." Rates of postage were accordingly fixed and authorized, and measures were taken to establish a post-office in each town in Virginia, when Neale began his operations. Massachusetts and other colonies soon passed postal-laws, and a very imperfect post-office system was established. Neale's patent expired in 1710, when Parliament extended the English postal system to the colonies. The chief office was established in New York, to which letters were conveyed by regular packets across the Atlantic. A line of post-offices was soon after established on Neale's old routes, north of the present city of Portsmouth, N. H., and south to Philadelphia, and irregularly extended, a few years later, to Williamsburg, Va. The post left for the South as often as letters enough were deposited to pay the expense. The rates were fixed, and the post-riders had certain privileges of travel. Finally an irregular postal communication was established with Charleston. In 1753 Dr. Franklin was appointed deputy postmaster-general for the colonies. It was a lucrative office, and he held it until 1774, when he was dismissed because of his active sympathy with the colonists in their quarrel with the ministry. For a while the colonial postal system was in confusion. William Goddard, a printer, went from colony to colony, making efforts to establish a "constitutional post-office," in opposition to the "royal mail." When, in 1775, almost every vestige of royal power was swept from the colonies, the Continental Congress appointed (July 26) Dr. Franklin Postmaster-general. In the autumn of 1776, when independence had been declared, and Franklin sailed for France, the whole number of post-offices in the United States was seventy-five; length of post-routes, eighteen hundred and seventy-five miles; revenue for about fifteen months, \$27,985; annual expenditures, \$32,142.

Postal Service of the Army. This admirably arranged service was begun at Forts Henry and Donelson, under the auspices of General Grant, to whom it was suggested by Colonel A. H. Markland, special agent of the national post-office. When General Grant began his movement on Fort Henry, he made arrangements for the mails to be promptly sent to the army. "Within an hour," wrote General Grant, in a letter to the author, "after the troops began to march into Fort Donelson" (which see), "the mail was being distributed to them from the mail-wagons. The same promptness was always observed in the armies under my command, up to

the period of final disbandment. It is a source of congratulation that the postal service was so conducted that officers and men were in constant communication with kindred and friends at home, and with as much regularity as the most favored in the large cities of the Union." This was not attended with any additional expense to the service. The chaplain of each regiment was recognized at first as "Regimental Postmaster." Afterwards the mails were "brigaded." They were placed in canvas bags at the general Post-office in Washington, and sent to each brigade, under charge of military authority. The Post-office Department had no further control over the army mails after they left the office at Washington. In this service Colonel Markland (who had the management of it) and his assistants were often exposed to the appalling dangers that awaited the soldiers, yet they never lost a mail over which they had personal control. The number of letters carried in this service was enormous. "For months," wrote the postmaster at Washington to the author, "we received and sent an average of two hundred and fifty thousand military letters per day." The only loss which the service entailed upon the department was in mail-bags. At least thirty thousand were sent out that never found their way back to the department.

Postal System, FIRST, IN AMERICA. In 1693 an act was passed by the Virginia Assembly, setting forth a royal patent granted to Thomas Neale to establish a post in the American colonies for the transportation of letters and packets at such rates as the planters should agree to give. The act authorized rates of postage, and the establishment of a post-office in every town in the colony. Other colonies passed similar acts, and a colonial post-office system, very limited and imperfect, was established under the patent.

Post-office Service. Very soon after the commencement of the first session of the first national Congress, Ebenezer Hazard, Postmaster-general, suggested (July 17, 1789) the importance of a reorganization of the Post-office Department. A bill for the temporary establishment of the General Post-office was passed soon afterwards. The subject was brought up in Congress from time to time, until the present system in its general features was adopted in 1792. When Franklin resigned the position of Postmaster-general in the fall of 1776, the whole number of post-offices in the United States was 75; the whole number in 1875 was about 35,000. The entire length of post-routes in 1776 was 1875 miles; in 1875 it was 277,873 miles. Of the latter, 70,000 miles of travel was by railroad, and 16,000 by steamboat. The entire receipts of the Post-office Department during the administration of Dr. Franklin—about fifteen months—were \$27,985; and the expenditures \$32,142; in 1875 the receipts of the Post-office Department for the fiscal year were \$26,671,218, and the expenditures \$33,611,309. Included in the receipts were about \$6,000,000 of grants from the national treasury for special purposes. The rates of postage from the organization of the

department until 1816 were: For a letter composed of a single piece of paper, under 40 miles, 8 cents; under 90 miles, 10 cents; under 150 miles, 12½ cents; under 300 miles, 17 cents; under 500 miles, 20 cents; and over 500 miles, 25 cents. The rates were made by law in 1816 for a single letter, not over 30 miles, 6½ cents; over 30 and under 80 miles, 10 cents; over 80 and under 150 miles, 18½ cents; over 400 miles, 25 cents, and an additional rate for every additional piece of paper. If a letter weighed an ounce, four times these rates were charged. After railroad facilities were established, these high rates caused many letters to be carried by express between the several cities, at rates much below those of the post-office. So early as 1836, Edward Everett, in Congress, proposed measures for reducing the postage. The matter was agitated in public discussions until 1843, when the general discontent was manifested by resolutions passed by various legislatures instructing their senators and requesting their representatives in Congress to adopt measures for reduction. The Postmaster-general (Wickliffe), in an elaborate report, recommended a moderate reduction, and in 1845 the following rates were established: For a letter not exceeding half an ounce in weight, under 300 miles, 5 cents; over 300 miles, 10 cents, and an additional rate for every additional half-ounce or fraction thereof. In the next Congress unsuccessful efforts were made to increase the rates on letters, but on newspapers and magazines they were raised, and prepayment was required. Postage on circulars was raised to 3 cents, and newspaper postage to Oregon and California, at the close of the war with Mexico, was fixed at 4½ cents each. The letter charge to California *via* Chagres and Panama was 40 cents. In 1851 a law was passed establishing the following rates of letter postage: For a letter of half an ounce in weight, under 3000 miles, if prepaid, 3 cents; or if not prepaid, 5 cents; over 3000 miles, 6 or 12 cents; to foreign countries not over 2500 miles, except where postal arrangements had been made, 10 cents; over 2500 miles, 20 cents. Transient newspapers, circulars, and other printed matter, 1 cent an ounce under 500 miles, and greater distances in proportion. Books, under 32 ounces, 1 cent an ounce, if prepaid; 2 cents an ounce if not. The next year the law was modified. Letters sent over 3000 miles and not prepaid were charged 10 cents; newspapers, etc., under 3 ounces, 1 cent. Books weighing less than 4 pounds, under 3000 miles, 1 cent an ounce; over 3000 miles, 2 cents. By an act of the same year (1852), stamps and stamped envelopes were ordered. By a law of March 3, 1855, the rates on single inland letters were reduced to 3 cents for all distances under 3000 miles, and 10 cents for all over that; and all inland letter-postage was to be prepaid. In 1863 the rate of postage was made uniform at 3 cents on all domestic letters not exceeding half an ounce in weight, and 3 cents additional for every half-ounce or fraction thereof. The rates on printed matter were also modified. In 1868 the law was so amended as to allow weekly newspapers to be sent free to regular subscribers re-

siding in the county. By the act of 1855, provision was made for the present system for the registration of valuable letters on the payment of a specific fee; but the government is not liable for the loss of any registered mail-matter; the system simply provides for greater certainty in transmission. In 1874 the cost of registration was reduced from 15 cents to 8 cents, in addition to the regular postage. In June, 1875, it was raised to 10 cents. The money-order system was established in the United States Nov. 1, 1864, in order to promote public convenience and insure safety in the transfer by mail of small sums of money. That security is obtained by omitting from the order the name of the payee, which is added on the receipt of the order. Orders are issued for sums not exceeding \$50; larger sums by increasing the number of orders accordingly. The charge for issuing a money-order for a sum not exceeding \$10 is 10 cents, and increases according to the amount; the charge for an order of over \$40 is 20 cents. Certain post-offices are designated as "money-order offices." At the close of the fiscal year 1875, there were 3100 of these. By act of June 8, 1872, the Postmaster-general was authorized to issue postal-cards to the public at a cost of one cent each. The first cards were issued in May, 1873. The object was to facilitate letter correspondence. In 1875 about 100,000,000 of these cards were issued. The rates of postage established by acts prior to 1876 were as follows: Single letters (domestic), uniform for any distance, 3 cents for every half-ounce, and for each additional half-ounce, 3 cents. This applies to all sealed matter, whether in manuscript or printed. There are two other classes of mail-matter; one embraces all regularly supplied newspapers, magazines, and periodicals, exclusively in print, and the other embraces pamphlets, transient newspapers, magazines, and articles of merchandise, seeds, roots, scions, engravings, etc., for all of which there are graded prices. Letters not taken from a post-office, or the directions of which are not clear, are sent to the Dead-letter Office in Washington, where they are examined, and, as far as possible, they and their contents are returned to the sender. The quantity of these letters is very large. In 1875 the number of dead letters received was 3,628,808, an average of 11,878 for each working-day. These contained current funds, bills of exchange, commercial paper, jewelry, samples of merchandise, photographs, and souvenirs of every variety. In 31,799 letters was found in the aggregate \$61,769 in current funds. Postal arrangements have been made with foreign governments by which great facility and security is obtained in the transmission of letters. In 1875 the total number of letters exchanged with foreign countries was 25,135,581. Of this number 12,854,333 were sent from, and 12,281,248 were received in, the United States.

Potawatomes. This Algonquin family occupied the lower peninsula of Michigan, and spoke one of the rudest dialects of that nation. At the beginning of the seventeenth century they were in scattered and apparently indepen-

dent bands, without the faintest sign of any civil government. Hunters and fishers, and cultivators of a little maize, they were wanderers, and were frequently engaged in wars with neighboring tribes. The Iroquois finally drove them to the shores of Green Bay, where the French Jesuits established a mission among them. They became allies of the French in the wars with the Iroquois and the English, and they gradually spread over southern Michigan and northern Illinois and Indiana. The Potawatomes joined Pontiac (see *Pontiac*), and were the friends of the English in the war of the Revolution and subsequently, but joined in the treaty at Greenville in 1795. (See *Greenville, Treaty at*.) In the War of 1812 they again joined the English, under the influence of Tecumtha. Afterwards they made treaties with the United States for the cession of their lands, when a large tract was assigned them in Missouri, and the whole tribe, numbering about 4000, settled there in 1838. A portion of them are Roman Catholics, and the remainder are pagans. They are divided into the St. Joseph, Wabash, and Huron bands, who are Roman Catholics, and the Prairie band, who are pagans. Missions among the latter have failed, and they have scattered, some of them having gone to Mexico. The experiment of giving a certain amount of land to each individual was undertaken with 1400 of them in 1867, and was partially successful. In 1874 there were 467 of the Prairie band on a reservation in Kansas, under the control of the Society of Friends or Quakers, who had established schools.

Potter, ROBERT B., son of Bishop Alonzo Potter, is a native of New York, where he was a successful lawyer when the Civil War broke out. He entered the military service as major of the Shepard Rifles, and led the attack on Roanoke Island (which see) early in 1862. He was wounded at Newbern; behaved gallantly at the head of his regiment in battles in Virginia, and at Antietam carried the stone bridge on the National left, when he was again wounded. He was in the battle at Fredericksburg, and was made brigadier-general in March, 1863. He commanded a division in the siege of Vicksburg, was active in the defence of Knoxville, and commanded a corps against Longstreet in Tennessee. In command of a division in the Army of the Potomac, he was distinguished throughout the Richmond campaign in 1864-65, and was shot through the body at Petersburg (April 2, 1865), but recovered.

Poverty of the Government of the United States (1789). So low were the funds in the public treasury of the United States at the close of 1789, that the Attorney-general and several members of Congress were indebted to the private credit of the Secretary of the Treasury (Hamilton) to discharge their personal expenses. Even the President of the United States (Washington) was obliged to pass his note to Tobias Lear, his private secretary, to meet his household expenses; and that note was discounted at the rate of two per cent. a month. Members of Congress were paid in due-bills, which the col-

lectors were ordered to receive in payment for duties.

Powers, HIRAM, sculptor, was born at Woodstock, Vt., July 29, 1805; died in Florence, Italy, June 27, 1873. He went to Ohio in early life, and on the death of his father made his residence in Cincinnati, where he was employed in a reading-room, a produce-store, and with a clock-maker. He learned the art of modelling in plaster from a German, and soon made several busts of considerable merit, and was manager of the wax-work department of the museum at Cincinnati. In 1835 he went to Washington, where he successfully modelled busts of distinguished men, and with the assistance of Nicholas Longworth, of Cincinnati, he was enabled to establish himself at Florence, Italy, in 1837, where he resided until his death. There he soon rose to eminence in his profession, making an ideal statue of Eve which Thorwaldsen pronounced a masterpiece. The next year he produced the exquisite figure of the Greek Slave, the most widely-known of his works, and of which six duplicates in marble have been made, besides casts and reduced copies. He was accurate in his portraits, and the greater portion of his works consists of busts of distinguished men. He made portrait statues of Washington for the State of Louisiana, of Calhoun for South Carolina (which has been called his best work of the kind), and of Webster for Massachusetts.

Powhatan was a powerful Indian sagamore, or emperor, on the Virginia Peninsula between the York and James rivers, and farther to the Patuxent, when the English first settled there in 1607. His name was Wah-un-so-na-cook. He lived about a mile below the foot of the falls of the James River, Richmond, and there Captain Smith and his companions, exploring the stream, found him. By his wisdom and prowess he had raised himself to the rank of sagamore, or civil ruler, over thirty Indian tribes, and was entitled Powhatan, having a significance like that of Pharaoh, the official title of a line of kings of Egypt. His subjects numbered about 8000, and he is known in history simply as Powhatan. His domains included the region just mentioned, and back to the falls of the great rivers of the territory. When he became emperor he resided chiefly at Werowocomoco (now Shelly), on the York River, in Gloucester County, Va. He treated the English people hospitably, but his younger brother, Opechancanough, King of Pamunkey, was always hostile to them. When Captain Smith was taken prisoner by him, he conducted the captain first to his own village, and then to the palace of Powhatan on the York. At the former place the Indians held incantations for three days to discover Smith's character, for they were in doubt whether he was the incarnation of the good or the evil spirit. Then they took him to Powhatan and asked him to decide the prisoner's fate. The emperor, seated upon a raised platform in a stately arbor covered with branches, and with a favorite daughter on each side of him, with solemn words addressed Smith to death. (See *Smith, John*.) The

sympathy of one of Powhatan's daughters saved him, and through her influence friendship was maintained, with some interruptions, between the emperor and the English until Powhatan died. (See *Pocahontas*.) Afterwards, Newport brought a crown for Powhatan from England, and he was crowned with much ceremony, in return for which honor the monarch gave Newport his mantle and shoes. Powhatan's friendship was almost destroyed when Captain Argall, a rough, half-piratical mariner, kidnapped Pocahontas to extort favors from her father. Powhatan was grieved, but remained firm. Meanwhile Pocahontas became betrothed to an Englishman, and with the consent of her father was married to him. After that Powhatan was the fast friend of the settlers. He died in 1619, and was succeeded by Opechancanough, an enemy of the English.

Powhatans. This branch of the Algonquin family composed a confederacy of about thirty bands, including the Accohannocks and Accomacs, on the eastern shore of Chesapeake Bay. Their sagamore, or emperor, was called Powhatan, a title having a significance like that of Pharaoh, of a line of Egyptian kings. His name was Wah-un-so-na-cook, and he raised himself by his ability from the rank of a chief to that of sagamore. He was in the height of his power when in 1607 the English appeared on the James River, and ruled despotically. Fear and policy made him and his people nominal friends of the English, which was sincere on his part after the marriage of his daughter to an Englishman. After Powhatan's death his people made two attempts (1622, 1644) to exterminate the English, but they themselves were so weakened by the contest that the confederacy fell in pieces at the death of Opechancanough, Powhatan's brother and successor. Of all that once great confederacy in lower Virginia, not one representative, it is believed, exists on the earth, nor one tongue speaks the dialect.

Pownall, THOMAS, LL.D., was born at Lincoln, England, in 1722; died at Bath, Feb. 25, 1805. He graduated at Cambridge in 1743, and in 1745 was made secretary to the Commissioners of Trade and Plantations (which see). He came to America in 1753 as secretary to Governor Osborn, of New York, whom he succeeded as lieutenant-governor. He was a member of the Colonial Congress at Albany (which see) in 1754, and was governor of Massachusetts from 1757 to 1760. In 1760-61 he was governor of South Carolina, and returning to England was made director-general of the office of control with the rank of colonel. Entering Parliament in 1768, he was one of the most powerful friends of the Americans in that body. Pownall retired from Parliament in 1780. (See *Prophecy of Pownall*.)

Prairie Grove, BATTLE AT. General T. C. Hindman had gathered about 40,000 men, largely made up of guerilla bands, in the vicinity of the Ozark Mountains. Schofield, leaving Curtis in command of his district, marched against them late in September, 1862, with 8000 men

under General J. G. Blunt. This officer attacked a portion of them at Fort Wayne, near Maysville (Oct. 22), and drove them into the Indian country. A week later a cavalry force under General F. J. Herron struck another portion on the White River and drove them into the mountains. Ill-health compelled Schofield to relinquish command, which was assumed by Blunt. Hindman now determined to strike a decisive blow for the recovery of Arkansas from National control. Late in November he had in one body about 20,000 men on the western borders of Arkansas, and on the 28th moved against Blunt. His advance, composed of Marmaduke's cavalry, was attacked and defeated by Blunt on Boston Mountains. The latter now took position at Cane Hill, where Hindman tried to crush him. Hindman crossed the Arkansas River at Van Buren (Dec. 1, 1862) with about 11,000 men, including 2000 cavalry, and joined Marmaduke. Informed of this, Blunt sent for Herron, then just over the Missouri border, for assistance. He immediately marched into Arkansas at the rate of twenty miles a day, with guns and trains. He had sent forward cavalry, but on the morning of Dec. 7 he met a part of them who had been driven back by Marmaduke's horsemen. Meanwhile, Blunt had been skirmishing with the Confederates, who had turned his left flank and were making for his trains. Both he and Herron were now in a perilous condition. Herron had arrived with his main army on Dec. 7, and marching on met the mounted guard of the Confederates at a little settlement called Prairie Grove. Divested of his cavalry, he had only about 4000 effective men. Ignorant of the near presence of a heavy force under Hindman, he left a strong position, drove the Confederate cavalry across the river, and was there confronted by about 20,000 men, well posted on a wooded ridge. Herron did not suspect their number, and, pushing on, was instantly driven back. He pushed a battery forward which did such execution that the Confederates supposed his force was much larger than it was. He now threw three full batteries across a creek, supported by three full regiments, opened on the flank of the Confederates with a terrible storm of grape and canister, silenced their guns, and pressed up to the ridge and captured a battery there. The Nationals, unable to hold it, fell back; and for a while the result was doubtful. While Herron was thus struggling, Blunt came up and fell upon the Confederate left where troops had been massed to turn Herron's right. A severe battle ensued which continued for nearly four hours. Night ended the conflict. The Nationals slept on their arms on the battle-field. The Confederates retreated under cover of the night, marched rapidly, and escaped. The National loss at the battle of Prairie Grove was 1148, of which 167 were killed. Blunt estimated the Confederate loss at 3000, as his command buried about 1000 killed on the battle-field. Hindman reported his loss at 1317.

Preble, EDWARD, was born at Portland, Me., Aug. 15, 1761; died there, Aug. 25, 1807. At the age of sixteen years he made a voyage to Eu-

rope in an American privateer, and in 1779, when eighteen years of age, he served as midshipman in the *Protector*. He was made prisoner and was in the *Jersey* prison-ship (which see) for a

EDWARD PREBLE.

while. After the war he occupied himself as ship-master until 1798, when he was named one of the five lieutenants appointed by the government. In 1799 he was commissioned captain, and made a voyage to the East Indies in the *Essex* for the protection of American commerce. Ill-health kept him ashore until 1803, when he took command of the frigate *Constitution*, and in June took charge of the squadron sent against Tripoli. By a series of skilful bombardments of Tripoli (which see) he brought its ruler to terms. He was superseded by Barron, in September, 1804, and returned home, when Congress voted him the thanks of the nation and a gold medal.

Preble, GEORGE HENRY, U. S. N., was born at Portland, Me., Feb. 25, 1816; entered the navy as midshipman, Oct. 10, 1835; served in the Mediterranean and the West Indies; became passed-midshipman in 1841; served in the Florida War, and in the *St. Louis* went round the world as acting-master and acting-lieutenant. He also served in the war with Mexico as executive officer of the *Petrel*. He became lieutenant early in 1848, while yet in service against Mexico; and from 1849 to 1851 he was attached to the Coast Survey, also in 1852-53. He was in the expedition to Japan and China (1852-56) and destroyed Chinese pirates in 1854. Afterwards he was with the South Pacific squadron; and during the Civil War (1861-65) he was an active commander in the Gulf region. He was with Farragut at New Orleans in May, 1862, and in July was commissioned commander. He commanded the naval brigade at the battle of Honey Hill, South Carolina. In 1867, he was commissioned captain and became chief-of-staff of the Pacific squadron. After some important duties

at Washington, he was appointed commandant of the Naval Rendezvous at Boston in 1871-72. On Nov. 12, 1871, he was made commodore, and from 1873 to 1876 was commandant of the navy-yard at Philadelphia. On Sept. 30, 1876, he was made rear-admiral; commanded the South Pacific

perior was carried on at a very remote period is attested by pits in which the earlier operations were carried on and in one of which a mass of ore was found, prepared for hoisting out, which weighed about eight tons. (See *Copper-mines*.) It had been hammered and chopped off until

MEDAL GIVEN TO COMMODORE PREBLE. (See p. 1129.)

squadron in 1877-78; and was retired as rear-admiral Feb. 25, 1878.

Preble, JEDEDIAH, was born at Wells, Me., in 1707; died at Portland about 1784. He was a sailor in early life, and in 1746 was a captain in a provincial regiment. He was a lieutenant-colonel under General Winslow at the dispersion of the Acadians in 1755. He rose to the rank of brigadier-general in 1759, and was twelve years a representative. In 1774, the Provincial Congress of Massachusetts made him a brigadier-general. He was a State Senator in 1780, and judge of the Supreme Court.

Precious Metals. Very little of the precious metals had been found within the domain of the United States before the discovery of gold in California in 1848. The chief product was in the Southern States. The total amount of gold mined in these states from the discovery of the metal until 1873 was \$20,000,000. From 1848 till 1873, the total value of the gold product of the United States was \$1,241,000,000. Until 1859-60, very little silver had been found in our country. Miners then "prospecting" for gold discovered in Nevada and elsewhere immense deposits of silver, and the average yield for a year in 1876 was not less than \$100,000,000, and was continually increasing. The United States has been the richest gold and silver producing country on the globe.

Pre-emption Rights. In 1816 the first pre-emption right of settlers on public lands was passed by Congress, not, however, without much opposition. This act allowed settlers on the public domain the right to purchase three hundred and twenty acres. This was the initial of a long series of similar enactments.

Prehistoric Mining near Lake Superior. That copper-mining in the region of Lake Su-

perior had been made smooth. It lay upon sticks of oak wood, not now known to grow in that region, and over it had accumulated a layer of gravel fifteen or twenty feet in depth, upon which were growing large forest trees. The present race of Indians have no knowledge of the ancient miners. They were of a prehistoric race who evidently possessed much cultivation.

Preliminary Treaty of Peace. (See *Treaty of Peace*, 1782.)

Prentiss, BENJAMIN MAYBERRY, was born at Belleville, Va., Nov. 23, 1819. He served as captain in the war against Mexico, and in April, 1861, he became colonel of a regiment of volunteers of Illinois, in which state he had resided since 1841. He was made brigadier-general of three-months troops, and was in command at Cairo (which see), then a position of great importance. He was made brigadier-general of United States volunteers in May, 1861, and served in Missouri until April, 1862, when he joined General Grant, and fought in the battle of Shiloh (which see), where he was taken prisoner. In November he was made major-general, and early in July, 1863, he defeated a Confederate force under Generals Holmes and Price, at Helena, Ark.

Preparations for War (1774). To wise and thoughtful men, war between Great Britain and her American colonies seemed inevitable. All through the summer of 1774 Samuel Adams proclaimed it as his belief. Joseph Hawley, of Massachusetts, submitted to the delegation from his colony, in the First Continental Congress, a series of wise "hints," beginning with these remarkable words: "We must fight, if we cannot otherwise rid ourselves of British taxation. There is not heart enough yet for battle," he contin-

ued. "Constant and a sort of negative resistance to government will increase the heat and blow the fire. There is not military skill enough. That is improving, and must be encouraged and improved, but will daily increase. *Fight we must, finally, unless Britain retreats.*" When John Adams read these words to Patrick Henry, the latter exclaimed, with emphasis, "I am of that man's mind." (See *Hawley, Joseph.*) All the summer and autumn of 1774 the people, impressed with this idea, had practised daily in military exercises, especially in Massachusetts. There provision was made for arming the people of the province and for the collection of munitions of war. The Provincial Convention of Massachusetts appropriated \$60,000 for that purpose, and leading soldiers in the French and Indian War were commissioned general officers of the militia. Mills were erected for the manufacture of gunpowder, and establishments were set up for making arms. Encouragement was given to the production of saltpetre, and late in December, 1774, the Massachusetts Provincial Congress authorized the enrolment of twelve thousand minute-men. Very soon there was an invisible army of determined patriots, ready to resist every act of military coercion on the part of Great Britain. (See *Minute-men.*)

Preparations for War (1812). When it was determined, early in 1812, to declare war against Great Britain, preparations were at once made for the crisis. In February the Committee of Ways and Means reported a financial scheme, which was adopted. It was a system adapted to a state of war for three years. It contemplated the support of war expenses wholly by loans, and the ordinary expenses of the government, including interest on the national debt, by revenues. The estimated expense of the war the first year was \$11,000,000. Duties on imports were doubled, a direct tax of \$3,000,000 was levied, and an extensive system of internal duties and excise was devised. In March Congress authorized a loan of \$11,000,000, at an annual interest not to exceed six per cent., reimbursable in twelve years. When war was declared, only little more than half the loan was taken, and the President was authorized to issue treasury notes, payable in one year, bearing an annual interest of five and two-fifths per cent. Measures were also devised for strengthening the military force. It was weak when war was declared. Congress passed an act (June 26, 1812) for the consolidation of the old army with new levies, the regular force to consist of twenty regiments of foot, four of artillery, two of dragoons, and one of riflemen, which, with engineers and artificers, would make a force of 36,700 men. Little reliance could be placed on the militia, who would not be compelled, by law, to go beyond the bounds of their respective states. The navy was very weak, in comparison with that of the haughty enemy, the acknowledged "Mistress of the Seas." It consisted of only twenty vessels, exclusive of one hundred and seventy gunboats, and actually carrying an aggregate of little more than five hundred guns. (See *United States Navy, 1812.*)

Preparations for War with France (1798). President Adams, in a special message in March, 1798, asked Congress to make provision for war that seemed impending. It was promptly complied with. A provisional army of twenty thousand regular soldiers was voted, and provision was made for the employment of volunteers as well as militia. Provision was also made for a national navy, and the office of Secretary of the Navy was created (see *Navy of the United States*), and the incumbent was made a member of the cabinet. Party spirit disappeared in the national Legislature in a degree, and a war spirit everywhere prevailed. There were a few members of Congress who made the honor of the nation subservient to their partisanship. They opposed a war with France on any account; and so unpopular did they become, that some of the most obnoxious, particularly from Virginia, sought personal safety in flight, under the pretext of needed attention to private affairs.

Preparations for War with Mexico (1846). The Congress of the United States having declared (May 13, 1846) that a state of war existed between Mexico and their government, and authorized the President to accept fifty thousand volunteers, and appropriated ten million dollars for carrying on the contest, the Secretary of War and General Winfield Scott (chief of the armies of the United States) formed a plan of magnificent proportions for prosecuting the contest. A fleet was to sweep around Cape Horn and attack the Pacific coast of Mexico; a force called the "Army of the West" was to gather at Fort Leavenworth, on the Missouri River, to invade New Mexico and co-operate with the Pacific fleet; and an "Army of the Centre" was to rendezvous at San Antonio de Bexar, in the heart of Texas, to invade old Mexico from the north. (See *Mexico, War with.*)

Preparations to meet Rebellion (1774). Governor Hutchinson having reported that the military power was insufficient in Massachusetts, because no civil officer would sanction its employment, the crown lawyers decided that such power belonged to the governor; and Lord Dartmouth, Secretary of State for the colonies, ordered General Gage, in case the inhabitants should not obey his commands, to bid the troops to fire upon them at his discretion. He was assured that all trials of officers or troops in America for murder would, by a recent act, be removed to England.

Presbyterians and Independents in Parliament. In the Long Parliament (which see), which was the result of a contest between an arbitrary king and the establishment of a permanent legislature, was lodged a power that made strong impressions on the destinies of the English-American colonies. Soon after the beginning of the civil war the Parliament became a body whose duration legally depended on its own will. The majority of that Parliament soon became the despots of England, especially after one hundred and eighteen royalist members, obeying the call of their sovereign to Oxford, had left it. Royalty had no longer any

power in that legislature; and with the departure of the royalist members departed also the power of the Established Church in that body. It was at once divided into Presbyterians and Independents. The former were a sort of compromise, politically, between churchmen and conservative Puritans. They were favorable to monarchy, with Presbyterianism as a state form of religion, and had hopes of making peace with the king if he would consent to such a revolution in the Church as would secure to them the ascendancy. They had a majority in the Commons, and while the House of Lords existed they had exclusive possession of it. They also held control of the army, and were favored by the people of England and Scotland. The Independents were republicans, and wished to effect a complete revolution in society on the principle of equality. They had the commoners, the peers, the commanders of the army, all Scotland, and the mass of the English people against them. They became the bold champions of religious liberty and the power of the people. Their tendencies were all towards democracy, and they dreamed of emancipating England from the thrall not only of feudal institutions, but of feudal ideas. This tendency the Presbyterian nobility opposed as heartily as any royalist. Henry Vane, who had been Governor of Massachusetts, was a good representative of the better principles of the Independents, but Oliver Cromwell became the acknowledged leader of the party. With Cromwell's sword and the fanaticism of unreasoning men subjected to excitement, the Independents finally prevailed, the king lost his head, and the House of Lords was abolished.

Presbyterians at Boston. Several persons arriving at Boston from England attempted, in 1643, to establish Presbyterian government there under the authority of the Assembly of Divines at Westminster. They failed, meeting with strenuous opposition from ministers and magistrates.

Presbyterians in the United States. The Presbyterians soon followed the Episcopalians in arranging their Church on a national basis. The Synod of New York and Pennsylvania was divided into four synods, delegates from which annually met in a general assembly. A sort of alliance had been formed between the Presbyterian and Congregational churches of New England. The consociation of Connecticut sent delegates to the general assembly, not as members, but as friendly ambassadors. This practice was afterwards imitated by other Congregational associations. In New England, Latitudinarianism (which see) yet prevailed among the learned, and the new doctrine of Universalism began to spread.

Prescott, ROBERT, a British general, came to Canada in 1773 as brevet-colonel of Foot. On the capture of Montreal, late in 1775, Prescott, who had the local rank of brigadier, attempted to escape to Quebec with the British troops, but was compelled to surrender. He was exchanged the following September for General Sullivan, and was soon afterwards made colonel

of his regiment. On the capture of Rhode Island, late in 1776, he was placed in command there, and was made a prisoner in July, 1777, by Colonel Barton. (See *Prescott, Robert, Capture of.*) He was finally exchanged for General Lee; went back to Rhode Island, and remained in command there until it was evacuated, Oct. 25, 1779. He was made major-general in 1777, and lieutenant-general in 1782. He died in October, 1788.

Prescott, ROBERT, CAPTURE OF. General Prescott, the captor of Ethan Allen at Montreal, was in command of the British occupying a portion of Rhode Island in 1777, and had his quarters at a farm-house a short distance from Newport (see illustration on opposite page). His conduct had become very offensive to the Whigs, and to the inhabitants generally, who wished to get rid of him. Lieutenant-colonel Barton, with thirty-eight picked men, in four whale-boats, accompanied by a negro named Prince, crossed Narraganset Bay from Warwick Point at nine o'clock on a warm evening (July 10, 1777) to accomplish the task. Barton divided his men into small parties, and to each assigned a special duty. Misleading the sentinel at the gate of the house, belonging to a Quaker (Samuel Overton), Barton entered. Prescott was sleeping in an upper room. Ascending to it, the negro burst in a panel of the door, through which Barton entered, seized the general, bade him be perfectly silent, and, hurrying him to one of the boats, thrust him in, and there allowed him to dress. He was taken to Warwick Point, and from thence he was sent to Washington's headquarters in New Jersey.

Prescott, WILLIAM, a distinguished officer of the Revolution, was born at Groton, Mass., Feb. 20, 1726; died at Pepperell, Oct. 13, 1795. He was a provincial colonel at the capture of Cape Breton in 1754, and was one of General Winslow's captains in Nova Scotia in 1756, when the dispersion of the Acadians took place. (See *Acadians, Expulsion of the.*) Prescott inherited a large estate at Pepperell, and held several offices of trust there. When the news of the affair at Lexington reached him he assembled a regiment of minute-men, of which he became colonel, and marched to Cambridge. When it was decided to fortify Bunker's Hill, Prescott was chosen to conduct the enterprise. He cast up a redoubt and breastworks on Breed's Hill, and defended it bravely the next day (June 17, 1775) until his ammunition was exhausted, when he was compelled to retreat, after a severe battle with three thousand troops under Generals Howe and Clinton. He was among the last to quit the field. Prescott resigned his commission early in 1777, and returned home; but in the autumn of the same year he entered the Northern army under Gates as a volunteer, and was present at the capture of Burgoyne. After the war he was in the Massachusetts Legislature several years.

Prescott, WILLIAM HICKLING, LL.D., historian, was born at Salem, Mass., May 4, 1796; died in Boston, Jan. 26, 1859. He graduated at

Harvard University in 1814. He was a grandson of Colonel Prescott of Bunker Hill fame. He adopted a literary rather than a professional career, in consequence of an injury to his eye while in college. From 1815 to 1817 he travelled extensively in Europe, consulted eminent oculists, and found no relief. The injury to his eye being permanent, it impaired his whole sight to such a degree that all through life he was compelled to use the eyes of others in his literary pursuits. In 1824 he began contributions to the *North American Review*, and in June, 1826, he began his *History of Ferdinand and Isabella*, pub-

lished, in three volumes, in 1838. This work placed him in the front rank of historians. His *Conquest of Mexico* appeared in three volumes in 1843; his *Conquest of Peru*, two volumes, in 1847; and the three volumes of his *History of Philip II. of Spain* appeared in 1855-58. He intended to add three volumes more, but he did not live to complete them. In 1856 he published Robertson's *Charles V.*, with notes and a supplement. Mr. Prescott's works have been translated into several European languages, and he was an honored member of many literary societies in Europe and the United States.

PRESCOTT'S HEADQUARTERS.

lished, in three volumes, in 1838. This work placed him in the front rank of historians. His *Conquest of Mexico* appeared in three volumes in 1843; his *Conquest of Peru*, two volumes, in 1847; and the three volumes of his *History of Philip II. of Spain* appeared in 1855-58. He intended to add three volumes more, but he did not live to complete them. In 1856 he published Robertson's *Charles V.*, with notes and a supplement. Mr. Prescott's works have been translated into several European languages, and he was an honored member of many literary societies in Europe and the United States.

Presents to United States Ministers. In 1798 the subject of receiving presents from foreign governments by American ministers was brought before Congress in the case of Thom-

as Pinckney, who had represented the United States at the Spanish and English courts. Presents, according to old diplomatic usage, had been tendered to him by both these courts at the termination of his mission to each, which, on account of the last clause, section 10, article II. of the Constitution, respecting presents from foreign powers and provinces, he had declined to receive till leave should be given by Congress. A resolution authorizing him to accept was passed by the Senate, but was lost in the House; but by unanimous vote it was declared that motives of general policy, and nothing personal to Mr. Pinckney, caused its rejection. The usage since has been for ministers to receive the presents tendered, but to deposit them, on their return, with the Department of State.

Presidency, VACANCY IN THE—HOW FILLED. The method of temporarily filling the office of President of the United States, in case of a vacancy caused by inability, resignation, removal, or death of both President and Vice-President, was left to the judgment of Congress. The question had been much discussed in that body, and the Secretary of State, the Chief-justice, the President of the Senate, and the Secretary of the Treasury had all been respectively proposed for that purpose. An act was finally passed (1792) for selecting the

President *pro tempore* of the Senate; or, in case there were none, the Speaker of the House of Representatives to act till the removal of the disability or a new election, to be held, in such cases, on the first Wednesday in December, after two months' notice of the vacancy being given by the Secretary of State.

President and Belvidera. Commodore Rodgers was in the port of New York when war was declared, in command of a small squadron—the *President* (his flag-ship), 44 guns; the *Essex*, 32, Captain Porter; and the *Hornet*, 18, Captain Lawrence. He received orders (June 21, 1812) to sail immediately on a cruise. He had received information that a fleet of West India merchantmen had sailed for England under a convoy, and he steered for the Gulf Stream to intercept them. He had been joined by a small squadron under Commodore Decatur—the *United States* (flag-ship), 44 guns; *Congress*, 38, Cap-

tain Smith; and *Argus*, 16, Lieutenant-commander St. Clair. Meeting a vessel which had been boarded by the British ship *Beltridera*, 36, Captain R. Byron, Rodgers pressed sail, and in the course of thirty-six hours he discovered the *Beltridera*, gave chase, and overtook her off Nantucket Shoals. Rodgers pointed and discharged one of the fore-castle chase-guns of the *President*, and his shot went crashing through the stern-frame into the gun-room of his antagonist, driving her people from it. That was the "first hostile shot of the war fired afloat." A few moments afterwards one of the *President's* guns burst, killed and wounded sixteen men, blew up the fore-castle, and threw Rodgers several feet in the air. As he fell his leg was broken. Then a shot from a stern-chaser came from the *Beltridera*, killing a midshipman and one or two men. The *Beltridera* now lightened her burden by cutting away anchors and casting heavy things overboard. She gained on the *President*, and at twilight (June 23) the chase was abandoned. The *President* lost twenty-two men (sixteen by accident) killed and wounded. The *Beltridera* lost about twelve men killed and wounded.

President and Endymion. In the summer of 1814 Commodore Decatur, who had long been blockaded in the Thames, above New London, was transferred to the *President*, 44 guns, which Commodore Rodgers had left for the new ship *Guerrière*. In November he had under his command at New York a squadron composed of his flag-ship; the *Hornet*, 18 guns, Captain Biddle; the *Peacock*, 18, Captain Warrington; and *Tom Bowline*, store-ship. He had been watching the British who had ravaged the coasts in the vicinity of Chesapeake Bay. Finally he received orders to prepare for a cruise in the East Indies to spread havoc among the British shipping there. On the night of June 14, 1815, the *President* dropped down to Sandy Hook, leaving the other vessels of his squadron at anchor near Staten Island, and before morning she evaded the British blockaders and cleared the coast. He kept the *President* close along the Long Island shore for a while, believing that a gale that blew on the 14th had driven the blockaders to the leeward. Then he sailed boldly out to sea, and by starlight that evening he saw a strange sail ahead, within gunshot distance. Two others soon made their appearance, and at dawn the *President* was chased by four British ships of war, two on her quarter and two astern. These were the *Endymion*, 40 guns; *Pomone*, 38; *Tenedos*, 38; and *Majestic*, razee, which had been blown off the coast by the gale. The *President*, deeply laden with stores for a long cruise, soon found the *Endymion*, Captain Hope, rapidly overtaking her. Decatur lightened his ship to increase her speed, but to little purpose. At three o'clock in the afternoon (Sept. 16) the *Endymion* came down with a fresh breeze, which the *President* did not feel, and opened her bow guns upon the latter, which she quickly returned. At five o'clock the *Endymion* gained an advantageous position and terribly bruised the *President*, while the latter could not bring a gun to bear on her antagonist. It was evident that the *Endymion*

was endeavoring to gradually bring the *President* to an unmanageable wreck, and so secure a victory. Perceiving this, Decatur resolved to run down upon the *Endymion* and seize her as a prize by a hand-to-hand fight. But the commander of the British vessel, wary and skilful, was not to be caught so, and managed his vessel so that they were brought abeam of each other, when both delivered tremendous broadsides. Every attempt of Decatur to lay the *President* alongside the *Endymion* was foiled by Captain Hope, who adroitly kept his ship a quarter of a mile from his antagonist. Decatur now determined to dismantle his antagonist. The two frigates ran side by side for two hours and a half, discharging broadsides at each other, until the *Endymion*, having had most of her sails cut from the yards, fell astern, and would have struck her colors in a few minutes. At that moment the other vessels in chase were seen by the dim starlight approaching, when the *President* kept on her course and vainly tried to escape. The pursuers closed upon her, and at eleven o'clock made a simultaneous attack. Further resistance would have been useless, and the colors of the *President* were hauled down. Decatur delivered his sword to Captain Hayes, of the *Majestic*, which was the first vessel that came alongside the *President*. Decatur lost twenty-four men killed and fifty-six wounded. The *Endymion* had eleven killed and fourteen wounded. The *Endymion*, with her prize, sailed for Bermuda, and both vessels were dismasted by a gale before reaching port. When the details of the whole battle became known, the praise of Decatur and his men was upon every lip.

President and Little Belt. Minister Pinkney, at the British court, had arranged the difficulties concerning the affair of the *Chesapeake* and *Leopard* (which see), by which full atonement by the British government was secured, and the formal completion of the business had been reserved for the new British minister (Mr. Foster), when another collision between war-vessels of the two nations, more sanguinary than the former, occurred. A favorable arrangement with the French by the United States had caused British cruisers on the American coast to become more and more annoying to American commerce. A richly-laden vessel bound to France was captured within thirty miles of New York, and early in May, 1811, a British frigate, supposed to be the *Guerrière*, stopped an American brig only eighteen miles from New York. The government resolved to send out one or two of the new frigates to protect American commerce from British cruisers. The *President*, lying at Annapolis, was ordered (May 6) to put to sea at once, under the command of Commodore Rodgers, and on the 10th he weighed anchor and proceeded down Chesapeake Bay, and on the 14th passed the Capes of Virginia out into the Atlantic. Rodgers saw a vessel on the eastern horizon. They approached each other. Having exchanged signals, the stranger bore off southward. Thinking she might be the *Guerrière*, Rodgers gave chase. Early in the evening of May 16 Rodgers

was so near that he inquired, "What ship is that?" The question, repeated, came from the stranger. Rodgers immediately reiterated his question, which, before he could take his trumpet from his mouth, was answered by a shot that lodged in the main-mast of the *President*. Rodgers was about to respond in kind when a single gun from his ship was accidentally discharged. It was followed by three shots from his antagonist, and then by a broadside, with musketry. Then Rodgers, "equally determined," he said, "not to be the aggressor, or suffer the flag of my country to be insulted with impunity," gave orders for a general fire. His antagonist was silenced within six minutes, and the guns of the *President* ceased firing, when suddenly her antagonist opened fire anew. Again she was silenced, and at dawn the *President* saw her several miles to the leeward. He ascertained that she was his majesty's ship *Little Belt*, Captain A. B. Bingham, which was searching for the *Guerrière* on the American coast. This event greatly increased the number and zeal of a rapidly growing war-party in the United States. While the two governments were willing to bury the affair in oblivion, the people of each were filled with more bitter mutual animosity.

President Johnson, Secretary Stanton, and General Grant. When the cabinet of President Johnson resigned, the friends of Mr. Stanton, Secretary of War, urged him to retain the office, for it was believed the chief magistrate was contemplating some revolutionary movement. The Tenure of Office Act seemed to guarantee Mr. Stanton against removal. The Fortieth Congress met immediately after the adjournment of the Thirty-ninth, and adjourned (March 31, 1867) to meet on the first Wednesday in July following for the express purpose of preventing President Johnson from doing serious mischief. After removing obstructions cast in the way of reorganization by the President, Congress adjourned (July 20) to meet Nov. 21, hoping the President would no longer disturb the public peace by his conduct. They were mistaken. As soon as Congress adjourned, in violation of the Tenure of Office Act (which see), he proceeded to remove Mr. Stanton from office. He first asked him (Aug. 5) to resign. "Grave public considerations," he said, "constrain me to request your resignation as Secretary of War." Stanton replied, "Grave public considerations constrain me to continue in the office of Secretary of War until the next meeting of Congress." He shared in the general suspicion that Johnson was contemplating a revolutionary movement in favor of the Confederates. A week later the President directed General Grant to assume the position and duties of Secretary of War. As a dutiful soldier, he obeyed his commander-in-chief. Stanton, knowing the firmness and incorruptible patriotism of Grant, withdrew under protest. This change was followed by such arbitrary acts on the part of the President that the country was thoroughly alarmed. Even the President's private friends were amazed and mortified by his conduct. He gave unsatisfactory reasons for

dismissing Stanton. On Jan. 13, 1868, the Senate reinstated Stanton, when Grant quietly withdrew. The enraged President reproached the latter for yielding to the Senate, charged him with having broken his promises, and tried to injure his reputation as a citizen and a soldier. A question of veracity between them arose, when the general-in-chief felt compelled to say, in a letter to the President: "When my honor as a soldier and my integrity as a man have been so violently assailed, pardon me for saying that I can but regard this whole matter, from beginning to end, as an attempt to involve me in the resistance of law for which you hesitated to assume the responsibility in orders, and thus to destroy my character before the country." The President did not deny the truth of this damaging charge. His conduct concerning Stanton led immediately to his impeachment.

President Johnson's Tour. On Aug. 14, 1866, a convention was held in Philadelphia, composed largely of Confederate leaders and their sympathizers in the North, for the purpose of organizing a new political party, with President Johnson as its standard-bearer. Whereupon Johnson and a part of his cabinet made a circuitous journey to Chicago, ostensibly for the purpose of being present at the dedication of a monument to Senator Douglas. He harangued the people on the way in language so unbecoming the dignity of a chief magistrate of the Republic that the nation felt a relief from mortification after his return in September. He had denounced Congress as an illegal body, deserving of no respect. The tour, made wholly for political effect, extended to St. Louis. His conduct at Cleveland and St. Louis was so offensive that the Common Councils of Cincinnati and Pittsburgh refused to accord him a public reception. The attempt to establish a new party with President Johnson as a leader was a failure.

President Lincoln and Virginia Commissioners. On April 13, 1861, commissioners from the Virginia convention had a formal audience with President Lincoln to ascertain his intentions towards the Secessionists. He told them frankly that it was his determination to pursue the policy marked out in his inaugural address. He informed them that if an attack had been made upon Fort Sumter, as it was at that moment rumored, he should feel at liberty to take means to repossess it. "In any event," he said, "I shall, to the best of my ability, repel force by force." He also told them that he might feel it his duty to withdraw the United States mail service from all the states which claimed to have seceded, as the commencement of war by the insurgents would justify such a course. It was this explicit declaration of the President, that he should defend the life of the Republic, that made the Secessionists in Virginia desperate and resort to desperate measures. (See *Virginia Ordinance of Secession*.)

President Lincoln's First Call for Troops. Mr. Lincoln had said, in a little speech at Trenton (Feb. 1, 1861), while on his journey to Washington, "It may be necessary to put the foot

down firmly." The attack on Fort Sumter, in Charleston harbor, and its enforced evacuation (April 14, 1861) created that necessity; and on April 15 he issued a proclamation declaring that the laws of the Republic had been for some time, and were then, opposed in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas "by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by law;" and he therefore, by virtue of the power in him vested by the Constitution and laws, called forth the militia of the several states of the Union, to the aggregate number of seventy-five thousand, in order to suppress those combinations and to cause the laws to be duly executed. The President appealed to all loyal citizens to "favor, facilitate, and aid in this effort to maintain the honor, the integrity, and existence of our national Union and the perpetuity of popular government, and to redress wrongs already long enough endured." He said the first service assigned the forces thereby called forth would probably be "to repossess the forts, places, and property which had been seized from the Union." He assured the people that in every event the utmost care would be observed, consistently with the objects stated, to "avoid any devastation, any destruction of, or any interference with, property, or any disturbance of peaceful citizens of any part of the country." He commanded the persons composing the combinations mentioned to disperse and retire peacefully to their respective abodes within twenty days from the date of the proclamation. In the same proclamation he summoned a meeting of Congress at Washington at noon on Wednesday, July 4, next ensuing.

President of New England. In 1686 James II. commissioned Joseph Dudley President of New England. The royal commission was received May 15, and published on the 25th, at which time Dudley's administration was begun. It was short and unsatisfactory. The House of Delegates was laid aside, but the ancient ordinances of the General Court were declared to be in force. Dudley was superseded by Edmund Andros.

President of the Peace Convention. Ex-President John Tyler, of Virginia, was chosen President of the Peace Convention (which see) in February, 1861. At the close of the convention he was thanked by that body, and in his closing speech he said: "I cannot but hope and believe that the blessing of God will follow and rest upon the result of your labors, and that such result will bring to our country that quiet and peace which every patriotic heart so earnestly desires. . . . It is probable that the result to which you have arrived is the best that, under the circumstances, could be expected. So far as in me lies, therefore, I shall recommend its adoption." Mr. Tyler hastened to Richmond, where his views of the Peace Convention seem to have been modified, for thirty-six hours after the adjournment of that body he, in

a speech, denounced the convention as a worthless affair; declared that the South had nothing to hope from the Republican party; and entered warmly into the plans for severing Virginia from the Union.

Presidential Election (1793). The people voted for presidential electors to fill the place of the retiring President (Washington) in the autumn of 1796. The vote in the electoral college (which see) stood for John Adams, 71; Thomas Jefferson, 68; C. C. Pinckney, 59; Aaron Burr, 30; Oliver Ellsworth, 11; George Clinton, 7; John Jay, 5, and ten votes were scattered between five other candidates. Mr. Adams was chosen to the Presidency and Mr. Jefferson to the Vice-Presidency. The latter lost the office by three scattering votes. These votes for Mr. Adams were accidental tributes of personal esteem. "He felt the insecurity of his position," says his family biographer, "as a President of three votes."

Presidential Election (1804). Mr. Jefferson had been re-elected President in 1804, with George Clinton, of New York, as Vice-President. As the time for the election of President in 1808 approached there was much excitement in the political field. Early in the year a caucus of Democrats in Congress nominated James Madison for President and George Clinton for Vice-President. The ambition of leaders had thus caused a schism in the Democratic party. Madison, Monroe, and Clinton were each candidates for the Presidency. The Federalists, perceiving, as they thought, some chance for success in consequence of this schism, nominated Charles Cotesworth Pinckney, of South Carolina, for President, and Rufus King, of New York, for Vice-President. Madison was elected President, and Clinton Vice-President.

Presidential Election (1828). This took place in the midst of a highly excited state of public feeling, brought on by the long discussion of the characters of the prominent candidates, John Quincy Adams and Andrew Jackson. Immediately after the election of Adams to the Presidency (1824) there was a combination against him of a majority of the friends of Crawford with those of Jackson, and every effort of the new President to conciliate his political enemies was in vain. So early as November, 1815, Aaron Burr, in a letter to his son-in-law, ex-Governor Allston, of South Carolina, asked that gentleman to advocate the nomination of Andrew Jackson for the Presidency. The latter had constantly grown in popularity, and the result of the election in 1828 was that the electoral college gave him 178 votes to 83 for Adams. Mr. Calhoun was re-elected Vice-President by 171 votes. The number of electoral votes received by Mr. Adams was one less than he received in 1824, while those given for Jackson exceeded by one the united votes for Jackson, Crawford, and Clay in 1824.

Presidential Election (1836). The candidates for President and Vice-President in 1836 were Martin Van Buren, as the party successor of Jackson, with Richard M. Johnson as Vice-

President; and William Henry Harrison was nominated by the opposition, with Francis Granger for Vice-President. The opposition was divided in regard to nominees, the great body of them supporting Harrison, but a considerable faction in the South and Southwest supported Hugh L. White, of Tennessee, with John Tyler, of Virginia, for Vice-President. The opposition in Massachusetts voted for Daniel Webster for President, and the South Carolinians gave their votes to Willie P. Mangum, of North Carolina. The election was warmly contested. The different sections of the opposition, unable to concentrate their forces upon a single candidate, had hoped that the election of President would devolve upon the House of Representatives. The result, determined by the electoral college, was as follows: For President, Martin Van Buren, 170; William H. Harrison, 73; Hugh L. White, 26; Daniel Webster, 14; Willie P. Mangum, 11. Majority for Van Buren, over all, 46. For Vice-President, Richard M. Johnson, 147; Francis Granger, 77; John Tyler, 47; William Smith, of Alabama (vote cast by the Virginia electors), 23. Van Buren was elected President, but there was no choice for Vice-President. Then the Senate, in accordance with the provisions of the Constitution, proceeded to elect that officer, and chose Richard M. Johnson, of Kentucky.

Presidential Election (1840). Preparations for the presidential election began to be made early. The two grand political parties in the country were then known as Whigs (as the opposition was first called in 1834) and Democrats. The former met in national convention at Harrisburg, Penn., Dec. 4, 1839, and nominated General William Henry Harrison, of Ohio, for President, and John Tyler, of Virginia, for Vice-President. The Democrats held a convention at Baltimore, Md., May 5, 1840, and unanimously renominated Martin Van Buren for President. No nomination for Vice-President was then made, but afterwards Richard M. Johnson and James K. Polk were nominated in different states for that office. Never before was the country so excited and so widely demoralized by any election as it was during the "Hard-cider Campaign" (which see) in 1840. Harrison and Tyler were elected by overwhelming majorities.

Presidential Election (1852). When the administration of Mr. Fillmore drew to a close, nominations for his successor were made. The Democratic national convention assembled at Baltimore (June 1, 1852) and nominated General Franklin Pierce, of New Hampshire, for President, and William R. King, of Alabama, for Vice-President. A Whig national convention assembled at the same place in the same month (June 16) and nominated General Winfield Scott for President, and William A. Graham, of North Carolina, for Vice-President. There were several other candidates for nomination in the Democratic convention—namely, Lewis Cass, of Michigan; James Buchanan, of Pennsylvania; William L. Marcy, of New York; Stephen A. Douglas, of Illinois; Samuel Houston, of Texas; Joseph Lane, of Indiana, and others. On the

thirty-third ballot General Pierce was voted for for the first time, and the votes for him rapidly increased as the balloting went on. It required 192 votes to nominate; on the forty-ninth ballot he received 282 votes against six candidates. In the Whig convention there were three prominent candidates: Millard Fillmore, Winfield Scott, and Daniel Webster. On the first ballot Fillmore received 133, Scott 131, and Webster 29; and this relative proportion was kept up through fifty ballotings, 149 votes being necessary to a choice. On the fifty-third ballot Scott received 159 votes, and was declared nominated. A national convention of the Free-soil party (which see), held at Pittsburgh on Aug. 11, nominated John P. Hale, of New Hampshire, for President, and G. W. Julian, of Indiana, for Vice-President. A national convention of the Liberty party (not acquiescing in the fusion with the Free-soil party) met at Syracuse, N. Y., on Sept. 30, and nominated William Goodell for President, and S. M. Piper for Vice-President. A Southern Rights convention in Georgia nominated George M. Troup, of that state, for President, and General Quitman, of Mississippi, for Vice-President, but they did not accept the nomination. In November, Pierce and King were elected, each receiving the electoral votes of twenty seven states, 254 in number.

Presidential Election (1876). A Republican national convention assembled at Cincinnati, June 16, 1876, and nominated Rutherford Birchard Hayes, of Ohio, for President, and William A. Wheeler, of New York, for Vice-President. On the 27th of June a Democratic national convention assembled at St. Louis and nominated Samuel J. Tilden, of New York, for President, and Thomas A. Hendricks, of Indiana, for Vice-President. A very excited canvass succeeded, and so vehement became the lawlessness in some of the Southern States that at times local civil war seemed inevitable. The result of the election was in doubt for some time, each party claiming for its candidate a majority. In the electoral college 185 votes were necessary to the success of a candidate. It was decided after the election that Mr. Tilden had 184. Then ensued a long and bitter contest in South Carolina, Florida, and Louisiana over the official returns, each party charging the other with fraud. There was intense excitement in the Gulf region. In order to secure fair play, President Grant issued an order (Nov. 10, 1876) to General Sherman to instruct military officers in the South to be vigilant, to preserve peace and good order, and see that legal boards of canvassers of the votes cast at the elections were unmolested. He also appointed distinguished gentlemen of both political parties to go to Louisiana and Florida to be present at the reception of the returns and the counting of the votes. The result was that it was decided, on the count by returning boards, that Hayes had a majority of the electoral votes. The friends of Mr. Tilden were not satisfied. They had a majority in the House of Representatives in the Forty-fourth Congress, and they proposed, instead of submitting to the usual course in counting the votes of the several elec-

toral colleges, to appoint a commission (see *Electoral Commission*) to decide, after careful inquiry, at the final counting of the votes, what returns were legal. This electoral commission, composed of members of both houses, decided that Hayes was lawfully elected, with Wheeler as Vice-President. They were duly inaugurated on March 5 (the 4th falling on Sunday), 1877.

Presidential Etiquette. Washington was anxious so to regulate his intercourse with the public at large that the dignity of his office should be maintained consistently with a proper degree of republican simplicity. He resolved at the outset, in order to give his time to the public business, not to return any visits. To prevent being overrun with mere callers, he appointed the hour between three and four o'clock each Tuesday afternoon for the reception of gentlemen. He met ladies at the receptions given by Mrs. Washington, who also had stated times for the ceremony. These receptions by Mrs. Washington were confined to persons connected with the government and their families, foreign ministers and their families, and persons moving in the best circles of refined society, who were expected to appear in full dress. On these occasions Washington generally stood by the side of his wife, dressed in a plain suit of brown cloth, with bright buttons, without hat or dress-sword. At his own levees he wore a suit of black velvet, black-silk stockings, silver knee and shoe buckles, and yellow gloves. He held in his hand a cocked hat with a black cockade. His hat was trimmed with an ostrich feather around the edge, about an inch deep. An elegant dress-sword hung upon his hip in such a manner that only the point of the scabbard might be seen below the skirt of his coat. His friend Colonel Humphreys was master of ceremonies. As visitors came in they were introduced to the President by Humphreys, when they were arranged in a circle around the room. The door was closed at a quarter past three o'clock, when the company for the day was completed. The President then began on the right, and spoke to each visitor, calling him by name and addressing a few words to him. When he had completed the circuit, he returned to his first position, when the visitors approached him, bowed, and retired; and by four o'clock the ceremony was over. It was almost as free to the promiscuous public as are the President's levees now. Colonel Humphreys, who had lived in Paris, arranged the etiquette of the "republican court." The "court life" was not pleasing to Washington, and was positively distasteful to his wife. "I think I am more like a state prisoner," she wrote to a friend. "There are certain bounds which I may not depart from; and, as I cannot do as I like, I am obstinate, and stay at home a great deal."

Presidential Nominations and Election (1856). The American, or Know-nothing, party held a national convention at Philadelphia, commencing Feb. 18, 1856. It was called a special session of the "Council of the American Order." It had assumed the attitude of a strong political

power, its chief bond of union being opposition to foreigners, and especially to Roman Catholics. At the February gathering a national platform was considered. In June, 1855, the same council had, in a section of its platform, deprecated all further action on the subject of slavery. A motion to strike that out was warmly debated, when they decided to make an entirely new platform, which virtually recognized the Kansas-Nebraska Act (which see), and the duty of all to comply with the Fugitive Slave Law (which see). On Feb. 22, 1856, a national nominating convention of the American, or Know-nothing, party was held in Philadelphia and nominated Millard Fillmore, of New York, for President, and Andrew Jackson Donelson, of Tennessee, for Vice-President. Forty members seceded from the convention, and this was the beginning of the dissolution of the party. (See *American, or Know-nothing, Party, The*.) The Republican party, just forming, held a national nominating convention at Pittsburgh, Penn., on Feb. 22, 1856, over which Francis P. Blair, of Maryland, presided. It put forth an elaborate statement of the principles and purposes of the Republican party. They declared that for many years the powers of the national government had been "systematically wielded for the promotion and extension of the interests of slavery, in direct hostility to the letter and spirit of the Constitution, in flagrant disregard of other great interests of the country, and in open contempt of the public sentiment of the American people and of the Christian world." Opposition to the spread of slavery in the Republic was the strong feature of this party now organized, and a convention to nominate candidates for the Presidency of the United States was called to meet at the same place in June following. It convened, and Henry S. Lane, of Indiana, was chosen chairman of the convention. A platform was adopted, the substance of which was as follows: 1. The Constitution must be preserved. 2. The existence of any constitutional power to give legal continuance to slavery was denied. 3. The sovereignty of Congress over all territories was affirmed, and the exercise of its power to prohibit slavery and polygamy was demanded. 4. It declared that the rights of the people had been violated under the sanction and procurement of the administration. 5. It urged the admission of Kansas into the Union under its free constitution. 6. The principles in respect to foreign policy contained in the Ostend Manifesto (which see) were denounced. 7. The construction of a railway to the Pacific through the aid of the national government was advocated. 8. Government appropriations for internal improvements were favored. 9. Men of all parties were asked to co-operate with the Republicans, and it repudiated legislation which interfered with the liberty of conscience and the equal rights of citizens. The convention nominated for President of the United States John C. Fremont, of California, and William L. Dayton, of New Jersey, for Vice-President. On the 12th of June (1856) the seceders from the nominating convention of the American, or Know-nothing,

party, calling themselves "North Americans," met in convention in New York and presented to the Republican convention the name of N. P. Banks, of Massachusetts, for President, and W. F. Johnson, for Vice-President. After the Republican convention the North Americans formally nominated John C. Frémont and W. F. Johnson for President and Vice-President. The national nominating convention of the Democratic party—a party formed in 1829—assembled at Cincinnati (June 2, 1856), with J. E. Ward, of Georgia, as chairman. Their platform condemned all political organizations based upon religious principles or accidental birth-place (aimed at the American, or Know-nothing, party [which see]); recognized the principles of the Kansas-Nebraska Act, as the only safe solution of the slavery question; affirmed the duty of firmly upholding "state rights" (state supremacy) and the Union; deprecated monopolies and partial legislation; recommended a firm adherence to the compromises of the Constitution; affirmed the Monroe doctrine, and assented generally to that of the Ostend Manifesto. On the 5th the convention nominated James Buchanan, of Pennsylvania, for President, and John C. Breckinridge, of Kentucky, for Vice-President. Three candidates for President were now in the field—Buchanan, Frémont, and Fillmore. The Democratic and Republican candidates adopted their respective platforms; Mr. Fillmore referred his countrymen to his past acts as the exponents of his principles. Buchanan and Breckinridge were elected, receiving the electoral votes of nineteen states. Frémont and Dayton received the votes of eleven states; and Fillmore and Johnson the votes of one state—Maryland.

Presidential Nominations and Election (1860). The Democratic national convention assembled at Charleston April 23, 1860, and, after a stormy session and the secession of Southern delegates, it reassembled at Baltimore, June 18, and nominated Stephen A. Douglas, of Illinois, for President, and Herschel V. Johnson, of Georgia, for Vice-President. The Southern seceders also assembled at Baltimore, June 23, 1860, and nominated John C. Breckinridge, of Kentucky, for President, and Joseph Lane, of Oregon, for Vice-President. A recent political organization, calling themselves the "National Constitutional party," had already met in delegate convention in Baltimore (May 9, 1860), over which ex-Governor Washington Hunt presided. They adopted as their platform the national Constitution, with the legend—"The Union, the Constitution, and the enforcement of the laws." They nominated John Bell, of Tennessee, for President, and Edward Everett, of Massachusetts, for Vice-President. On May 16 a vast concourse of Republicans assembled in a building erected in Chicago for the purpose, called "The Wigwam," to nominate a Republican candidate for the Presidency. George Ashmun, of Massachusetts, presided over the convention. They adopted a platform of principles in the form of seventeen resolutions, in which it was declared that each state has the absolute right of control in the manage-

ment of its own domestic concerns; that the new dogma, that the national Constitution, of its own force, carries slavery into any or all of the territories of the United States, was a dangerous political heresy, revolutionary in its tendency, and subversive of the peace and harmony of the country; that the normal condition of all the territories of the United States is that of freedom, and that neither Congress nor a territorial legislature nor any individuals have authority to give legal existence to slavery in any territory in the United States; and that the reopening of the African slave-trade (then recently commenced in the Southern States under the cover of our national flag, aided by a perversion of judicial power) was a crime against humanity and a burning shame to our country and age. On the 19th the convention proceeded to ballot for a candidate for the Presidency of the United States. Henry S. Lane, of Indiana, nominated Abraham Lincoln, of Illinois, for that high office; and on the third ballot he was chosen as the standard-bearer of the Republican party. Hannibal Hamlin, of Maine, was nominated for Vice-President. There were now four candidates for President in the field. The candidate of the Republicans, who declared freedom to be the normal condition of all territory, and that slavery could exist only by authority of municipal law, was Abraham Lincoln. The candidate of the radical pro-slavery wing of the Democratic party, who declared that no power existed that might lawfully control slavery in the territories, and that it was the duty of the national government to protect the institution, was John C. Breckinridge. The candidate of the wing of the divided Democratic party whose platform assumed not to know positively whether slavery might or might not have lawful existence in the territories, but expressed a willingness to abide by the decision of the Supreme Court in all cases, was Stephen A. Douglas. The candidate of the National Constitutional Union party, which declined to express any opinion upon any subject, was John Bell. The conflict was desperate from July until November, when Abraham Lincoln and Hannibal Hamlin were elected. Of three hundred and three presidential electors chosen, one hundred and eighty voted for Mr. Lincoln. An analysis of the popular vote showed that three fourths of the whole number were given by men opposed to the extension of the slave-labor system. This significant fact notified the supporters of the slave system that the days of their long political domination in the councils of the nation had ended, perhaps forever, and they acted accordingly.

Presidential Nominations (1872). Early in the year several political national conventions were held for the purpose of nominating candidates for the Presidency. The first was that of the "Labor Reform party," held at Columbus, O., in February, and nominated David Davis, of Illinois, one of the judges of the Supreme Court of the United States, for President. He declined, and Charles O'Connor, of New York, was nominated. In April a national convention of

colored men was held in New Orleans, but refrained from nominating a candidate. A movement, begun in Missouri in 1870, for a union of Democrats and so-called "Liberal Republicans," culminated in the spring and summer of 1872 in the fusion of these two political elements. On the 1st of May a national convention of Liberal Republicans assembled at Cincinnati and nominated the late Horace Greeley, editor of the *New York Tribune*, for President, and B. Gratz Brown, of Missouri, for Vice-President. The regular Republican Convention assembled at Philadelphia June 5, and nominated President Grant for re-election, and Henry Wilson, of Massachusetts, for Vice-President. On July 9 a Democratic national convention assembled at Baltimore and adopted the nominees of the Liberal Republicans (Greeley and Brown) by an almost unanimous vote. The opposition party expected much strength from the coalition, but failed. Grant and Wilson were elected, the former by a larger majority than he received at his first election. They were inaugurated on March 4, 1873.

Presidential Titles. On the day when Washington arrived in New York as President-elect (April 23, 1789) the Senate appointed a committee to confer with such committee as the House might appoint as to what titles, if any, it would be proper to annex to the office of President and Vice-President. The joint-committee reported that it would not be proper to use any other than that "expressed in the Constitution"—"plain" President and Vice-President. The Senate was not satisfied, and referred the subject to a new committee, who reported in favor of adopting the style of "His Highness the President of the United States, and Protector of their Liberties." A long and animated debate ensued in the House, when a proposition was made to appoint a new committee to confer with that of the Senate. The House finally appointed a committee. To this the Senate responded, but no report was ever made. The House had already carried their views into practice by addressing Washington, in reply to his first message, as "President of the United States." The Senate saw fit to follow the example. Before long it became common to prefix the title "His Excellency."

President's March. THE. President Washington and his family attended the little theatre in John Street, New York, occasionally by particular desire of the manager. On these occasions the play-bills would be headed "BY PARTICULAR DESIRE," and the house would be crowded with as many to see Washington as the play. On one of these occasions, on the entering of the President, he was greeted with a new air by the orchestra, composed by a German musician named Fayles (1789), which was called *The President's March*, in contradistinction to *The March of the Revolution*, then very popular. Ever afterwards this air was played by the orchestra when the President entered the theatre. But the public would call for *The March of the Revolution* as soon as *The President's March* was end-

ed. The latter air is now known as *Hail Columbia* (which see).

Presidents' Messages. Washington and Adams, like the monarchs of England, read their speeches at the opening of the national Legislature in person; but the inaugural address of Jefferson, which was more to the people than to Congress, was the last delivered orally. After that his messages at the opening of Congress and on special occasions, made in writing, were sent to the presiding officer of the House addressed, by his private secretary—a practice ever since followed. Jefferson also discontinued the practice of holding levees, but it was reintroduced by Madison and his charming wife after he became President.

Presidents of the United States. The union of the English-American colonies and the formation of the Republic of the United States was begun at the organization of the First Continental Congress, in 1774. The Presidents of that and succeeding Congresses properly rank as Presidents of the United States. So ranking, *Peyton Randolph*, of Virginia, was chosen the first President, in September, 1774. He was succeeded by *Henry Middleton*, of South Carolina, Oct. 23, 1774, on account of Mr. Randolph's sickness. He served only three days, when the Congress adjourned. On May 19, 1775, *John Hancock*, of Massachusetts, was chosen President, and held the office until the autumn of 1777. *Henry Laurens*, of South Carolina, became President Nov. 1, 1777. *John Jay*, of New York, succeeded Laurens, Dec. 10, 1778, soon after which the latter was appointed minister to Holland. *Samuel Huntington*, of Connecticut, was chosen President Sept. 28, 1779, when Jay was appointed minister to Spain. He was succeeded by *Thomas McKean*, of Pennsylvania, July 10, 1781, who, in turn, gave place to *John Hanson*, of Maryland, Nov. 5, 1781. *Elias Boudinot*, of Huguenot descent, a native of Philadelphia, was chosen President Nov. 5, 1782. *Thomas Mifflin*, also a native of Philadelphia, was chosen President Oct. 3, 1783, and was followed by *Richard Henry Lee*, of Virginia, Nov. 30, 1784. *Nathaniel Gorham*, of Massachusetts, followed Lee, by appointment, June 6, 1786, and gave place to General *Arthur St. Clair*, Feb. 2, 1787. *Cyrus Griffin*, chosen Jan. 22, 1788, to succeed St. Clair, who was appointed Governor of the Northwest Territory, was the last of the Presidents of the Continental Congress, which expired March 4, 1789. Then the new government, under the national Constitution, went into operation, and *George Washington*, who had been chosen President, became the first chief magistrate of the new nation. The table on the following page gives some important statistics of the succeeding Presidents from Washington to Hayes, with the names of the Vice-Presidents.

President's Proclamations (1865). On April 11, 1865, President Lincoln issued two proclamations: one declaring the closing, until further notice, of certain ports in the Southern States, whereof the blockade had been raised by their capture, respectively; and the other demand-

ing, henceforth, for American vessels in foreign ports, on penalty of retaliation, those privileges and immunities which had hitherto been denied them on the plea of according equal belligerent rights to the Republic and its internal enemies.

Presque Isle, FORT, was the chief point of communication between Fort Pitt (now Pittsburgh) and Fort Niagara. It was on the site of Erie, Penn. It was garrisoned by twenty-four men. On June 20, 1763, it was attacked by Indians, and, after defending it two days, the commander, paralyzed by terror, surrendered the post. Several of the garrison were murdered, and the commander and a few others were carried to Detroit. (See *Pontiac's War*.)

Preston, WILLIAM, was born near Louisville, Ky., Oct. 16, 1816; died in 1862. He served, in the war against Mexico, as lieutenant-colonel of Kentucky volunteers, and afterwards was in his state Legislature. In 1851 he was elected to Congress, and in March, 1859, President Buchanan appointed him envoy-extraordinary to the court of Spain. When the Civil War broke out, Mr. Preston resigned his office, and hastened home to join the Secessionists of Kentucky in efforts to carry that state out of the Union. At the Secession Convention at Russellville, he was appointed a commissioner to visit Richmond, and negotiate for the admission of Kentucky into the Confederacy, and accepted the commission of brigadier-general in the Confederate army. He was aid to his brother-in-law, General A. Sidney Johnston, at the battle of Shiloh (which see), and he served under Bragg in his invasion of Kentucky.

Prevost, AUGUSTINE, was born at Geneva, Switzerland; died at Barnet, Eng., May 5, 1768. He served as captain under Wolfe at Quebec. He came to America, a British colonel, in 1778, and distinguished himself in Georgia (see *Sunbury and Brier Creek, Battle at*), especially in his defence of Savannah, in 1779, for which he was promoted to major-general. (See *Siege of Savannah*.) He had made an unsuccessful attempt to

capture Charleston a few months before.

Prevost, SIR GEORGE, was born in New York, May 19, 1767; died in England, Jan. 5, 1816. He entered the army in his youth, and served with distinction in the military operations of the British in the West Indies, especially at St. Lucia. In January, 1805, he was made a major-general, and in November a baronet. He was second in command at the capture of Martinique (1808), and the same year he became Governor of Nova Scotia. He was made lieutenant-general in 1811, and in June of that year he succeeded Sir James Craig as

Governor of Canada, which office he retained until his return to England, in 1814. He ably defended Canada in the War of 1812-15. With a large force of Wellington's veterans, he invaded New York in September, 1814, and was defeated in battle at Plattsburg on the 11th. (See *Plattsburg, Battles at, on Land and Water*.)

Prevost's Flight from Plattsburg. The cause of the sudden panic of the British troops at Plattsburg, and their precipitous flight on the night of the battle there (see *Plattsburg, Battles at, on Land and Water*), was inexplicable. The late Rev. Eleazar Williams (which see) informed the writer that it was the result of a clever trick arranged by him (Williams), who was then in the military service, as commander of a secret corps of observation, or "spies," as they were called in the Western Army. Governor Chittenden, of Vermont, restrained the militia of his state from leaving it. A few days before the battle, an officer (Colonel Fassett) from that state assured Macomb that the militia would cross the lake in spite of the governor. After the officer left, Williams suggested to Macomb that a letter from Fassett, declaring that a heavy body of militia were about to cross the lake, sent so as to fall into the hands of the British general, would have a salutary effect. Macomb directed Williams to carry out the plan. He went over to Burlington, and received from Fassett a letter to Macomb, in which he said Chittenden was marching with 10,000 men for St. Albans, that 5000 men were marching from St. Lawrence County, and that 4000 from Washington County were in motion. This letter Williams placed in the hands of a shrewd Irishwoman at Cumberland Head, who took it to Prevost just after the battle at Plattsburg had ended. Prevost, who was naturally timid, was greatly alarmed by the "intercepted" letter, and at a little past midnight his whole army were flying in haste towards the Canada frontier.

Price on Liberty. Dr. Price (see *Price, Richard*), in his essay entitled *Observations on Civil*

Liberty and the Justice and Policy of the War with America, defined liberty to be a government of laws made by common consent. Around this definition clustered his arguments. But his masterly plea (like that of all others) for the Americans was unavailing, though his tract had great influence at home, in applying to the actual condition of the representation of his own country the principle on which America justified her resistance. He raised a cry of reform which proved the death-knell of many abuses. Tories and Churchmen denounced him as an enemy to the throne and Christianity, and caricature was employed in vain against him. A print by Gillray exhibited Price, Priestley, and others tearing in pieces acts of Parliament and pulling down churches. Under the picture were these lines:

"From such implacable tormentors,
Fanatics, hypocrites, dissenters,
Cruel in power, and restless out,
And, when most factious, most devout,
May God preserve the Church and throne,
And George the good that sits thereon.
Nor may their plots exclude his heirs
From reigning, when the right is theirs!
For should the foot the head command,
And faction gain the upperhand,
We may expect a ruined land."

Price, RICHARD, D.D., LL.D., a British author, was born at Tynton, Glamorganshire, Wales, Feb. 23, 1723; died in London, March 19, 1791. He was a dissenting minister, and was connected with churches at Stoke-Newington and Hackney, as pastor and preacher, from 1743 until a short time before his death. He wrote much and well on morals, politics, and political and social economy. His *Appeal on the Subject of the National Debt* is said to have been the foundation of Pitt's Sinking Fund scheme. In 1776 he published *Observations on Civil Liberty and the Justice and Policy of the War with America*. It was a powerful plea for justice and right, and sixty thousand copies were distributed. The corporation of London gave him a vote of thanks and the freedom of the city; and in 1778 the American Congress invited him to become a citizen of the United States, and to aid them in the management of their finances, promising him a liberal remuneration. In 1783 Yale College conferred on him the honorary degree of LL.D., and in 1784 he published *Observations on the Importance of the American Revolution*. His philosophical writings procured for him a fellowship in the Royal Society in 1764.

Price, STERLING, was born in Prince Edward County, Va., in September, 1809; died at St. Louis, Mo., Sept. 29, 1867. He was a member of Congress from Missouri (where he settled in 1830) in 1845, was colonel of Missouri cavalry in the war against Mexico, and in 1847 was made a brigadier-general and military governor of Chihuahua. He was Governor of Missouri from 1853 to 1857, and President of the State Convention in February, 1861. He was made general-in-chief of Missouri, and served the Confederacy faithfully as a leader of insurgent forces throughout the Civil War. At the close of the war he went to Mexico, but returned to Missouri in 1867, and died soon afterwards.

Prideaux, JOHN, was born in Devonshire, Eng., in 1718; died at Niagara, July 19, 1759. Son of Sir John Prideaux, he entered the army, and was appointed captain in 1745, colonel in 1758, and brigadier-general in 1759. Intrusted with the duty of reducing Fort Niagara, he led a strong force against it, and during a siege he was instantly killed by the bursting of a cannon.

Prince Regent, MANIFESTO OF THE. (See *Manifesto of the Prince Regent.*)

Prince (or Prence), THOMAS, Governor of Plymouth Colony, was born in England in 1601; died at Plymouth, Mass., March 29, 1673. He arrived in America in 1628, and was either Assistant (which see) or Governor of Plymouth from 1634 to 1673. He was one of the first settlers at Nauset, or Eustham, in 1644, and lived there until 1663. He was a zealous opposer of the Quakers, as heretics, though not a persecutor of them, and was an earnest champion of popular education. In spite of the opposition and clamors of the ignorant, he procured resources for the support of grammar-schools in the colony.

Prince, THOMAS, chronologist, was born at Sandwich, Mass., May 15, 1687; died in Boston, Oct. 22, 1758. He graduated at Harvard College in 1707. He was a minister of the Gospel, and, going to England in 1709, he preached there until 1717, when he returned to America, and was ordained minister of the "Old South Church," Boston (1718), as colleague of Dr. Sewall. In 1703 Mr. Prince began a collection of private and public papers relating to the civil and religious history of New England, and continued these labors for fifty years. These he published in the form of annals (1736 and 1756). The history was brought down only to 1633, as he spent so much time on the introductory epitome, beginning with the creation. His manuscripts were deposited in the Old South Church, and were partially destroyed by the British while they occupied Boston, in 1775-76. The remains, with his books, form a part of the Public Library of Boston.

STERLING PRICE.

Princeton, BATTLE AT. Alarmed by the blow at Trenton (see *Trenton, Battle at*), the British broke up their encampments along the Delaware, and retired to Princeton. Washington thereupon reoccupied Trenton, where he was speedily joined by three thousand six hundred

Pennsylvania militia. At that moment the term of enlistment of the New England regiments expired, but the persuasions of their officers and a bounty of \$10 induced them to remain for six weeks longer. Howe detained Cornwallis (who was about to sail for England), and sent him to take command of the concentrated troops at Princeton, about ten miles northeast of Trenton. Reinforced by troops from New Brunswick, he marched on Trenton (Jan. 2, 1777), where Washington was encamped on high ground east of a small stream, near where it enters the Delaware. After a sharp cannonade at a bridge and a ford, the British encamped, feeling sure of capturing the whole of Washington's army in the morning. The position of the latter was a perilous one. He had five thousand men, half of them militia who had been only a few days in camp. To fight the veterans before him would be madness; to attempt to recross the Delaware in the face of the enemy would be futile. Washington called a council of war, and it was decided to attempt to gain the rear of the enemy during the night, beat up his quarters at Princeton, and, if possible, fall on his stores at New Brunswick. Washington kept his camp-fires brightly burning, sent his baggage silently down the river to Burlington, had small parties throwing up intrenchments within hearing of the British sentinels, and at about midnight, the weather having suddenly become very cold and the ground hard frozen, the whole American army marched

the army had mysteriously disappeared. Faint sounds of cannonading at Princeton reached the ear of Cornwallis at Trenton. Although it was a keen winter morning, he thought it the rumbling of distant thunder. General Erskine more readily comprehended the matter, and exclaimed, "Thunder! To arms, general! Washington has outgeneralled us! Let us fly to the rescue at Princeton!" The army was now on the move in that direction. In the meantime the battle at Princeton was sharp and decisive. Mercer's forces were furiously attacked with the deadly bayonet, and they fled in disorder. The enemy pursued until, on the brow of a hill, they discovered the American regulars and Pennsylvania militia, under Washington, marching to the support of Mercer, who, in trying to rally his men, had his horse disabled under him, and was finally knocked down by a clubbed musket, and mortally wounded. Just then Washington appeared, checked the flight of the fugitives, and, with the help of Moulder's artillery, intercepted the other British regiment. Mawhood saw Washington bring-

VIEW OF THE BATTLE-GROUND NEAR PRINCETON.

away unobserved by the enemy. By a circuitous route, they reached Princeton (Jan. 3, 1777) before sunrise. Two of three British regiments lying at Princeton had just begun their march to join Cornwallis at Trenton. Their commander, Colonel Mawhood, first discovered the approaching Americans, under General Mercer, and a sharp engagement ensued, each having two field-pieces. Meanwhile the British at Trenton were greatly surprised, in the morning, to find their expected prey had escaped. The American camp-fires were still burning, but the lit-

ing order out of confusion, and, charging with his artillery, tried in vain to seize Moulder's cannon. At this onset the Pennsylvanians, first in line, began to waver, when Washington, to encourage them, rode to the forefront of danger. For a moment he was hidden in the battle-smoke, and a shiver of dread lest he had fallen ran through the army. When he appeared, unhurt, a shout of joy rent the air. A fresh force of Americans, under Colonel Hitchcock, came up, and, with Hand's riflemen, were turning the British left, when Mawhood

ordered a retreat. His force (the Seventieth Regiment) fled across the snow-covered fields, leaving two brass cannons behind them. The Fifty-fifth Regiment, which had attempted to reinforce them, were pressed by the New England troops, under Stark, Poor, Patterson, Reed, and others, and were joined in their flight towards New Brunswick by the Fortieth, who had not taken part in the action. A British regiment in the strong stone-built Nassau Hall, of

wife of the first president of Harvard College. Under the direction of the authorities at Boston, Day set up the press at Cambridge, and began printing there in January, 1639. Its first production was *The Freeman's Oath*, and the first literary work issued by it was a new metrical version of the Psalms, a revision of those of Sternhold and Hopkins. This was the beginning of book-printing in the United States. It was forty years before another printing-press was set up in this country. The first printing-press at work west of the Alleghany Mountains was in Cincinnati, in 1793, and the first west of the Mississippi was in St. Louis, in 1808.

NASSAU HALL, PRINCETON COLLEGE.

the College of New Jersey, was cannonaded, and soon surrendered. In this short but sharp battle the British lost, in killed, wounded, and prisoners, about four hundred and thirty men. The American loss was about one hundred, including Colonels Haslet and Potter, Major Morris, and Captains Shippen, Fleming, and Neal. Mercer died nine days after the battle. When Cornwallis arrived at Princeton, Washington and his little army and prisoners were far on their way towards the Millstone River, in hot pursuit of the Fortieth and Fifty-fifth regiments. Washington relinquished the chase because of the great fatigue of the American soldiers; and moving on to Morristown, in East Jersey, there established the winter-quarters of the army. He was universally applauded. It is said that Frederick the Great, of Prussia, declared that the achievements of Washington and his little band of patriots, between the 25th of December, 1776, and the 4th of January, 1777, were the most brilliant of any recorded in military history.

Pring, MARTIN. (See *New England*.)

Printing. The first printing in America was done in the City of Mexico, in 1539. There were then about two hundred printing-offices in Europe. The second press was set up at Lima, Peru, in 1586, and the third was erected at Cambridge, Mass., in 1639. In 1638 Rev. Jesse Glover started for Massachusetts with his family, having in his care a printing-press given to the colony by some friends in Holland. He was accompanied by Stephen Day, a competent printer. Mr. Glover died on the voyage, and his widow became the

Printing-press, THE. Wonderful improvements have been made in the construction of printing-presses in the United States within the present century. The press on which Benjamin Franklin worked as a journeyman printer, in 1725, was very little improved until 1817, when George Clymer, of Philadelphia, invented the "Columbian" press. It was the first important improvement. The power was applied by a compound lever. In 1829 Samuel Rust invented the "Washington" press, which superseded others for a while. The dubbing-balls, before used, were succeeded by inking-rollers, and later a self-inking apparatus was used. With that machine a good workman could turn off two thousand sheets a day. Daniel Treadwell, of Boston, invented the first "power-press," and in 1830 Samuel Adams, of the same city, invented the celebrated "Adams" press, which is still used for fine book-work. It was improved by his son Isaac. Every operation, excepting the feeding of the sheets (and some-

FRANKLIN'S PRESS.

times that) is done automatically. The first "rotary" press for rapid newspaper-printing was made by a German mechanic in London, and used to print the *London Times*, in 1814.

It gave eighteen hundred impressions in an hour. An improved machine was made for the *Times*, in 1848, which threw off ten thousand sheets an hour. The Hoes, of New York, made many and great improvements in printing-machines, and between 1850 and 1860 they made successful attempts to print from a roll of paper, on both sides of the sheet. Difficulties that at first appeared have been overcome, and now Hoe's "Perfecting" press prints a newspaper on both sides and folds it, ready for delivery, at the rate of fifteen to eighteen thousand an hour. It was a good day's work when Franklin's old press gave two hundred and fifty impressions an hour.

Printing Prohibited in Virginia. In reply to questions of the Plantation Committee (see *Board of Trade and Plantations*), Governor Berkeley, in 1671, reported: "We have forty-eight parishes, and our ministers are well paid, and by my consent should be better if they would pray oftener and preach less. But as of all other commodities, so of this—the worst are sent out to us; and there are few that we can boast of, since the persecution in Cromwell's tyranny drove divers worthy men from hither. But I thank God there are no free schools nor printing, and I hope we shall not have them these hundred years; for learning has brought disobedience and heresy and sects into the world, and printing has divulged them, and libels against the best government. God keep us from both!" The authorities in Virginia continued to hold this view after Berkeley had left. In 1680 John Buckner, having brought a printing-press to Virginia, printed the laws of that session for a while. Governor Culpepper and his Council called him to account and compelled him to give bonds that he would print no more until his majesty's pleasure should be known. Royal instructions came positively forbidding any printing in the colony. (See *Navigation Acts*.)

Prisoners, EXCHANGE OF, DURING THE CIVIL WAR. At the beginning of the Civil War prisoners were taken on both sides. The question instantly occurred to the government, Can we exchange prisoners with rebels against the national authority without thereby acknowledging the Confederate government, so called, as a government in fact? They could not; but humanity took precedence of policy, and an arrangement was made for an exchange of prisoners. Colonel W. H. Ludlow was chosen for the service by the national government; Robert Ould was chosen by the Confederates. The former commissioner had his headquarters at Fortress Monroe; the latter at Richmond. Prisoners were sent in boats to and from each place. This business went regularly on until it was interrupted by Jefferson Davis near the close of 1862. Because the government chose to use the loyal negroes as soldiers, Davis's fiery anger was kindled. On Dec. 23 he issued a most extraordinary proclamation, the tone of which more than anything else doubtless caused foreign governments to hesitate about

introducing the Confederacy into the family of nations. In it he outlawed a major-general of the Union army (see *Butler in New Orleans and Woman Order, The*), and he directed in that proclamation that all negro soldiers who might be taken prisoners, and all commissioned officers serving in company with them who should be captured, should be handed over to state governments for execution, the negroes as insurgent slaves, the white officers as inciters of servile insurrection. The government felt morally bound to afford equal protection to all its citizen soldiers of whatever hue. When Davis, in a message to the Confederate Congress (Jan. 12, 1863), announced his determination to deliver all white officers commanding negro troops, who might be captured, to state authorities to be hung, and to treat those troops as rebels against their masters, the national Congress took the matter up. Davis's proclamation and message were followed by his instructions to Robert Ould not to consider captive negro soldiers as prisoners of war. After that no quarter was given, in many instances, where colored troops were employed, and the black flag was carried against officers commanding them. The government felt compelled to refuse any more exchanges until the Confederates should treat all prisoners alike. In August, 1863, when the national commissioner of prisoners demanded that negro captives should be treated as prisoners of war and exchanged, Commissioner Ould replied: "We will die in the last ditch before giving up the right to send slaves back to slavery." The Confederate government thus effectually shut the door of exchange, and fearfully increased the number and terrible sufferings of the Union prisoners in their hands. These sufferings have been detailed in official reports, personal narratives, and otherwise; and there seems to be conclusive testimony to show that the order of Davis concerning negro prisoners was to deliberately stop exchanges and enable the Confederates to destroy or permanently disable Union prisoners by the slow process of physical exhaustion, by means of starvation or unwholesome food. General Meredith, commissioner of prisoners at Fortress Monroe, said in a letter: "On the 25th of November I offered to send immediately to City Point 12,000 or more Confederate prisoners, to be exchanged for National soldiers confined in the South. This proposition was distinctly and unequivocally refused by Mr. Ould. And why? Because the damnable plans of the rebel government in relation to our poor captured soldiers had not been fully carried out." The testimony seems clear that the Union prisoners at Richmond, Danville, Salisbury, and Andersonville were subjected to cruelties and poisonous food for the double purpose of crippling and reducing the National force and of striking terror into the Northern population, in order to prevent enlistments. When General John Winder, Davis's general commissary of prisoners, went from Richmond to take charge of the Union prisoners at Andersonville, the *Examiner* of that city exclaimed: "Thank God that Richmond is at last rid of old Winder!

God have mercy upon those to whom he has been sent!" (See *Andersonville and other Confederate Prisons*.) Meanwhile the Confederate prisoners of war had been well fed and humanely treated. This the Confederate authorities well knew; and when, in all the Confederate prisons, the Union captives were no better, as soldiers, than dead men—an army of 40,000 skeletons—Mr. Ould proposed, in a letter to General Butler (Aug. 10, 1864) a resumption of exchange, man for man. And when such resumption began, the difference between Union skeletons and vigorous Confederate soldiers was acknowledged by Ould, who wrote exultingly from City Point to General Winder: "The arrangement I have made works largely in our favor. We get rid of a set of miserable wretches, and receive some of the best material I ever saw." At the middle of autumn (1864) arrangements for special exchanges were made, and Lieutenant-colonel Mulford went with vessels to Savannah to receive and take to Annapolis 12,000 Union prisoners from Andersonville and elsewhere. In these the writer saw (December, 1864) the horrible effects of treatment in Confederate prison-pens. The records of the War Department show that during the war 220,000 Confederate soldiers were captured, of whom 26,436 died of wounds or diseases during their captivity; while, of 126,940 Union soldiers captured, nearly 22,576 died while prisoners—or a little more than 11 per cent. of the Confederates, and more than 17 per cent. of the Unionists.

Prisoners, First Exchange Of. Late in 1776 an arrangement was made for an exchange of prisoners between the Americans and British. The latter had taken about five thousand prisoners, and many of these had suffered terribly in the prisons in and around New York. (See *Prisons and Prison-ships*.) The Americans held about three thousand. At first the British refused to exchange, on the ground that the Americans were rebels; but after Howe's arrival at New York he had opened negotiations on the subject. A good deal of obstruction had occurred on account of the refusal of Congress to fulfil the stipulations made by Arnold at the Cedars. (See *Cedars, Affair at the*.) But finally a cartel was arranged, and a partial exchange was effected early in 1777. As the Americans had no prisoner of equal rank with General Charles Lee (which see), they offered in exchange for him six Hessian field-officers captured at Trenton. Lee was claimed by Howe as a deserter from the British army, and the exchange was at first refused. Howe had received orders to send Lee to England; but the fear of retaliation upon British prisoners, and some important revelations made by Lee, caused him to be kept in America, and finally exchanged for General Robert Prescott. (See *Treason of General Lee*.) There were other reasons for delay in the exchange of prisoners. The prisoners in the hands of the British were returned half-starved and disabled, and Washington refused to send back an equal number of healthy British and Hessian prisoners. Besides, those who came back were

persons whose terms of service generally had expired, and would be lost to the Continental army; while every person sent to the British army was a healthy recruit. For this reason Congress was in no haste to exchange.

Prisoners for Debt. The suffering of prisoners for debt, which impelled General Oglethorpe to propose colonizing a region in America with them, was terrible in the extreme. The writings of Howard and the pencil of Hogarth have vividly depicted them; yet these do not convey an adequate idea of the old debtors' prisons of England. The merchant, unfortunate in his business, was often plunged from affluence and social honor and usefulness to the dreadful dens of filth and misery called prisons. Oglethorpe had stood before one of the victims of the cruel law. He had been a distinguished London alderman, a thrifty merchant, and highly esteemed for his integrity and benevolence. As a "merchant prince," he had been a commercial leader. Great losses made him a bankrupt. His creditors sent him to prison. In a moment he was compelled to leave a happy home, delightful society, and luxurious ease for a loathsome prison-cell, there to herd with debased and criminal society. One by one his friends who could aid him in keeping famine from his wretched abode disappeared, and he was forgotten by the outside world. He had been twenty-three years in jail when Oglethorpe saw him. Gray-haired, ragged, haggard, and perishing with hunger, he lay upon a heap of filthy straw in a dark, damp, unventilated room. His devoted wife, who had shared his misery for eighteen years, had just starved to death, and her body lay in rags by his side, silent and cold. An hour before he had begged his jailer to remove her body to the prison burying-ground. The inhuman wretch, who was acquainted with the prisoner's history, had refused with an oath, and said, with cruel irony, "Send for your alderman's coach to take her to Westminster Abbey!" The scene led to the foundation of the colony of Georgia. (See *Georgia, Colony of*.) The fate of this London alderman was worse than that of the debtors of Greece and Rome, who were sold into slavery by their creditors. Laws for the imprisonment of debtors disgraced the statute-books of our states until within a comparatively few years. When Lafayette visited our country in 1824-25 he found Colonel Barton, the captor of General Prescott in Rhode Island, in a prison for debt, and released him by the payment of the creditor's demand. Robert Morris, whose financial ability was the main dependence of the colonies in carrying on the war for independence, was a prisoner for debt in his old age. Red-Jacket, the Seneca chief, once saw a man put in jail in Batavia, N. Y., for debt. His remark—"He no catch beaver there!"—fully illustrated the unwisdom of such laws; for surely a man in prison cannot earn money to pay a debt. Public attention was thoroughly aroused to the cruelties of the law when John G. Whittier wrote his stirring poem, *The Prisoner for Debt*, in which he thus alluded to Colonel Barton:

"What hath the gray-haired prisoner done?
 Hath murder stained his hands with gore?
 Ah, no! his crime's a fouler one—
God made the old man poor.
 For this he shares a felon's cell,
 The fittest earthly type of hell!
 For this, the boon for which he poured
 His young blood on the invader's sword,
 And counted light the fearful cost—
 His blood-gained liberty is lost!

* * * * *

"Down with the law that binds him there!
 Unworthy freemen, let it find
 No refuge from the withering curse
 Of God and human kind!
 Open the prisoner's living tomb,
 And usher from its brooding gloom
 The victims of your savage code
 To the free sun and air of God!
 No longer dare as crime to brand
 The chastening of the Almighty's hand!"

It is believed that this poem did much to bring about a repeal of the cruel laws of imprisonment for debt. It was abolished in the State of New York, except in certain specified cases, in the year 1831. Such laws have since been gradually dropped from the statute-books of other states; and now the legislation of the State of New York may be assumed, in its general features, as the prevalent system throughout the United States in respect to the coercive remedy for the collection of debts by process against the person.

Prisoners from Quebec. The prisoners of war captured at Quebec Dec. 31, 1775, five hundred in number, and released on parole by Carleton, arrived at Elizabethtown Point, N. J., on Sept. 24, 1776. They were so overjoyed on reaching the shore, just before midnight, that they could not sleep, "but ran a race to Elizabethtown," and "passed the night in singing, dancing, screaming, and raising the Indian halloo from excess of joy." Among them was Colonel Daniel Morgan, the intrepid leader of riflemen, who was soon afterwards exchanged.

Prisoners of War, MEASURES FOR RELEASE. OF. On April 15, 1783, Congress resolved "That the agent of mariners cause all the naval prisoners to be set at liberty;" also, "That the Secretary of War, in conjunction with the commander-in-chief, make proper arrangements for setting at liberty all land prisoners."

Prisons and Prison-ships, BRITISH, AT NEW YORK. The British in New York confined the American prisoners of war in various large buildings, the most spacious of which were

VAN CORTLANDT'S SUGAR-HOUSE.

churches and sugar-houses. In the North Dutch Church, corner of Fulton and William

streets, were confined at one time eight hundred prisoners; and in the Middle Dutch Church, corner of Nassau and Liberty streets, room was made for three thousand prisoners. Both churches were stripped of their pews, and floors were laid from one gallery to the other. Smaller churches were used for hospitals. Rhinelander's, Van Cortlandt's, and Livingston's sugar-houses contained hundreds of

SUGAR-HOUSE IN LIBERTY STREET.

prisoners, whose sufferings for want of fresh air, food, and cleanliness were dreadful. Under Commissaries Loring, Spront, and others, and particularly under the infamous Provost-marshal Cunningham, the prisoners in these buildings and the provost jail received the most

PROVOST JAIL.

brutal treatment. Hundreds died and were cast into pits without any funeral ceremonies. The heat of summer was suffocating in the sugar-house prisons. "I saw," says Dunlap, in describing the one in Liberty Street, "every narrow aperture of those stone walls filled with human heads, face above face, seeking a portion of the external air." For many weeks the dead-cart visited this prison (a fair type of the others), into which from eight to twelve corpses were flung and piled up. They were then dumped into ditches in the outskirts of the city and covered with earth by their fellow-prisoners, who were detailed for the work. The prison-ships—dismantled old hulks—lying in the waters around the city, were more intolerable than the prisons on land. Of these, the *Jersey*, lying at the Wallabout, near the site of the Brooklyn Navy-yard, was the most famous. She was the hulk of a 64-gun ship, in which more than a thousand prisoners were sometimes confined at one time. There they suffered indescribable horrors from unwholesome food, foul air, filth, and vermin, and from small-pox, dysentery, and prison-fever that slew them by scores. Despair reigned there incessantly,

for their treatment was generally brutal in the extreme. Every night the living, dying, and dead were huddled together. At sunset each day was heard the savage order, accompanied by horrid imprecations, "Down, rebels, down!" and in the morning the significant cry, "Rebels, turn out your dead!" The latter were selected from the living, sewed up in blankets, carried on shore, and buried in shallow graves in the sand. Full eleven thousand were so taken from the *Jersey* and buried during the war. In 1808

THE JERSEY PRISON-SHIP.

the bones of these martyrs were gathered by the Tammany Society and placed in a vault near the entrance to the navy-yard, and a few years ago a magnificent monument was erected and dedicated to their memory in Trinity Church-yard, near Broadway.

Private Taxation in Virginia. In 1662, by a reorganization of the judiciary in Virginia, the governor and council became the highest tribunal, and these were all appointed, directly or indirectly, by the crown. In each county were eight empowered justices of the peace, appointed by the governor during his pleasure, who held monthly courts in their respective counties. The administration of justice in the counties was in the hands of persons holding these offices at the good-will of the governor, while the governor himself and his council constituted the General Court. The county courts, thus made independent of the people, exercised the arbitrary power of levying county taxes, which, in amount, generally exceeded the public levy. The commissioners themselves levied taxes to meet their own expenses; and, in like manner, the self-perpetuating vestries made out their lists of taxables, and assessed taxes without the consent of the parish. These private taxes, unequal and oppressive, were seldom audited; and the power was often exercised by men who combined to defraud the public.

Privateering. This is really legalized piracy—the right given to private individuals to roam the ocean and seize and plunder the vessels of an enemy in time of war. It is still the accepted rule among nations. On this subject Thomas Jefferson wrote (July 4, 1812) after the declaration of war, and after asking "What is war?" answered, "It is simply a contest between nations of trying which can do the other the most harm." Again he asked, "Who carries on war?" and answered, "Armies are formed and navies manned by individuals. What produces peace? The distress of individuals. What difference to the sufferer is it that his property is taken by a national or private armed vessel? Did our merchants, who have lost 917 vessels by British

captures, feel any gratification that most of them were taken by his majesty's men-of-war? Were the spoils less rigidly enforced by a 74-gun ship than by a privateer of 4 guns, and were not all equally condemned? . . . In the United States every possible encouragement should be given to privateering in time of war with a commercial nation. We have tens of thousands of seamen that without it would be destitute of the means of support and useless to their country." The same argument was used by the Dey of Algiers when Colonel Humphreys remonstrated against his piratical expeditions, and exhorted him to make peace with the United States. "If I were to make peace with everybody," he said, "what should I do with my corsairs? what should I do with my soldiers? They would take off my head for the want of other prizes, not being able to live on their miserable allowance." Mr. Jefferson continued, "Our national ships are too few in number to give employment to one twentieth part of them [the seamen], or retaliate the acts of the enemy. By licensing private armed vessels, the whole naval force of the nation is truly brought to bear on the foe; and while the contest lasts, that it may have the speedier termination, let every individual contribute his mite in the best way he can to distress and harass the enemy and compel him to peace."

Privateering in the Revolution. Early in the war privateering was entered upon with much zeal and vigor by the Americans, especially by the New-Englanders (see *Privateering*); and the scarcity produced by the interruption of regular commerce was partially supplied by successful cruisers. It was kept up during the whole war. Shares in vessels practising it were held by many of the leaders in the revolutionary struggle. Robert Morris made large profits by the business, and Washington was part owner of one or more privateers. The homeward-bound British vessels from the West Indies, deeply laden, and passing a long distance along the American coast, offered rich and tempting prizes. In the first year of this naval warfare nearly three hundred and fifty British vessels had been captured, worth, with their cargoes, \$5,000,000.

Privateers Authorized (1776). When the act of Parliament prohibiting all trade with the colonies and confiscating their ships and effects as if they were the ships and effects of open enemies was received by Congress, the first instinct was to retaliate. On March 16 (1776) a committee of the whole considered the propriety of authorizing the inhabitants of the colonies to fit out privateers. Franklin expressed a wish that such an act should be preceded by a declaration of war, as of one independent nation against another. Two days afterwards, after an able debate, privateers were authorized to cruise against ships and their cargoes belonging to any inhabitant, not of Ireland and the West Indies, but of Great Britain. All New England and New York, Virginia, and North Carolina voted for it. Maryland and Pennsylvania voted against it. On the following day (March 19), Wythe,

Jay, and Wilson were appointed to prepare a preamble to the resolutions, and when on the 22d Lee presented their report (being in the minority), he moved an amendment, charging the king himself with their grievances, inasmuch as he had "rejected their petitions with scorn and contempt." This was new and bold ground, and was objected to as severing the king from the colonies. Never before had they disclaimed allegiance to their monarch, and Congress hesitated; but on the following day (the 23d) the amendment was accepted. This was nearly three months before Lee offered his resolution for independence. He voted for this amendment.

Privateers, EXPLOITS OF AMERICAN. The records of the American privateers during the War of 1812-15 show the wonderful boldness and skill of American seamen, most of them untaught in the art of naval warfare and the general character of privateering service. After the first six months of the war most of the naval conflicts on the ocean were carried on, on the part of the Americans, by private armed vessels, which "took, burned, and destroyed" about 1600 British merchantmen of all classes in the space of three years and nine months, while the number of American merchant-vessels destroyed during the same period by British privateers did not vary much from 500. The American armed vessels which caused such disasters to British commerce numbered about 250. Of these, 46 were letters-of-marque (which see), and the remainder were privateers. This was 115 less than were enrolled while there were difficulties with France in the years 1789 and 1799. The number of private armed vessels then was 365. Of the whole number in 1812-15, 184 were sent out from the four ports of Baltimore, New York, Boston, and Salem. The aggregate number sent out from Portsmouth, N. H., Philadelphia, and Charleston, was 35. The remainder went out from other ports. The "clippers"

schooners with raking masts. They usually carried from six to ten guns, with a single long one, which was called "Long Tom," mounted on a swivel in the centre. They were usually manned with fifty persons besides officers, all armed with muskets, cutlasses, and boarding-pikes, and commissioned to "burn, sink, and destroy the property of the enemy, either on the high seas or in his ports." A complete history of American privateering would fill several volumes; an outline of it is contained in Coggeshall's *History of American Privateers*, in one volume. The most famous and desperate combat recorded in the history of American privateering is that of the *General Armstrong*, Captain S. C. Reid, in September, 1814. (See *General Armstrong, The Privateer*.)

Privy Council. Formerly a body of men selected by the kings of England for their chief advisers and executors. First it was a small permanent committee selected out of the great council of the kingdom, which was composed of all the great tenants of the crown. It appears in the early rolls of Parliament as a permanent council, and under the Plantagenet monarchs it consisted of the five great officers of state, the two archbishops, and from ten to fifteen other persons, spiritual or temporal, sitting constantly as a court, and invested with extensive powers. Under the Stuarts, the Star-chamber Court and Court of Requests were committees of the Privy Council. The privy-councillors are chosen by the king without patent or grant. Under Charles II. their number, which had become large, was reduced (1679) to thirty. It soon became indefinite again and so continued. Those only who were specially summoned ever attended its meetings. Under its jurisdiction the king, in council, might issue proclamations binding on the subject if consonant with the laws of the land; temporarily regulate various matters of trade and international intercourse; inquire into offences against the government and commit offenders to take their trial according to law, and had appellate jurisdiction in the last resort from all the colonies. The lord-president of the council was the fourth great officer of state. This office was created by Henry VIII. In the reign of William IV. a judicial committee of the Privy Council was constituted with high powers. It consisted of the chief-justice of the king's bench, the master of the rolls, the vice-chancellor of England, and several other persons, *ex officio*, and any two privy-councillors might be added by the sovereign. The function of advisers of the sovereign in all weighty matters is now discharged by the cabinet, or ministers of state.

CLIPPER-BUILT PRIVATEER SCHOONER.

were the fastest sailers and most successful of the privateers. These were mostly built at Baltimore, or for parties in that city, and were known as "Baltimore clippers." They were

Prize-money, DISTRIBUTION OF. At the beginning of the second war for independence (which see), Congress decreed that in the distribution of prize-money arising from the captures by national vessels, one half should go

to the United States, and the other half, divided into twenty equal parts, should be distributed in the following manner: to captains, three parts; to the lieutenants and sailing-masters, two parts; to the marine officers, surgeons, pursers, boatswains, gunners, carpenters, master's mates, and chaplains, two parts; to midshipmen, surgeon's mates, captain's clerks, school-masters, boatswain's mates, gunner's mates, carpenter's mates, stewards, sail-makers, masters-at-arms, armorers, and coxswains, three parts; to gunner's yeomen, boatswain's yeomen, quartermasters, quarter-gunners, coopers, sail-maker's mates, sergeants and corporals of marines, drummers and fifers, and extra petty officers, three parts; to seamen, ordinary seamen, marines and boys, seven parts.

Procès Verbal, the French term for an official report or record of proceedings in a court of justice or elsewhere. The French discoverers and explorers in America set up a cross and a column, and placed the royal arms of France upon the latter, and then proclaimed the country discovered to be a part of the dominions of France. Then a report of the whole proceedings was written and signed by the leader and his companions. (See *La Salle, Robert, Caratier de.*) Sometimes they deposited a tablet of lead with an appropriate inscription. La Salle did so at the mouth of the Mississippi, and in the next century Céloron, who led a French expedition from Canada to the Ohio country (1749), buried several of them at different points as an enduring *procès verbal*. One of these plates, stolen by an Indian from the French interpreter at Fort Niagara, was taken to Colonel (afterwards General) William Johnson by a Cayuga sachem for an interpretation of its meaning. The following is a translation of the inscription: "In the year 1749, of the reign of Louis XV., King of France, we, Céloron, commander of a detachment sent by Monsieur the Marquis de la Galissonnière, Governor-general of New France, to re-establish tranquillity in some Indian villages of these cantons, have buried this plate of lead at the confluence of the Ohio and Chautauqua* this 29th day of July, near the river Ohio, otherwise *Belle Rivière*, as a monument of the renewal of the possession we have taken of the said river Ohio, and of all those which empty into it, and of all the lands on both sides as far as the sources of said rivers, as enjoyed or ought to have been enjoyed by the kings of France preceding, and as they have there maintained themselves by arms and by treaties, especially those of Utrecht and Aix-la-Chapelle." This inscription revealed the designs of the French. The plate was sent to the royal governor of New York (George Clinton), and by him to the British government. He sent copies of the inscription to other colonial governors, and Colonel Johnson told the Five Nations that it implied an attempt to deprive them of their lands, and that the French ought to be immediately expelled from the Ohio and Niagara. One of the plates buried by Céloron

near the mouth of the Muskingum River was found by some boys near the close of the last century. A part of it was used for bullets; the preserved fragment is now in the library of the American Antiquarian Society of Worcester, Mass. Near the mouth of the Great Kanawha River, W. Va., another leaden *procès verbal*, buried by Céloron, was found by a boy in 1846. (See *Céloron's Expedition.*)

Proclamation by General and Admiral Howe. Foiled in their attempt at peace negotiations, the Howes issued a proclamation to the people of the colonies, in which they declared the intention of the British government to revise the instructions to the royal governors, and all acts of Parliament by which the colonists might think themselves aggrieved. They called on the people to judge for themselves whether it were not better to rely upon this promise and return to their allegiance than to sacrifice themselves to the unjust and precarious cause in which they were engaged. Influenced by this proclamation, many patriotic inhabitants of New Jersey took protection from the British authorities. The enlistment of Tories went on briskly under the shield of this proclamation, and Oliver De Lancey, brother of a former lieutenant-governor of New York, and Cortlandt Skinner, late Attorney-general of New Jersey and Speaker of the Assembly, were commissioned brigadier-generals. When the British and Hessian soldiers afterwards entered New Jersey, the people perceived, to their cost, that their "protectors" did not shield them from the abuse and plunder of armed men fighting for the king. Late in 1775, the Howes issued a new proclamation in their character of king's commissioners, calling upon the insurgents to disband, and upon all political bodies to relinquish their "usurped authority," and allowing sixty days within which to make submission. The speedy triumph of British arms seemed certain, and many, especially persons of property, hastened to make their submission. Tucker, President of the New Jersey Provincial Convention, abandoned the Whig cause and took a British protection. It was at this time that Joseph Galloway, of Pennsylvania, showed open signs of disaffection. For ten days after the issue of the proclamation, two or three hundred persons from New Jersey came in every day to take the oath of allegiance.

Proclamation of King George (1775). The arrival of Richard Penn in London with the second petition of Congress aroused the anger of the king towards, and his fixed determination concerning, the "rebellious colonies." He refused to see Penn or receive the petition, and on Aug. 23 he issued a proclamation for suppressing rebellion and sedition in America. "There is reason," said the proclamation, "to apprehend that such rebellion [in America] hath been much promoted and encouraged by the traitorous correspondence, counsels, and comfort, of diverse wicked and desperate persons within our realm," and he called upon all officers of the realm, civil and military, and all his subjects, to disclose all "traitorous conspiracies," giving information of

* The Alleghany River was regarded as the Ohio proper, and the Monongahela only as a tributary.

the same to one of the secretaries of state, "in order to bring to condign punishment the authors, perpetrators, and abettors of such traitorous desigus." This proclamation was aimed at Chatham and Camden in the House of Lords, and Barré in the House of Commons, and their active political friends. When it was read to the people at the Royal Exchange it was received with a general hiss from the populace. But the stubborn king would not yield. He would rather perish than consent to repeal the alterations in the Charter of Massachusetts, or yield the absolute authority of Parliament. And North, who in his heart thought the king wrong, supported him chiefly, as was alleged, because he loved office with its power and emoluments better than justice. When, in November, the wife of John Adams read the king's proclamation, she wrote to her husband, saying, "This intelligence will make a plain path for you, though a dangerous one. I could not join to-day in the petitions of our worthy pastors for a reconciliation between our no longer parent state, but tyrant state, and the colonies. Let us separate; they are unworthy to be our brethren. Let us renounce them; and, instead of supplications as formerly for their prosperity and happiness, let us beseech the Almighty to blast their councils and bring to naught all their devices." The proclamation stimulated Congress to recommend the formation of state governments, and filled the minds and hearts of the people with thoughts of, and desires for, independence. Encouraged by Franklin, Rush, and others, Thomas Paine, an emigrant from England, and a clear and powerful writer, prepared an appeal to the people of America in favor of independence. (See *Common Sense*.)

Proclamation of the Restoration in Massachusetts. More than a year after the restoration of monarchy in England, Charles II. was formally proclaimed king (August, 1661) in Boston. All disorderly demonstrations were prohibited. None were to presume to drink the king's health, but a loyal address in fulsome style, designating the king as "one of the gods among men," was adopted by the authorities at Boston. The magistrates and ministers were uncertain of the king's intentions concerning the province, and hardly knew what to do.

Proclamation of Washington (1777). Late in January Washington issued a proclamation in the name of the United States that all who had taken British protection and professed fidelity to the crown should take an oath of allegiance to the United States or withdraw within the British lines. Regarding this as a violation of state supremacy, the Legislature of New Jersey censured the commander-in-chief, and a few members of Congress joined in the censure. There was then a growing faction in that body inimical to Washington, and ready to censure him. They were jealous of the power with which he had been invested (see *Dictatorship conferred on Washington*), and which he used so judiciously. "In private life," said John Adams, "I am willing to respect and look up to him; in this

House I feel myself to be the superior of General Washington." Not more than one hundred of the inhabitants of New Jersey had joined the army of Washington when fleeing before Cornwallis, while almost three thousand had subscribed to a declaration of fidelity to the king. Having felt the cruelty and endured the plunderings of the British and Hessian troops, they were now glad to obey the requirements of Washington's proclamation, and hundreds joined his troops who were sent out to harass the enemy.

Proclamations and Counter-proclamations (1775). A proclamation having been issued in the name of the king (Aug. 23, 1775), in which the colonists were denounced as "rebels," and accused of "forgetting the allegiance which they owed to the power which had protected and sustained them," the Congress issued a counter-proclamation (Dec. 6), in which they denied that they ever owed allegiance to Parliament, but avowed their allegiance to the sovereign. They condemned, and avowed their purpose to oppose with arms, the exercise of unconstitutional powers by the crown or Parliament, and proclaimed their resolution to retort upon the supporters of the ministry—the Tories—any severities which might be inflicted upon their friends and partisans.

Proctor, HENRY A., was born in Wales in 1765; died in Liverpool, Eng., in 1859. He joined the British army in 1781, and rose to the rank of major-general after his service in Canada in 1813. He came to Canada in command of a regiment in 1812, and, as acting brigadier-general, commanded British troops at Amherstburg, under the direction of General Brock, to prevent Hull's invasion of Canada. For his victory at Frenchtown (on the River Raisin) he was made a brigadier-general. (See *Frenchtown, Massacre at*.) He and his Indian allies were repulsed at Fort Meigs and at Fort Stephenson (which see); and he was defeated in the battle of the Thames (which see) by General Harrison. For his conduct in America, especially at Frenchtown, he was afterwards court-martialled, and suspended from command for six months; but was again in active service, and was made a lieutenant-general.

Proctor, THOMAS, colonel of Pennsylvania artillery during the Revolution, was born in Ireland in 1739; died in Philadelphia, May 16, 1806. He was distinguished in the battle of Brandywine and in Sullivan's expedition in 1779 (which see).

Prophecy of Pownall. Thomas Pownall, who, as governor of Massachusetts, and a traveller, explorer, and civil officer in the central portion of the Union, had become well acquainted with the characteristics of the American people, published in England, at the beginning of 1780, a memorial to the sovereigns in Europe, in which he said the system of establishing colonies in various climates to create a monopoly of the peculiar products of their labor was at an end; that America was so far removed from the influences of Europe and its embroiled interests that it was without a real enemy, and the

United States of America had taken an equal station with the nations upon earth; that negotiations were of no consequence either to the right or the fact—the independence of America was “a fixed fact;” that its government, young and strong, would struggle by the vigor of its internal healing principles of life against all evils in its system and surmount them. “Its strength will grow with years,” he said, “and it will establish its constitution.” He asserted his belief that in time the West Indies must, “in the course of events, become part of the great North American dominion.” He predicted the casting off by the Spanish colonies in South America of their dependence upon Spain, which occurred in less than fifty years afterwards, because “South America,” he said, “is growing too much for Spain to manage; it is in power independent, and will be so in act as soon as any occasion shall call forth that power.” He spoke of the civilizing activity of the human race having free course in America, the people there, “standing on the high ground of improvement up to which the most enlightened parts of Europe have advanced, like eaglets, commence the first efforts of their pinions from a towering advantage.” He lauded America as “the poor man’s country,” where labor and mental development went hand in hand—where “many a real philosopher, a politician, a warrior, emerges out of this wilderness, as the seed rises out of the ground where it hath lain buried for its season.” He referred to the freedom of the mechanic arts that would be secured by independence, where no laws lock up the artisan, and said, “The moment that the progress of civilization is ripe for it, manufactures will grow and increase with an astonishing exuberancy.” Referring to ship-building, he said: “Their commerce hath been striking deep root;” and referred to ocean and inland navigation as becoming “our vital principle of life, extended through our organized being, our nature.” “Before long,” he said, the Americans “will be trading in the South Sea, in the Spice Islands, and in China. . . . Commerce will open the door to immigration. By constant intercommunion, America will every day approach nearer and nearer to Europe. Unless the great potentates of Europe can station cherubim at every avenue with a flaming sword that turns every way to prevent man’s quitting this Old World, multitudes of their people, many of the most useful, enterprising spirits, will emigrate to the new one. Much of the active property will go there, too.” He alluded to the folly of the sovereigns trying to check the progress of the Americans, and said: “Those sovereigns of Europe who shall call upon their ministers to state to them things as they really do exist in nature, shall form the earliest, the more sure, and natural connection with North America, as being, what she is, an independent state. . . . The new empire of America is, like a giant, ready to run its course. The fostering care with which the rival powers of Europe will nurse it insures its establishment beyond all doubt and danger.” So early as 1760, Pownall, who had associated with

liberal men while upholding the king’s prerogative, many times said that the political independence of the Americans was certain, and near at hand. On one occasion Hutchinson, who, eight years later, was in Pownall’s official seat in Massachusetts, hearing of these remarks, exclaimed, “Not for centuries!” for he knew how strong was the affection of New England for the fatherland. He did not know how strong was the desire of the people for liberty.

Proposed Amendments to the Constitution. Early in the last session of the Thirty-sixth Congress (1860), when disloyal men lifted up the voice of sedition in that body, Alexander R. Boteler, of Virginia, proposed a committee of one from each state (thirty-three), to which should be referred so much of the President’s message as related “to the present perilous condition of the country” for consideration (see *Thirty-sixth Congress, The*), with power to report at any time. The committee was appointed, and it received a large number of resolutions, suggestions, and propositions for amendments to the national Constitution. The principal amendments offered were by John Cochrane and Daniel E. Sickles, of New York; Thomas C. Hindman, of Arkansas; Clement L. Vallandigham, of Ohio; and John W. Noell, of Missouri. Cochrane proposed the acceptance of the decision of the Supreme Court in the Dred Scott case; that neither Congress nor the people of any territory should interfere with slavery therein while it remained a territory; that the Missouri Compromise, as to the limits of slavery, should be revived; that Congress should not have power to abolish the inter-state slave-trade; that the Fugitive Slave Law should be reaffirmed; that slaveholders might pass with their slaves unmolested through any free-labor state; and that all state laws nullifying the Fugitive Slave Law should be inoperative; also a declaration that the national Constitution was an article of agreement between sovereign states, and that an attempt of the national government to coerce a sovereign state into obedience to it would be levying war upon a substantial power, and would precipitate a dissolution of the Union. Sickles proposed an amendment declaring that when a state, in the exercise of its sovereignty, should secede, the government of the United States should appoint commissioners to confer with duly appointed agents of such state, and agree upon the disposition of the public property and territory belonging to the United States lying within it, and upon the proportion of the public debt to be assessed and paid by that state; also authorizing the President, when all should be settled, to proclaim the withdrawal of such state from the Union. This surrendered everything to the Secessionists. Senator Clingman had proposed almost the same thing a fortnight before. Sickles afterwards fought the Secessionists in the field and lost a leg. Hindman, afterwards a Confederate general, proposed an amendment that should guarantee the express recognition of slavery wherever it existed; no interference with the inter-state or domestic slave-trade; to give free action of slave-

holders with their slaves in free-labor states; to prohibit to any state the right of representation in Congress whose Legislature should pass laws impairing the obligations of the Fugitive Slave Law; to give to slave-labor states a negative upon all acts of Congress concerning slavery; to make these and all other provisions of the Constitution relating to slavery unamendable, and to grant to the several states authority to appoint all national officers within their respective limits. Vallandigham proposed an amendment providing for the division of the Republic into four sections, to be called respectively the *North*, the *West*, the *Pacific*, and the *South*. The North was to include the New England States, New York, New Jersey, and Pennsylvania; the West, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, and Kansas. The Pacific, Oregon and California. The South, the fifteen slave-labor states. "This," said a writer at the time, "was the fullest and most logical embodiment yet made of Mr. Calhoun's subtle device for enabling a minority to obstruct and baffle the majority under a political system preserving the form of a republic." Noell proposed to instruct Congress to inquire and report as to the expediency of abolishing the office of President of the United States, and establishing in lieu thereof an executive council of three members, to be elected by districts composed of contiguous states as nearly as possible, and each member to be invested with a veto power; also, whether the equilibrium between the free-labor and slave-labor states might not be restored and preserved, particularly by a voluntary division on the part of the last-named states into two or more commonwealths. Other propositions for conciliation were offered, some similar and some quite dissimilar to those already mentioned; and it was evident to the people at large that the Republic would not be saved by the wisdom of their representatives alone.

Proprietaries of Pennsylvania Taxed. The Pennsylvania Assembly, by perseverance, triumphed at last. Tired of the struggle, and without a salary, which the Assembly persistently refused to vote him unless he would come to their terms, Governor Denny consented to a tax in which the proprietary estates were included. The Assembly had indemnified him against the forfeiture of his bond. (See *Controversy between the Governor and Assembly of Pennsylvania*.) This and other compliances with the popular will by the governor the Assembly rewarded by liberal grants of salary. The proprietaries, disgusted at what they called Denny's faithlessness, persuaded James Hamilton to again accept the office of governor. But, to obtain means for furnishing the quota of troops required from Pennsylvania, Hamilton was compelled to consent to a tax on the proprietary estates. The proprietaries, according to the constitutional doctrine in Pennsylvania, were bound by the acts of their agent (the governor), though contrary to their instructions. They petitioned the royal veto on eleven of Denny's acts, including the tax above referred to. Franklin, on the one hand, and the proprietaries, on

the other, were heard by their counsel before the Board of Trade and Plantations (which see). That body commented severely on the collusion between the Assembly and Denny evinced by a grant to the governor of a distinct sum of money for consenting to each of the eleven obnoxious acts. The great point of the right to tax the proprietary estates was decided in favor of the Assembly, but the eleven acts were disallowed. For his success on that occasion the Assembly gave Dr. Franklin thanks. But disputes with proprietaries broke out again not long afterwards.

Proprietary Government, FALL OF, IN PENNSYLVANIA. The Assembly of Pennsylvania, influenced by the proprietary government and office-holders in its own body, as well as by timid patriots, hoping, like John Dickinson, for peace and reconciliation, steadily opposed the idea of independence. Finally, a town meeting of four thousand people, held in State-house Yard, in Philadelphia (May 24, 1776), selected for its president Daniel Roberdeau. The meeting voted that the instruction of the Assembly for forming a new government (in accordance with John Adams's proposition) was illegal and an attempt at usurpation; and the Committee of the City and Liberties of Philadelphia were directed to summon a conference of the committees of every county in the province to make arrangements for a constituent convention to be chosen by the people. Then was preparation made for the fall of the proprietary charter of Pennsylvania. Dickinson and his friends persisted in opposition to independence. Concessions were made to the Continental Congress by the Assembly in not requiring newly elected members to swear allegiance to the king. Finally, on May 24, the Committee of Inspection of the city of Philadelphia addressed a memorial to the Congress, setting forth that the Assembly did not possess the confidence of the people, nor truly represent the sentiments of the province; and that measures had been taken for assembling a popular convention. The Assembly became nervous. It felt that its dissolution was nigh. In the first days of June no governor appeared. The members showed signs of yielding to the popular pressure; but on the 7th, the very day when Richard Henry Lee offered his famous resolution for independence in Congress (which see), John Dickinson, in a speech in the Assembly, pledged his word to the proprietary chief-justice (Allen), and to the whole House, that he and a majority of the Pennsylvania delegates in the Congress would continue to vote against independence. Only once again (after June 9, 1774) did a quorum of members of the Pennsylvania Assembly appear. The proprietary government had expired.

Proprietary Innovations in Pennsylvania. The Penn family, who inherited the Province of Pennsylvania from the founder, at about the middle of the last century had become very greedy for money and power. Their encroachments upon the political rights of the people had been observed a long time before public no-

tice was taken of them. To increase their political influence in the colony, the proprietaries had adopted the practice of appointing judicial and other officers, not during good behavior, as formerly, but during the pleasure of the proprietaries. On the death of John Penn, his half of Pennsylvania descended to his next brother, Thomas, who thus became possessor of three fourths of the province. Thomas began other encroachments on the popular rights. He adopted the practice of giving secret instructions to the deputy-governor, which his bond to the proprietaries compelled him to obey; but which, at the same time, he was forbidden to communicate to the Assembly. (*See Controversy between the Governor and Assembly of Pennsylvania.*)

Protection of the Capital (1861). It was evident at the opening of the new year (1861) that the plan of the Secessionists for seizing the capital was fast ripening, and measures were taken for the protection of the government. Lieutenant-general Scott was called in to cabinet meetings for consultation. The militia of the District of Columbia was organized, and a few companies of artillery, under Captain Charles P. Stone, of the Ordnance Department, were placed in Washington. It was also resolved to strengthen garrisons in forts in the slave-labor states, especially at Charleston.

Protest against Taxes in New York. Governor Francis Lovelace, as a means of raising a revenue, imposed a duty of ten per cent. upon all imports and exports in 1667. This was done upon the sole authority of the Duke of York, and was a revival of the duty formerly levied by the Dutch. Eight towns on Long Island protested against taxes being levied by the governor and council of the province without the royal authority. This protest was publicly burned by the common hangman, and the inhabitants who had consented to the overthrow of the Dutch rule, to "enjoy English liberties," were told that they should have liberty to think of nothing else excepting "how to pay taxes." In 1680 the people boldly opposed the levying of taxes by the sole authority of the Duke of York; and the grand jury of New York indicted the collector of taxes, and he was sent to England for trial on the charge of constructive high-treason in levying taxes without authority. The right to do so was questioned by the courts in England. No accuser appearing, the collector was released.

Protestant Episcopal Church in America. The Church of England in America, having suffered much during the old war for independence, sought, on the return of peace, to reorganize itself. Its clergy generally, and many of its members, had adhered to the crown in the struggle, and became refugee loyalists. Samuel Seabury, of New London, at the request of the Episcopalians of Connecticut, proceeded to England, in 1784, to obtain ordination as bishop. The English bishops, under the acts of Parliament, could not raise one to the episcopal dignity who did not take the oath of allegiance, and make acknowledgment that the King of England was

the head of the Church. Seabury, therefore, applied to the Jacobite nonjuring bishops of the Episcopal Church in Scotland, and was by them ordained. The American Episcopalians generally were not satisfied with this ordination, preferring to derive the Episcopate through the heads of the English Church. A convention, held during Seabury's absence (October, 1784), composed of delegates from several states, adopted resolutions on the basis of a fundamental constitution for the "Protestant Episcopal Church of the United States of America." A second convention, held the next year (Sept. 27, 1785), matured this constitution, which was afterwards ratified by conventions in the several states. All titles usually descriptive of temporal power and precedence, such as "Lord Bishop," were dropped, and the bishops and clergy were declared liable, in case of misbehavior, to deposition from office by the General and State Conventions. Some portions of the Liturgy were left out, and others modified, to adapt them to republican ideas. This convention addressed a letter to the English bishops, expressing friendly regards, and a desire to obtain Episcopal ordination for American bishops elect through their hands. After some hesitation the boon was granted, and William White, of Philadelphia, and Samuel Provoost, of New York, were consecrated (Feb. 4, 1787), by the Archbishop of Canterbury, bishops respectively of the dioceses of Pennsylvania and New York. Rev. James Madison, of Virginia, was consecrated bishop, in 1790, by the Archbishop of Canterbury. At a triennial convention, held in October, 1789, measures were set on foot for perpetuating the Episcopacy in America. The consecration of Madison in England, the next year, completed the number of bishops in America canonically required to perform the act of consecration, and Rev. Thomas J. Claggett, D.D., of Maryland, was raised to the Episcopate by Bishops Provoost, White, Seabury, and Madison. In the same year the revised Book of Common Prayer (now the standard) was adopted.

Protests against the Repeal of the Stamp Act. In March, 1766, a protest, prepared by Lord Lyttelton, against the repeal of the Stamp Act, was signed by thirty-three peers. In that House it was maintained that such a strange and unheard-of submission of King, Lords, and Commons to a successful insurrection of the colonies would make the authority of Great Britain contemptible. There were sixty-three members of the House of Lords, including several bishops, who were for subduing the colonies with fire and sword, if necessary; but the vote for repeal stood one hundred and five against seventy-one. Soon afterwards a second protest, containing a vigorous defence of the policy of Grenville, and showing a disposition to enforce the Stamp Act at all hazards, was signed by twenty-eight peers. At that hour of efforts for conciliation five of the bishops "solemnly recorded, on the journal of the House of Lords, their unrelenting enmity to measures of peace."

Proud, ROBERT, historian of Pennsylvania,

was a member of the Society of Friends, or Quakers. He was born in Yorkshire, Eng., May 10, 1728; died in Philadelphia, July 7, 1819. He came to Philadelphia in 1759, where he taught Greek and Latin in a Quaker academy until the breaking-out of the Revolution, when he gave a passive adherence to the British crown. In 1797 his *History of Pennsylvania* was published. It embraces the period between 1681 and 1742.

Providence Plantation. (See *Williams, Roger*, and *Rhode Island, Colony of*.)

Providence Rejects Negro Slavery. In the legal codes of Massachusetts and Connecticut, compiled by Roger Ludlow, about 1650, negro slavery was authorized. In the town of Providence, R. I., the colony with which Massachusetts and Connecticut would not fraternize when they formed the New England Confederacy (which see), because of the religious heresy of its founders, the enslaving of the negro was prohibited by law. In the "Providence Plantation," where Roger Williams bore personal rule, the law placed "black mankind" on the same footing as that of white mankind in regard to perpetual servitude. This regulation, enacted during a temporary disruption of the province, never extended to the other towns, and Providence has the high honor of being the only place in all our land where negro slavery never legally existed.

Provincial Assembly of New York, FINAL ADJOURNMENT OF THE. This body had always been behind the people in zeal for the cause of popular liberty. It was so lukewarm, because of the strong tincture of Toryism in its composition, in 1774-75, that it did not officially approve of the proceedings of the Continental Congress, nor adopt the American Association as public policy. This position caused the British ministry to count upon the disaffection of New York as a strong element of weakness in the colonies. They were mistaken. The New York Assembly sent so strong a remonstrance against the oppressive acts of Parliament that the ministry refused to receive it. Still the Assembly hesitated in the march of decided opposition to government. It refused to appoint delegates to the Second Continental Congress. This aroused the people, and at an exciting election for delegates to a Provincial Convention, for the purpose of choosing delegates to the Congress (March 15, 1775), the popular party triumphed. The Assembly adjourned on the 3d of April, and never met again.

Provincial Congress of Massachusetts. Governor Gage summoned a meeting of the Massachusetts Assembly at Salem, under the provisions of the new and obnoxious act of Parliament. Perceiving the increasing boldness of the people under the stimulus of the proceedings of the Continental Congress, he countermanded the summons. The members denied his right to do so. They met at Salem, ninety in number, on the appointed day (Oct. 5, 1774), waited two days for the governor, who did not appear, and then organized themselves into a Provincial Congress, with John Hancock as president and

Benjamin Lincoln secretary. They adjourned to Concord, where, on the 11th, two hundred and sixty members took their seats. There they adjourned to Cambridge, when they sent a message to the governor, telling him that, for the want of a legal assembly, they had formed a provisional convention. They complained of unlawful acts of Parliament, expressed their loyalty to the king, and protested against the fortifying of Boston Neck by the governor. Gage denounced them. This act increased their zeal. They appointed a Committee of Safety, to whom they delegated large powers. They were authorized to call out the militia of the province, and perform other acts of sovereignty. Another committee was authorized to procure ammunition and military stores, for which purpose more than \$60,000 were appropriated. A Receiver-general (Henry Gardiner) was appointed, into whose hands the constables and tax-collectors were directed to pay all moneys received by them. They made provision for arming the province, and appointed Jeremiah Preble, Artemas Ward, and Seth Pomeroy general officers of the militia. They also authorized the enrolment of twelve thousand minute-men, and, assuming both legislative and executive powers, received the allegiance of the people generally. So passed away royal rule in Massachusetts, and the sovereignty of the people was established in the form of the Provincial Congress. Gage issued a proclamation denouncing their proceedings, to which no attention was paid.

Provincial Congress of New Hampshire, THE, assembled at Exeter, on May 17, 1775, when ninety-eight counties, towns, parishes, and boroughs were represented by deputies, Matthew Thornton being chosen president, and Eleazar Thompson, secretary. They established a post-office at Portsmouth, provided for procuring arms, recommended the establishment of home manufactures, commissioned Brigadier-general Folsom first commander, and provided for the issue of bills of credit.

Provincial Congress of New Jersey. On the 2d of May, 1775, the Provincial Committee of Correspondence of New Jersey directed the chairman to summon a Provincial Congress of deputies to meet at Trenton, on Tuesday, the 23d of the same month. Thirteen counties were represented—namely, Bergen, Essex, Middlesex, Morris, Somerset, Sussex, Monmouth, Hunterdon, Burlington, Gloucester, Cumberland, Salem, and Cape May. Hendrick Fisher was chosen president; Jonathan D. Sargent, secretary; and William Paterson and Frederick Frelinghuysen, assistants. The Provincial Assembly had been called (May 15) by Governor Franklin (son of Benjamin Franklin), to consider North's conciliatory proposition. They declined to approve it, or to take any decisive step in the matter, except with the consent of the Continental Congress, then in session. They adjourned a few days afterwards, and never met again. Royal authority was at an end in New Jersey. The Provincial Congress adopted measures for organizing the militia and the issuing of \$50,000

in bills of credit for the payment of extraordinary expenses.

Provincial Congress of New York, ORGANIZATION OF THE. On the recommendation of the Committee of Sixty of the City of New York (which see), delegates chosen in a majority of the counties of the province met at the Exchange in New York, May 22, 1775. They adjourned to the next day, in order to have a more complete representation, when delegates appeared from the following counties, New York, Albany, Dutchess, Ulster, Orange, Westchester, Kings, Suffolk, and Richmond. The Congress was organized by the appointment of Peter Van Brugh Livingston, president; Volkert P. Douw, vice-president; John McKesson and Robert Benson, secretaries; and Thomas Petit, door-keeper. They adopted the method of voting of the Provincial Convention (which see). They forwarded to the Continental Congress a financial scheme, devised by Gouverneur Morris, for the defence of the colonies by the issue of a Continental paper-currency, substantially the same as that shortly adopted. (See *Continental Paper-money*.) They also took measures for enlisting four regiments for the defence of the province, and for erecting fortifications, recommended by the Continental Congress, at the head of York Island and in the Hudson Highlands. The Provincial Congress agreed to furnish provisions for the garrison at Ticonderoga. There was a strong Tory element in the Congress, which caused much effort towards conciliation, and a plan was agreed to, in spite of the warm opposition of leading Sons of Liberty. It contemplated a repeal of all obnoxious acts of Parliament, but acknowledged the right of the mother country to regulate trade, and the duty of the colonists to contribute to the common charges by grants to be made by the colonial assemblies, or by a general Congress, specially called for that purpose. But this plan met with little favor, and in time the Provincial Congress of New York became more thoroughly patriotic. It showed hesitation, however, in several important emergencies, especially in the matter of declaring the independence of the colonies. It ceased to exist in the summer of 1777, when a state government was organized.

Provincial Congress of North Carolina. On Monday, Aug. 21, 1775, a Provincial Congress, consisting of one hundred and eighty-four deputies, assembled at Hillsborough. They first declared their determination to protect the Regulators (which see), who were liable to punishment; declared Governor Martin's proclamation (which see) to have a tendency to stir up tumult and insurrection in the province dangerous to the peace of the king's government, and directed it to be publicly burned by the common hangman. They provided for raising troops; authorized the raising, in addition to a regular force, of ten battalions, to be called minute-men (which see), and they authorized the emission of bills of credit to the amount of \$150,000.

Provincial Convention of Maryland, THE, met at Annapolis, April 24, 1775. There were one

hundred deputies present. They chose Matthew Tilghman president, and Gabriel Duval, clerk.

Provincial Convention of New York. Delegates chosen in March, 1775, from nine counties in the Province of New York—namely, New York, Albany, Dutchess, Orange, Westchester, Kings, Ulster, Suffolk, and Queens—assembled at the Exchange, in the city of New York, on the 20th of April, and organized by choosing Philip Livingston, of the city of New York, president, and John McKesson, secretary. It was agreed that every question should be determined by a majority of the votes of the counties represented, the city and county of New York to be considered as *four*, the city and county of Albany as *three*, and each of the other counties as *two*. On the 21st, Philip Livingston, James Duane, John Alsop, John Jay, Simon Boerum, William Floyd, Henry Wisner, Philip Schuyler, George Clinton, Lewis Morris, Francis Lewis, and Robert R. Livingston were elected delegates to the Second Continental Congress. Their credentials were signed by the forty-one delegates present, and at eleven o'clock on Sunday morning, April 22, the convention finally adjourned.

Provincial Convention of North Carolina. A general meeting of delegates was held at New Berne, April 3, 1775, at which delegates from twenty-six counties and seven towns appeared. John Harvey was appointed moderator, and Andrew Knox, clerk. The General Assembly of the province was in session at the same time, but on the 8th the governor (Alexander Martin) dissolved them, his council having declared that, in consequence of having approved the proceedings of the Continental Congress, "the longer existence of such a House of Assembly" was "incompatible with the honor of the crown and the safety of the people." They never met again.

Provincial Jealousy a Bar to National Union. After the Declaration of Independence was adopted, the Congress considered two plans for a confederation of the states, one by Dr. Franklin, the other by John Dickinson. Franklin's plan was broad and national in its views; that of Dickinson was narrow and provincial. The latter was supported by those who feared the effects of a consolidated government, and took pride in independent state authority. In this the delegates from South Carolina were conspicuous. Edward Rutledge, who espoused Dickinson's plan, saw danger in the very thought of an indissoluble league of states, and said, "If the plan now proposed [Franklin's] shall be adopted, nothing less than ruin to some colonies will be the consequence. The idea of destroying all provincial distinctions, and making everything of the most minute kind bend to what they call the good of the whole, is, in other terms, to say that these colonies must be subject to the government of the Eastern provinces. The force of their arms I hold exceeding cheap, but I confess I dread their overwhelming influence in council; I dread their low cunning, and those levelling principles which men without

character and without fortune generally possess, which are so captivating to the lower class of mankind, and which will occasion such a fluctuation of property as to introduce the greatest disorder. I am resolved to vest the Congress with no more power than what is absolutely necessary, and to keep the staff in our own hands; for I am confident, if surrendered into the hands of others, a most pernicious use will be made of it." Mr. Rutledge evidently expressed the sentiments of a majority of the Congress at that time and afterwards, for in the Articles of Confederation (which see) that were finally adopted, the powers of the separate states were so rigidly preserved that the confederation was only a weak league of states that failed to win the respect of European nations. The mind of Washington soared far above these petty jealousies. In a general order issued on Aug. 1, 1776, he spoke for union. "Divisions among ourselves," he said, "most effectually assist our enemies; the provinces are all united to oppose the common enemy, and all distinctions are sunk in the name of American." So Patrick Henry had declared in the First Continental Congress (which see).

Provisional Constitution of the Southern Confederacy. It declared that the convention at Montgomery was a "Congress" vested with the same legislative power as that of the United States. It provided that the Provisional President of the Confederacy should hold his office one year, unless superseded by the establishment of a permanent government; that each state should be a judicial district, and that the several district judges should compose the Supreme Court of the Confederacy; that the word "Confederacy" should be substituted for the word "Union" in the national Constitution; that the President might veto a separate appropriation without affecting the whole bill; that the African slave-trade should be prohibited; that the Congress should be empowered to prohibit the introduction of slaves from any state not a member of the Confederacy; that all appropriations should be made upon the demands of the President or heads of departments; and that members of Congress might hold offices of honor and emolument under the Provisional Government. No mention was made of taxes excepting those in the form of a tariff for revenue, nor the keeping of troops and ships of war by states, nor for any ratification of the Constitution by the people. All legislative powers were vested in the "Congress" there assembled until otherwise ordained.

Fryor, ROGER A., was born in Dinwiddie County, Va., July 10, 1828, and graduated at Hampden-Sidney College in 1845. He became a lawyer and editor, and an advocate of state supremacy. In 1854 he was a commissioner to Greece, and was elected to Congress in 1859. He was a vehement advocate of secession; went to South Carolina early in 1861 to urge on civil war; was on the staff of Beauregard in the attack upon Fort Sumter in April; was made a brigadier-general and led a division in the battles before Richmond in 1862, and resigned in

1863. He was a member of the Confederate Congress, and was captured and confined in Fort Lafayette for a time. After the war he edited a newspaper in Tennessee, and finally settled as a lawyer in New York, where he still (1880) remains.

Public Debt. At the close of the Revolution (1783) the restoration of the public credit was the first care of the Congress. The whole expense of that war was estimated at the sum of \$135,000,000. In this is included the specie value of all the bills issued by the Treasury of the United States, redeemed according to a scale of depreciation established by Congress. The whole amount of the debt of the United States, as ascertained in 1783, was a little more than \$42,000,000, of which \$3,000,000 arose from loans obtained in France and Holland, and the remainder was due to American citizens. The annual interest on the debt was \$2,415,956. The whole indebtedness of the United States, state and national, was about \$70,000,000. At the close of the second war for independence (1812-15), it amounted to about \$127,000,000, which was all extinguished within twenty years from that time. In 1835 the Republic was out of debt, and in 1836 there was a surplus in the Treasury of \$28,000,000, which was distributed among the several state banks to loan out, and was never returned. The Civil War that broke out in 1861 burdened the nation with heavy indebtedness, under which load, lightened somewhat by partial liquidation, it still (1880) labors. On Jan. 1, 1861, the total national debt was a little more than 69,000,000, consisting of loans, Texas indemnity, Texas debt (see *Texas*), and Treasury notes. On the 30th of June, 1865, the total national debt was \$2,682,593,000. On the 1st of January, 1866, it was \$2,807,310,000. On July 4, 1876, it was \$2,099,439,344; a decrease in ten years and six months of \$707,870,656. The several states in the Union in 1870 had an aggregate debt of \$864,785,000, exclusive of the Confederate debt, which is not considered in national financial statistics. This sum, added to the national debt, at that time (July 1, 1870) amounting to \$2,386,358,599, made the total indebtedness of the Republic, state and national, \$3,251,143,599. The following is a statement of the public debt at the close of each administration:

Washington (first term) ending 1793.	\$80,352,634 04
— (second term)	82,064,479 38
John Adams	83,038,050 80
Jefferson (first term)	82,312,150 50
— (second term)	57,023,192 09
Madison (first term)	55,962,827 57
— (second term)	123,491,965 16
Monroe (first term)	89,987,427 66
— (second term)	83,788,432 71
John Quincy Adams	58,421,413 67
Jackson (first term)	7,001,698 83
— (second term)	3,308,124 07
Van Buren	13,594,480 73
Tyler	15,925,303 01
Polk	63,061,868 69
Fillmore	59,803,117 70
Pierce	28,099,831 85
Buchanan	90,580,873 72
Lincoln	2,680,647,869 74
Johnson	2,588,452,213 94
Grant (first term)	2,157,390,700 63
— (second term)	2,088,781,143 04

Public High-school in Philadelphia. In

1669 Penn gave a charter for a public high-school which had been established in Philadelphia.

Public Libraries. Previous to the Revolution there were only five public libraries, outside of colleges, in the English-American colonies. These were the "Library Company of Philadelphia," founded in 1731; "American Philosophical Society," 1742; "Library Society," Charleston, S. C., 1748; "Athenæum," Providence, R. I., 1753; and "Society Library," New York, founded in 1754. In 1776 they numbered more than 1100, each containing 1000 volumes and upwards. This does not include School-district and Sunday-school libraries. In 1873 there were 150 public libraries containing from 10,000 to 25,000 volumes each; 75 containing 25,000 or more volumes each; 37 from 25,000 to 50,000 volumes each, and 15 over 50,000 volumes each. The 75 alluded to are among the most important libraries of the United States, and contained an aggregate of 3,725,200 volumes. Of these, 9 contained over 100,000 volumes each. The Library of Congress, at Washington, had in 1876 about 275,000 volumes; the Public Library of Boston, 262,000; Astor and Mercantile libraries of New York, 152,000 each; Mercantile Library of Philadelphia, 105,000 volumes; and Boston Athenæum, 105,000. The total contents of the public and private libraries of the United States in 1870 were 45,528,938 volumes. Of these libraries, 108,800 were private, containing a total of 26,072,420 volumes. The Sunday-school libraries of the United States contained 8,346,153 volumes, and other circulating libraries 2,536,128.

Public Property Seized in Alabama (1861).

A week before the Secession Ordinance of Alabama was adopted (Jan. 11, 1861), volunteer troops, in accordance with an arrangement made with the governors of Louisiana and Georgia, and by order of the Governor of Alabama, had seized the arsenal at Mount Vernon, about thirty miles above Mobile, and Fort Morgan, at the entrance to Mobile Harbor, about thirty miles below the city. The Mount Vernon Arsenal was captured by four insurgent companies commanded by Captain Leadbetter, of the United States Engineer Corps, and a native of Maine. At dawn (Jan. 4, 1861) they surprised Captain Reno, in command of the arsenal, and the Alabama insurgents thus obtained 15,000 stand of arms, 150,000 pounds of gunpowder, some cannons, and a large quantity of munitions of war.

Public Property Seized in Florida (1861).

Before the Florida Ordinance of Secession was passed, Florida troops seized (Jan. 6, 1861) the Chattahoochee Arsenal, with 500,000 rounds of musket-cartridges, 300,000 rifle-cartridges, and 50,000 pounds of gunpowder. They also took possession of Fort Marion, at St. Augustine, formerly the Castle of St. Mark, which was built by the Spaniards more than a hundred years before. It contained an arsenal. On the 15th they seized the United States Coast Survey schooner *F. W. Dana*, and appropriated it to their own use. The Chattahoochee Arsenal was in charge of the courageous Sergeant Powell and

three men. He said, "Five minutes ago I was in command of this arsenal, but in consequence of the weakness of my command, I am obliged to surrender. . . . If I had force equal to, or half the strength of yours, I'll be d——d if you would have entered that gate until you had passed over my dead body. You see that I have but three men. I now consider myself a prisoner of war. Take my sword, Captain Jones."

Public Property Seized in Georgia (1861).

On the recommendation of Senator Toombs and others at Washington, the Governor of Georgia (Joseph Brown) ordered the seizure of the United States coast defences on the border of the state before the secession convention met. Fort Pulaski, on Cockspur Island, at the mouth of the Savannah River, and Fort Jackson, near the city of Savannah, were seized on Jan. 3, 1861. On the same day the national arsenal at Savannah was taken possession of by insurgents, and 700 state troops, by the orders and in the presence of the governor, took possession of the arsenal at Augusta, Jan. 24, when the National troops there were sent to New York. In the arsenal were 22,000 muskets and rifles, some cannons, and a large amount of munitions of war. The forts were without garrisons, and each was in charge of only two or three men.

Public Property Seized in Louisiana (1861).

Prompted by advice from John Slidell and Judah P. Benjamin, then sitting as members of the United States Senate, the Governor of Louisiana (Moore) sent expeditions from New Orleans to seize forts Jackson and St. Philip on the Mississippi, below the city, then in charge of Major Beauregard; also Fort Pike, on Lake Pontchartrain, and the arsenal at Baton Rouge. A part of General Palfrey's division went down the river in a steam vessel, and on the evening of Jan. 10, 1861, the commander of Fort St. Philip (Dart) gladly gave it up to the secessionists; but the commander of Fort Jackson (Sergeant Smith), which surrendered, gave up the keys under protest. State troops seized Fort Livingston, on Grand Terre Island, Barataria Bay, at the same time, and on the 20th the unfinished fort on Ship Island was seized and held by the insurgents. Troops left New Orleans, 300 in number, under Colonel Walton, on the evening of Dec. 9, in a steam vessel, and on the following evening arrived at Baton Rouge to seize the arsenal, then in command of Major Haskin. He was compelled to surrender it on the 11th. By this act the insurgents were put in possession of 50,000 small-arms, four howitzers, twenty pieces of heavy ordnance, two field-batteries, 300 barrels of gunpowder, and a large quantity of other munitions of war. A part of this property Governor Moore turned over to Governor Pettus, of Mississippi. The barracks below New Orleans were seized on the 11th. They were used for a marine hospital. The United States collector at New Orleans was required to remove the 216 patients from the barracks immediately, as the state wanted the building for the gathering insurgents. The collector (Hatch) remonstrated, and they were allowed to remain. The author-

ities of Louisiana also seized the national Mint and the Custom-house there, with all the precious metals they contained in coin and bullion, and by order of the State Convention this treasure, amounting to \$536,000, was placed in the state coffers. Soon after this, a draft for \$300,000 was received by the sub-treasurer at New Orleans from the Treasury Department, which that fiscal officer refused to pay, saying, "The money in my custody is no longer the property of the United States, but of the Republic of Louisiana."

Public Treasury, THE (1861). The first care of the government after the inauguration of Mr. Lincoln was to ascertain the condition of its money-chest. The management of Cobb, Buchanan's Secretary of the Treasury, had prostrated the public credit in the fall of 1860. To a loan of \$20,000,000 asked for in June, one half to be paid in October, only \$7,000,000 were subscribed. A few days after Cobb left the Treasury, Congress authorized (Dec. 14, 1860) the issue of \$10,000,000 in Treasury-notes, payable in one year at the current rate of interest offered. After the retirement of Cobb there was a partial restoration of confidence among capitalists, but this was soon weakened by his immediate successor, Thomas, of Maryland, and the robbing of the Indian Trust Fund (which see). Interest on the public debt would become due Jan. 1, and the government would be embarrassed. Loyal bankers came forward to the relief of the government. The appointment of John A. Dix as Secretary of the Treasury inspired confidence, and the remainder of the authorized loan was soon subscribed for, but at the high rate of interest of 10½ per cent. a year. On Feb. 8, Congress authorized a loan of \$25,000,000 to bear an interest of 6 per cent. On Feb. 27 the secretary offered \$8,000,000 of this stock, and there were more than \$14,000,000 proffered. On March 2, Congress, being purged of its disloyal element, passed an act to go into effect April 1 which established the highest protective tariff. Confidence was restored, and all through the war that ensued the government never lacked money to carry on its operations.

Puebla (La Puebla de los Angeles), AMERICANS IN (1847). This is the capital of the Mexican State of Puebla, and is the sacred city of the republic. It was founded after the reduction of Mexico by Cortez (1519-1521). It contains more than sixty churches, thirteen nunneries, nine monasteries, and twenty-one collegiate houses. Many of the churches and convents are rich in gold and silver ornaments, paintings, and statues. The city is about 7000 feet above the level of the sea, and contains about 80,000 inhabitants. After his victory at Cerro Gordo (which see), General Scott pressed forward on the great national road over the Cordilleras. General Worth had joined the army (see Vera Cruz), and with his division led the way. They entered the strongly fortified town of Jalapa April 19, 1847, and a few days afterwards Worth unfurled the American flag over the formidable Castle of Perote, on the summit of the Cordilleras, fifty miles beyond Jalapa. This fortress

was regarded as the strongest in Mexico after San Juan de Ulloa. Appalled by the suddenness and strength of this invasion, the Mexicans gave up these places without making any resistance. At Perote the victors gained fifty-four pieces of artillery and an immense quantity of munitions of war. Onward the victors swept over the lofty Cordilleras, and on May 15th they halted at the sacred Puebla de los Angeles, where they remained until August. There Scott counted up the fruits of his invasion thus far. In the space of two months he had made 10,000 Mexican prisoners and captured 700 splendid pieces of artillery, 10,000 muskets, and 20,000 shot and shells; and yet, when he reached Puebla, his whole effective marching force with which he was provided for the conquest of the capital of Mexico, did not exceed 4500 men. Sickness and the demands for garrison duty had reduced his army about one half. At Puebla Scott gave the Mexicans an opportunity to treat for peace. The government had sent Nicholas P. Trist as a diplomatic agent, clothed with power to negotiate for peace. He had reached Jalapa just as the army had moved forward, and he now accompanied it. He made overtures to the Mexican government, which were treated with disdain and loud boasts of their valor and patriotism. General Scott issued a conciliatory proclamation to the Mexican people on the subject while on the march, which closed with this significant paragraph: "I am marching on Puebla and Mexico, and from those capitals I shall again address you." At Puebla Scott was reinforced by fresh troops. His chief officers were Generals Worth, Twiggs, Quitman, Pillow, Shields, Smith, and Cadwallader. On the 7th of August he resumed his march towards the capital. (See *Mexico, War with*.)

Pulaski, COUNT CASIMIR, was born in Lithuania, Poland, March 4, 1748; died at Savannah,

COUNT CASIMIR PULASKI.

Ga., Oct. 11, 1779. His father was Count Pulaski, who formed the Confederation of Bar in

1768. He had served under his father in his struggle for liberty in Poland; and when his sire perished in a dungeon the young count was elected commander-in-chief (1770). In 1771 he, with thirty-nine others, disguised as peasants, entered Warsaw, and, seizing King Stanislaus, carried him out of the city, but were compelled to leave their captive and fly for safety. His little army was soon afterwards defeated. He was outlawed, and his estates were confiscated, when he entered the Turkish army and made war on Russia. Sympathizing with the Americans in their struggle for independence, he came to our shores in the summer of 1777, joined the army under Washington, and fought bravely in the battle of Brandywine. Congress gave him command of cavalry, with the rank of brigadier-general. He was in the battle of Germantown; and in 1778 his "Legion" was formed, composed of sixty light horsemen and two hundred foot-soldiers. Surprised near Little Egg Harbor, on the New Jersey coast, nearly all of his foot-soldiers were killed. Recruiting his ranks, he went South in February, 1779, and was in active service under General Lincoln, engaging bravely in the siege of Savannah (which see), in which he was mortally wounded, taken to the United States brig *Wasp*, and there died. Congress voted a monument to his memory, which was never erected. The citizens of Savannah erected one to "Greene and Pulaski,"

GREENE AND PULASKI MONUMENT.

the corner-stone of which was laid by Lafayette in 1825.

Purchas, SAMUEL, was born at Thaxted, Essex, Eng., in 1577; died in London in 1628. He was an able clergyman, but is chiefly known by his famous work entitled *Purchas his Pilgrimages; or, Relations of the World and the Religions observed in all Ages and Places discovered from the Creation until this Present*. It contains an account of voyages, religions, etc., and was pub-

lished in five volumes in 1613. This, with *Hakluyt's Voyages*, led the way to similar collections. The third volume relates to America, and contains the original narratives of the earliest English navigators and explorers of the North American continent. Purchas was Rector of St. Martin's, Ludgate, and Chaplain to Abbot, Archbishop of Canterbury.

Puritanism was exhibited in its most radical form in New England, for there it had freedom of action. The Puritan was not a sufferer, but an aggressor. He was the strictest of his sect. He was an unflinching egotist, who regarded himself as his "brother's keeper," and was continually busied in watching and guiding him. His constant business seemed to be to save his fellow-men from sin, error, and eternal punishment. He sat in judgment upon their belief and actions with the authority of a God-chosen high-priest. He would not allow a Jesuit or a Roman Catholic priest to live in the colony. His motives were pure, his aims lofty, but his methods were uncharitable and sometimes absurd. As a law-giver and magistrate, his statute-books exhibit the salient points in his character—a self-constituted censor and a conservator of the moral and spiritual destiny of his fellow-mortals. His laws in those statute-books were largely sumptuary in their character. He imposed a fine upon every woman who should cut her hair like that of a man. He forbade all gaming for amusement or gain, and would not allow cards or dice to be introduced into the colony. He fined families whose young women did not spin as much flax or wool daily as the selectmen had required of them. He forbade all persons to run, or even walk, "except reverently to and from church," on Sunday; and he doomed a burglar, because he committed a crime on that sacred day, to have one of his ears cut off. He commanded John Wedgewood to be put in the stocks for being in the company of drunkards. Thomas Pitt was severely whipped for "suspicion of slander, idleness, and stubbornness." He admonished Captain Lovell to "take heed of light carriage." Josias Plaistowe stole four baskets of corn from the Indians, and he was ordered to return to them eight baskets, to be fined five pounds, and thereafter to "be called by the name of Josias, and not Mr. Plaistowe, as formerly." He directed his grand-jurors to admonish those who wore apparel too costly for their incomes, and, if they did not heed the warning, to fine them; and in 1646 he placed on the statute-books of Massachusetts a law which imposed the penalty of flogging for kissing a woman in the street, even by way of honest salute. He rigidly enforced this law a hundred years after its enactment, because it was not repealed. A British war-vessel entered the harbor of Boston. The captain, hastening to his home in that town, met his wife in the street and kissed her. He was accused, found guilty, and mildly whipped. Just before sailing on another cruise he invited his accuser, the magistrates, and others who approved the punishment to dine on board his vessel. When all were merry with good-cheer

he ordered his boatswain and mate to flog the magistrates with a knotted cat-o'-nine-tails. It was done, and the astonished guests were driven pell-mell over the side of the ship into a boat waiting to receive them. Such were some of the outward manifestations of Puritanism in New England, especially in Massachusetts and Connecticut. In Rhode Island it was softened, and finally it assumed an aspect of broader charity everywhere. Its devotees were stern, conscientious moralists and narrow religionists. They came to plant a church free from disturbance by persecution, and proclaimed the broad doctrine of liberty of conscience—the right to exercise private judgment. "Unsettled persons"—Latitudinarian in religion—came to enjoy freedom and to disseminate their views. In that dissemination Puritanism saw a prophecy of subversion of its principles. Alarmed, it became a persecutor in turn. "God forbid," said Governor Dudley in his old age, "our love for truth should be grown so cold that we should tolerate errors—I die no libertine." "To say that men ought to have liberty of conscience is impious ignorance," said Parson Ward, of Ipswich, a leading divine. "Religion admits of no eccentric notions," said Parson Norton, another leading divine and persecutor of so-called Quakers in Boston.

Puritans. This name was applied in England, at the middle of the 16th century, to persons who wished to see a greater degree of reformation in the Established Church than was adopted by Queen Elizabeth, and a purer form, not of faith, but of discipline and worship. It became a common name of all who, from conscientious motives, but upon different grounds, disapproved of the established ritual in the Church of England from the Reformation under Elizabeth to the act of uniformity in 1562. From that time until the Revolution in England in 1688 as many as refused to comply with the established form of worship were called "Non-conformists." There were about two thousand clergymen and half a million people who were so denominated. From the accession of William and Mary and the passage of the Toleration Act the name of "Non-conformists" was changed to "Dissenters," or Protestant Dissenters. Because the stricter Non-conformists in the reigns of Elizabeth and James I. professed and acted purer lives in morals and manners, they were called "Puritans" in derision. There were different degrees of Puritanism, some seeking a moderate reform of the English liturgy, others wishing to abolish Episcopacy, and some declaring against any Church authority whatsoever. Representatives from these three classes of Puritans formed the larger portion of the earlier settlers in New England. The union of these in the Civil War in England effected the overthrow of the monarchy, and at the restoration the name of Puritan was one of reproach. Since the Toleration Act of 1690 the word has ceased to designate any particular sect. Those in New England were generally earnest and pious bigots, and some of them were as fierce persecutors as those from whom they had fled for conscience' sake.

II.—24

Puritans and Indians. The early settlers in New England regarded the barbarians around them as something less than human. Cotton Mather took a short method of solving the question of their origin. He guessed that "the devil decoyed the miserable salvages hither in hope that the Gospel of our Lord Jesus Christ would never come here to destroy or disturb his absolute control over them." And after wars with the Indians had embittered both parties, the expressions of pious men concerning them are shocking to the enlightened mind of to-day. After the massacre of the Pequods, Mather wrote: "It was supposed that no less than five or six hundred Pequod souls were brought down to hell that day." (See *Pequod War*.) The learned and pious Dr. Increase Mather, in speaking of the efficiency of prayer in bringing about the destruction of the Indians, said: "Nor could they [the English] cease crying to the Lord against Philip until they had prayed the bullet into his heart." In speaking of an Indian who had sneered at the religion of the English, he said that immediately upon his uttering a "hideous blasphemy a bullet took him in the head and dashed out his brains, sending his cursed soul in a moment amongst the devils and blasphemers in hell forever." The feeling against the barbarians at the close of King Philip's War among the New-Englanders was that of intense bitterness and savage hatred. It was manifested in many ways; and when we consider the atrocities perpetrated by the Indians, we cannot much wonder at it. The captives who fell into the hands of the Rhode-Islanders were distributed among them as servants and slaves. A large body of Indians assembled at Dover, N. H., to treat for peace were treacherously seized by Major Waldron. About two hundred of them were claimed as fugitives from Massachusetts, and were sent to Boston, where some were hanged and the remainder sent to Bermuda and sold as slaves. To have been present at the "Swamp fight" was adjudged by the authorities of Rhode Island sufficient foundation for putting an Indian to death. Death or slavery was the penalty for all known to have shed English blood. Some fishermen at Marblehead having been killed by the Indians, some women of that town, coming out of church on Sunday just as two Indian prisoners were brought in, fell upon and murdered them. King Philip's dead body was first beheaded and then quartered. His head was carried into Plymouth on a pole and there exhibited for months. His wife and son, made prisoners, were sent to Bermuda and sold as slaves. The disposition of the boy was warmly discussed, some of the elders of the church proposing to put him to death, but slavery was his final doom.

Puritans, EMIGRATION OF, TO MARYLAND. At the time of the passage of the Toleration Act in Maryland (1649) the Puritans in Virginia were severely persecuted because they refused to use the church liturgy, and one hundred and eighteen of them left that colony. Their pastor, Mr. Harrison, returned to England; but nearly all the others, led by their ruling elder, Mr. Du-

rand, went to Maryland, and settled on the banks of the Severn River, near the site of Annapolis, and called the place Providence. The next year Governor Stone visited them and organized the settlement into a shire, and called it Ann Arundel County, in compliment to the wife of Lord Baltimore. (See *Calvert, Cecil*.) These Puritans gave the proprietor considerable trouble.

Putnam and Molang. While Abercrombie was resting securely in his intrenchments at Lake George after his repulse at Ticonderoga, two or three of his convoys had been cut off by French scouting-parties, and he sent out Ma-

guished them. But they were renewed with greater intensity, and Putnam lost all hope, when a French officer dashed through the crowd of yelling savages, scattered the burning fagots, and cut the cords that bound the victim. It was Molang, the leader of the French and Indians, who had heard of the dreadful proceedings. Putnam was delivered to Montcalm at Ticonderoga, treated kindly, and sent a prisoner to Montreal. He was afterwards exchanged for a prisoner captured by Bradstreet at Fort Frontenac.

Putnam Hurries to the Field. On the morning after the affairs at Lexington and Concord (April 20, 1775) Israel Putnam, of Pomfret, Conn., the famous Provincial soldier of the French and Indian War, was in his field, with tow blouse and leather apron, assisting hired men in building a stone wall on his farm. A horseman at full speed acquainted him with the stirring news. He instantly set out to arouse the militia of the nearest town, and was chosen their leader when they were gathered. In his rough guise he set out for Cambridge, and reached it at sunrise, having ridden the same horse one hundred miles in eighteen hours.

Putnam, ISRAEL, was born at Salem, Mass., Jan. 7, 1718; died at Brookline, Conn., May 29, 1790. In 1739 he settled in Pomfret, Conn., where he acquired a good estate. He raised a company, and served in the French and Indian War with so much efficiency that in 1757 he was promoted to the rank of major. He was in command of rangers, and in an encounter not far from the southern end of Lake Champlain he was made a prisoner and taken to Montreal. (See *Putnam and Molang*.) He was exchanged, and was lieutenant-colonel at the capture of Montreal in 1760, and at the capture of Havana in 1762. He was a colonel in Bradstreet's Western expedition in 1764. After the war he kept a tavern in Brookline; and when he heard of the affair at Lexington he left his field and, without changing his clothing, set off for Boston, where he was appointed a Provincial major-general. He was very active in the battle of Bunker's (Breed's) Hill, and was appointed one of the

MAJOR ISRAEL PUTNAM IN BRITISH UNIFORM.

jors Rogers and Putnam to intercept them. (See *Ticonderoga*.) Apprised of this movement, Montcalm sent Molang, an active partisan, to waylay the English detachment. While marching through the forest (August, 1758), in three divisions, within a mile of Fort Anne, the left, led by Putnam, fell into an ambuscade of Indians, who attacked the English furiously, uttering horrid yells. Putnam and his men fought bravely. His fusée at length missed fire with the muzzle at the breast of a powerful Indian, who, with a loud war-whoop, sprang forward and captured the brave leader. Binding Putnam to a tree (where his garments were riddled by bullets), the chief fought on. The Indians were defeated, when his captor unbound Putnam and took him deeper into the forest to torture him. He was stripped naked and bound to a sapling with green withes. Dry wood was piled high around him and lighted, while the Indians chanted the death-song. The flames were kindling fiercely, when a sudden thunder-shower burst over the forest and nearly extin-

ISRAEL PUTNAM, 1776.

first major-generals of the Continental army. From that time his services were given to his

country without cessation until 1779, at West Point, strengthening the fortifications there. Paralysis of one side of his body affected his physical condition, but did not impair his mind, and he lived in retirement until his death. The sign on Putnam's tavern bore a full-length portrait of General Wolfe. In the following letter,

PUTNAM'S SIGN.

written at the close of the war for independence, he alludes to his having been an innkeeper:

"BROOKLINE, Feb. 18, 1782.

"GENTLEMEN,—Being an Enemy to Idleness, Dissipation, and Intemperance, I would object against any measure that may be conducive thereto; and as the multiplying of public-houses where the public good does not require it has a direct tendency to ruin the morals of the youth, and promote idleness and intemperance among all ranks of people, especially as the grand object of those candidates for license is money, and where that is the case, men are not apt to be over-tender of people's morals or purses. The authority of this town, I think, have run into a great error in approving an additional number of public houses, especially in this parish. They have appropriated two houses in the centre, where there never was custom (I mean travelling custom) enough for one. The other custom (or domestic), I have been informed, has of late years increased, and the licensing of another house, I fear, would increase it more. As I kept a public house here myself a number of years before the war, I had an opportunity of knowing, and certainly do know, that the travelling custom is too trifling for a man to lay himself out so as to keep such a house as travellers have a right to expect; therefore I hope your honors will consult the good of this parish, so as only to license one of the two houses. I shall not undertake to say which ought to be licensed; your honors will act according to your best information.

"I am, with esteem, your honors' humble servant,

"ISRAEL PUTNAM.

"To the Honorable County Court, to be held at Windham on the 19th inst."

Putnam Rallies Flying Troops. When powder failed them, and further resistance seemed vain, Colonel Prescott ordered a retreat from Bunker's (Breed's) Hill (which see), and they fled across Charlestown Neck. Putnam was absent from the hill at the third onset, collecting men for a reinforcement, and was encountered by the retreating party on the declivity of Bunker's Hill proper. Acting on his own responsibility, he now, for the first time, assumed supreme command of those troops. Without orders from any person, he rallied such of the flying soldiers as would obey him, joined them to a detachment which had not arrived in time to share in the battle, and took possession of Prospect Hill, where he encamped that night, and which remained an American encampment throughout the nine months' siege of Boston.

Putnam, RUFUS, was born at Sutton, Mass., April 9, 1738; died at Marietta, O., May 4, 1824. He served in the French and Indian War (which see) from 1757 to 1760, and on the surrender of Montreal (1760) he married and settled in Braintree, Mass., as a millwright. He was studious, and acquired a good knowledge of mathematics, surveying, and navigation. He was a deputy surveyor in Florida before the Revolution. He entered the army at Cambridge in 1775 as lieutenant-colonel, and the ability he displayed in casting up defences at Roxbury caused Washington to recommend him to Congress as superior, as an engineer, to any of the Frenchmen then employed in that service. He was appointed chief-engineer (August, 1776), but soon afterwards left that branch of the service to take command of a Massachusetts regiment. He was with the Northern Army in 1777, and in 1778 he, with his cousin, General Putnam, superintended the construction of the fortifications at West Point. After the capture of Stony Point (which see) he commanded a regiment in Wayne's brigade, and served to the end of the campaign. He was made a brigadier-general in 1783. He was aid to General Lincoln in quelling Shay's insurrection (1787), and in 1788, as Superintendent of the Ohio Company (which see), he founded Marietta, the first permanent settlement in the eastern part of the Northwest Territory. He was judge of the Superior Court of that territory in 1789, and was a brigadier-general in Wayne's campaign against the Indians. As United States Commissioner, he made important treaties with some of the tribes. He was United States Surveyor-general from October, 1793, to September, 1803.

Pyle, DEFEAT OF. Recrossing the Dan after his famous retreat into Virginia, Greene attempted to frustrate the efforts of Cornwallis to embody the loyalists of North Carolina into military corps. In this business the gallant Colonel Henry Lee, with his "Legion," was conspicuous. At the head of his cavalry, he scoured the country around the head-waters of the Haw and Deep rivers, where, by force and stratagem, he foiled Tarleton, who was recruiting among the Tories there. Colonel Pyle, an active loyalist, had gathered three or four hundred Tories, and was marching to join Cornwallis. Lee's Legion greatly resembled Tarleton's, and he made the country people believe that he was recruiting for Cornwallis. Two prisoners were compelled to favor the deception or suffer instant death. Two well-mounted young men of Pyle's corps were so deceived, and informed Lee (supposing him to be Tarleton) of the near presence of that corps. Lee sent word to Pyle, by one of the young men, of his approach, and, assuming the person of Tarleton, requested him to draw up his corps on one side of the road, that his wearied troops might pass without delay. The order, or request, was obeyed. Lee intended, when he should secure the complete advantage of Pyle, to reveal himself and give his Tory corps the choice, after being disarmed, to join the patriot army or return home. He had ordered Pickens to conceal his riflemen

near. Just as Lee (as Tarleton) rode along Pyle's line (March 2, 1781), and had grasped the hand of the latter in an apparently friendly salute, some of the loyalists discovered Pickens's riflemen. Perceiving that they were betrayed, they commenced firing upon the rear-guard of the cavalry, commanded by Captain Eggleston. That officer instantly turned upon the foe, and the movement was followed by the whole column. A terrible fight and slaughter ensued. Of the loyalists, ninety were killed and a large portion of the remainder wounded in a brief

space of time. A cry for mercy was raised by the loyalists. It was granted when the Americans were assured of their safety. Colonel Pyle, wounded, fled to the shelter of a pond near by, where, tradition says, he laid himself under water, with nothing but his nose above it, until after dark, when he crawled out and made his way to his home. Tarleton, who was near, fled to Hillsborough, and the disheartened Tories returned to their homes. Cornwallis wrote: "I am among timid friends and adjoining inveterate rebels."

Q.

Quaker Enthusiasts Whipped in Massachusetts. In 1671 the patience of the people of Massachusetts was sorely tried by the conduct of two young married Quaker women, who walked without any clothing through the streets of Salem and Newburyport, in emulation of the prophet Ezekiel, as a sign of the nakedness of the land. They were whipped at cart-tails, from town to town, out of the colony, under the law against vagabond Quakers. The young husband of one of them followed the cart to which his wife was tied, and from time to time interposed his hat between her naked and bleeding back and the lash of the executioner.
